“FAIS CE QUE DOIS; ADVIENNE QUE POURRA!”

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the “JAPAN WEEKLY MAIL,” must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JANUARY 5TH, 1883.

WEEKLY NOTES.

HOSPITABLE Japanese householders, when pressing a friend to partake of refreshments in the face of his assertions that he has already dined, habitually make use of the phrase “*tokoro kawareba, aji kawaru*,” which may be freely translated, “the flavour of the viands changes with the place where they are eaten.” We are forcibly reminded of this saying when we observe the different attitudes of the foreign communities at the various settlements, with regard to municipal Government. At Hiyogo, Osaka, and Nagasaki alike, the Japanese employés of the foreign residents are duly registered by the municipal police, who make monthly domiciliary visits for the purpose. The result, so far as Kobe is concerned, is thus recorded by the *Hiyogo News*:—“Before the system of registration of servants was instituted by the Hiyogo Municipal Council nearly three years ago, scarcely a week passed that some foreign resident had not occasion to complain of a theft on his premises. A servant would be missing, and at the same time some property, but in not one instance out of a hundred could any information be obtained of the probable destination of the thief, where he came from, or where his relations lived. Now—that is since the registration system has been brought into force—thefts by servants are as rare as formerly they were frequent, and seldom does the thief manage to escape capture.” The same journal explains the method of carrying out the registration, and shows that it is attended by no inconvenience whatsoever to foreign householders. But in Yokohama, it has been decided

that such a system would be an intolerable violation of some romantic privilege, which cannot be defined, indeed, but which, nevertheless, every true Briton is bound to defend against the insidious devices of all persons having skins a shade darker than his own. We have not yet been able to discover what might happen, or what is apprehended, if a sergeant of municipal police were permitted to come and write down the names of our servants once a month, but we presume that the proposal must present some objectionable features since it emanates from the Japanese. It would never do were the Foreign Office able to compile a record, showing the brand of our cigars, and the number of pieces each of us sends to the wash every week. As highly civilized Englishmen, with rights which our forefathers wrung from despots upon sundry sanguinary fields, it is our bounden duty to oppose every conceivable obstacle to such a system of espionage, even though the alternative be to see our houses converted into asylums for thieves and jail-birds. If the inhabitants of Kobe, Osaka, and Nagasaki have so far forgotten the traditions of their race as to permit the privacy of their Japanese servant's quarters to be invaded once a month by a Japanese constable with a pencil and a pocket-book, it is all the more incumbent upon the residents of the principal settlement to set a stern and unflinching example to their erring compatriots.

WE learn from a Nagasaki journal that after a twenty-five days' trial, the Criminal Court has pronounced judgment in the case of the constable charged with causing the death of a Chinaman, on the night of September the 15th, while attempting to arrest some opium smokers. The gist of the judgment is said to be that, despite the conflicting and contradictory nature of the evidence, it has been established, beyond a doubt, that the deceased met his death in a struggle between Chinese residents and Japanese constables, “while the latter were attempting to make an illegal arrest,” and that a constable by name Minasu is alone responsible for the man's death. The italics here are our own. We use them to draw attention to a part of the verdict which appears quite incredible. There can be little question that, according to the treaty between China and Japan, the local authorities of the latter country are entitled to arrest Chinese engaged either in opium smuggling, or in the perpetration of the more serious offence of opium smoking, and that no previous reference to a Chinese Consul is necessary. Indeed, it is plain, without considering any treaty, that such must be the case. The use of opium is a violation of the laws of Japan, and its suppression does not conflict with any treaty right. It is not necessary, therefore, that a Japanese constable should apply to any one for a warrant to arrest a Chinaman whom he discovers in the act of smoking opium. He might as well apply for a warrant to arrest a drunken sailor. We do not believe that the verdict contains any such sentence as that quoted above, unless, indeed,

the circumstances of the affair were altogether different from the reports hitherto published both by Chinese and Japanese. It will surprise us to learn that among the privileges conferred by extraterritoriality is included the right of committing an immoral and illegal act under the very eyes of the Japanese police, without the latter having power to interfere until they have obtained written permission. The Japanese appear to admit practically that British subjects, under extraterritorial jurisdiction, are at liberty to convert their houses into gambling exchanges where Japanese subjects may resort, to transgress the laws of the land. We entirely disagree with any such notion. If the Japanese authorities had the courage to enter such establishments and arrest the law-breakers without asking the British Consul any questions, they would soon learn whether Her Majesty's Government is disposed to support the false and unwarrantable interpretation put upon the treaties by giddy officials. All that is wanted to set these matters right is a little pluck, and its exercise would be heartily applauded by ninety-nine Englishmen out of a hundred.

THE *London and China Express*, in its issue of November the 9th, commented in a somewhat listless strain upon the resolutions adopted by a meeting of Japanese at the Langham Hotel, and its comments elicited two lengthy communications one from the Japanese who drew up the resolutions and the other from a Japanese merchant residing in London. These letters have been already published in our columns. The *London and China Express* has made no attempt to answer them, so that we may consider its original expression of opinion to be final, for the present at all events. Our contemporary set out by saying that the gentlemen who met at the Langham Hotel and drew up the resolutions “cannot be taken as representatives of Japanese trade with Great Britain, and can therefore not expect that their voice will be listened to with the same respect as a deliverance by the Yokohama Chamber of Commerce;” and that “the resolutions passed at the meeting held on the 3rd inst. are simply an expression of individual opinion, or of the opinion of a certain number of individuals, which will no doubt be acknowledged with all due courtesy by the Japanese Government, but cannot carry the weight attaching to similar expressions by largely interested and representative bodies.” This airy method of discrediting the results of the meeting at the Langham is of a piece with the tone generally adopted by foreign journals in discussing Japanese treaty revision. We are asked to attach the utmost importance to the utterances of a foreign Chamber of Commerce made up of men who, however intelligent and enterprising from a commercial point of view, have come to Japan solely for the purpose of making and carrying away as much money as they can in the shortest possible time, and who cannot reasonably be expected to care anything for this country so soon as it has served their temporary turn. But if a number of Japanese who, by residing abroad, have enjoyed exceptional opportunities of observing the

deference that free states pay to each other's rights, assemble, and, after careful deliberation, draw up a set of resolutions on the subject of treaty revision, we are assured that their views do not deserve as much respect as "a deliverance of the Yokohama Chamber of Commerce," and that their resolutions are "simply an expression of individual opinion, or of the opinion of a certain number of individuals." There is a most charming vagueness about this phrase, "the opinion of a certain number of individuals." It would be interesting to know, as an arithmetical curiosity, at what particular point of collective magnitude the members of an assembly lose their individuality. What particular characteristic, numerical or otherwise, entitles the "deliverances" of the ten or twelve gentlemen who interest themselves actively in the concerns of the Yokohama Chamber of Commerce, to be placed on a higher pedestal than "the opinion of a certain number of individuals." There is something here that does not immediately render itself comprehensible, though, as an illustration of the impression it is intended to convey, the phrase is well enough in its way.

* * *

It would scarcely be worth while to comment on these phraseological quibbles were they not consistent with the whole tone of the article under review. Our contemporary continues thus:—

The expression of impatience at the extreme length of the negotiations is not unnatural. But is it not the fact that the revision has hitherto failed of result, because the revision itself was premature? The failure is, in one sense, a tribute to the wisdom of the first negotiators. The treaties were so well adapted to the requirements of the situation that they have been allowed to remain in operation for a double term, without any inconvenience having been felt from the delay sufficiently serious to cause real impatience or irritation. Certainly, the Japanese wish important changes, but it is more as a matter of sentiment than because of any real inconvenience that existing circumstances entail. And, again we ask, whether their failure so far to gain assent to the proposed changes is not due to the fact that revision itself is premature? Foreign Governments are not yet prepared to restore to Japan judicial power over their nationals, because Japanese laws and customs have not yet been brought sufficiently into harmony with their own to give confidence in the experiment, or rather we should say the practice of the laws has not reached that point. Japanese statesmen have been engaged for years in preparing a code of law having, it is understood, the Code Napoleon for basis. It is hardly surprising that Foreign Governments should prefer waiting to see the experience of its working before consenting to subject their nationals to it action. The objection to throwing open the whole country, so long as extra-territorial jurisdiction is reserved, is, we suppose reasonable. It is one thing to have foreigners residing at a given spot, under the effective control of their own officials, and quite another to have them roaming or living at large throughout the Empire, subject to no local control, but liable only to be sued before a tribunal a hundred miles, it may be, distant. We took occasion, not long ago, to glance at the question of extra-territoriality in connection with the arguments against the Ibert Bill. We maintained then, and we repeat that, while the grievance is wholly sentimental and intangible, its abolition would at present be fraught with very real inconvenience, and excite a dangerous feeling of race antagonism. Once again, revision is, under this head at least, decidedly premature.

We venture to predict that if any one will be at the pains to read this quotation twice, the resultant impression will be one of unbounded astonishment. The argument amounts simply to this: the fact that efforts to improve a system are not successful may be taken as a proof that the system does not need improvement. The absurdity of such a contention is self-evident. One might as well say that the practice of foot-binding in China is proper because the efforts hitherto made by the reigning dynasty to check its prevalence have failed. The only logical inference to be drawn from the circumstance is that the people of China are still too barbarous to appreciate the reforms preached to them by their rulers. Precisely analogous is the position in which the Japanese nation is virtually placed by the refusal of foreign Powers to revise the treaties. Let it be understood that we make no allusion here to the question of tariff. That is a mere bagatelle, entirely unconnected with the opening

of the country. We allude to those clauses of the treaties which deprive Japan of jurisdiction over foreign residents, and which have further been falsely construed as conferring exemption from any obligation to observe Japanese laws or regulations. These clauses were devised wholly with reference to a state of partial intercourse. The journal from which we quote, itself admits unequivocally that the Japanese Government would not be justified in throwing open the country so long as extra-territorial jurisdiction is observed, since "to have foreigners residing at a given spot, under the effective control of their own officials, is one thing, and to have them roaming or living at large throughout the Empire, subject to no local control, but liable only to be sued before a tribunal a hundred miles, it may be, distant, is quite another thing." Thus then the position amounts to this: the Japanese, declaring that the day is long past when any barrier of prejudice or tradition existed between them and the outer world, earnestly seek for a revision of treaties which were confessedly framed to suit a state of semi-isolation, and which, so long as they continue unrevised, necessarily perpetuate that state; the Foreign Powers reply that the treaties are very well "adapted to the requirements of the situation;" that the delay in revising them has not produced any trouble "sufficiently serious to cause real impatience or irritation," and that the desire of revision is "more a matter of sentiment" than anything else. In other words, Foreign Powers tell Japan that in their judgment she is not yet sufficiently civilized to grant strangers the same privileges within her territories as her own subjects enjoy everywhere abroad; and when she objects to this verdict, and points to what she has done as evidence of her title to be trusted, answer is made that such appeals are mere matters of sentiment. The Japanese may well be puzzled. They may well enquire when this access of practicality overtook their foreign friends. Was it in deference to a mere point of sentiment that Western Powers sent their fleets here a quarter of a century ago to batter down the barriers of Japanese isolation, alleging, in justification of this resort to force, the imperative dictates of progress and civilization, which forbid that any nation shall hold itself aloof from the rest of the world? Was it, and is it, in obedience to a mere point of sentiment that Western statesmen and philosophers did then, and do still, denounce, in the most unequivocal terms, the spirit which imposes restrictions upon international intercourse in the Orient, declaring that such a spirit is inconsistent with civilized codes, and that every nation exhibiting it must consent to be called barbarous? If all this be pure sentiment, unworthy of practical recognition, then the Japanese had better begin to educate themselves again. They had better learn that a nation has no business to be jealous of its reputation; that it will only be ridiculed if it gives effective expression to a desire for free and equal intercourse with the rest of the world. They had better learn, in short, that though Western peoples have a mission to force their society upon Eastern, it is for the former alone to determine the limits of such intercourse. No other interpretation can be truly put upon the attitude of the Foreign Powers in this matter of treaty revision. By refusing to modify agreements confessedly adapted to a state of partial intercourse only, they practically avow their resolution to prevent perfect intercourse. The

tables are completely turned. It is Japan now who is liberal and progressive: the exclusiveness and race prejudice are entirely on the side of her treaty friends, who at the same time offer to supply her with new religions and new systems of moral philosophy!

* * *

We have argued this question from a broad standpoint, because, whatever may be said about sentiment and romance, it is quite certain that Englishmen, at all events, will respect and sympathise with Japan's desire to be freed from the stigma of semi-barbarism. As for the statement that no serious inconvenience is caused by the present condition of affairs, it can only be referred to ignorance. It is a most serious inconvenience that by twelve or thirteen of the Treaty Powers no efficient machinery for preserving law and order has been provided in the place of the jurisdiction taken from the Japanese. It is a most serious inconvenience that, with the one honorable exception of American citizens, every foreigner residing in Japan is at liberty to violate Japanese local and municipal regulations at his pleasure. It is a most serious inconvenience that the development of Japanese resources is fatally impeded by a system which cripples enterprise, keeps capital at a distance, and cages up within the narrow limits of tiny settlements the few hundred foreigners who eke out there such scanty pittance as the generosity of the monopolists that environ them permits. It is a most serious inconvenience that the feeling of mutual umbrage and distrust grows daily deeper and sorer, and that the principles of Western civilization and morality are persistently contradicted by the practice of injustice and illiberality. If the people of Japan evinced no disposition or desire to amend such a miserable state of affairs, we should have but little hope for their future.

* * *

Is Japan powerless in this matter? Must she quietly submit to a verdict which condemns her to seclusion and to a state of confessed unfitness for free international intercourse. Most certainly not. If after years of weary endeavour to effect a suitable revision of treaties which became legally subject to revision in 1871, she finds it impossible to obtain from Western Powers terms which every independent country has a right to demand, there is only one course open to her, and that is to renounce the treaties. Under such circumstances she is neither morally nor legally bound to observe them. The endorsement of one of the most renowned of European jurists consults was not needed to establish the soundness of this opinion. They greatly mistake the temper of the times who imagine that any civilized Power could venture to make war upon an Oriental State because the latter declined to accord to aliens residing within its territories privileges greater than, or different from, those enjoyed by its own subjects. If the Mikado's Government were to declare to-morrow that henceforth all distinctions shall cease to exist between foreigners and Japanese in Japan; that both shall enjoy the same rights of trade, travel, and residence, and that every clause of every treaty designed to impose distinctions or restrictions shall be finally abrogated, there is not a Power in Europe that would permit itself to oppose by force the consummation of such a programme. We do not care to contemplate the necessity of this step, not because its consequences suggest any apprehension, but because recourse to it would imply, on the side of the Treaty Powers,

an obdurate indifference to Japan's claims as well as an inconsistency of principle and practice which no one will be readily disposed to admit. But at the same time we are persuaded that a little more resolution and courage on Japan's part would go far to provide an exit from the deadlock.

As time goes by we are apparently destined to discover that China is in very truth the mother of *all* inventions. Until the other day there was one thing, at any rate, which we were disposed to regard as a specimen of genuine American originality, though possibly not altogether free from the echo of an Indian war-whoop. We allude to that condition of almost supernatural exaltation which, according to Mark Twain, often precedes a combat in the United States, and the effect of which is to make the combatants caper around, appling to themselves various pleasant epithets, such as bald-headed snipes of the prairie, double-jawed hyenas from the upper trail, blazing bloody blitzers, snorter, snoozers and so forth. But it would seem that even this device is quite familiar to the Chinese, if we may judge by the following document which we extract from the columns of the *New York Herald*:—

PATRIOTIC LETTER PURPORTING TO BE WRITTEN BY LIU JUNG-FU, CHIEF OF THE BLACK FLAGS, TO ADMIRAL COURBET, COMMANDER-IN-CHIEF OF THE FRENCH FORCES IN TONKIN.

BY A GRADUATE OF NANKING:

It is a well-known fact that when soldiers were engaged in ancient times, there was no confusion in rendering obedience to orders. Now you Frenchmen have been creating disturbances in Annam for the last nine or ten months. Your General has been killed, which is a shame upon your country; the expenditure of your money in this war has been the means of impoverishing your people; similar disasters will be multiplied as you go on, and yet you do not know how to repent of having produced such calamities. How can you answer for the deeds you perform? You are no better than beasts which devour their own parents, and you will but pollute the swords which may yet kill you; but you are entitled to no compassion. I only pity the inhabitants of Pei-ch'i, whom you have so distressed and trampled upon that the mere sighing of the winds and the shrieking of storms make them fancy their enemies are approaching, so that there is scarcely time left for them to sleep. Whose fault, I ask you, is this? You make our people run to and fro in terror and distress. It is the virtue of Life, which is an attribute of High Heaven, that compels me to speak these words to you, for our King, also, loves his people. For the last few months your soldiers have shown signs of lassitude and enervation, and may be likened to animals at their last gasp in a frying-pan; for you stay cooped up in your barracks without any heart to engage us in battle. I hear that by dint of no small brag, you have attempted to frighten China, saying that you are going to attack Canton. You are like mules in your ideas! You may be said to be in abject poverty, and being everywhere ill spoken of, you have become even more ferocious. China is well known among the inhabitants of the Four Continents; why should she fear you? I know well enough that you dare not declare war against China; nevertheless by your brag you inflict injury on others. Nor do I hesitate to assert my belief that all you say amounts to no more than empty threats to frighten people. Now listen to what I say, and open your eyes. Twenty years ago, when the Chinese Emperor T'ung Chih had just ascended the Throne, I, trying to avoid the trouble of rebellion in China, went over to Annam; and the men I had with me were not all my own followers—they were only friends of mine. On my arrival at that time in Annam the people of the two provinces Hsing Hua and Hsuan Kuang were in rebellion against the Annamese King; wherefore the high officials asked me to appeal for volunteers. I undertook the task, I organised an army, and I was instrumental in annihilating the insurgents. For this service I obtained the rank of Assistant General of San Hsien. At that time, also, you Frenchmen were fighting in Nan-ch'i on account of some matters relating to the Chiu Lung Chiang—Nine-Dragon River. Receiving the commands, therefore, of the King of Annam, I led troops to the South, and in three engagements with your soldiers I repeatedly routed them, captured their General, and put numbers of them to the sword. It is needless for me to point out that you are perfectly well aware of these facts. A year after this, when a Treaty had been made with you, I returned to Pei-ch'i, and resumed my peaceful occupations. Do you still dare to brag of the bravery of your troops, of the magnitude of your country, and of the superiority of your military organisation? Do you say that your country is the largest upon earth—that it is the most powerful—that you are the bravest among all nations—that there is no nation in the world that dares to fight with you? In my opinion you appear to be nothing more than dogs. My own followers submit to me because I love justice and mercy. They are nothing but tillers of the soil and merchants; they have in no wise been trained to arms; hence I have been able to rule them by the exercise of kindness and justice. By mutual assistance we have been able to avert calamities from our Kingdom. I have always been victorious against

the armies of France. Though your enmity against me and mine is consequently intense, still I, Liu Jung-fu, am by no means afraid of you. It is indeed laughable that everything you have done in Annam has been under the pretext of "protecting" the Kingdom. Seeing that Annam is in my opinion tributary to China, if ever she wants protection China is there to give it her. What are Annamese affairs to the French? For instance: in a family of children, all their needs, such as protection against cold, heat, pain, or irritation, are ministered to by their parents, who are their natural guardians. If, therefore, any outsider attempts to fondle the children, even though it should be from love of them, he would lay himself open to the suspicion of being a kidnapper. Your doings in Annam are on all-fours with this.

Besides, I know that you French were conquered by the Prussians, that your fortresses were dismantled, and your Emperor captured. You were not only conquered; you had to pay a war-indemnity as well. Some of your colonies have been lost; would it not be more natural for you to try and protect those that are left to you? Open your eyes, then, before you make any attempts against Annam. You are only making yourselves a laughing-stock to the world. I am afraid you are not aware how much you are despised by other nations!

Now, as regards the word "protection." When the Great Emperor of China ordered his generals into Annam, it was for the express purpose of suppressing the rebel hordes. After this had been accomplished, they all returned home. They did not take by force a single grain of rice, nor did they disturb a single stack of corn; dogs and fowls had no fear of them, and the inhabitants lived at their homes in peace. This is what is called "protection." But you Frenchmen, when you saw rebellion in the provinces, simply sat down and looked on; you never sent a single soldier to assist the King, but, on the contrary, you instigated the rebels to disobedience, and thus became the means of creating trouble. There was not the least "protection" given. I pass over what has been done before to what is being done now. If you have the least idea of affording "protection," what do you mean by capturing Annamese cities, killing Annamese mandarins, ransacking the Annamese Treasury, and forcing the Annamese King to sign a Treaty? Moreover, you bring over Black Devils [Turcos] who ravish our women and rob our goods—indeed, there is not a single thing that they do not do. They are more ferocious than poverty-stricken murderers and the fiercest robbers; in fact they are twice as bad. You pretend to be just and merciful, but by your acts you prove yourselves akin to thieves and murderers. The Great Emperor of China is at present highly wroth, and has commanded his generals and armies to take the field in order to war against and punish you French. I, Liu Jung-fu, have received despatches from Hsü, Fu-t'ai of Kuangsi, stating that he has been honoured with an Imperial Decree directing him to tell me to gather together my forces and recapture Hanoi, and in no case to make a retrograde movement. Such are the commands of Heaven. It would then be possible for the officials and people of Annam to live a few years longer. I, therefore, Liu Jung-fu, brave in spirit, have mustered my forces, which are composed of men who have at one time or another received some kindness from me, and who are therefore willing to die for me and for their country.

Now I opine that every creature under Heaven has participated in the bounty of the Great Emperor; hence people from the most distant lands sing praises of his good deeds, and there is not one soul who does not feel happy to submit to Him. The King of Annam is also a lover of justice, and in everything connected with you, Frenchmen, he has acted up to his high principles. When he warred with you, he only did so through force of circumstances; he never had any idea originally of driving you out. But you Frenchmen have nothing but the spirit of injury within you; evils of which others have no conception are propagated by you. You have already cajoled us out of a hundred myriads of money; you have encroached upon six of our best provinces; and you have obtained possession of three or four of our ports. Even in spite of all this, you have been kindly treated by the King of Annam, and the only return you make for his kindness is to encroach upon him still more. But now good fortune has descended on our country; our King has changed his former mind toward you, and is going to sweep you off the face of Annam. In former times he never had any wish to fight you, but now he is determined to do so, and by this means he will be able to pacify the hearts of the people.

But even a piece of rock may one day become alive, and a ferocious tiger have an occasional fit of good humour. Cannot you Frenchmen, then, pause one moment in your evil course, for reflection? If I have not already trespassed too much upon your patience, let me continue my illustrations. Annam is by no means a rich country; it is, moreover, a great distance from France; and from the commencement of your intercourse with us till now you have gained no laurels. Even if you should annex the country the inhabitants will never submit to you in their heart of hearts, but will always look up to their own mandarins for support. Besides, China has already sent to Annam her generals, who are ferocious as bears and savages, and her soldiers, who are as swift of foot as fire. I, Liu Jung-fu, am therefore determined to put on my armour and assist them in doing battle against you. We have rice to last us ten years in the districts west of the mountains. The regions north of the River contain grain enough to feed a million men. The country without and within the frontier contains troops stationed every five li, and as soon as the Chinese armies arrive all the mountains will tremble beneath their footsteps. How unlike are we, [in taking these measures], to you Frenchmen, whose Minister for Foreign Affairs, having scraped together a few troops one day, must ask the Chamber for a credit of money the next! He gets some from the east, he borrows a little from the west; picks up a bit with his right hand, and tries to filch a little more with his left. When these miserable pickings are lumped together they certainly make an imposing show, but what an empty foundation, for is it not exposed? After the engagements of the 28th of the 7th month and the 19th day of the 8th moon, we ceased fighting with you; not because we were afraid of you, but because we knew that negotiations were going on between that Great Emperor and your country about Annam. It was for this reason that we did not continue hostile operations, lest we might prejudice the good wishes of China. You, on the contrary, attributed this to

fear! But, in the first place, I was waiting to see what your next move was to be, so that I might counteract your plans; and in the next place I was awaiting reinforcements. Eventually you will all be gathered into my net, and, when you have all been put to the sword, Annam will once more be at peace.

You Frenchmen still cherish the idea of taking Bacninh, and also desire to capture Sontay. Is not this a vain dream? Everything I have said to you is for the sole benefit of you Frenchmen. Perhaps then you will be enlightened, and return Hanoi and Namdinh to Annam, and having so done embark your troops at once. When you have done this, even though I hold the commands of the Great Emperor to fight, still, having pity on the inhabitants of the country, I will refrain from further hostilities, and write to the Fu-t'ai Hsü to memorialise the Great Emperor to forgive you the sins of the past. After your retreat, compassionating your abject poverty, I will not lay a heavy hand upon you, but effect a Treaty with you instead. I, Liu Jung-fu, will be responsible for this, and will not eat the words that I have spoken. If you still persist in your evil course and repent not of your idle dreams, I, Liu Jung-fu, having received the Imperial commands, will stake my life in battle with you, and I personally will be the advance guard of the Chinese army.

How can you, Frenchmen, being like dogs and sheep, hope to conquer us, who are like tigers and panthers? You seeing us so ferocious, then, it would be better that you should decamp quickly. If you, like a sick patient, listen to my words as to those of a physician, you will surely have no cause for shame hereafter. But if you do not submit, then you will be destroyed like a crumbling mountain. Even if at present the Great Emperor does not cherish the wish to fight against you, still, if you persist, your very dens and caves in Saigon will be wrested from you, nor will a single soldier or trooper of France be suffered to remain in Annam. And when every nation in the world knows this, will you still have the face to remain as a country in Europe? You will suffer the same fate as you did when, under Napoleon the Third, you fought against Prussia. Now I have heard that all the transportations of troops and such like to Annam were the sole idea of one man—the former Minister of Foreign Affairs; it was not the idea of the President of the Republic, nor were the French people at ease when they saw so much money being expended on the expedition. So it seems to me that the whole affair was the private scheme of a single individual, against the wishes of the whole people of France. This was the reason of the retirement from office of the Minister for Foreign Affairs. The present Foreign Minister is yet without any settled ideas of his own, and those of his colleagues should, in view of this, influence him to abandon the policy of his predecessor.

An answer to this letter is requested within three days from its receipt by you. If you remain silent, beware lest you share the same fate as Rivière! Think three times over this!

Written by a Chinese Scholar of determined mind.

We observe with pleasure that arrangements have been made for bringing the Tokiyo Lectures on "Christianity and Humanity" within easier reach of the public. A prospectus has been issued announcing that a part of the remaining stock will be sold at a dollar a copy, provided a sufficient number of orders are received to prevent actual loss. The first and second volumes of the Japanese version are also advertized, and as their retail price is only 15 sen a volume, their circulation among the Japanese ought to be very greatly facilitated.

NOTES.

We have never been able to understand why directories published in Japan should be different from those published everywhere else. If one takes up, for example, a London Directory or a New York Directory, the leading impression it conveys is that no trouble has been spared to make it what it professes to be, namely, a dictionary of names. It is only necessary to open such a volume and turn to the letter of the alphabet under which the information sought naturally falls. But compilers of directories in Japan seem deliberately to set themselves the task of confusing their readers. They begin by dividing the foreign residents of Japan into Settlements, instead of alphabetical classes, and they then proceed to give these divisions a more labyrinthine aspect by mixing them up with a variety of subjects which belong rather to an almanack or lexicon than to a directory. This perplexing arrangement and superfluity of detail reached a maximum in the case of the Japan Gazette Directory for 1883. During the first few weeks that we were obliged to use it, every reference to its mixtum-gatherum of contents

was preceded by a shudder of anticipation, until by patient practice one acquired sufficient dexterity to find what one wanted without bestowing a series of back-handed blessings on the compilers. Misguided enthusiasm may become an intolerable nuisance under certain circumstances. Thus if a policeman, being appealed to for information about the route by a man in a hurry, were to interlard his explanation with descriptions of the social habits of the neighbourhood and the average rainfall in inches, his questioner would immediately set him down as a benevolent but badly-balanced blue-coat, and would be careful to make no subsequent demands on his local knowledge. But in Yokohama people were still more unfortunate, for they had no choice but to come back, time after time, to this garrulous and bewildering indicator. While there were two directories, they exercised some check upon one another's diffuseness; but after the first had been driven out of the field through the laziness of its publishers, the second became so puffed up with the honours of monopoly, that its authors branched out into all sorts of unprecedented directions, and the good people of Yokohama were at last obliged to pay five dollars for the privilege of picking out their six hundred names from a volume nearly as large as *Peter Parley's Annual*. Doubtless the public's first sentiment ought to have been gratitude for the labour bestowed on their behalf, but they probably thought that having paid five dollars, they had a right to criticise the quality of the labour, and their criticism was exceedingly out-spoken. For these reasons we were heartily glad when Meiklejohn & Co. rescued us from a deal of unnecessary toil and torment by publishing a handy little map of Yokohama with an alphabetical list of residents. This was a step in the right direction, and we hoped that it was only a preliminary step. But Meiklejohn & Co. have evidently failed to grasp the situation. They have published a directory for 1884, which, with some trifling exceptions, presents the same faults as the Japan Directory. True the new volume only costs two dollars (less than half of the unconscionable price of its rival); its dimensions are much handier, and it is supplemented by a business diary, which, in itself, is an immense attraction. But in other respects it is pitifully conservative. We have, first, pages of advertisements, calendars, tariffs, and other matter, after which we come to the Yokohama directory, arranged in numerical order; then to the Tokiyo, Hiyogo, &c., directories arranged in a sort of half-hearted alphabetical order, and, finally, to eight separate alphabetical lists of residents at the various open ports and in the interior. Just conceive what this means for a man who seeks the address of a foreigner residing in Japan but possesses no farther knowledge of his whereabouts. He may be obliged, first to turn over the pages of the directory until he comes to the alphabetical lists, and then to search through eight of these lists before he finds what he wants. In this respect, indeed, Meiklejohn's Directory is at a disadvantage compared with its rival, for the latter, among its heterogeneous contents, provides its readers with an alphabetical list of all the foreigners in Japan, whereas Meiklejohn has not taken the trouble to summarize his local lists. It is truly disappointing that of those who busy themselves about the publication of directories in Yokohama, no one seems capable of evolving a really practical

arrangement. What we want is a small handy volume, opening, not with advertisements or tariffs, but with a general alphabetical list of all the foreign residents in Japan, the Japanese officials, and the Japanese merchants at the open ports. After this should come separate numerical lists for the various settlements, and then tariffs, exchange tables, postal rates, and so forth. A judicious colouring of the edges would add much to the ease of using the volume, and save one from finding oneself engaged in a struggle with signal codes or catalogues of Tokugawa Shoguns when the object of search is a ship-chandler in Hiyogo or a publican in Yokohama. Meiklejohn's directory is full of valuable information, but it wants re-arrangement. We cannot hope, however, for anything better during 1884, so in the meanwhile we congratulate the public on being enabled to get something like what they want without having to pay a monopoly price for it.

THE recent fire at Akasaka seems to have had its origin in a very sad affair. A postman residing at the scene of the conflagration had an aged mother whose one desire was to spend the last days of her life in her native village, and be buried in the cemetery of the temple where the bones of her ancestors had found a resting-place through many generations. Her husband had been one of those who, in the social changes that succeeded the abolition of feudalism, saw himself reduced from comparative opulence to a pittance which came in the form of a yearly pension that died with him. The son's earnings as a postman were small, but he supplemented them by sundry household industries, so that, in the course of two or three years, he managed to amass a sum of fifty yen. This would have sufficed to accomplish his mother's wish, and it was accordingly arranged that she should leave Tokiyo for her native place in the spring. But on the night of the 28th of December, during her son's absence on his rounds, the old lady, cowering over a brazier, saw that a portion of the quilt with which she was covered had caught fire. She sprang up, and thinking she could conquer the flames without assistance, set herself silently to do battle with them. But the struggle was too unequal, and when the neighbours saw the light of the conflagration making its way through the roof, the old woman was past calling out. Before the son came back his mother was dead, and the savings that were to have carried her home had been reduced to ashes with all rest of the his worldly possessions.

In latest obituary notices we read of the death of Charles William Siemens "scientist, engineer and electrician." The deceased died in London, from the effects of a fall, at the end of last month, at the age of sixty-three.

THE Report of Colonel Henderson says that not only is London the best protected city in the world as regards life and property, but it is safeguarded by a smaller force than capitals not half nor a third its size. The authorised strength of the police of the metropolis at the close of 1882 was 25 superintendents, 611 inspectors, 977 sergeants, and 10,086 constables, being a total of 11,699. The augmentations made during the year were six inspectors, 30 sergeants, and 429 constables. This may seem a considerable number, but the impression is altered by the coincident fact that during the year

23,301 houses were built, forming 508 new streets and one square, covering a distance of over 75 miles. The number of houses built and the area they embrace is somewhat less than the total for the two previous years; but, though a temporary diminution may suggest that the builder has moved in advance of the occupier, there are no signs of any probably decrease in the continuous extension of the metropolis. We have only to consider that the number of new houses added on last year to the bulk of London almost equalled the total in the city of Dublin, exclusive of the suburbs and outlying townships, to understand the rate at which this phenomenal city increases its monstrous growth. "Simple drunkenness" decreased from 8,567 in 1881 to 7,042 in 1882. Colonel Henderson adds to this that there was practically no serious alteration in the cases of drunkenness with disorderly conduct. This is what we should have expected. The disorderly drunkard is nineteen times out of twenty a thoroughly demoralised specimen of the habitual drunkard, who whenever he indulges his master vice displays the violent inspiration with which it fires him. But there seems to us a hard nut for the Teetotal Alliance to crack in the decrease of drunkenness from 8,567 cases in 1881 to 7,042 in 1882. This total decrease of 1,525 represents an enormous percentage, and should form the most crushing answer to the fanatics who want us to believe that the people cannot become sober of their own free will and motion, but must be led and driven to sobriety by platform agitation and penal legislation. Felonies increased during last year, and so did the arrests for these offences. There was on the other hand a decrease of burglaries from 470 to 437, but housebreaking, breaking into shops, and the like, increased from 1,392 in 1881 to 1,764 in 1882. Repeated cautions more and more or less bitter experience appear to have little effect upon the careless householder, who not only persists in leaving his door or his window open as a temptation to the prowling thief, but increased the burglar's opportunity from 25,591 cases in 1881 to 26,097 in the year following. The total value of property stolen was £159,288, an increase of £42,102 over 1881, but the value of property recovered was £63,222, so that the loss was only £76,066 in 1882 as against £103,568 in 1881. The mysteries and perils of London remain last for notice. During last year 12,878 children under ten years of age and 3,961 adults were reported to the police as lost or missing; 7,538 children and 860 adults were found by the police. The remainder returned home or were found by their friends—all but 74 adults who committed suicide, and 124 adults and 12 children who have not been traced. Fifty-nine bodies of persons found dead and unknown were photographed. Fatal accidents in the streets increased from 127 to 147, the number of persons injured in the streets from 3,400 to 3,889. The number of stray dogs in the streets continues to decrease; but, all the same, as many as 16,721 of these animals were seized by the police during the year. Of the 18,659 deposits of lost property handed in by drivers and conductors, 10,031 were restored to the owners. Among the recoveries were three bonds for £1,000 each, a plate of silver weighing 1,034 oz., a diamond valued at £5,000, and bank-notes £850. On the hand, other three bank-notes for £50 each and several other valuable deposits remained unclaimed, and were returned to the finders.—*Morning Advertiser*.

News by the American mail with regard to the destruction of Hicks Pacha's army, is very circumstantial. The accounts of the disaster are still a little vague, but the balance of testimony is that when Hicks reached Namua, near the Obeid hills, he detached a considerable portion of his force and sent it forward to demand the surrender of El Obeid. The false prophet, El Mahdi, who was advancing from the south-east, met these troops and invited them to surrender, but they replied by opening fire. Attracted by the firing, General Hicks pushed up with the rest of the army, and the whole force forming square, received the enemy's charge. The victory that day seems to have remained with Hicks Pacha, but whether the battle was renewed the following morning on the same spot, or whether, as *The Times* and *Standard* say, he was enticed into a defile without water, and there annihilated after three days' continued fighting, does not seem to be yet definitely known. According to the intelligence first received, the only man who escaped, of the 10,500 composing the ill-fated army, was either Power or Edmund O'Donovan, the well known correspondent of the *Daily News*, whose imprisonment at Merv, and the six months of regal power he exercised there, created so much excitement a few years ago. It seems probable, however, that this estimate was exaggerated, and that General Hicks, with perhaps some of the nine European officers who accompanied him, succeeded in saving their lives. The names of these officers were:—Colonel Farquhar, Chief of the Staff; Majors Warner, Seckendorf, Evans, and Massey; Captains Heath and Walker; Surgeon-Major Rosenberg, and Captain Herlth, an Austrian, who formerly commanded an Uhlan regiment and was superintendent of drill in Hicks' army. The force originally consisted of 7,000 Egyptian troops, among whom was the First Regiment of Egyptian Infantry, which was formerly under the command of Arabi Pacha. It is said that this regiment regarded the campaign as a sort of punishment and never had any stomach for hard work. Hicks reached Khartoum about the beginning of July, and there awaited reinforcements, so that when he marched out of the city on the 19th of September, his army consisted of 8,600 regular infantry, 1,400 cavalry (of whom 100 were cuirassiers; the remainder Bashi-Bazouks); one battery of Krupp guns; two batteries of mountain guns, and one battery of Nordenfeldts—about 10,500 men of all arms. Khartoum lies at the junction of the White Nile and the Blue Nile, and the original idea seems to have been to maintain communication with the river by establishing a line of fortified posts. For several reasons, however, this plan had to be abandoned, and the army, cut off from its base of operations, had to depend for sixty days on biscuits and whatever it could find *en route*. The heat appears to have been intense, and water was found, for the most part, on the surface in the ground depressions. El Mahdi's force was believed to number about twelve thousand, and the intention was to force a decisive battle with him as soon as possible. Now, however, it is thought that he had with him a much more numerous army, variously estimated at from 25,000 to 300,000. General Hicks' march was a most daring business. Having on his right the impassable Lybian Desert, while his left was constantly exposed to the attacks of

Abyssinian tribes, he travelled more than eleven hundred miles over a difficult and almost unknown country, taking the bank of the Nile for a guide and depending upon native scouts and spies for information. The scene of the battle was two hundred miles from Khartoum, and defeat meant destruction for Hicks' army. It is believed that El Mahdi's victory will so augment his prestige and elate his followers that his advance upon Cairo may be expected. Khartoum is a place of some importance, and has about forty thousand inhabitants. It is about 900 miles from Cairo. The Khedive, on receipt of the disastrous news, ordered the évacuation of all the posts on the White Nile and the concentration of their garrisons in Khartoum, but it is said that the majority of the inhabitants of that city sympathize with the False Prophet and will certainly receive him with open arms after his recent victory. The London journals are unanimous in condemning the idea of withdrawing the troops from Egypt at this juncture. The *Daily Telegraph* thinks that British military prestige alone can arrest the progress of El Mahdi's arms, and *The Times* says: "We cannot believe that Mr. Gladstone will wilfully and blindly persist in weakening the small British force now in Egypt. The broad highway of the Nile Valley is now open to the victorious fanatics. What is there to prevent the garrisons and the populations at the advanced posts from yielding to the temptations of El Mahdi? Mr. Gladstone and his colleagues must understand that England will hold them answerable if, by further errors of judgment, Egypt is allowed to relapse into anarchy, aggravated by the passions of religious fanaticism and the maddening influence of invasion by the barbarism of the interior of Africa." We observe, however, that two days after the above details were published the following telegram was received:—

Cairo, November 25th.

The Governor of Khartoum telegraphs that two chiefs state the report of the defeat of Hicks Pacha is false; that Hicks Pacha is at El Obeid, and that El Mahdi has been killed.

This, taken in conjunction with Reuter's recent announcement that Hicks Pacha is safe, justifies a hope that the reported disaster may not have occurred after all. On the other hand, it is quite possible that the telegram from the Governor of Khartoum may have been sent in the interest of the False Prophet himself.

A FINE tumulus which occupied a conspicuous site in the old churchyard at Taplow, near Maidenhead, has just been opened by members of the Berkshire Archæological Society, and found to contain relics equal in value and archæological interest to any of the Saxon period yet found in England. The digging was carried to a depth of twenty feet, where a quantity of gold fringe was found, followed by the discovery of a male interment. The body had evidently been placed on its back, with the head lying eastward. A circular shield of wood, cased with bronze, of two feet diameter, rested on the lap. On the shield lay two drinking horns, shaped somewhat like the early feudal horn, lipped with gilt silver, the terminals being of gilded silver, elegantly mitred and figured. Two mitre-shaped armlets of ornamental gilt silver were also found on the shield. Some glass vessels were found near, together with a circular tub stamped with a peculiar Pagan design, the horse shoe. The usual warlike weapons lay alongside the dead.

As the gold fringe was found spread in strips about the grave it is pretty clear that it formed a frilling to the corpse. Some shreds of the gold fibre were ten inches in length. Other ornaments have been found, including a brooch buckle, weighing four ounces, and being four inches in length, made of pure gold chastely wrought and neatly jewelled. Two smaller and elegantly-wrought buckles, and some other objects in bronze were found, but nothing has yet been discovered which sufficiently bears the character of a helmet.—*London and China Express*.

A CORRESPONDENT sends us the following curious data, for the accuracy of which, however, he refuses to vouch:—According to a numerical calculation based upon the number of the new year, 1884 will not be a year of calamities. The first half of the year will be more unfortunate than the second, but none of the months are destined to be fraught with untoward events. The most unlucky months are February and September, the most unlucky day in the year September 20th, the most unfortunate hour of the day 8 a.m. The most unpropitious day of each month is the eleventh. Combinations of 2, 9, 11, and 20 are to be avoided, and no important undertakings should be commenced on any of these days. 209 is a number of peculiar ill-omen during the coming year, and buyers of lottery-tickets are advised to steer clear of it. Mercury and Neptune are the two planets which most immediately affect human affairs, and have a sinister influence, while Mars and Jupiter are propitious. This portends misfortune to seafaring people and danger from fire, while the propitious conjunction of Mars and Jupiter should signify an immunity from great wars. Planetary influence will be unusually strong, but the fortunate conjunction of Mars and Jupiter will counteract the sinister bearing of Mercury and Neptune.

THE *Colonies and India* tells of a new substitute for coffee and cocoa. It says that the kola nut, which has claimed attention from time to time as a remarkable stimulant, rivalling the celebrated *coca* leaves as a means of sustaining long periods of fast and severe exertion, now comes forward in a new character. Dr. Neish, of Port Royal, Jamaica, reports that the value of these nuts is enhanced by the fact that citrate of caffeine—a medicine now much employed for the relief of sea-sickness, megrim, and other nervous complaints—can be readily obtained from them, for the reason that they actually contain more caffeine than coffee berries. Another advantage is that in the kola nut the caffeine is in the free or uncombined state. These nuts seem therefore likely to take their place in the market as furnishing a nutritive and stimulant beverage. Besides being rich in the active principle of coffee, and containing also a large proportion of the obromine, the active principle of cacao, these nuts, in addition, contain three times the percentage of starch contained in chocolate; and, moreover, they also contain less fat, so that, in addition to stimulant and nutritive properties, there is the probability that a chocolate prepared from them will more readily agree with delicate stomachs. Mr. D. Morris warmly supports Dr. Neish's suggestion as a very appropriate one. Both the cacao and kola belong to the same natural order, *Sterculiaceæ*, and the habits and characteristics of the two trees are very similar. They both effect low warm situations, and, in view of the probable demand for kola nuts, attention might

very well be given to their cultivation. The tree is already cultivated to a considerable extent in Jamaica, where it is known under the name of byssi, and its nuts seem likely to become quite a valuable product.

THE *Nagasaki Express* of the 29th Dec., says :—The British barque *Gitanilla*, Capt. F. Taylor, a local-owned vessel, which left Shanghai in ballast on the 18th November, bound to this port, and of whose safety doubts were beginning to be entertained, has, we are glad to hear, arrived safely at Kobe, having been prevented from making this port by a long succession of strong head winds and current. She is now on her way here *via* the Inland Sea.—The first Corean-owned trading vessel to visit Japan, the *Ko-koku Maru*, a schooner of 87 tons, arrived here on Tuesday last, from Gensan, with a general cargo, consisting of hides, seaweed, linen, gall-nuts, etc. She is commanded by a Japanese captain, with a crew of thirteen Coreans. It is reported that she left Gensan on the 20th September, which seems almost incredible, unless she has since that time been occupied in collecting her cargo along the coast.

THE telegram which we publish this morning with regard to the course advocated by the press of Paris has an ugly look. It seems as though France were steadily drifting into war with China. A few months ago the prospect of such a conjuncture was regarded by the bulk of the people with extreme disfavour, and the general impression conveyed by the tone of the newspapers was that the Government's existence depended on its ability to avoid a rupture with the Middle Kingdom. But ever since M. Ferry's remarkably outspoken vindication of his policy and the vote of confidence he obtained from the Deputies, the complexion of affairs has completely changed. The Cabinet is left to pursue its way undisturbed, and that way leads directly to war. The President of the Council made it quite plain in his speech of October the 30th that the foreign policy of France under her present administrators is to be conducted in a spirit of speculative adventure, and that the bourne of her endeavours is the acquisition of distant territories which she will bequeath to succeeding generations. The sentiment which dictates this programme is doubtless very respectable from a paternal point of view, but its morality is dubious, and its consequences are not unlikely to be inconvenient. When a great nation, with an immense army and a powerful navy, persuades itself that its immediate mission is to make investments for posterity by planting colonies in the territories of other States, there is always a danger that its views may excite selfish opposition. The limits, too, of such a programme are apt to be developed by circumstances to an extent not originally contemplated. Not long ago the French journals were calling upon the Ministry to negotiate with China on the basis of the Bourée Convention; in other words, to restrict their scheme of occupation in Tonquin to the district lying south of the Red River. Now the same journals are recommending the occupation of Formosa, Hainan, and Chusan, as a guarantee for the expenses of a war, in which, if we may accept the avowals of M. Ferry himself, China fights in defence of the first right of every independent country—the right to determine who shall, and who shall not, have permanent

access to her territories. These three islands, Formosa, Hainan, and Chusan, are places of inestimable importance to the Chinese empire, and their occupation by France, whether as a temporary or a permanent measure, would be a step the Court at Peking could not contemplate without the greatest uneasiness. It would be a step, too, so exactly in accordance with the policy of patriotic extension announced by M. Ferry and pursued in Annam, that were the islands once occupied by France, their evacuation might only be looked for on terms which China could not possibly accept. At all events, it is plain that whatever may be the merits of the Tonquin question, its issue is entirely beyond forecast so long as France remains in her present mood. She means to have colonies, and her appetite, which six months ago, would have been satisfied with the delta of the Red River, is now so keen that Hainan, Formosa, and Chusan seem little more than a mouthful. Apart from the rights and wrongs of the business, the seizure of these islands would probably be the very wisest measure she could adopt. It is plain that campaigning in Tonquin presents immense difficulties, and that China is in a position to offer a very stout resistance there. But the occupation of Formosa, Hainan, and Chusan is a different thing. The French troops would meet with no appreciable opposition in the undertaking, and once established there, they might dictate their own terms. Selfishly speaking, no solution of the deadlock could be more agreeable to foreigners in the East. Permanent French colonies in this part of the world would be so many active factors of civilization and commerce; and for our own part we should like to see not only the whole of Tonquin, but also the three islands in question shown henceforth in the map of the world as French territory. But there are many highly unpleasant contingencies to be contemplated before such a result could be finally attained.

WHEN the English and French, uninvited guests, knocked at the gates of Peking twenty-three years since, ten thousand men were sufficient to enforce an entrance. Now-a-days it would take certainly twice that number to approach the walls of the big city. Western learning has been forced upon the Orient, and the East has learned fairly well, if unwillingly. Taciturn China has now a word or two to say. We read, for instance, in a trustworthy English journal, that the Marquis Tsêng regards hostilities with France as unfortunately probable. He confronts the probability with anxiety, but without fear. "Forty thousand Frenchmen," he says, "would not suffice to beat us." If the French won the first battles the Empire might split into several Governments. But these Governments would be united for the purpose of resistance, and would be as formidable in this combination as if the Empire remained unbroken. The Black Flags in Tonquin now number eleven thousand, and have many reserves on the Upper Red River; and in the case of war breaking out, China, Annam, and Tonquin would make common cause. There is a good deal in all this of speculation, and war carries with it uncertainties which are not in the habit of adapting themselves to the best informed and most diplomatic estimate of probabilities. As to the attitude which the other European Powers would assume in the case of hostilities breaking out between France and China, the Marquis Tsêng, who in prudence might give lessons to many European states-

men, declines to say anything. He contents himself with pointing out that war would do those Powers incalculable damage. With respect to the Tricou despatch, the Marquis charitably assumes that the statement that he was disavowed by the authorities at Peking is due to some misunderstanding. Li Hung-chang has no power to treat on foreign matters, and is not the Marquis's superior. It is natural to suppose that some conversational remarks of his were misunderstood. There are many instances in the history of our relations with China of serious mistakes arising out of the difficulties which the want of a common language of diplomacy, and even of community of ideas between East and West, has occasioned. It is impossible to believe that M. Jules Ferry or M. Tricou would be capable of the gross fraud, sure soon to be detected, which any other interpretation of the incident would impute to them.

ACCORDING to the *New Zealand Herald*, the report of the South British Fire and Marine Insurance Company of New Zealand, presented at the last general meeting, showed that the income, including the balance brought forward from last half-year, was £232,911 16s. 1d.; the general expenditure was £200,835 4s. 6d.; the balance to credit of profit and loss account at the close of the books was £32,076 11s. 7d., from which the directors recommended the payment of a dividend at the rate of 15 per cent. per annum (less interim dividend at 5 per cent. paid April last).

The *Times*, in its weekly telegram from India, says :—There appears to be a possibility, if not a probability, of an outbreak of war between Nepal and Tibet. The quarrel arose thus :—A custom prevails at Lhasa that for the first two months of the year a kind of carnival is held, during which the Ministers retire from the cares of State and make over their duties to the monks of the three great monasteries. In the course of the last carnival the monks of the great Debang Monastery, who number some seven thousand men, and appear to be very disorderly, took advantage of their temporary authority to plunder the Nepalese traders in Lhasa to the extent, it is said, of seventy lakhs. The Nepalese Government demands compensation for its subjects. The two Chinese Ampas or Imperial Residents at Lhasa have attempted to mediate, proposing that one-fourth of the damage occasioned should be made good by the Chinese Government, one-fourth by the Lhasa Government, and one-fourth by the Debang monks, and that the plundered traders should be content to bear the loss of the remaining fourth. Nepal rejected this proposal, and sent an officer to demand full restitution. This officer was seized and detained by the Debang monks. Nepal has now proposed that representatives of both Governments should meet at the frontier and try to come to terms. It is hoped that matters may thus be peacefully arranged. Meanwhile, the Nepalese are strengthening their frontier forts.

WHILE General Hicks was leading his little army into the desert to fight an enemy of whose strength he was quite uncertain, public interest was but little excited about his progress, but now that his name is associated with a disaster second only to the massacre of the Cabul expeditionary force, everybody is asking who he was and by what chain of incidents he came to command

an Egyptian force in the Soudan. His story, however, seems to have been a very simple one. His first experience in the field was gained fighting against the Sepoys, in the service of the East India company, and he afterwards served in Abyssina with distinction. In character he is said to have resembled Chinese Gordon, and when he offered his sword to the Khedive for the subjugation of the Soudan, no one supposed that he was actuated by any sentiment of reckless ambition. But the Egyptian campaign could scarcely be called complete so long as the Moslems fighting for the False Prophet were daily growing stronger and threatening a descent even upon Cairo, and General Hicks is believed to have thought that an enterprise of this sort fell as much in the way of his duty as anything else. The first news of his terrible fate elicited the fact that more than one critic had prophesied disaster for him, and we shall doubtless hear a good deal of his recklessness in separating himself from his base of supplies, and of the hopelessness of leading a half-disciplined force into difficulties that would have taxed the endurance of hardened veterans. But Ismail Pacha's explanation of the catastrophe is probably the true one. "Hicks could never have succeeded," said the ex-Khedive, "with such material as he commanded. Egyptian soldiers, more than any other soldiers, need a flag, military music, and all the *éclat* of war. Without these they cannot—will not fight." General Hicks was not the sort of man to deceive himself about the stuff his troops were made of, but neither was he the man to turn back because success looked difficult. It may turn out that instead of being annihilated himself, he has annihilated El Mahdi, but our latest telegram with regard to the fortification of Suakin looks ominous. Suakin, the only important Egyptian harbour on the Red Sea, is the point from which the Soudan is most easily reached. A camel journey of twenty days takes the traveller to Berber, whence the journey to Khartoum is made by river in small steamers. A railway from Suakin to Berber was formerly projected, but afterwards abandoned as its paying prospects were very doubtful. Had General Hicks' campaign succeeded, there would have been no reason to fortify Suakin at present, but if the victory was with the False Prophet, the rebel tribes would soon have found their way to the neighbourhood of the town. It is said that on receiving the news of the disaster, Sir Evelyn Baring advised the Egyptian Government to abandon the Soudan, and establish a strong frontier line from Khartoum to Suakin, but it seems scarcely likely that England will be content with defensive measures. Any successes which the False Prophet gains in the Soudan will merely be regarded by him as preliminaries to more extensive operations, and Great Britain has very solid reasons for desiring to see the Mussulman authority reasserted before the revolt spreads any farther. Turkey, too, is closely concerned, and we shall not be surprised to learn that the task of restoring order will ultimately be undertaken by her with English assistance. At any rate, it is plain that the fates have conspired against Mr. Gladstone. The removal of the English forces from Egypt must now be postponed *sine die*. The story of El Mahdi, the False Prophet, is thus told by the *New York Herald* :—

Mohammed Ahmed, the False Prophet of the Soudan, was born at Dongala, memorable as the place where Ismail Pacha Saddyke, the Monfettish and late

Finance Minister of the ex-Khedive, was put in a sack along with some stones, and, the sack being sewed up, was thrown into the Nile. The Mahdi's father was named Mohammed, and was a carpenter. Young Ahmed followed his father's calling and became very skilful in the art of boat building. When his father died he went to Senaar—to the south-east of Khartoum—where he continued the carpenter business, but where he was so lucky, or perhaps unlucky, as to cut off the ends of the fingers of his left hand. This mishap, however, proved to be the making of young Ahmed, for he now fulfilled all the conditions of the prophecy alluded to elsewhere.

Ahmed knew how to read and write and possessed a certain eloquence. He gave up carpentering and took to reading the Koran in the public places and haranguing the crowd. He then travelled all about the country, making "stump speeches" on religious subjects. The people used to listen to him at first through curiosity. Soon he made himself respected, and in a few years he acquired an enormous ascendancy over his ignorant followers, who had never before heard such an orator. People used to come on foot hundreds of miles to see him. The Sheikh travelled about like a second Peter the Hermit; but, unlike Peter, he gave himself up to personal ambition. There was a constant rivalry among his hearers as to who could lay before Sheikh Ahmed the richest offering. The prudent Sheikh stored up these presents, and having become wealthy he set himself up as a prophet. The motto which he adopted was, "The whole world shall follow me and obey me." Endowed with no ordinary imagination, he uttered certain predictions to which his credulous but already submissive disciples attached implicit faith. According to one of his prophecies, on November 12, the first day of the new Mussulman century—1,300 after the Hegira—he himself was to be proclaimed, at Khartoum, Prophet and Ruler of the Soudan. Having convinced his followers that he was in direct communication with the Almighty, he used, while addressing them, suddenly to become silent, and, closing his eyes, to remain motionless for several minutes. He carried this trick to such perfection that not the slightest movement was perceptible while he simulated coma, after which he appeared to recover from a state of profound lethargy, cast wondering glances around him, and exclaimed, with an air of conviction:—"I come from Paradise, where I have been with Allah and His Prophet. How I would like to tell you of all I saw and heard! but you would not be able to understand it." His followers became so devoted to him that at a signal from him they were ready to sacrifice their lives.

Five years ago he withdrew himself from his followers and became a hermit, thus seeking to involve his very existence in mystery. This proceeding at once increased his fame. From Zaouia to Zaouia of the Senoussia, and consequently from Mecca to Morocco, the attention of the faithful was assiduously called to the following prophecy :—

"On the 1st of the month of Moharrem, in the year 1300 (November 12, 1882), will appear El Mahdi or Messiah. He will be exactly forty years of age, and of noble bearing. One arm will be longer than the other. His father's name will be Mohammed and his mother's name Fatima, and he will be hidden for a time prior to his manifestation."

Ultimately El Mahdi came forth from his retirement and stationed himself on the Island of Abba in the White Nile. He absolved his followers from all allegiance to earthly potentates and announced himself as the successor of Mohammed. This involved their refusal to pay tribute.

The first active rebellion broke out on the 12th of August, 1881, at the Island of Abba. On this occasion, thanks to the incredible stupidity of the officer in command, the Egyptian troops who were sent to arrest the Mahdi not only failed in their object, but lost 120 men. After this the Mahdi left his home on the Island of Abba and crossed the White Nile into Kordofan. During the next ten months repeated attempts were made to arrest the False Prophet, but, owing to bad management and the employment of insufficient forces, always with the same result—complete failure. During this time the Egyptians lost at one place or another 1,200 men and an equal number of rifles. Finding that the insurrection was spreading rapidly, it was at length judged necessary to make a serious effort. Accordingly, in the beginning of June, 1882, Yusef Pacha left Fashoda at the head of 4,400 men, with four mountain guns and a rocket, for Ghebel Gadir, where Mohammed Achmet was then residing. On the way he met the rebels, and, thanks to his neglect of the most elementary rules of warfare, he was completely defeated, with the loss of 3,600 men and all his guns. Of the 800 men who escaped at the time the greater part were subsequently captured and sold into slavery. City after city capitulated to the False Prophet, the greatest of his successes being the capture of El Obeid.

When El Mahdi, the False Prophet, appeared in the Soudan, announcing his divine mission after the fashion of Mohammed, travellers in that country were a unit in expressing the belief that the Egyptian campaign of Sir Garnet Wolseley would be child's play compared with the religious uprising in the Valley of the White Nile. The reasons for this belief were very simple, and they have been justified by the overwhelming defeat of Hicks Pacha. The disaffection and restlessness among the Arab tribes date back many years, and may be said to have begun

when Khartoum was founded by Mohammed Ali as a military post; and, being at the confluence of the Blue and White Niles, was a strategic point commanding the water courses to Central Africa. This city, the largest in Northern Central Africa, contains a mixed population of 40,000, embracing as godless a set of ruffians of all shades of color, moral and physical, as were ever brought together.

Khartoum became not only the capital of the slave trade, with all its numberless horrors, but was also the penal colony where murderers, highwaymen, and every species of scoundrel—Turkish, Frank, Egyptian, Arab and native—were permitted to roam at will, and often obtain high place in the government employ. Khartoum became the seat of central authority of all that region between Berber and the Equatorial lakes, with indefinite boundaries on the west and south. This whole tract was divided into nine provinces, with a separate governor for each province, these various territorial divisions having the supreme head in the Governor-General at Khartoum, a post second only in authority and emoluments to that of the Khedive himself. It is this official, represented in the various persons holding the place, who is more to blame for the present state of affairs in the Soudan than can be assigned to any source.

THE *New York Herald* says :—The difficulties in China are likely to give rise to many cases involving personal and property rights of American citizens in that country. Jurisdiction of such cases is now vested in the American Minister, consuls and commercial agents there. These officers are clothed with extraordinary judicial powers to determine issues touching not only the property, but also the life and liberty of citizens of the United States. They are appointed to their diplomatic and consular positions without any reference to their qualifications for judicial duties, and, as a rule, they are utterly incompetent and unfit to perform such duties. It is well known that this mongrel system of administering law has been fruitful of flagrant abuses, which are now likely to increase in consequence of the pending war. Efforts were made last winter by the State Department and in Congress to remedy this matter. A Bill was favourably reported from the Committee on Foreign Relations by Senator Pendleton, embodying a reasonably complete code of civil and criminal law for the government of citizens of the United States in Eastern countries. It specified crimes and fixed punishments. It defined civil rights and prescribed remedies. It provided for the establishment of Courts and the appointment of judges. It should have been passed by Congress, but was not. The subject has now assumed a new importance, and will demand the earnest attention of Congress as soon as that body meets.

THE *New York Maritime Register*, referring to a vessel now making a voyage to this country, from that port, says :—The ship *Kennebec* (new, 2,126 tons), Captain Foard, sailed from Bath, Me., October 20th, discharged 550 tons ballast and loaded 78,700 cases oil and 100 tons merchandise and sailed for Japan 7 a.m. November 17th, 23 days from the time she left Bath. The above number of days include a detention of 4 (four) days consumed in moving ship from berth to berth and waiting for lighters.

THE *London Globe* says :—"Taking into consideration the anti-Chinese and anti-English feeling in Paris, Marquis Tseng thinks it better that his family should remain at Folkestone during the coming winter. The same class of French journals that denounced their Royal visitor as a 'Prussian spy,' now describe the Marquis as an 'English agent.' Both appellations are odious, and the result might easily be the same."

A NEW RAILWAY.

THE scheme formulated by the Minister of Finance in his recently issued Notification No. 47 is, in its main features, similar to the methods generally pursued in France with a corresponding object. That object, in the present case, is to connect Tokiyo and Saikiyo (Kiyoto) by a line of railway setting out from Takasaki and connecting, at Ogaki, with the road now in course of construction thither from Sekigahara. It will be remembered that the Tokiyo and Takasaki line is already open to within five miles of the latter place, and if the Finance Minister's plan matures, the last length of that line would probably be completed simultaneously with the commencement of the first section of the Takasaki and Ogaki road. It is scarcely necessary to discuss the prospects of this project as an industrial undertaking. Everyone is agreed that Japan stands in urgent need of facilities for internal transport, and a line of rails connecting the Eastern and Western Capitals constitutes the natural backbone of her railroad system. Such a line may, therefore, be regarded as a necessity. What remains to be considered is the method of obtaining funds for its construction.

The Finance Minister's plan is to sell interest-bearing bonds and apply the proceeds to defray the cost of construction. The rate of interest is to be seven per cent.; the quantities offered for sale, from time to time, are to be regulated by the requirements of the work; the upset price of the bonds is to be determined by the Minister, and there is to be no restriction with regard to the nationality of the purchaser.

At first sight two objections to this scheme forcibly present themselves. One is that, having regard to the rates of interest now ruling in Japan, the people's money cannot profitably be sunk in railways. The Government may not hope to borrow on better terms than those commanded by its scrip at present. Owing to currency contraction and the consequent stagnation of industry during the past two years, capital has been abnormally attracted towards public securities, the result being that loan-bonds which commanded from eleven to twelve per cent. interest in 1881, now produce little more than nine per cent. With the revival of industry—a revival which the construction of railways, amongst other things, cannot fail to stimulate—opportunities to use capital productively will increase, and speculation will be diverted from Government scrip until the interest on that class of investment reaches the higher level which will then rule generally. We may observe here that economical science does not wholly justify the favorable deductions which some Japanese financiers seem disposed to draw from reduced rates of interest. The rate of interest depends on the supply of capital in all forms suited to productive

uses, compared with the opportunity to use capital productively. In a country where industry is depressed owing to such a cause as currency contraction, there may be a low rate of interest with a small supply of capital; while, on the other hand, there may be a high rate of interest with a large supply of capital in a country where natural resources are abundant and the spirit of enterprise is continually incited by success. Simultaneously with the reawakening of industry and commerce in Japan, we look to see the demand for capital increase and the price paid for its use augment correspondingly. Thus, though seven-per-cent. railway bonds could probably be issued now at 75 (since ten-per-cent. pension bonds are quoted at 107), their price in the near future might, and probably would, fall to 70 or even 65. On the whole, it seems reasonable to estimate that the Government will have to pay at least ten per cent. on the proposed railway scrip, whereas money for the same purpose could undoubtedly be obtained in Europe at 8 per cent. What, then, are the reasons which induce the Minister of Finance to enter the dearer market in preference to the cheaper? Apparently they are two. First, the reluctance Japan feels, for political reasons, to incur any new obligations abroad. A foreign loan would undoubtedly be very unpopular at present. The spirit of independence, naturally strong among the Japanese, has been developed to almost romantic proportions by the arbitrary opposition its just aspirations encounter. We need not stop to consider how far this sentiment is morbid or unwarranted. It is enough to note its existence and the influence it necessarily exercises upon the councils of the Government. The second reason probably is that, by borrowing at home, there is a hope of obtaining the money in quantities determined by the needs of the moment. Assuming that the construction of the line is carried on simultaneously from both ends at a total rate of 40 miles a year and a cost of sixty thousand *yen* per mile, a simple calculation will show that by borrowing 2,400,000 *yen* per annum at ten per cent., the aggregate payments on account of interest at the end of 5 years would be 3,600,000 *yen*, and the aggregate sums borrowed twelve millions; whereas, if twelve millions were obtained at once in Europe, at 8 per cent., the aggregate payments on account of interest would amount, at the end of five years, to 4,800,000 *yen*. This difference is sufficiently important to dispose, in some degree, of the question of interest as between the home and foreign markets. It may fairly be hoped, also, that before five years have elapsed, considerable portions of the line will be earning enough to pay the interest on the cost of construction. We have seen that the Tokiyo-Kumagaye road is already netting from ten to twelve per cent., and that its takings are still capable of very large development. In

fact, should the Government be able to devote the earnings of the various lines throughout the country to pay the principal and interest of the money raised for their construction, we have little doubt that before many years Japan might easily be provided with a very tolerable net-work of railways.

The second consideration which suggests itself in connection with the scheme, is that inconvenience may result from the fixing of so much floating capital. This is a question which necessarily takes us into the region of speculation. How much capital may be available for commercial and industrial purposes in Japan we have no means of ascertaining. It is believed by Japanese financiers, whose sources of information are exceptionally good, that gold and silver to the value of fully fifty million dollars are lying idle in godowns or otherwise hoarded throughout the country, and that the owners of this virtually buried wealth will be tempted by the opportunity of investing it in Government scrip at a good rate of interest. If this result be attained—and certainly the Government's greatly improved credit must count for something in the prospect—the country will be a direct gainer by the utilizing of so much unemployed capital. But if, on the other hand, capital already seeking investment is diverted, in any considerable quantities, toward railway scrip, the revival of trade may be deferred by the consequent scarcity of the money supply. This country has many natural advantages, and what it chiefly needs is capital to furnish all the tools and materials which labour can profitably employ. The people have already suffered sorely by the cramping of industry and the fall in the price of produce consequent upon currency restriction. A foreign loan for the construction of railways and other public works would probably impart to enterprise and labour the stimulus of which they stand in urgent need, while a further diminution of the nation's floating capital seems a financial measure of very doubtful wisdom.

THE NEW PUBLIC LOAN-BONDS.

ON December the 28th there was issued, over the signatures of the First Minister of State and the Minister of Finance, a Notification (No. 48) providing for the issue of public loan-bonds in exchange for *Kinsatsu*. In order to appreciate the force and intention of this measure, a brief retrospect of the history of Japanese fiat paper is necessary.

When *Kinsatsu* were first issued, in 1868, the credit of the Government, owing to causes which need not be recapitulated here, did not stand very high with the people. Little assurance was felt that official "promises to pay" in thirteen years—for that was the period originally fixed for redemption—would be redeemed at the date of their

maturity, 1881. These promissory notes therefore fell at once to a discount of nearly sixty per cent., and nothing but an exceptional exercise of arbitrary power forced them into circulation at all. Twelve months later, their volume was doubled, and this additional issue was accompanied by an announcement that the date of maturity should be anticipated by eight years. It was proclaimed, in short, that the notes should either be exchanged for specie in 1872, or that interest at the rate of six per cent. should be paid on the whole amount in circulation. Thenceforward the value of the fiat paper steadily appreciated—we again omit, as superfluous to our present purpose, an analysis of the agencies that combined to produce this result—until *Kinsatsu* circulated at par with silver. But when 1872 came, the Government evaded its engagement. Instead of adopting either of the promised alternatives, it invited the people to buy bonds redeemable within fifteen years, and bearing, in the meanwhile, interest at the rate of six per cent. in specie. The holders of *Kinsatsu* would scarcely have accepted this compromise without remonstrance, had they not already become quite reconciled to the fiduciary currency. Five years before, when the volume of *Kinsatsu* in circulation was but twenty-five millions, one hundred *yen* in paper represented only forty *yen* in silver. Now, with a volume of paper four times as large, the superiority of silver was practically unrecognized. But if the people gave themselves little concern about the Government's inability to pursue its promised programme, they were scarcely less indifferent to the new bonds. These found so few purchasers that in nine years scarcely five millions were disposed of. The reason of the unpopularity of these securities was not far to seek. They were in no respect a definite instrument for the resumption of specie payments. Such an instrument must be an actual tool of exchange; a cheque payable to bearer and transferable without difficulty. The bonds were by no means of this nature. The original holder of each was registered, and to him alone were the interest and principal payable. In a word, to purchase these bonds, a man must have been prepared to take the risk of losing the use of his capital for fifteen years, receiving in the interim, interest considerably below the market rate. It is true that, shortly afterwards, the Satsuma Rebellion, by recalling the circumstances under which fiat notes first made their appearance and attained their maximum depreciation, once more established a wide interval between the purchasing powers of *Kinsatsu* and silver. The specie bonds then presented some very attractive features to speculators, but to speculators only. They had no appreciable effect, nor could have any, on the mass of the note-holders. They did not in any degree help to restore *Kinsatsu* to their place as real money, nor did they even amount to a distinct acknow-

ledgement of the Government's liability to redeem its pledges. What followed is too familiar to need much comment. Industry and enterprise were crippled by a medium of exchange so unstable that it defied all calculation, while Japanese financiers confined themselves to speculative attempts to bolster up the credit of their notes—attempts which encouraged gambling and tended ultimately to intensify the mischief. Fortunately for the country this fatal policy was not pursued. The Finance Department, under new management, adopted a new programme, the three principal features of which were—to refrain from all speculative operations of exchange; to reduce the bulk of the *Kinsatsu* in circulation; and to accumulate a reserve in the Treasury for the ultimate resumption of specie payments. These measures, steadily pursued, have produced marked consequences. In two years the fiduciary currency has risen from a discount of 27 until it now circulates at a value only 9 per cent. less than that of silver. True, there are critics who pretend to believe that this is all unreal, referring it to some occult official devices for "bearing" specie. But the vagaries of such writers have no longer, we presume, any interest for rational men. Everything, even to a general readjustment of prices, goes to show that the appreciation of *Kinsatsu* is real, and the Notification referred to at the commencement of this article indicates the first definite step towards the resumption of specie payments.

We venture to refer here to some words of our own published in these columns eighteen months ago. We wrote:—"It seems to us that the course to be pursued is very clear. Return to specie payments must be effected by a series of redemptions. The first step would be the issue of interest-bearing bonds in exchange for *Kinsatsu* to the amount of, say, thirty million *yen*. These should be redeemable with silver in thirty years (the quantities, periods, &c., here mentioned are, of course, arbitrary) by annual sums of two million *yen*. The bonds might be slightly different in form from the notes at present in use, but they should be manufactured with a careful regard to convenience of circulation. Those to be liquidated at par would be declared by lot once, twice, or even three times per annum, the successful numbers being payable in silver on demand." The principal features of this suggestion are exactly reproduced in the scheme now announced by the Minister of Finance. The "Redemption Bonds" are to bear an annual interest of six per cent. payable in specie; they are not to be registered or to carry the name of their holder, but to be transferable like ordinary bank-notes; they are to be of three denominations, one hundred, five hundred, and a thousand, *yen*; they are to circulate for five years unredeemed, and then to be redeemed by yearly draw-

ings extending over a period of thirty years.

The immediate effects of this measure will probably be almost imperceptible. As an investment, the Redemption Bonds offer no note-worthy attractions. Among foreigners they are not at all likely to find a market at the present rate of exchange, nor is the interest offered sufficient to tempt Japanese capitalists. What may be expected, however, is that they will to some extent take the place of *Kinsatsu* of large denominations, since they will be equally convenient as instruments of exchange and more valuable on account of the interest they bear.

But as a means of steadying the currency they cannot fail to perform a useful function. Should circumstances tend to bring about another depreciation of fiat notes, the Redemption Bonds will immediately be preferred as a circulating medium in all the larger transactions of trade. Further, their issue marks the Government's first practical acknowledgment of its liabilities, and at the same time establishes a tangible relation between *Kinsatsu* and metallic money. These are points of great importance. Disappointment will probably be expressed in some quarters that a more radical measure is not adopted, but nothing is more to be deprecated in this business than precipitancy. The contraction of the currency has already been carried on with dangerous rapidity, and for the present the efforts of the Finance Minister may wisely be limited to improving its stability. What is wanted is, not to withdraw *Kinsatsu* from circulation, but to make them exchangeable for, and therefore of equal value and stability with, specie.

TREATY REVISION.

THE Resolutions passed, on November the 3rd, at a general meeting of the non-official Japanese now residing in England and Scotland are, we believe, a fair expression of the opinions entertained by the educated classes in this country with regard to treaty revision. Years have gone by since this subject passed into a by-word, so much had been written and said about it, and so hopeless did the prospect seem of any settlement being arrived at. Many attempts have been made to show that the delay was not less attributable to Japanese unreadiness and mismanagement, than to foreign obstructiveness, but such arguments are as deficient in honesty as the policy they seek to extenuate is wanting in justice. The plain facts are that a combination of powerful States forcibly compelled Japan, eighteen years ago, to revise her tariff on a basis which should be again subject to revision in 1871, and that the same combination of States has ever since persisted in founding upon that original act of compulsion a claim to withhold from this country the right to manage her own fiscal affairs. We

are very well aware that there are some lovers of euphemisms who object to admit that the SHOGUN'S Government was subjected to any compulsion in these arrangements, and who would have the world believe that the concessions obtained by the Foreign Representatives in 1865 were quite voluntary, so far as the Japanese were concerned. Such scruples are intelligible enough, but they cannot be reconciled with history. European Governments, whether reluctant to submit their dealings with Japan to public scrutiny, or for some other reasons of high policy, have been for many years careful to depart, in her case, from the ordinary rule which prescribes the occasional publication of diplomatic correspondence. This secretive system had not, however, been inaugurated in 1866, and we are thus enabled to quote the words of Sir HARRY PARKES himself, who, speaking on behalf of his colleagues and describing the steps they had taken with a view to submitting their proposals to the Japanese, wrote thus to Earl RUSSELL:—"On considering the manner in which these proposals should be laid before the Government of the TYCOON, we were of opinion that our reference (to him) could be made more effectually by ourselves, provided we could proceed to the Bay of Osaka and be accompanied by an imposing naval force." It may, perhaps, be said that the object of the Foreign Representatives in causing themselves to be escorted by eight ships of war was simply to furnish employment to the English, French, and Dutch Fleets, and that nothing was farther from their thoughts than to intimidate the Japanese. But which of us is there who, if men came with blunderbusses in their hands and asked him to sign an agreement embodying conditions known to be distasteful to him, would agree that he was under no duress because his life was not verbally threatened? When the Doyen of the Foreign Representatives addressed to the Japanese Ministers at Osaka a despatch "demanding a prompt and satisfactory settlement of certain questions of grave importance arising out of the Convention of October 22nd, 1864," and when he concluded his despatch by calling attention to the fact that he was "accompanied by the Commander-in-Chief of all the naval forces of Her Britannic Majesty in China and Japan," and that his letter was "dated from that officers's flagship," the Japanese must have been singularly sanguine or curiously naïve if they mistook the alternative implied by his attitude in the event of their refusal to satisfy his demands.

The Convention here alluded to was that concluded after the Shimonoseki expedition. Amongst other things, it stipulated for the payment by the SHOGUN of an indemnity of three million dollars. Her Majesty's Government subsequently decided that "the general interests of trade and of

consulted by an arrangement which should absolve the Government of the TYCOON from two-thirds of the whole indemnity, provided, first that the port of Hiogo and the city of Osaka should be opened for the trade and residence of the subjects of the Treaty Powers on the 1st of January, 1866; secondly, that the sanction of the Mikado be formally given to the treaties already concluded by the TYCOON with the Treaty Powers; and thirdly, that the duties on imports into Japan be generally reduced to 5 per cent., and in no case exceed 10 per cent."¹ These were the three conditions to obtain which the Foreign Representatives visited Osaka, in 1865, with a combined fleet of English, French, and Dutch ships. They obtained two of them, and Sir HARRY PARKES, reporting this result to Earl RUSSELL wrote:—"I beg your Lordship to observe that the sanction to the Treaties and the revision of the Tariff, these being two of the three conditions for which Her Majesty's Government were willing to relinquish two-thirds of the indemnity due under the Convention of October 22nd, 1864, have been obtained." The third condition, the immediate opening of Hiogo and Osaka, was considered impossible in the then condition of affairs, and we now know that it would probably have led to serious trouble. The Foreign Representatives were therefore compelled to be satisfied with obtaining two of the concessions for which two-thirds of the indemnity was to have been remitted. But they did not remit a dollar.

See, then, the sequence of events. In 1864, "the hostile acts of a Japanese Daimiyo assumed such formidable proportions as to make it difficult for the TYCOON faithfully to observe the treaties."² Four of the Treaty Powers accordingly undertook "the duty of chastising this rebellious Daimiyo." As guerdon for their services they then imposed on the TAIKUN a fine of three million dollars. Subsequently, they announced their willingness to remit two-thirds of the fine if the Japanese Government would make them three concessions. The Japanese Government hesitated about the concessions, being, in fact, unable to guarantee them, but went on paying the instalments of the indemnity. The Treaty Powers sent eight men-of-war to Osaka to remind the TAIKUN that there was an alternative to the payment of the indemnity. The TAIKUN then accepted and fulfilled two of the three alternative conditions. Finally—the indemnity was exacted to the uttermost farthing, and one of the concessions obtained by the Foreign Representatives with their combined fleets was thenceforth regarded as conferring on the Treaty Powers a title to withhold from Japan in perpetuity the right of regulating her own tariff.

It is thus that every Japanese reads, and every fair-minded foreigner must also read,

the story of these events. They do not furnish any valid reason to impeach the motives or principles of the persons and powers chiefly concerned in them. That is altogether a different question. Humanity is so constituted that all creeds must adapt themselves to circumstances. But it would surprise us much to be told that the policy of duress and dictation which was considered applicable to Japan's semi-anarchic state in 1865, is to form the basis of her treatment by Western nations in 1883.

Those who have taken any trouble to watch the course of popular feeling in Japan during the past five years will readily endorse the statement embodied in the Langham Hotel Resolutions that the delay in the revision of the treaties is "endangering the continuance of the present good feeling towards foreigners." It has been frequently pointed out in these columns that the position of the present Government with regard to its foreign relations bears a striking resemblance to the some-time position of the SHOGUN'S Government. Twenty years ago, the most powerful weapon placed in the hands of the revolutionary party was the seemingly craven attitude of the Yedo Court towards Western nations; an attitude which, according to the creed of those days, was inconsistent with every patriotic dictate. At present, the Opposition has nothing stronger to urge against the Government than its apparent inability to obtain from Western Powers a practical recognition of Japan's independence. The people have either to believe that their rulers are singularly incompetent; or that rights exercised by every other free country in the universe are arbitrarily denied to Japan by civilized Europe. The vernacular press is gradually teaching its readers to accept the latter version of the dead-lock, and their disposition towards foreigners is not improved by the lesson; while at the same time, the Government's difficulty in pursuing a patient and conciliatory policy is becoming daily more formidable. Even the Japanese residing in Great Britain call for an "exercise of greater energy," implying that they are still disposed to blame their own Government's inability rather than foreign injustice. They do not hesitate, too, to indicate the route they would have pursued should it be found impossible to bring the negotiations to a speedy and satisfactory conclusion. "Proper steps must be taken to put an end to those portions of the existing Treaties which are detrimental to our national interests." In other words, Japan must repudiate the treaties, or such parts of them as impair her independent rights. This is an alternative from which the Government may well shrink until it has exhausted every conceivable expedient to arrive at an amicable understanding. The difficulties it has to contend with are great, but not invincible. Foremost among them is that coalition of Treaty Powers by which European Governments set so much store

¹ Earl Russell to Sir F. Bruce, July 12th, 1865.

² Convention of October 22nd, 1864.

in former days. Not that there is any acknowledged disposition to overawe Japan by the irresistible strength of the coalition, but that it is almost hopeless for her to obtain an unanimous recognition of her rights from a dozen States each of which is as solicitous to consult the other's wishes as it is indifferent to this country's claims. That indifference, however, is certainly not attributable to a desire, or even a willingness, to be arbitrary or unjust. Even in England, which Japan has learned to regard as the most obdurate of her treaty friends, and which, having incomparably the largest interests at stake, is compelled to be the most chary of concession, there exists a spirit of fairness and liberality ready at any moment to find active expression if only it be properly appealed to. We believe that the chief cause of Japan's inability to obtain a recognition of her just claims is the ignorance which prevails among Europeans about everything that concerns her, and for this reason public expressions of opinion, such as that made at the Langham Hotel, cannot fail to produce a useful effect.

THE FRENCH ARMY.

Not long ago the condition of the French army was journalistically described with the aid of statistics which took the world somewhat by surprise, inasmuch as they showed that the numerical measure of France's military strength was no less than three and a half millions of men. Such a stupendous figure has no parallel since the days of XERXES, and, other things being tolerably equal, it was plain that the supremacy wrested from France twelve years ago must gravitate to her again by sheer force of numbers. More careful analysis, however, goes to show that these statistics must not be received without reserve. Captain NORMAN, writing in the last number of the *Nineteenth Century*, submits them to tests which altogether change the character of the impressions they convey. By the new system of military organization adopted by France in 1872, the country was divided into nineteen military districts, each having a population of about two millions, and each being again subdivided into eight sections, so that the total number of territorial divisions was 144. Throughout these divisions the liability to military service was to be absolutely universal for every male so soon as he arrived at the age of twenty years. Statistics showed that by this arrangement each district would furnish annually 16,000 conscripts, or, in other words, that 296,000 recruits would join the colours yearly from the first eighteen districts (the nineteenth being omitted as permanently occupying Algiers). Each man was to serve for 20 years, namely—five years with the colours; four, with the reserve of the active army; five in the territorial army, and six in the territorial reserve. As, however, the total strength of the army with the colours was fixed at 500,000, it became impossible to utilize the services of all the recruits legally available, and there was accordingly devised a system of exemptions which had the effect of reducing the 296,000 to 141,000—that is to say, 155,000

(more than half) of those liable were exempted. Even when thus reduced the annual contingent was unmanageably large, and a further reduction was effected by passing 47,000 into the reserve of the active army after they had served one year with the colours. Thus 93,000 men remained to be absorbed yearly by the permanent army and to serve five years with the colours. Yet again a reduction was effected by releasing infantry soldiers at the end of three years, keeping only these in the mounted or scientific branches for five. Having regard to these modifications the forces at the disposal of France may be divided into three great classes, thus :—

Trained men, i.e. those who have passed three years or upwards with the colours	837,000
Partly trained men, i.e. those who have served one year only	703,000
Untrained men, i.e. those who have escaped service altogether, though liable to be called up in the event of war	1,715,000

Of this force the number actually with the colours is 273,000, of whom 140,000 are in their first year of service; 140,000, in their second, and 93,000 in their third. It is also pointed out that as the amount and quality of daily training in the French army are far inferior to the standard laid down in Germany, the reserves of the former cannot be compared to the Landwehr.

Small as these figures look side by side with those recently published, it cannot be pretended that they do not represent an immense military organization—an organization which, thirty years ago, would have been regarded as a nine days' wonder. But the really weak point of the system appears to be the impossibility of keeping up the establishment in the superior grades. In England, one officer to thirty soldiers is considered the minimum; in Germany, the proportion is one officer to thirty-four trained men, and in France, it is nominally, one to twenty-eight. At present, however, the total number of regimental officers serving in the permanent army or borne on the rolls of the active reserve, is only 22,409, whereas 36,597 is the number required to place these forces on a war footing. The crippling effect of this deficiency becomes doubly apparent when we remember that there are 469,000 men, partially trained, with the colours and in the ranks of the First Reserve, who, in case of war would require earnest and unceasing attention in order to fit them to replace casualties. Turning again to the Territorial Army, which, consisting, as it does, of men who have completed nine years' service, may be said to form the backbone of military France, we find that the number of officers at present borne on the cadres of the regiments is only 9,835, whereas the number required to place these regiments on a war footing is 22,421. Thus the total deficiency in the establishment of officers is 27,000, irrespective of those who would be needed to train the million and a half men that have hitherto escaped service altogether.

A greater, and if possible, more serious, failure of the system is observable in the case of the non-commissioned officers. These men constitute the real nucleus of an army, and on their activity and intelligence its efficiency mainly depends. In nothing has the evil of short-service been felt more than in the difficulty it places in the way of obtaining a sufficient supply of experts to fill the non-commissioned ranks. In

England the bad consequences of Mr. CARDWELL'S "reforms" have been largely mitigated by rates of pay liberal enough to retain good men with the colours; and by the Great European States similar inducements are offered to prevent the retirement of capable soldiers and the consequent exercise of power by young men. But in France, the sergeant-major of a cavalry regiment receives only 2s. 3½d. a day, and the sergeant of a line battalion, 8½d. The result is that there are at present in the French army 24,000 *sous-officiers* who have not completed five years' service in the ranks, and 18,000 who have less than three years' service. In fact, instead of trying to attract *sous-officiers*, or to retain those she has, France puts a premium on the early retirement of her best men by permitting those that can pass an examination to escape further servitude at the expiration of one year in the ranks. Thus the posts of the non-commissioned officers "are filled by men from the lowest classes of society, men devoid of good education, and of those powers of command generated by habits of scholastic obedience." Captain NORMAN says that upwards of 18,000 vacancies occur annually among the *sous-officiers* of the permanent army, and are invariably filled by corporals of little more than one year's service. Yet to these men are entrusted powers of punishment equal to those possessed by officers commanding companies in the British army. No wonder that the consequences are fatal to discipline. The writer in the *Nineteenth Century* says that "in war, as in peace, the insubordination of the French private is a matter of history," and that under existing circumstances there springs up a laxity not unfrequently culminating in what would be called mutiny by Englishmen. He instances several examples of this, amongst others the statements of the French officers themselves, that during the war of 1870 "they were compelled to shoot men down red-handed in order even temporarily to restore obedience," which summary executions received the sanction of a Government decree. It is to be feared that the course of the campaign in Tonquin has already furnished notable illustrations of this want of discipline. The story told in the *Figaro* of officers arguing with their men in order to restrain them from committing barbarous excesses, and being compelled at last to yield to the soldier's bloodthirsty logic, has a strange sound in English ears.

The spirit that prevails among the commissioned officers, also, is described as one of discontent and distrust. General THIBAUDIN'S elevation to the post of Minister of War will probably prove to have been a most unfortunate event. A junior general of division, his rank did not qualify him for an office which his military antecedents ought, under any circumstances, to have placed beyond his reach. He began by removing the Princes from the army; followed this by depriving General GALIFET of the chief command at the cavalry manœuvres; went on to issue a circular calling for the political opinions of all officers recommended for staff employ; soon let it be practically seen that only men of Republican views might look to fill important military posts; and finally extended this system of political tests even to the junior officers, so that the routine of promotion was entirely upset. The result has been an universal spread of discontent and the retirement of a great number of officers.

Captain NORMAN concludes his analysis with these words:—"The French organization reads well on paper; but we believe that the army, with the exception of the artillery, in which there is a most noticeable improvement, is in a worse condition than it was in 1870. Its permanent force is wanting in those soldierlike qualities which distinguished the regiments that used to march past the Emperor on the Champ de Mars. The reserves, who would be called out to bring the army up to war strength, are composed of half trained men, whose value has been seriously impaired by their severance from military discipline. The old feeling of comradeship amongst officers has been succeeded by mutual distrust, and *esprit de corps* amongst the men is also a thing of the past. Efficiency has been sacrificed to numbers, military capacity to political exigencies, and should war overtake France before she has realized and rectified the defects of her military organization, nothing can avert a disaster more crushing than that which befell her thirteen years ago." It is to be sincerely hoped that the one event which can effectually prove or disprove this analysis may never occur. We have too much faith in the better instincts of humanity and in the progress of civilization to suppose that war is the only teacher which can cure Europe of its military mania, and make the nations believe once more in the old maxim:—"Sæpe intereunt aliis meditantibus necem."

THE DIARY OF HENDRICK HEUSKEN (1856-1858).

(From the German of Dr. G. Wagener, in "Transactions of the German Asiatic Society of Japan" June, 1883).

The diary from which these extracts referring to Japan were taken, was given by Heusken's mother to Mr. Bouvy, of Amsterdam, and later through the kind offices of Mr. Eykman in Tokio, placed at the disposal of the German Asiatic Society in Japan. A careful inspection of these reminiscences, which are written in the French language, soon showed that they referred to the years 1856-8 which preceded the conclusion of the treaties with America, England, France, &c., and though they present no new facts of importance, they give us a more exact apprehension of Japanese circumstances and the *modus operandi* of the Government, than is the case with any other publication. On this account alone it seemed proper to publish these valuable papers for the benefit of a wider circle of readers; moreover, by this means a duty will also be fulfilled towards both Mr. Harris and Mr. Heusken, in bringing to remembrance and putting into clearer light the meritorious services of these two gentlemen in the opening of this country to foreign intercourse.

As to Mr. Heusken's personality and adventures, the work entitled "The Prussian Expedition to East Asia," Berlin, 1864, Vol. II., p. 145, contains the following item:—"Heusken (born Jan. 20, 1832, in Amsterdam), who sprang from a family in good position, and had enjoyed a youth amid wealth and happiness, soon learned all the bitterness of life through the sudden impoverishment and subsequent death of his father. He wrought bravely amid many discouragements to earn his subsistence, when accidentally he fell in with Mr. Harris who was just starting for Japan as Consul. From that time his fortune rose. He won the confidence of his superior, with whom he lived in seclusion for years in Shimoda, and from the fact that his assistance became indispensable in negotiating the treaties, his position grew in influence and importance. He lived in comfort, supported his mother by liberal contributions, and had the most flattering prospects for the future. One felt that he enjoyed life, all his surroundings bore evidences of

comfort. Before his little cottage home there smiled a picturesque garden, his well-lighted rooms were ornamented with well-selected specimens of Japanese art, his servants always appeared with faces indicative of satisfaction and cheerfulness."

This testimony is confirmed by many notices in his diary. His early misfortunes had left no trace of bitterness or narrowness in his fresh and youthful spirit; the account of his experiences give evidence of benevolence towards all men, magnanimity and a love of justice, joyous courage and confidence leave their impress on his diary. Only once he seems to have been overwhelmed with excusable anxiety, as he waited week after week with unwearied faithfulness at the bed-side of his superior, who, far from all help, lay at death's door.

It was natural that, with a character so happily endowed, Heusken should spend his days in satisfied contentment after having reached so great a result, which affected not only the United States but was also of great benefit to other countries as well.¹ He became a favourite with the members of the Prussian expedition on account of his social qualities. With his assistance, in spite of greater hindrances than those experienced by the English, Russians, &c., in negotiating their treaties in 1858, the Prussian Embassy had reached the point on the 14th of January, 1861, where everything was complete, and the Japanese had promised to receive the presents on the following day and also in a very short time to sign the treaty. Heusken had been the whole day at the Prussian Legation and remained for the evening. Everyone was in good spirits and specially grateful towards Heusken. At 9 p.m. he left on horseback; at 10 o'clock word came from Mr. Harris that Heusken lay severely wounded in his house. The physician of the expedition and several other gentlemen hastened to his side, but found him in a hopeless condition. A gaping sword wound, which laid bare the intestines, extended from near the navel across the lower abdomen almost to the hip. In consequence of loss of blood—Heusken had lain half an hour in the street, and medical help could not be obtained inside of an hour and a half—he died without pain. Harris wept bitterly by the body. It was afterwards found that the attack was made by seven or eight men armed with swords. January 18th, 1861, he was buried. The government sent word to the foreign Legations, that they had information of an intended attack on the funeral procession, and although they had taken steps to prevent it, they could guarantee nothing, and therefore earnestly desired the Embassadors and their attendants to remain at home and allow the coffin to be put away quietly. Mr. Harris answered without a moment's hesitation that nothing in the world would prevent him and his colleagues from fulfilling the last offices of friendship towards their murdered friend, they would accompany his body to the grave and take care to defend themselves. For this purpose all who took part in the obsequies armed themselves, the members of the Legations and Consulates, Naval officers, etc., and the procession was strengthened by about 70 marines from the foreign men-of-war then in the harbour. Five *Bunyo* (Japanese officials of highest rank) rode at the head of the procession, and many other officials followed on foot or on horseback. No disturbance was attempted.—Heusken's body was laid away in the graveyard of the *Kōrenji* temple in Azabu; a gravestone with inscription marks the spot. In the same place also lies Dankuchi, the Japanese interpreter for the English Legation who was murdered a year before.

Why Mr. Heusken, who was also exceedingly liked by the Japanese, was selected as a victim has never been explained. His cruel death has indeed been shown to correspond with the suicide of Hori Oribe no Kami, a high official, who is said to have been aggrieved by Mr. Heusken; this version is given in the History of Japan, Vol I.,

p. 129, which was published in the year 1874, by F. O. Adams. At the same time this supposition was combated with such good reasons, in the "Prussian Expedition" 1866, that it can scarcely be maintained. Mr. Harris also repudiates this explanation in an official document² and he gives as the cause of the murder simply Heusken's own carelessness, which led him, Harris, to fear some such result ever since their arrival in Tokio (see also end of this paper).—The Japanese historical work called "*Kinsei Shiraku*," translated by Mr. F. M. Satow, ascribes the deed to the *ronin*, who at that time were gathering in *Hitachi* and *Shimosa* concocting plans for an attack on Yokohama, but by the intervention of the Government were prevented carrying their plan into execution. "Nevertheless" says the above work, "the secretary of the American minister, who lived in Yeddo, a certain Mr. Heusken, was murdered one evening in Mita as he was returning from an excursion."

So far Mr. Heusken's personal experiences and fate. If our readers wish to inform themselves further on the subject we refer them to the full and beautiful account in "The Prussian Expedition," Vol. I., pp. 180, 257, 271, and Vol. II., 145, 160, 171. We return to the diary and its contents.

The diary does not give an account of every particular day, for which the monotonous life in Shimoda, and subsequent retirement in Yedo, would give but little occasion. He describes only what seemed new and interesting, and what related to the negotiations, but he gives this in such simple unadorned style, that no doubt can be raised as to the truthfulness and correctness of these accounts. The following abstract contains all that would be of interest to-day, exactly as Heusken himself gives it and mostly in his own words. Whoever reads the abstract cannot but be struck with the tact and skill of these two foreigners, and will agree with the remarks of the author of "The Prussian Expedition" in Vol. I., p. 180: "Both Mr. Harris and his secretary and interpreter, Mr. Heusken, a Hollander by birth, were able to accommodate themselves to Japanese conditions as very few could and by a skilful combination and use of circumstances to accomplish what no one had dreamed possible." Moreover, the reader will also admit that in the years 1856-58, the Shōgun's régime did not at all deserve the charges that are sometimes made respecting their treatment of foreigners.³ From this diary it would seem to be clear that the Shōgun's government stood almost alone in being sensible of the fact that foreigners could not be simply driven away; that they did not at all disguise the fact of the difficulty of their position on account of the provincial lords, nor the fact that the supreme power lay not with them, but with the Mikado, whose consent they declared to be absolutely necessary, in order to overcome the opposition of the Daimio. All these difficulties were made so plain in the negotiations that Mr. Harris himself was compelled to acknowledge their force. And when the government of the Shōgun claimed the right to negotiate and conclude treaties with alien nations, they acted in perfect accord with their standpoint, that is, precisely as all Shōguns from the time of Yoritomo would have acted under similar circumstances, and in entire accord with the Laws of Iyeyasu.⁴ The wars with China and Korea, the negotiations for peace, the rejection or permission of Portuguese and Dutch intercourse, the mercantile regulations in Nagasaki, etc., etc., were concluded by the Shōgun alone and not by the Emperor. In view of such an actual arrangement of authority in Japan, the reproach that the Shōgun allowed foreigners to address him as "Majesty" amounts to nothing; the Dutch had used the title from the first, and honoured every *Daimio*, every *Tono-sama* with the title of "King." The titles used by Japanese to Heusken, *Shōgun*, *Taikun*, *Kubo-sama*, all belonged to the Shōgun in reality, or had been formerly applied to him.

¹ See Prussian Expedition, Vol. I., p. 182. "This (the English) treaty was negotiated so speedily because Mr. Harris had, the winter before, done the whole work, and had placed at the disposal of the English Ambassador his own secretary Mr. Heusken, who understood all the circumstances and the persons affected, and was able speedily to remove every difficulty."

² See "Prussian Expedition," Vol II., p. 171.

³ See, for instance, Adams' History of Japan, p. 107.

⁴ See Vol. I. of Transactions, pt. I., p. 4 and 8, particularly the 2nd law and the conclusion; also p. 12, the 28th law, according to which the Shōgun had the right under certain circumstances to appoint the Emperor.

This is especially true of the title *Taikun*, which indeed has never been usual among Japanese, but which was introduced by the third Shōgun of the Tokugawa line in diplomatic intercourse with Korea; and then afterward used when dealing with Americans and other foreigners. On the other hand, it must be acknowledged that the whole establishment of the Shōgunate was itself the abnormal outcome of usurped power, which sooner or later could not but lead to a struggle between Kioto and Tokio. This diary shows clearly that from the year 1856-58 the opposition to the Shōgunate had already reached an alarming height.

The point, which constituted the chief grievance and ground for agitation of the opponents of the Shōgunate was evidently the right of residence granted to foreigners. The mercantile arrangements were for the Japanese of less importance, and this diary shows that they were completely ignorant of the real scope of these regulations and in perfect confidence allowed themselves to be guided by the advice and proposals of foreigners.

To assist in making the diary more intelligible, we give here a few historical dates to refresh the memory of the reader. On the 31st of March, 1854, Perry's treaty was concluded in Kanagawa, and on the 21st of February, 1855, ratified in Shimoda. This treaty stipulated only the opening of the ports of Shimoda and Hakodate for American ships requiring wood, coal, water, and provisions: help and friendly treatment of shipwrecked Americans, and the sending of the same to Shimoda or Hakodate; free intercourse within certain limits for Americans temporarily sojourning in these ports; a limited exchange of mercantile commodities under the control of the Japanese authorities, and the right to nominate a consul for Shimoda with jurisdiction over all Americans in Japan, and finally the most favoured nation clause. Shortly afterwards the English and the Russians concluded similar treaties, the former in Nagasaki, the latter in Shimoda. About a year after the ratification of this treaty Mr. Harris appeared in Shimoda as Consul, at the same time he came as Envoy Extraordinary to present a document from the President of the United States to "the ruler of Japan," the Shōgun, and to negotiate a new treaty. According to the *Kinsei Shiraku* the Yedo government was warned by the Dutch in Nagasaki not to quarrel with the foreigners for fear that they would be treated as China had been ten years before. This warning was heeded as described in the same work, and this corresponds exactly with the attitude of the Government of the Shōgun as depicted in Heusken's diary. After a good deal of trouble Mr. Harris brought matters so far that in June, 1858, he returned to Shimoda, after having received from the government the promise to sign the treaty in a few months. So far the diary. According to the *Kinsei Shiraku* it was just at this time that Ii-Kamon-no-Kami, whom Heusken does not mention, was made regent, *Tairō*. He received information from Mr. Harris, who had learned it from American and Russian men-of-war, that the Anglo-French fleet would sail for Yedo on the conclusion of the war with China, whereupon he determined not to wait any longer for the culmination of a decision in Kioto, and signed the treaty with America on the 29th of July, 1858. "Immediately afterwards," says the *Kinsei Shiraku*, "the English, French, and Russians came to Yedo and negotiated treaties similar to the American. It was at this time that the agitation for the expulsion of the foreigners began, and that many people began to talk about internal and external affairs."

The chief difference between these and the former treaties was that they secured for foreigners diplomatic representation, the right of permanent residence in certain places, extraterritorial rights, freedom in the exercise of their religion, and unrestricted commercial intercourse.

The agitation against the foreigners became more formidable, especially after the murder of Ii-Kamon-no-Kami in the year 1860. "From that time," says the *Kinsei Shiraku*, "the number of those who demanded the expulsion of the foreigners increased daily." And this same

agitation, as previously remarked, is accredited in the same book with having brought about the murder of Heusken without even a hint of any particular personal cause.

ABSTRACT OF THE DIARY.

From 21st August, 1856, to 8th June, 1858.

August 21st to September 21st, 1856.

On the 21st of August, 1856, the screw-frigate *San Jacinto*, with Messrs. Harris and Heusken on board, anchored in the harbor of Shimoda at the southern end of the peninsular of Idzu. Immediately one of the secretaries of the governors with two interpreters, who understood Dutch, made his appearance in order to welcome Mr. Harris as Consul-general, and to receive a document from him announcing his arrival to the governors.

On the day on which the Consul-General was to meet the two governors, the Daimios of Shinano and Bingo, he goes ashore with 12 officers, is met by Japanese officers and military escort and is conducted to the government buildings. Both governors, surrounded with officers and secretaries, await him at the entrance of the audience hall. The greeting is exceptionally friendly and the company sit down at once to a Japanese repast. After the usual ceremonial speeches and assurances of friendship, the governors express themselves as not having expected the Consul-General so soon; Shimoda had been visited by floods and earthquakes; they had as much as they could do to repair the mischief done thereby, the whole land was completely demoralized by the great calamity; it would therefore greatly rejoice them if his Excellency the Consul-General would return home, and visit them again in one or two years. As this was negated by the letter of his consular instructions, the governors declared they could not see any necessity whatever for a consul in Shimoda, they would like to know why he was sent at all; it was stated in the treaty, that a consul should be appointed in Japan, if one of the contracting governments considered it necessary. After an explanation of the prerogatives and duties of a consul, viz., protection of his countrymen, assistance of shipwrecked, etc., etc., the Japanese reply that they need have no anxiety on that score, they (the Japanese) would see to those matters to the satisfaction of all parties concerned. After a lengthened debate, in which it became very clear that the arrival of a consul was not very much to the liking of the Japanese government, it was at last decided to put a temple at his disposal and arrange it according to his wishes, as there was no preparations made for any other dwelling.

On one of the following days, the Commodore (for the first time), and the consul accompanied by Heusken and several officers, made a visit to the Governors, on which occasion they repeat the attempt to get rid of the troublesome foreigners, and ask the Commodore naively, whether he would not rather take the Consul along with him when he left the port. After the repast, from which each guest had to take away his packet of sweetmeats, the Commodore, the Consul, and Mr. Heusken each receive some presents of lacquer ware; the officers find on their return to the ship that each is the happy recipient of half of a large fish, whereas on the first visit they had already received two fowls apiece.

When the temple *Fusenji* was to be taken possession of by Mr. Harris there was a long series of discussions, for the Governors wished to reserve two or three rooms for Japanese officers. While the Japanese represented such a guard of honor to be an absolute necessity, as well as a most convenient arrangement, for in this way every wish or command of the Consul could be accomplished without delay, the latter thanked them most politely for their care and goodwill, but assured them positively that there was no necessity for so much trouble; that he would be able to take care of himself, and had no wish for such guests in his house. At last he consented to have a small house in the temple court used for a Japanese watch. After the crew of the *San Jacinto* had erected a flag-mast in the court of the Consulate, the ship

weighed anchor on the 3rd of September, 1856; Townsend Harris and Heusken remained alone behind.

21st September to 24th February, 1857.

In the night of 20th Sept., 1856, a *taifun* destroyed one-third of the town of Shimoda and cast all the junks on shore, the next morning Heusken was surprised at the placidity of the Japanese and the activity with which they began the work of repairing the mischief.

On the 25th of September, the Consul-General sends a letter to the Minister of Foreign Affairs in Yedo to acquaint him with the fact that he was not only Consul, but that he had full powers as Ambassador, and moreover that he had a letter from the President of the United States to "His Majesty the Emperor" and intended to go to Yedo to deliver the same.

In the meantime, before an answer is returned, a Dutch steam corvette arrives, stays however, but a few days in the unsafe harbour; later, in October, an American schooner brings a cargo of arms, but the Japanese considered them too old and refused to have them. A very welcome interruption to the monotonous life in Shimoda was occasioned by the more lengthened stay (from Nov. 12 to Dec. 15) of the Russian corvette *Olivuzsa* with Captain Constantin Possiet on board, who brought the ratification of the treaty concluded between Russia and Japan. On the 22nd of February, at the request of the Consul, the Japanese fire off two small cannon in honour of Washington's birthday, the cannon were exact imitations of a model presented by Commodore Perry and were served with great precision.

At last one of the Governors brings an answer from Yedo. The Government there is not inclined to deal directly with the Consul-General; the governors of Shimoda have full powers for that purpose. This answer is corroborated by a written answer of the Great Council to the two letters which Harris had sent to the Minister of Foreign Affairs. Probably in order to alleviate the unpleasantness of this message, the governors invite the Consul to their private dwelling; all their intercourse thus far had been in the government buildings.

On the 24th of February 1857 the consul and his secretary are borne in two *norimon* to the dwelling of the two governors, Inouye, Daimio of Shinano and Oka, of Bingo. All the Japanese officials are in gala dress. With every possible mark of politeness the guests are entertained in Japanese fashion, and on the conclusion of the meal, one of the governors prepares tea with his own hands to present to the Consul, to whom also the whole tea apparatus is given as a memento. The governors and other officials lived in a compound surrounded by a wall, about an English mile from Shimoda; each one had his little house in which he lived with his servants; women were entirely excluded, for the government held that where the officials had an extraordinary mission to fulfill they could by that means better secure State secrets from gossiping tongues.

February 25th to March 1st, 1857.

On the 25th of February the negotiations with the governors were at last to make a beginning. Mr. Harris had wisely occupied the lengthened interval in arranging all sorts of apparently trivial things, partly with the object of learning the *modus operandi* of the Japanese, and also to give them to understand that while he acted with the greatest consideration he intended also to go forward with the greatest firmness. The chief causes of complaint were the following:—The two foreigners could never go outside of the house without having their steps dogged by a police official, who never let them go out of sight, under the pretence of protecting them from the perfectly harmless people. The people of Shimoda were strictly prohibited all intercourse with the foreigners, and all ran away as soon as they appeared. The next point was, that the presence of the so-called guard of honour, consisting of two officers and two soldiers in a little house in the temple court, had become altogether unbearable. Moreover, whenever an official came on a visit he was always accompanied by half a dozen secretaries who wrote down every word that was spoken. The fourth

difficulty was the constant surveillance of three imperial spies, as Heusken calls them, probably the so-called *ometsuke*, who had the right to be present at every audience, on which occasions they occupied a place separate from the rest of the officials and observed everything exactly in order to report the same to Yedo. Finally, the Governors had the habit of answering their letters by messages and never in writing.

As all kindly representations resulted in nothing but evasive replies, Harris took a determined stand; declared all these arrangements to be an insult to the representative of a great nation, and in opposition to all the laws recognized by civilized nations in diplomatic intercourse. He declared further that, if the guard of honour was not removed at once, he would consider himself a prisoner and report accordingly to his government; he would always welcome visits from Japanese officials, but uninvited guests he would show to the door. That took effect; the guard of honour vanished, the secretaries and *ometsuke* were seen no more; the governors answered by letter, and the people soon became more friendly.

March 1 to June 17, 1837.

On the first of March negotiations begin in earnest respecting some additional articles in the treaty concluded by Commodore Perry in Kanagawa. One great difficulty arises out of the question of the dollar exchange, the Japanese at first wish to take the dollar at the rate of one silver *bu*, although worth treble that amount. The Consul refuses to pay what he owed until this question was settled; and on his advice a Russian corvette paid only one-third of the price demanded for purchases, and deposited the balance with the Consul. The Japanese then propose to exchange gold for gold, and silver for silver by weight but with 25 per cent. discount for cost of re-coining; and finally it is decided to fix the discount at 6 per cent.

June 18th to August 18th, 1857.

At length on the 17th of June, after ten months of delay, the Convention was signed. The new regulations are principally the following:—The port of Nagasaki is opened for American vessels as it had already been for Russian ships, to take in provisions, coal, etc., and to arrange averages. Americans have the right after July 4th, 1858, to settle in Shimoda and Hakodate, gold and silver are to be exchanged according to weight, with 6 per cent. in favour of the Japanese for cost of re-coining. The Americans are amenable to their own law-courts, ships which call at Shimoda, Hakodate, or Nagasaki may pay for purchases in kind if they have not a sufficiency of cash. The consuls have the right to come and go freely within a radius of 7 *ri* from their residences, but at the request of the Japanese Government they will not make use of this privilege for a time. Finally, the consuls and the members of their households may buy necessities direct from the dealers without the intervention of an official.

The above additions to the former treaty having been settled, the time has come to begin negotiations for the conclusion of a real treaty of commerce, for which purpose the two governors declare they have full powers to act for the Government. Mr. Harris, however, demands first of all, an answer to two letters, of Oct. 25, 1856, and Jan. 8, 1857, that he had sent to the Great Council in Yedo, containing among other things an intimation that he was the bearer of a document from the President of the United States which he had to present to the "Emperor" of Japan. The governors declare that they have authority to receive the letter, and one of them would bear it to its destination in Yedo. The Consul, however, will not agree to this, and insists on putting the letter himself into the hands of the "Emperor." A refusal on the part of Japan would be a serious insult to his Government and would have a disastrous result. At the same time he makes good use of an event which occurred a short time before, and which just now stood him in good stead. The governors had sent him word that they had received a letter for him from the great Council in Yedo

which they would hand him at their next meeting in the government house. As Harris was sick he desired them to deliver the letter to his secretary, Mr. Heusken, but this they refused to do, on the ground that a letter signed by the great Council could be delivered only to the Consul himself and not to any of his underlings; this was Japanese etiquette. Mr. Harris now turned the tables on them and urged the same arguments upon the governors that they had used, so that it was eventually decided that the lord of Shinano should set out for Yedo and bring instructions thence.

Everything is at a stand-still until he returns, and Heusken relates his experiences in expeditions on horseback with improvised saddles over frightful roads.

August 25, the lord of Shinano returns, and two days later a conference is held, when Harris is informed that after a great deal of difficulty and objection on the part of the great Council, they have decided to receive him in Yedo, and to accept the letter of the President to the ruler of Japan (the Shōgun). Harris refuses, and the two governors endeavour to persuade him that it would not do for him to present the letter himself to the Shōgun, for he never attended personally to any political business, the eighteen great princes were against such a presentation, and to consent to what the Consul demanded would cause discontent and disturbance. If he, nevertheless, should insist in his demands, the Japanese Government would prepare a full document for the Minister of Foreign Affairs in Washington and ask him, the Consul, to have it sent to his address. Harris declares that he is ready and willing to forward any letters whatever to his Government, can assure them, however, that such a document would be of no avail in this case, and as to their anxiety with regard to disturbances he had thought that the Government stood on firmer ground and had more power than really now seemed to be the case; moreover, there was a precedent for what he demanded; Pater Valignani was received by the Shōgun as Ambassador of the Viceroy of Goa. The governors declare that they have found no trace of any such act either in old books or in the archives of the nation.

August 28th, 1857.

In the next conference the Consul presents a long list of persons who had been received by the Shōgun as ambassadors. That was very true, they allow, but no letter was ever handed the Shōgun; Mr. Harris had better desist from this question of the letter, and at once communicate to them the important matters of which he had spoken in his letter to the great Council. The Prince of Shinano said he had assured the Council as well as His Majesty that Mr. Harris would begin negotiations for a new treaty in Shimoda as soon as he had received permission to go to Yedo. Mr. Harris protests against any such acceptance of his promise, and declares that he had promised to make the communications in question when he had received a written consent, not only to his going to Yedo but also to present the letter to the Shōgun. The governors declare they never heard of such a stipulation, but the interpreter and Mr. Heusken drive them into a corner by declaring emphatically that they had repeatedly insisted on that very condition; and they asked them also how it came that on the day before they had said that the great Council was ready to take the letter for the Shōgun, if there had been no previous question as to its direct presentation. Thereupon they have no reply to make, turn rather to entreaty, adding that if the Consul should refuse to accede to their request they might not be in a position to continue their intercourse so pleasantly with him. Mr. Harris takes this as a threat and replies sharply, is however informed that such was far from their intention, but the expression simply meant that unless a satisfactory solution be soon reached they, the two governors, may be invited to disembowel themselves.

August 31st, 1837.

In the next conference the request is repeated, and Mr. Harris makes two propositions: Either (1) to communicate the "important

matters" at once in Shimoda, and then to go immediately to Yedo to hand the Shōgun the letter, or (2) to go at once to Yedo and hand the letter to the Prime Minister in the presence of the Shōgun, and then return at once to Shimoda to make the communications there. In either case he insists on making an address to which the Shōgun must reply. The governors ask him to come again next day. Next day they acknowledge thankfully the concession of the Consul to hand the letter to the Prime Minister and not to the Shōgun, but now repeat their request to have the "important communications" made at once, which request is, however, flatly refused. Mr. Harris offers to make his propositions of the preceding day in writing so as to have the Government in Yedo informed regarding them, but the governors refuse the offer declaring that such a document would be as inadmissible before the Council as the handing of the letter to the Shōgun himself.

September 2nd, 1857.

On this day the interpreter Moriyama reappears, to induce the Consul to yield, and indeed at the very moment that he has withdrawn his two propositions, seeing that they had not been accepted. The interpreter takes this letter with him, returns, however, at 4 o'clock, and declares that the governors have not refused to accept the propositions, but have only desired Mr. Harris to consider the matter a few days longer: they were quite satisfied with a part of the propositions, but cannot see why Mr. Harris should lay so much stress upon not making his communications before the letter had been presented. (The governors appear to have considered the first proposition, to hand the letter directly to the Shōgun, as entirely out of the question.) Harris replies that as to the communications from his government he is quite vexed with himself that he should ever have allowed the possibility to occur of giving them before he had presented his letter, he was certain to be blamed for it by his government, for it was the custom at every court in Europe never to open important negotiations before the presentation of credentials to the Sovereign, the governors had done him good service by not accepting his propositions, for he had now the right to take them back, particularly as they were only made in order to make some sort of a beginning after the long delay of nearly a whole year. His propositions must therefore be considered annulled, he will make no more, it is now for the governors to renew the negotiations.

On the third of September *Bon Matsuri*. It is for the foreigners also a festival day, for the first time since their arrival in Shimoda, now a whole year, they receive letters from home and from China, which are brought to them by a Japanese official.

September 4th to September 7th, 1857.

Conference with the governors. They say they had no intention of rejecting the propositions and throw the blame of the misunderstanding on their interpreter Moriyama, who this time is absent. In his place there are two other interpreters who together do not understand as much Dutch as he alone. On the 7th September, it is finally settled that a messenger should be sent to Yedo with the second proposition:—viz. audience in Yedo, presentation of the letter to the Prime Minister in presence of the Shōgun, return to Shimoda and opening of negotiations. In the meantime before the messenger returns, an American frigate calls at Shimoda bringing letters and papers, and makes a very pleasant and refreshing break in the monotonous life of the two diplomats.

September 23rd to November 23rd, 1857.

At length on the 23rd September, Mr. Harris is informed that his proposition has been accepted in Yedo. Heusken writes, "We are to be received in Yedo with great honour, we are to have an audience with the Taikun. The Minister Plenipotentiary is to make an address, whereupon I am to hand him the President's letter, which he is then to place in the hands of Hotta Bichiu no Kami, the President of the Great Council." After the arrangement of some minor affairs and the refusal of Harris to

salute the Shōgun Japanese fashion it is decided that the prince of Shinano and the interpreter shall repair to Yedo to make definite arrangements.

The interpreter Moriyama returns from Yedo with the information that the journey from Shimoda shall begin on the 23rd of November. Everything is now regulated to the minutest particular, two plans of the palace are laid before them to explain the way into the interior apartments. The two foreigners shall start from the ambassador's hotel in Yedo in *Norimon*, Heusken and the vice-governor of Shimoda shall alight outside the inner wall, the ambassador and the governor ride to a farther station and alight where all the mightiest potentates of the realm do, only the "three brothers of the King," i.e., the *Gosanke*, the heads of the Tokugawa branch lines, the princes of Owari, Kiushiu, and Mito only are allowed to come nearer the palace without alighting. At the steps Harris and Heusken are to be met by two masters of ceremony properly *ometsuke* (privy commissioners of high rank) and conducted to a room where they are to change their shoes. The speeches are to be prepared beforehand so that Harris will address the Shōgun in English and the latter shall reply in Japanese, dispensing with the aid of an interpreter.

November 23rd to December 7th.

The start is made at 7 o'clock in the morning; the four Chinese servants remain behind. In Nakamura the vice-governor is waiting with the force that is to accompany them, and the train makes a formal start; at the head a Japanese officer, then the Ambassador, and Heusken on horseback, Japanese officers and men, finally the vice-governor of Shimoda in *norimon* Heusken has the opportunity during this journey over the Amagi-toge and Yugashima to Mishima, the pleasing scenery of which places he describes, to convince himself that for all internal intercourse, Shimoda is very unfavourably situated. As to their Japanese attendants, they leave nothing to desire as far as politeness and attention are concerned, there is indeed almost too much of the good thing in their efforts to drive away the curious people who modestly watch the passing travellers. But before they reach the watch on Hakone Pass some little difficulties arise. The Ambassador is told that the officials of the watch will open his *norimon*, give one glance inside and then shut it up at once; moreover he could go through on foot, or on horseback if he chose to do so: but that form of inspection had to be submitted to by the greatest Princes of the empire, even the Lord of Satsuma was no exception. Harris declares, however, that these are all mere vassals, he however, figures here as the representative of the President of the United States, and he will go through the gate without inspection or not at all. After a two hour consultation between the vice-governor and the commander of the guard the latter consents to have Heusken's *norimon* only opened and to let Mr. Harris pass without inspection. As they approach the barrier, however, Mr. Harris's servant jerks the door of his *norimon* open and shuts it again immediately, whereupon Mr. Harris is not a little angry for he looks upon the action as a premeditated manoeuvre. It appears, however, afterwards that it was in all probability a mere misunderstanding on the part of the servant. On account of this delay the train accompanied by lanterns and torches reaches Odawara at 9 o'clock in the evening, in which place the police-force with lanterns on long staves lead the way to the hotel. On the following day Nov. 27, they reach Fujisawa. The road is in good condition and could be used by wheeled vehicles. In all the villages the train is met and accompanied by the authorities, the people humbly squatting before the houses silently look at the passing train; the upper-stories of the houses are also filled with people. This is explained by the fact that the Government had ordered that no one was to appear on the high road; and so it happened that while the houses were filled with people Heusken declares that all the way from Mishima to Shina-

gawa, for about 28 *ri*, he saw but two or three *norimon* and not more than five or six people on the otherwise so busy Tokaido. In all the places through which they passed, even where no soul was to be seen, the people at the head of the train kept crying out *Shita-nero*, so that Heusken had all the way the none too refreshing sight of a kneeling crowd, which to his great joy came to an end as soon as they reached Yedo. November 30th, they start from Kawasaki: in Shinagawa arrangements are made for the entrance into Yedo. At the head of this train goes the vice-governor of Shimoda in *norimon*, then Harris also in *norimon*, the interpreter, a number of officers and a band of 130 soldiers and coolies. A vast multitude is gathered together in the streets, Heusken thinks a million, every quarter of the city has a separate gate which is opened for the train and forthwith closed again, the police force of each section accompanies the train. The people, who maintain absolute silence, show only a kindly curiosity and no trace of dislike or hatred. Moreover, Heusken remarks expressly that even the officers and nobles from the highest to the lowest, whose acquaintance he has made have always met him with the most friendly frankness and the most painful politeness. The shake of a fan on the part of an officer is sufficient to drive back the surging crowd when approaching to near. In the better part of the city where the nobles reside, all the windows are protected by screens, behind which numbers of forms are visible. The dwelling of the ambassador is situated within the third wall, and at the steps the two foreigners are met by the governor of Shimoda, the Prince of Shinano. He asks at once for the letter announcing the arrival of Mr. Harris to the Prime Minister. He also adds that the Taikun has appointed an Ambassador Extraordinary, the Prince of Tamba, to welcome Harris and to present him with certain gifts. On the 1st of December this dignitary makes his appearance, and is received by Harris (who has had lessons in Japanese etiquette from the Prince of Shinano) at the door, while the Prince of Shinano on the upper step, the vice-governor of Shimoda and certain officials further down the steps, and a host of officers in the court greet him kneeling. The reception finished, the present turns out to be a great box of bon-bons. Besides the Prince of Tamba seven other Princes are appointed as commissariat to look after Harris's wants and to give him every assistance he might need. On the 2nd of December the prince of Bichiu, Minister of Foreign Affairs, brings information in person that the audience is to take place on the 7th. On the fourth Harris returns the visit, on which occasion the addresses to be read at Court are exchanged. On the 7th of December the audience is held in the following manner:—At the steps of the Palace, where they change their foot-gear, Harris and Heusken are met by the Prince of Tamba and another commissary and conducted into a hall whose ceiling, 30 feet in height, is supported by wooden pillars. After the audience room has been shown them, they remain in the former apartment until the Shōgun is seated upon his throne, then they enter, first the two commissaries, the Prince of Shinano, and then Harris, finally Heusken bearing the document from the President. In the great hall adjoining, 600 or 700 of the élite of the Japanese lie prostrate, decked in Court costume, an upper garment of yellow linen confined by a silk sash in which a sword is sticking, and long trowsers. At the threshold of the room in which the Shōgun sits the two Commissaries and the Prince of Shinano fall upon their knees. The latter remaining in this posture, leads Mr. Harris to the right so that he stands opposite the Taikun.

The Taikun is seated on a stool at the back part of the room on a platform 3 feet high; but the darkness scarcely allows of his being seen and his face is completely hidden by a hanging curtain from those who are standing.

With three bows Mr. Harris advances and remains standing on a place which is a step higher; at his right are the five members of the great Council, at his left fifty dignitaries; all on their knees. Perfect silence is preserved.

The Ambassador then makes the following ad-

dress, "May it please Your Majesty: In presenting my letters of credence from the President of the United States of America I am directed to express to Your Majesty the sincere wishes of the President for your health and happiness, and for the prosperity of your dominions. I consider it as a great honour that I have been selected to fill the high and important place of Plenipotentiary of the United States at the Court of Your Majesty, and as my earnest wish is to unite the two countries more closely in the ties of enduring friendship, my constant exertions shall be directed to the attainment of that happy end." The answer of the Taikun may be rendered: "Rejoiced at the reception of a letter sent by the hand of an Ambassador from a far country and also at his address, fellowship shall continue forever." Hereupon Heusken steps forward, gives the President's letter into Harris's hand, who opens it, shows the signature to the President of the Council and then delivers it to him. He lays it upon a table opposite the throne, then Harris retires with three bows.—The ceremony made quite an impression on Mr. Heusken, and according to his opinion the Court of the Taikun with its solemn simplicity and the absence of all barbarian splendour, contrasted very favourably with Court of the King of Siam, decked with gold and precious stones, which they had visited on their way out to Japan.

(To be continued.)

THE WEEK OF PRAYER.

The programme for the Twenty-fifth Anniversary of the Week of Prayer to be held from the 6th to the 13th inst., has been published and circulated as usual by the Japan Branch of the Evangelical Alliance. The Arrangements for Meetings to be held in Tokio and Yokohama are as follows:—

TOKIO,
UNION CHURCH, TSUKIJI.
Sunday—11 a.m., Sermon by the Rev. D. S. Spencer
Monday—4 p.m., Prayer-meeting led by the Rev. C. D. Fisher
Tuesday—4 p.m., Prayer-meeting led by the Rev. J. P. Moore
Wednesday—4 p.m., Prayer-meeting led by the Rev. C. S. Eby
Thursday—2.30 p.m. The Tenth Annual Meeting of the Evangelical Alliance of Japan. Addresses by the President Rev. Hugh Waddell, "Review of Christian Work during the year 1883;" Dr. C. G. Knott, "Dreams of the Past, and Facts of the Present;" Rev. A. A. Bennett, "Allegiance the Strength of Alliance."
Friday—4 p.m., Prayer-meeting led by the Rev. Mr. Cole
Saturday—4 p.m., Prayer-meeting led by the Rev. D. S. Spencer
Sunday—11 a.m., Sermon by the Rev. D. Thompson
YOKOHAMA.
Sunday—Union Church, 11 a.m., Sermon by the Rev. J. T. Smith
No. 212, Bluff, 8 p.m., Prayer-meeting led by J. A. Thompson, Esq.
Monday—Seamen's Mission, No. 86, 5 p.m., Prayer-meeting led by the Rev. H. Loomis
Tuesday—Seamen's Mission, No. 86, 5 p.m., Prayer-meeting led by the Rev. E. S. Booth
Wednesday—Seamen's Mission, No. 86, 5 p.m., Prayer-meeting led by A. J. Wilkin, Esq.
Thursday—Seamen's Mission, No. 86, 5 p.m., Prayer-meeting led by Dr. T. W. Gulick
Friday—Seamen's Mission, No. 86, 5 p.m., Prayer-meeting led by the Rev. W. C. Davisson
Saturday—Seamen's Mission, No. 86, 5 p.m., Prayer-meeting led by the Rev. T. P. Poate
Sunday—Union Church, 11 a.m., Sermon by the Rev. F. C. Klein
No. 212, Bluff, 8 p.m., Prayer-meeting led by Rev. C. E. Garst

Programmes giving a list of the subjects suggested for Prayer each day may be had at the Seamen's Mission Rooms, No. 86 Settlement, or at the Union Church, Tsukiji. They included the usual topics of Sermons, Praise, and Thanksgiving; Confession and Prayer for Cleansing and Renewal; Prayer for the Families and Instructors of Youth; Prayer for the Church of Christ; Intercession for the Nations; Prayer for Missions at Home and Abroad; and a closing Sermon on Christian love. Text Thess. 3: 12, 13. Union Meetings of all the Native Churches in Yokohama will be held throughout the entire week following the same programme, in which they will be joined by the Native Christians in Tokio, Kobe, Osaka, Saikio, and all parts of Japan. Twenty-five hundred Japanese programmes have been supplied them for the purpose. A second week of prayer has been determined upon by the Native and foreign Christians in Yokohama and at some other points. It may be made general throughout Japan. Very interesting meetings have already been held at the Seamen's Mission Rooms since the beginning of the New Year.

NOTIFICATIONS OF THE COUNCIL OF STATE.

NOTIFICATION No. 47.

It is hereby notified that the Public Loan Bonds Regulations for the construction of the Nakasendo Railway, has been fixed as follows:—

Art. 1.—These Public Loan Bonds are to be issued for the purpose of raising a fund to construct a railway on the Nakasendo Road from Takasaki, Kotsuke, in the prefecture of Gumba, to Ogaki, Mino, in the prefecture of Gifu.

Art. 2.—These Public Loan Bonds shall be limited to the amount of *yen* 20,000,000 and they shall be issued gradually by the Minister for Finance as the progress of the work demands. As to the details of each issue, the Minister for Finance will fix them at the time of making the issues.

Art. 3.—These Public Loan Bonds shall not bear the name of the owners and shall be of three denominations—*yen* 100, *yen* 500, and *yen* 1,000.

Art. 4.—The interest shall be seven per cent. per annum.

Art. 5.—Should the applications for the bonds exceed the amount required by the Minister for Finance, the number of the bonds to be transferred to the applicants shall be reduced in proportion to the excess. When, however, an application is made for the bonds at a higher price than their fixed value, the amount applied for shall not be reduced. The Minister for Finance will fix the price of issue.

Art. 6.—The Minister for Finance shall exhibit a sample of the bonds.

Art. 7.—The principal of these loan bonds shall not be redeemed for the first five years; but after that they shall be redeemed within twenty-five years by means of yearly drawings. The amount to be repaid shall be notified, at least, sixty days beforehand. The interest shall be paid in June and December, but upon the bonds which have to be redeemed the interest shall be paid up to the date on which the scrip is drawn. The interest shall be paid in paper currency.

Art. 8.—The interest is payable from the date on which the bonds are purchased. If they are paid for before the 15th of the month, the interest is payable for that month, and if paid after the 15th, it dates from the following month.

Art. 9.—The principal and interest shall be paid by the Nippon Bank. Notice of payment will be given thirty days beforehand.

Art. 10.—The interest shall also be paid at the branches of and agencies of the Nippon Bank.

Art. 11.—Anyone is allowed to buy and sell these bonds.

Art. 12.—When the principal is to be paid, the bond holders living in Tokiyo and Yokohama who having a large number of the bonds—there must be above ten of them—and five officers from the National Debt Bureau and Bureau for Record, must assemble at the Nippon Bank, and the drawing will take place in their presence.

Art. 13.—If the bonds are lost or stolen, the owners must report the particulars (denomination, amount, number, and manner in which the bonds were obtained) to the Minister for Finance through their local authorities. The Minister for Finance must prohibit the purchase or sale of such lost or stolen bonds. Should the bonds be recovered, the fact must be reported to the Minister for Finance. But if such bonds are not found by the end of the period for their redemption, and if they are thought to have been destroyed, the principal shall be repaid to the owners.

Art. 14.—Should the bonds be lost at the time the drawings are notified, they shall be excluded from the drawing.

Art. 15.—When the bonds are spoiled or torn, new ones can be procured on making application

at the Treasury Department through the Nippon Bank and on payment of the necessary fees.

Art. 16.—Should the bonds be spoiled in such a manner that the denomination, stamp of the Minister for Finance, etc., are unrecognizable, they shall be regarded in the same manner as lost or stolen bonds.

Art. 17.—Should the application for the payment of the interest not be made for fifteen years after the interest fell due, the owners shall not be entitled to either the principal or interest.

Art. 18.—These rules are subject to modification, excepting as to the amount of interest and the period of redemption, at the convenience of the Government.

(By Imperial Order)

SANJO SAN'EYOSHI,

First Minister of State.

MATSUKATA MASAYOSHI,

Minister of Finance.

December, 28th 1883.

NOTIFICATION No. 48.

The following Regulations for the issue of Loan Bonds in exchange for *Kinsatsu* and not bearing the name of the holder, are hereby enacted, and Article III. of Notification No. 47 of 1880 is cancelled.

Regulations for the issue of Loan Bonds in exchange for *Kinsatsu* and not bearing the name of the holder:—

Art. 1.—With the object of resuming specie payments, Loan Bonds will be exchanged for the paper money issued by the Government. The Bonds will not bear the name of the holder; their principal and interest will both be payable in specie, and the paper money against which they are exchanged will be destroyed by fire at the Finance Department.

Art. 2.—The Bonds will be issued by the Minister of Finance according to the desire of applicants, but it shall be competent for the Minister to reject applications according to the convenience of the national finances.

Art. 3.—The Bonds will be interest bearing, without the name of the holder, and of three dimensions, viz., 1,000 *yen*, 500 *yen*, and 100 *yen*.

Art. 4.—The interest on the Bonds will be six per cent. per annum.

Art. 5.—The Bonds will be issued at par, and applications for them may be made at the Bank of Japan or at any of its branches or agencies.

Art. 6.—The form of the Bonds will be determined by the Finance Minister.

Art. 7.—The redemption of the Bonds will commence five years after the year in which they are issued and will extend over a period of 30 years. The amount to be redeemed on each occasion will be made known by the Finance Minister sixty days at least before the date of drawing, and the interest will be paid twice every year, in May and November, so long as the principal remains unredeemed. When a Bond is drawn for redemption its interest will be calculated for the number of months that shall have elapsed since the date of the last payment, and the same rule will be observed in the case of Bonds which mature.

Art. 8.—The Bonds will be divided into those which have been purchased during the first fifteen days of the month and those purchased within the second fifteen days. On the former, half the month's interest will be paid: on the latter, the interest will be reckoned from the first of the following month.

Art. 9.—All business connected with the redemption of the Bonds and the payment of interest will be managed by the Bank of Japan. Dates and places will be determined by the Finance Minister, thirty days at least before the day of drawing.

Art. 10.—The interest on the Bonds will be paid at the Bank of Japan, its branches or agencies, in exchange for the coupons annexed to the Bonds.

Art. 11.—The Bonds may be purchased or dealt in by any one without distinction.

Art. 12.—The amount of Bonds to be redeemed on any occasion will be published by the Bank of Japan, their number, order, denominations, and amount having been fixed by the Minister of Finance. At the time of drawing there shall be present ten of the largest Bondholders, resident in Tokiyo and Yokohama, and five officials of the National Debt Bureau.

Art. 13.—In the event of a Bond being lost, its owner will report, in writing, to the Local Officials for transmission to the Finance Department, the number and denomination of the Bond, the name of its owner, and the circumstances under which it was lost. Thereupon the Finance Minister will prohibit the sale or exchange of the Bond. The same cause will be pursued in the event of the Bond being found. Should a Bond thus lost be not found before the expiration of the period fixed for redemption, it shall be considered cancelled, and the principal and interest will be paid to the person who originally reported the loss.

Art. 14.—Should the loss of a Bond be discovered only at the time of its being drawn for redemption, the drawing shall count for nothing.

Art. 15.—Should a Bond be stained or torn, it may be exchanged on application and payment of a reasonable commission at the Bank of Japan or any of its branches or agencies. Such exchanges must be preceded by a careful examination of the Bond's number, denomination, stamps, and other particulars.

Art. 16.—If at the time of exchanging or redeeming a Bond, it be found so much soiled or torn that the number, denomination, stamps, or other particulars are illegible, the payment of the principal and interest shall be subject to the rules which apply to the case of lost Bonds.

Art. 17.—Bonds of which the principal or interest shall not have been claimed for fifteen years after they fall due, shall cease to be redeemable.

Art. 18.—With the exception of the rate of interest and the period of redemption, these Regulations may be amended or added to in accordance with Government necessity.

(Signed)

SANJO SAN'EYOSHI,

First Minister of State.

MATSUKATA MASAYOSHI,

Minister of Finance.

28th of December, 1883.

THE ISSUE OF THE BANK OF FRANCE.

Mr. Paul Leroy-Beaulieu writes to the following effect on the dangers of suppression of the limit of the issue of the Bank of France. The state of French finances beginning to be well known, remedies are sought for on all sides. The simplest is one that seems to have escaped all observation; and that is to reduce the unparalleled squandering that has been going on for the last five or six years. But it appears that, far from adopting such a plan, the Government desires to adopt one quite the reverse. Thus, in the course of the last few days, it has forced the Senate to vote a supplementary credit of *fr.* 100,000 to increase the salaries of Prefects, whereas the emoluments of these functionaries are out of all proportion to the democratic condition of French habits, and the appropriation ought to be reduced by half a million at least, if not by a full million.

However, there are not two kinds of wisdom—one for private individuals and one for Governments. Take the case of any good citizen who, with a revenue of *fr.* 20,000 spends during three or four years *fr.* 24,000 or 25,000. Immediately that he realizes the condition of his affairs he will say to himself that there is only one way of disentangling himself, namely by reducing his expenses to *fr.* 20,000 or rather to *fr.* 19,000 as he has already made a hole in his capital. If the State had any perspicacity and any force of will, it would at the present moment adopt a similar line of

¹ Japanese papers interpret this article as embodying the foreign subscribers.

policy; but it does not listen to any such counsel, as this study of economy appears a too hard and vulgar a virtue: it seeks for other succour. And thus the strangest projects are invoked. One might think oneself back again either at the end of the last century or in the middle of the middle ages, to such an extent are absurd fancies attributed to the Government. One man propounds the reminting of all the gold currency of France: another says that the authorities desire to raise by two hundred million francs the three milliards which is the limit of issue of the Bank of France. (In point of fact, says Mr. Beaulieu, the suppression of the limit of issue of the Bank of France figures in the revised budget prepared by Tirard. The moment was ill-chosen.)

When we first read in some papers this absurd information, we gave no credence to it. But the rumor has been confirmed; and it is time to discuss these strange proposals. What is meant by reminting all our gold, and extending the limit of the Bank of France's note-issue? In what mad brain could such ideas have terminated. Would the Government emit false coin, as was done in the reign of Philippe le Bel? Or should we gradually reestablish our assignats by borrowing from the Bank its reserve of Treasury-notes, its railway bonds, or other paper to the extent of either one milliard or five millions. Nought but astonishment can follow the learning of such designs. Look for a single reasonable explanation of any idea of this nature. I defy you to find any.

Mr. Beaulieu goes on, in a strain of sarcasm that always renders his writing, even on dry subjects, pleasant: "To remint all the gold coin is not, I hope, for the pleasure of destroying all the effigies of Napoleon I., Louis VIII., Charles X., Louis Philippe, and Napoleon III. This would be simply costly child's play—as stupid as that pursued in the redesignation of the streets." And here we find an aphorism worth remembrance, which we may take the liberty of condensing from Mr. Beaulieu's sensible verbiage:—"Remintage is a cause of profit or loss. Honestly conducted it is a source of loss to the State, for small coins are always more or less worn away by friction and have lost part of their weight. The new coinage must be of standard weight. Hence the State may be in a deficit which may easily sum up to some hundred of millions."

But the reverse of the medal is next shown. Dishonestly performed, a recoinage may be a source of gain for the State, but of such a gain as will cause to the whole of the nation a loss much more considerable. It is suggested even that some unscrupulous broker may have whispered into the ear of the Minister of Finance to make a partial, not a total, remintage: that is to say to re-coin all the pieces which are above the recognized standard. The writer shows what profits might result; and concludes:—"In one word the vast development of the Bank of France's circulation during the past five years does not arise at all from commercial needs but from the requirements of the Treasury. And it is not for trade, but for the exchequer that the Bank's limit of issue is to be extended." And, again, "the Bank's liberty is wide enough: nothing hinders it to restore some coin to circulation." . . . "Yet an increase in circulation ought to be reserved for days of great peril as, for instance, a foreign war. Recourse on the part of the Exchequer or the big-privileged institutions such as the Railway Companies or the Credit Foncier, to the Bank is very dangerous." . . . "The notion of raising the limit of issue is such as to be likely to injure the public credit and to give another shock to our already badly shaken financial situation. If we hope to have a solid credit, and a clear and well-established monetary system, we must take example from the English, who for the past forty years have made no change in the limit of issue of the Bank of England. That example is decisive."

TRANSLATIONS FROM NATIVE JOURNALS.

THE ANGLO-KOREAN TREATY.

(Translated from the *Nichi Nichi Shimbun*.)

The public is now pretty well acquainted with the tenor of the treaty concluded by Sir Harry Parkes at Sōul, its principal clauses having been already published in these columns. Although the treaty stipulations between the two countries include the most favoured nation clause, our country occupies the position of the most favoured nation, as we are entitled to the same privileges as other nationals and their Governments, as provided for in our treaty with Korea, which says:—"Any right, privilege, or favour which the Korean Government has actually granted or may hereafter grant to the Government or subjects of any other State shall be extended to the Government or subjects of Japan without delay." According to this provision, we can claim whatever privileges are contained in the treaties of nations with Korea and which are in any way more beneficial than our own, without discrimination as to whether it is France or England. Thus, we can claim the privileges, rights, and favours that are embodied in the English Treaty on an equal footing with the Government and subjects of that country; so that whenever other nations enter into treaty stipulations with Korea, we can secure the additional benefits that may accrue without any effort on our part, and there can be no question that this is a matter for congratulation. But in considering the interests of Korea, we cannot help regretting that every new treaty may tend to conflict with the true interests of that country.

Article 1 of the English treaty provides for peace and amity, and for the exercise of good offices in case of these being required by one or other of the contracting powers. Article 2 provides for diplomatic and consular representation. Article 3 secures to the British authorities exclusive jurisdiction in all cases, civil or criminal, brought against English in Korea, either by the Korean Government or Korean subjects; and complaints involving a penalty or confiscation for breach of the treaty or of other regulations will also be decided by the English authorities. Article 4 provides for the opening of the port of Inchhōn, Wōnsan, and Pusan, and the town of Yanghwachin. According to this article, choice may be made of another port in the neighbourhood of Yanghwachin if those two places should be found unsuitable; but the right to open commercial establishments in the capital is subject to surrender if the Chinese Government should relinquish that right. At each of the places named, British subjects may rent or purchase land or houses, and may erect dwellings, warehouses, and factories. The sites for the foreign Settlements are to be selected and laid out by the Korean Government, in conjunction with the competent Foreign Authorities, and will be managed by a Council, the constitution of which will be determined in the same way. British subjects will have full liberty to travel and trade in the interior of the country, and will be amenable, in the settlements or elsewhere, to such Municipal, Police, and other Regulations as may be agreed on by the authorities of the two countries.

The 1st, 2nd, and 3rd articles afford no particular feature for comment. The 4th article, however, has an important bearing. The ports of Inchhōn, Wōnsan, and Pusan were opened to Japanese trade in the 8th year of Meiji, and the town of Yanghwachin was opened last year. These places were opened for our benefit, yet as we are by no means disposed to monopolise them, it pleases us that they were opened for other treaty powers. Thus, if any other place is newly opened for European nations, we are entitled to live and trade thereat. Supposing Pusan is not suitable for trade and another place is substituted for it, we can trade

in the new place as well as in Pusan. The Capital was not opened for Japanese commerce, although Chinese are trading there.

Article 4 of the Trade Regulations between China and Korea says that Chinese subjects shall be allowed to trade in Sōul, while Koreans are at liberty to trade in Peking. China contrived to prevent other nations from obtaining the same privilege by saying in the preface: "the conditions now stipulated are a special favour for commerce by land and sea which China grants to her dependency. This favour is not to be extended to other nations." The assertion by China that Korea is her dependency, is no longer recognised by any nation. First of all, Japan treated the Peninsular Kingdom as an independent power, and our example was followed by America, England, France, and Germany. In these circumstances, the treaty between Korea and China is untenable. It is not reasonable that, as England—one of the favoured nations—should have claimed to be placed on the same footing with China, Japan should do the same. Korea may have refused to open Sōul but for the threats of the Chinese Government, and the latter may now be contemplating the abolition of the treaty. On this account, the British Minister has, it appears, consented to the insertion of a clause in the English treaty to the effect that the right to trade in Sōul is subject to surrender, if China should give it up. But it may be rather for Korea's benefit than otherwise if she should open the Capital to foreign trade. We suppose the Council mentioned in the treaty to be similar to the Municipal Council at Shanghai; but in carrying out such a system in Korea, the government must take great care, or otherwise she may find that this Council may cause a miscarriage in the management of her national affairs. For what reason Korea granted the right as laid down in the English Treaty for people to travel and trade in the interior, we are unable to say. But she appears to have over-estimated her own circumstances, for certainly the Korean people are not yet in a condition to justify any such proceeding. However, as Korea has extended this privilege to England, she cannot refuse the same to Japan.

Article 5 gives English subjects the right to import into Korean open ports from any foreign port or any Korean open port all kinds of merchandise (excepting prohibited goods); and to export the same to any Korean open port, or to any foreign port. It provides for drawbacks on foreign goods, and for the refund of duty on Korean produce when proved to have been conveyed to a Korean open port. All goods that have once paid the duty of the tariff may be transported to any Korean open port free of duty, or may be conveyed into the interior free of any additional tax, excise, or transit duty whatsoever. Tonnage duties are to be paid at the rate of 30 cents per ton, a single payment being good for four months; and the whole of the dues so collected are to be appropriated to the construction of lighthouses, beacons, etc., and to the improvement of the anchorages at, and the approaches to, the open ports. These conditions afford no particular contrast with ours, except that while English bottoms pay tonnage dues of 30 cents in silver, we pay 125 *mon*. If these 125 *mon* are not to contribute toward replenishing the Korean exchequer, we have yet the right to prefer the lower rate. Tonnage dues are to be appropriated to the construction of lighthouses, beacons, the improvement of harbours, &c., but the English treaty stipulates that "the whole of those dues" shall be used for the purpose named, and the Korean Government is therefore restricted in the way of spending the tonnage dues.

Article 6 relates to smuggling at non-opened ports, the penalty being confiscation of the smuggled goods, as well as the forfeiture of twice their value. Our treaty, however, says that if a Japanese vessel shall smuggle or attempt to smuggle any goods at any of the non-opened

harbours of Korea, all such goods, together with all other commodities on board such vessel, shall be forfeited to the Korean Government, and the master of such ship shall pay a fine of 50,000 *mon*. Here we observe a great difference. British smugglers are liable to have confiscated only such portion of cargo as was attempted to be smuggled, and the other portion of cargo is not to be forfeited. On the other hand, we are liable to have the whole cargo confiscated and to pay a penalty of 50,000 *mon*. However desirable it may be to prevent smuggling, the lighter penalty seems preferable. Article 7 details the course to be followed in case of shipwreck, or when a British vessel is stranded on the Korean coast. All salvaged cargo or property is to be carefully protected, and the wants of the shipwrecked persons are to be fully provided for. Article 8 relates to ships of war. Article 9 sanctions the employment of Koreans by British subjects. Article 10 fixes the position of England as regards the most favoured nation, and Article 11 provides for revision of the treaty in ten years hence.

In the English treaty, the export of ginseng is prohibited, but nothing is mentioned as to the duties on ships. It promises the conversion of the present *ad valorem* duty into specific rates. This is a very important question, which demands the most serious consideration on the part of the Korean Government.

REVIEW OF THE YEAR 1883.

(Translated from the *Tokyo-Yokohama Mainichi Shimbun*.)

The Chinese philosopher So, said that mankind, in learning letters, learned the word "affliction" first of all. Since we first entered upon the journalistic field, our troubles have far surpassed our happiness every year. Whether this is due to our being acquainted with letters, or otherwise, we know not. In summing up the principal events of the year 1882 at the end of the year just gone, we expressed a hope that the year 1883 might witness a healthy improvement in trade, politics, and agriculture; but it has turned out, on the contrary, to be one of still greater depression in trade and not at all satisfactory in the political improvement of the country. We shall now proceed to review these subjects, each one separately. In the beginning of the year 1883, members of all the Metropolitan and Prefectural Assemblies met in Tokyo to discuss the advantage or otherwise of the present system of Assemblies. On the 1st of February, they were to meet at the Honganji Temple; but owing to a breach of agreement on the part of the monastery, they were obliged to find some other suitable place, as the priests, having refused to lend their hall after having previously agreed to its being used, the committee were thrown into confusion, but they ultimately succeeded in obtaining rooms at Nakamura's. As the meeting was of a purely social nature, we called upon all persons interested to attend it in spite of living at a great distance, even those from Satsuma and Osumi. Unfortunately, the day was ushered in by a great snowfall, which made the weather almost unbearable, and on the second day the meeting was dispersed by order of the Home Minister. The cause of this order, however, could not be ascertained. The Press Laws were revised and were made more stringent than before. Formerly, the editor alone was responsible for the violation of the Press Regulations, but according to the new rules, the proprietor, editor, and printer are alike liable to punishment. The most remarkable feature in the new provisions is the exacting of security amounting to *yen* 1,000, according to the nature of the journal. In consequence, many papers stopped publication. At one time, we feared that journalistic enterprise would be entirely put an end to. The principal parties, worthy of the name, were the Liberals, the Liberal-Conservatives, and

the Imperialists. The first two parties professed nearly the same creed, their mutual relations being similar to those of Nobunaga and Iyeyasu, and we might have naturally expected that harmony would have existed between them. On the contrary, however, the Liberals assumed an attitude decidedly hostile towards the Liberal-Conservatives, when their leader Mr. Itagaki left for Europe on a tour of political inspection. They applied all sorts of scurrilous epithets to their opponents, whilst our friendly advice was never accepted; and especially did the lower grades of the Liberals bring discredit upon themselves by their calumnies and abuse. On the return of Mr. Itagaki, however, they abandoned their method of procedure, and this course has been attributed to their having been admonished by Mr. Itagaki; nevertheless, they are to be congratulated upon having mended their ways. The Imperial Party has distinguished itself by its inactivity throughout the period of its existence, and it has exercised no influence whatever upon political affairs, notwithstanding that it was numerically stronger than some other parties, especially in the provinces; and although its creed is utterly at variance with that which we profess, it was often demonstrated in the field of practical politics that the party was occasionally useful, and with this in view we always desired that it should continue to exist. On the 24th of September, however, the members dissolved their organization, which we think, for the reason given above, is to be regretted. During the year, the Koto Ho-in was twice opened for the prosecution of political offenders, in one case those who were connected with the Fukushima affair, and the other those who got into trouble at Takata. In the former case, the suspects were sentenced, on the 29th of September, to six years imprisonment, except the ringleader, who was committed to gaol for the term of seven years. In the latter case, the ringleader was sentenced to nine years' imprisonment. Considering that our beloved Sovereign possesses the brilliant virtue of mercy, which is equally acknowledged by the Japanese people as by foreigners, and that his Ministers are all men of ability, it seems almost past belief that such events have taken place in two instances in the year just gone. The departure to Europe of H.E. Ito was an event which afforded food for surmise and conjecture, and when he returned, it was reported that great Ministerial changes would take place; another report was that the provincial officers would be superseded. No such changes, however, as those referred to have taken place, or even any material alteration, if we may except the transfer of the three Privy Councillors, Fukuoka, Yamada, and Yamagata, from one post to another.

With regard to commerce, depression at length has reached the last stage, and Yokohama has witnessed a series of commercial disasters such as have never been experienced since it was first opened for foreign trade. Silk merchants have been ruined owing to the depreciation in the value of that article and consequent upon the fall in the rate of exchange in the interior. The import dealers have equally suffered. If they once put their goods into godowns, they knew not when an opportunity to take them out would occur, since there was no demand for them. Every article they contracted for proved a loss on arrival here, and the consequence was no end of trouble attended by constant litigation between them and foreign merchants. The Bourse has also been ruined owing to the enactment of new rules which came into operation on the 1st of April. Formerly, the tax paid by exchange brokers amounted to more than *yen* 60,000; but for the last half year from July to December, it only amounted to *sen* 70, and the Stock and Rice Exchanges in Tokyo have shared a nearly similar fate; while additional disaster has attended the enormous fall in the price of rice, and it may be said of the saké brewers that they have simply collapsed, the number of these who have become bankrupt being upwards of 500, or about 6 in every 10. The expenditure of

the Post Office is reported to exceed the income owing to a considerable falling off in the quantity of correspondence. This not only represents a stagnation in business, but also the contraction of knowledge and the prevention of its diffusion among the people.

Of course, the mainstay of this country is its agriculture. For the last five or six years we have been blessed with abundant harvests, although there may have been some localities where the crops were slightly damaged, but on the whole, we have had an outturn of both grain and cereals far above the average; nevertheless, distress has prevailed to a very great degree amongst farmers instead of prosperity, and to such an extent in many instances that they cannot pay the taxes. The Government has postponed the period for their payment, yet the result, we fear, will not be so good as is anticipated.

So much for the principal events that occurred during the year 1883. Our readers will find no difficulty in deciding whether we were well off or not. Notifications Nos. 46, 47, and 48 next demand serious consideration at our hands, and we shall discuss them in a future issue.

THE POSITION OF FOREIGN SETTLEMENTS IN WAR.

(Translated from the *Nichi Nichi Shimbun*.)

Our readers already know that Europeans maintain, in view of war arising from the Franco-Chinese difficulty, that the settlements, being under the protection of extraterritoriality, are neutral, and that the French cannot blockade any treaty ports. According to international law, the belligerents cannot encroach upon neutral countries and must respect the right of such nations. In case of a blockade, such waterways as are open to neutral parties shall not be obstructed. Thus, A. is a neutral country, situated say, at the source of a river, and B. is a country engaged in hostility with C., who, being B.'s enemy, cannot blockade the river in question, as it must not obstruct A.'s passage. Such is the right of neutrals, which belligerents must respect. We shall now proceed to consider whether or no foreign settlements are made neutral by virtue of extra-territoriality. What is the meaning of extraterritoriality? It is nothing more than that foreigners observe their laws under the pretence that the laws of the country in which they reside are not sufficient to protect their lives and property; or, in other words, extraterritoriality stipulates that the control of foreigners shall be left to their own Governments; but it does not stipulate for any grant of land. That the Government officers cannot pay domiciliary visits to foreigners is not because the residence of foreigners is on foreign soil, but because the authorities have no power over them, a fact which is clearly established by the treaties between nations. This being the case, foreign settlements are still an integral portion of the country in which they are located. This is exactly the case in Japan and China. Foreign settlements in China cannot, therefore, be considered neutral. Should the French blockade them in case of war with the Middle Kingdom, bystanders would have no right to object to the proceeding. This is recognized by the most learned authorities. Supposing that extraterritoriality affords protection to foreign settlements against blockade, it being based upon an agreement between the contracting parties, is binding upon the contracting parties only and not upon outsiders. This is not mere presumption, but a maxim laid down in the law of contract which Occidentals obey. Therefore whatever contracts may exist between China and any other power, are binding upon the two and need not be recognised by France. Whatever nationals may reside at the ports of China, the ports being Chinese territory, no foreign power can restrain the exercise of the full rights of belligerents. No matter whether the result be

favorable or unfavorable to China, we are sure that, should the pretensions of foreigners prevail, the French cannot blockade the ports of Canton, Amoy, Ningpo, Shanghai, Chefoo, Tientsin, and other important places; and this would be a bad thing for China in so far as her temporary convenience is concerned. But an inevitable consequence is that the foreign concessions in her dominions will establish themselves as independent possessions, entirely beyond her control. If the foreign settlements were once declared neutral and exempt from a French bombardment, China would equally with other powers be unable to execute military operations there. The settlements might come within the line of defence, or it might be found expedient to burn them down or evacuate them or build fortifications round them; but if they are declared neutral and are not to be attacked by French, what can China do? France cannot take offensive, or China defensive, measures. This notion cannot be reconciled with the rights of independent nations. Article 15 of the treaty between China and Japan says:—"If either power shall be at war with another country, it may close its ports and temporarily stop trade by giving due notice. Vessels going and coming must not suffer. Chinese residing in Japan or Japanese residing in China, shall not, in such a case, take sides with either one of the hostile parties." This is very proper. But we do not know whether China has a similar treaty with other powers. Supposing China yields to foreign pretensions, what will she do? We are apprehensive for our good neighbour. If the foreign settlements are not to be attacked by the French, the advantage in this respect will be more than counterbalanced by China's inability to take defensive measures in the settlements. Not only this, but the foreign settlements will fall entirely out of China's hands as she will no longer be able to control them. Should such a precedent as is here implied be once admitted in international law, all future affairs in the East will be meddled with by neutrals. The question at issue bears not only on the future of China, but on that of the whole of the Orient. We earnestly call the attention of Chinese and Japanese functionaries to this point.

CHRISTIANITY AND BUDDHISM.

Mr. Mozoondar, a distinguished Indian Brahmin Priest, and a leading representative of the Bramo Somaj, now on a visit to Japan, delivered a lecture before the faculty and students of the Imperial Japanese University on Friday last. He spoke as follows:—

GENTLEMEN,—I have lately visited the great countries of the West. As our vessel neared the coasts of Japan, my heart was full of joy, for I felt that I was once more creeping back into the bosom of Asia, my mother and your mother. President Hattori has requested me to address you to-day on Buddha, his life and teaching. I rejoice that Japan and India are near to each other because they are both a part of Asia; but my country and your country are bound together in a higher union by the strong arm of Shakamuni. I have often sat under the famous tree where he prayed and obtained illumination, and besought for myself the wisdom of heaven. The names applied to Buddha are extremely interesting as they indicate his personal virtues. Shaka means lion of the Shaka race. Buddha signifies intelligence, wisdom. Seddhahar—one who has accomplished his purpose. In childhood Buddha was trained in all the manly sports, as well as in literature and other accomplishments. You are all familiar with the words of an English poet:—"The child is father to the man." This is true of him, for young Shakamuni was father to the future Buddha. The philosophy of India is a boundless ocean. There are heights and depths of wisdom which

are almost unfathomable. Buddha was a perfect master of this vast philosophical system.

Mr. Mozoondar then gave a very poetic description of the life of the young Prince in the royal palace, surrounded by lovely parks, and from whose outlook sickness, death, and all unpleasant sights were carefully removed. He participated in the enjoyments which surrounded him, but these did not suffice for him. He longed and sighed for something which the world could not give. True, every man sighs for something beyond the pleasures of the world, but Shakamuni's longing was deeper and more earnest. The life of a Hindoo Prince is very different from that of an European Prince. In Europe a Prince keeps his pack of hounds, opens their mouths and counts their teeth, compares the size of bullets, looks into the mouth of cannon, takes a part in manly sports, and becomes well acquainted with the outside world. In India their condition is the opposite of all this. They are confined within the walls of a palace, and when they go forth for pleasure there is a body-guard in front and rear. They are ignorant of the world. A few years ago the Prince of Wales visited India. Vast preparations were made beforehand for his visit. Immense sums of money were expended in putting everything in good condition. The people were commanded to whitewash their houses, and remove all offensive sights. The beggars were all spirited away and put out of sight. When the Prince came and saw how clean and well governed India was, he was satisfied that the great empire over which he was to rule some day was in a most happy condition. How much less, then, could Buddha, confined to his palace, know of the real world? Shakamuni once issued from his palace and for the first time saw a sick beggar. He knew not who or what the creature might be, for he had never heard of such an object. But when he found out what it all meant, his pure sympathetic soul was thrilled with pain. At another time he saw a funeral procession, and inquired of the attendant what it was? He never knew there was such a thing as death in the world. These were awful revelations to him, and the first thought with him was:—"Is there no remedy for these ills of life?" Again, at another time, he met a man clad in tattered garments. His exterior was that of a beggar, but his countenance showed composure and peace, and beamed as though a full moon were rising out from it. He asked the attendant who the man was! And he replied that is a "Holy man! He loves God: he loves man: he conquers himself." The sight of this holy man made a deep and lasting impression upon his mind; and he felt that in religion was to be found the remedy for all the sorrows of the world. He said:—"In religion I find the secret of ease."

The speaker next dwelt on Buddha's character. Three great features distinguish his character and teaching. (1) Humanity—He taught kindness, gentleness, love. By his example and powerful preaching he did much to humanize India. In the days of Shakamuni the Brahmins as a class were cruel and warlike, and fond of animal food. But their habits of life were greatly improved under the humane influence of this great teacher, and the effects of his teaching are very manifest in India to-day, for there is still a mighty people in that country who abstain from animal food. (2) Wisdom and intelligence, as the name Buddha itself signifies. Shakamuni, was the wisest, the greatest of all the sons of India. He revelled in the profundities of Hindu ideas and philosophy—a Prince among wise men. (3) Self-discipline and subjugation of the passions. "Self is the law of self." For, in long years, he fasted, and prayed, and wept, searching for the eternal verities. He tore the lusts from his heart and trod them under his feet. He conquered selfishness in all its branches. Nirvanah comprises the above three cardinal virtues. Nirvanah must not be confounded with annihilation. The doctrine of annihilation was not

taught by Buddha, but is an invention of later theologians. It signifies—according to the founder of Buddhism—peace, wisdom, holiness, reconciliation of soul to soul, and conquest of self. He has taught, further, that there are three things when constitute moral government. (1) Buddha—The Master himself. (2) Sauga—Priesthood. (3) Damma—Law. In Christianity we find corresponding to these. (1) Buddha, meaning Messiah. (2) Sauga, meaning Priesthood. (3) Damma, meaning the Bible.

Here the lecturer laid great stress upon the remarkable similarity between the "Light of Asia" and the "Star of Bethlehem." He eulogized Christianity as the chief of the great religions, and characterized Christ as the chief of all the great prophets of all times, the God-man, and the central light of the whole world. He continued:—"I am not a Christian, I am a Brahmin; and I believe in the ancient faith of my own country. Religion is a necessity to all men. A nation cannot take one stride forward without religion. I have visited Europe and America; and there I beheld the power of Christianity. It is the secret of all true prosperity. Christianity gives birth to and fosters all that is noble, great, and good in those lands. Where was Europe before Christianity? What would America be without Christ? I am sorry to learn that Japan is indifferent to the supreme importance of religion. You cannot prosper without it. Make your religion as rational, as national as you please, but a religion you must have."

The above is a very imperfect report of his lecture which was of rare interest from beginning to end. The speaker was heartily cheered at the close of his remarks by the students who were evidently moved by his eloquence. After the lecture he met the Professors in the reception-room, where refreshments were served, and a very exciting, but agreeable, hour was spent in conversation together. Questions on science, philosophy, religion, and the new religious movement of India, the Bramo Somaj, were poured upon him from all sides, but he remained cool, and self-possessed, replying to all with remarkable ease and tact.

THE CONFEDERATE CRUISERS.

The Secret Service of the Confederate States in Europe; or, How the Confederate Cruisers were Equipped. By JAMES D. BULLOCH, Naval Representative of the Confederate States in Europe during the Civil War. G. P. Putnam Sons. 2 vols., pp. 460-438.

As indicated by the above title, Captain Bulloch was the officer selected by the Confederate authorities to organise and equip their naval demonstrations from abroad, and his operations are related in the two large, somewhat loosely jointed, but interesting volumes under consideration. At the outbreak of the civil war the South found itself singularly barren of materials or resources for the creation of a navy. Beyond a few merchant steamers of indifferent character in its ports, there were no vessels within reach to meet the naval ships of the North, which, for their period represented a more efficient and complete naval force than we now possess. There was but one shop in the whole Confederacy capable of turning out a first-class marine engine, and no available yards for ship-building. The Pensacola and Norfolk yards, it is true, were for a time in possession of the Confederates, but the former was a place of repair, not of construction; and the latter, when it fell into their hands after its unnecessary evacuation by the Federal forces under Commodore McCauley, in April, 1861, was already rendered useless for the despatch of cruisers by the enemy's occupation of its outlet at Hampton Roads. This latter yard, it is worth remark, in passing, supplied the Confederates not only with the hull and engines out of which the *Merrimac* was created, but also with what Captain Bulloch fails to notice particularly, a store of heavy artillery (at least twelve hundred guns, according to Soley, Parker, and other authorities) sufficient to provide for their immediate need. It was with these guns that the Confederates equipped their otherwise comparatively inoffensive coast-fortifications and gunboats, and found material for the effective thirty-two-pounder rifled and banded pieces which they so cleverly improvised.

Under these circumstances, the attention of the Confederate naval authorities was early turned to foreign sources for the development of the insignificant germ of a navy then in hand. Accordingly we find, as probably one of the last letters coming through the mails which has yet reached the North

from the seceded States, a communication, dated April 23, 1861, from Judah P. Benjamin, then Secretary of State under the Montgomery Government, requesting Captain Bulloch, at New York, to come forthwith to Montgomery. Arriving there a few days later, he was despatched to England on the following day, under brief instructions, the execution of which led to the events which form the subject of his book. It is interesting to observe that, in the brief colloquy which Captain Bulloch had on this occasion with Mr. Mallory, then the Secretary of the Navy of the Provisional Government, and afterward holding the same post under the Confederate Government, it appeared that, although the Montgomery authorities ultimately expected a formal recognition of their Government by foreign nations, nothing but the comity of the latter to a belligerent was sought, or expected to be invoked, at that period.

Arriving in England in June, 1861, Captain Bulloch found himself without funds or a status sufficient to render his task encouraging, and with the formidable Foreign Enlistment Act staring his enterprise in the face. This statute, since amended, and afterward largely considered in the *Alabama* case at Geneva, forbade any person to "equip, furnish, fit out, or arm" any vessel within the realm for the purpose of making war on any foreign state or persons, and provided, in the event of its violation, not only for a forfeiture of the property, but, certain penal features applicable to the parties concerned. Sufficient as the provisions of the Act would seem, at first blush, to prevent his purpose, Captain Bulloch, as the event proved, found a way, if not to "drive a coach and four" through it, at least to slip through a few cruisers. Taking advice of eminent counsel, he found he could (as in fact he did) build his ships within Her Majesty's dominions, leaving the work of supplying their equipment—i.e., the necessary appliances for warfare—to be performed elsewhere, whether in obscure foreign ports, by the aid of tenders which took the materials out as ordinary merchandise, or otherwise. With this construction of the existing law to stand upon, in spite of many obstacles thrown in his way, the zeal of Mr. Dudley, the United States Consul at Liverpool, and Mr. Adams, the American Minister, and even of difficulties arising from the indiscreet babble of friends, he managed to build and despatch the *Florida*, *Alabama*, and other vessels, with results with which the world is familiar. Their work began the decadence of American commerce, and the heavy bill of damages they caused against England at Geneva represents but a small portion of the loss, one way or another, attributable to them.

With that promptitude which characterized all of Captain Bulloch's work, and which was largely the secret of its success, he caused the keel of the *Orto* (afterward the *Florida*) to be laid in the same month in which he arrived in England, and even before his first remittances had arrived from home. The same energy led to the building of the *Alabama* a few months later, and was evidenced again in the prompt despatch of this latter ship on a pretended further trial-trip, when the author had received information, "from a private but most reliable source, that it would not be safe to leave the ship in Liverpool another forty-eight hours." And as an example of Captain Bulloch's restless activity, we find that while awaiting the completion of the *Florida* and *Alabama*, he bought and took home to the South, through the Savannah blockade, with a cargo of army supplies, the steamer *Fingal*, which was afterward altered into the ironclad ram *Atalanta*, and suffered capture a year or two later, in a brief engagement under the guns of the monitors *Passaic* and *Nahant*. One object of this incidental trip was to obtain opportunity for conference with the naval authorities at Richmond. On her way out, the *Fingal* met the Confederate steamer *Nashville* at Bermuda, the latter being then bound for England, where she created so much talk and stir, and whence she departed home unexpectedly, before her officers and crew could be transferred to the *Florida*, as was intended.

The successful career of the *Alabama* and *Florida* illustrates the skill and foresight with which they were designed. It was apparent that, to keep the sea effectively, they must be capable of speed under sail alone, and dependent on their auxiliary steam power only in emergency. The various foreign nations had early proclaimed rules of neutrality intended to restrict the use of their ports by vessels of either belligerent, particularly in the matter of supplies of coal, and the home ports of the Southern vessels were in effect sealed against them by the blockade. Hence the two ships in question were built with fine lines for speed, and carried exceptional spread of canvas, especially in their fore and aft sails. Their chief cruising was done under sail alone, and they made a port only at long intervals, while their operations against the merchant-ships were

carried on at times almost under the guns of the enemy. On this point Captain Bulloch remarks that he has always thought

that the United States Navy Department showed either great apathy or was singularly blind to the real danger to the commerce of the United States, and strangely negligent in using the means to protect it. The points of attack were so apparent that it seems hardly credible that they were never occupied.

After describing in detail the course of American vessels between their home ports and those of the east and west coasts of South America, the Cape of Good Hope, and the East Indies, and showing that to catch the north-east and south-east trade-winds effectively they must pass near Fernando de Noronha, when about crossing the Atlantic equator, Captain Bulloch continues:—

If the United States had stationed a few ships to cruise in couplets in the neighborhood of the above named 'forks of the road,' as they have been called by Maury, and a few more, say, in the Straits of Malacca, and on the principal and well-known cruising-ground of their whaling fleet, two or three Confederate cruisers could not have remained for weeks in the track of passing ships, capturing and destroying them without hindrance. Neither the *Alabama*, *Florida*, nor *Sumter* was driven from her work in any particular latitude; they shifted their cruising-grounds only when it seemed advisable to seek fresh victims elsewhere; and the *Shenandoah* went round the world, sought out the great American whaling-fleet in the North Pacific, and destroyed thirty-eight vessels without so much as seeing a man-of-war."

The Navy Department did send out the steamer *Vanderbilt* and other vessels with instructions to cruise over nearly the same route that Captain Bulloch indicates, and it would appear to have been in some degree a matter of luck that the commerce-destroyers so long escaped an encounter. Professor Soley, in commenting upon the judicious instructions given to the commander of the *Vanderbilt* on this occasion, says that they were defeated by Captain Wilkes, who annexed that vessel to his flying squadron, and refused to give her up until peremptory orders had been issued from the Department, thus delaying her until the birds had flown and her plans proved abortive.

Of the midnight surprise and capture of the *Florida* by the *Wachusett*, under Captain Collins, in the neutral port of Bahia, Captain Bulloch speaks in strong terms, characterizing it as an act of "assassination." The *Kearsarge's* duel with and victory over the *Alabama* off Cherbourg was a different matter, and recalls the chivalric challenges and combats of the older school of naval warriors. The story of the famous fight of June 11, 1864, is retold freshly and with great fairness by Captain Bulloch. He finds, in brief, that "the result of the action was determined by the superior accuracy of the firing of the *Kearsarge*," and, in common with other reasonable people, holds that Captain Winslow's protection of his ship by hanging her chain-cables outboard over the more vulnerable parts was a sensible performance, notwithstanding the strictures this circumstance provoked—chiefly among Southerners—at the time. The well-known fact of the *unexploded* shell from the *Alabama*, which lodged in the *Kearsarge's* most vital parts—the sternpost, near the screw, rudder, and wood-ends—early in the action, is worth recalling, as a curious example of what minute chances success sometimes turns upon in warfare. Concerning the much-discussed attitude of the English yacht *Deerhound*, in carrying off and landing in England some of the *Alabama's* crew and officers from the sinking ship, Captain Bulloch fails to note the important fact pointed out by Professor Soley, that before the *Deerhound* intervened, she was hailed from the *Kearsarge* and asked to assist in taking off the *Alabama's* people. This latter authority, in a review of the case concludes that the *Kearsarge* had no right, under these circumstances, to expect that the *Deerhound* would deliver up the rescued men into imprisonment, and fails to see how any blame can be imputed to her owner in the premises.

We have thus far chiefly confined our attention (with many omissions) to Captain Bulloch's operations in England, but his chapters concerning the attempts to build and despatch vessels in France possess equal interest, particularly for their nearly positive evidence that no less a person than the Emperor himself, at one time, smiled upon and fostered these efforts. But that exalted personage was not unpractised in the methods of shifty diplomacy, and could, on occasion, with equal facility, blow either hot or cold. It appears that, early in 1863, the Confederate authorities had received intimation from high officials in France that facilities would be offered for the construction and equipment of ironclad ships-of-war in that country, and that this intimation was of a sufficiently formal character to induce the passage of a secret act, by the Confederate Congress, appropriating £2,000,000 for this purpose. These facts were communicated to Captain Bulloch, in a cipher despatch, by the hand of a special messenger, under date of May 6 of that

year; from which, by the way, it appears that Secretary Mallory not only felt sure of his ground in constructing these ships, but even supposed it possible that "one or more of the ironclads of the French navy might be so transferred" as to come into Confederate possession.

Before the receipt of these advices, however, Captain Bulloch, having himself received intimations from France of somewhat similar character, was already in treaty with a French shipbuilder for the construction of suitable vessels. This was a M. Arman, who, then engaged in building large armored vessels for the imperial navy at his Bordeaux yard, where he had been recently personally decorated by the Emperor, was a deputy in the Corps Législatif, and, as it appears, possessed of facilities for obtaining personal interviews, on occasion, not only with M. Rouher, the Minister of State, but with his Imperial Majesty himself. On M. Arman's assurance that he was "confidentially informed by the Minister of State that the Emperor was willing for him to undertake the construction of ships for the Confederate Government," and to let them go to sea under the French flag, for delivery at any desired point, Captain Bulloch ordered a formidable fleet of four clipper corvettes of twelve or fourteen six-inch rifle-guns each, and two ironclads of large power. What these effective vessels might have accomplished on the Northern coast, in the hands of the daring Confederate officers who were awaiting their completion, and how much they might have delayed the march of events in the then waning fortunes of the South, it is idle now to discuss. Whether it was bad news from Bazaine in Mexico, or Lee's shattered recoil from Gettysburg, that suggested a more cautious consideration of the protest from the United States, by that time lodged against these vessels, we shall perhaps never know; but this much is clear, that when Mr. Dayton, the American Minister presented his complaint, the shipbuilders concerned were sent for and informed, with fine official indignation, that their plans must forthwith be abandoned.

M. Arman, indeed, was treated to a personal interview with the Emperor, who "soundly rated" him, and, threatening imprisonment in the event of further dealings with the Confederates, dismissed him to such loss as his suddenly aborted transactions might involve. That the purpose of these vessels was fully known to the Emperor and his ministers, and their building connived at, admits of little doubt. Formal official authority to arm the ships had been duly furnished to the builders by the Minister of Marine, this functionary (M. Chasseloup-Laubat) writing under his official signature to M. Arman, under date of June 6, 1863, in reference to the corvettes, as follows:—

Je m'empresse de vous faire connaître . . . que je vous autorise volontiers à pourvoir d'un armement de douze à quatorze canons de trente les quatre bâtiments à vapeur, en bois et en fer, qui se construisent en ce moment à Bordeaux et à Nantes. Je vous prie de vouloir bien m'informer en temps utile de l'époque à laquelle ces navires seront prêts à prendre la mer, afin que je donne les instructions nécessaires à MM. les chefs du service de la Marine dans ces deux ports.

To this evidence may be added, as a bit of interesting history not generally known (or, indeed, known to Captain Bulloch, perhaps), the fact that the official records of the Richmond Government on this subject, including such papers as Mr. Slidell, their representative in France, had obtained from the imperial officials, were solemnly destroyed in the furnace of the Mint at Charlotte, North Carolina, on the retreat from Richmond of Mr. Davis and his Cabinet. And it was observed by such of those Confederate officials as were soon after captured and imprisoned, that one of the chief matters of inquiry directed to them by Mr. Seward was the French encouragement in the naval operations here referred to. It is said by Southerners in the confidence of these officials, that the reason for the detention of Mr. Mallory at Fort Lafayette (the last Confederate prisoner except Mr. Davis himself) was Mr. Seward's confident belief that he could produce these papers, which were then very much desired at the State Department in Washington, for use against the Emperor of the French in the matter of dislodging Maximilian from Mexico.

In construction Captain Bulloch's book is defective. The practice of following out each subject to its conclusion, without considering it in its relation to others, leads to much repetition, and, in consequence, to unnecessary length. But in discussing the events of the war, the work is conspicuously fair—there being, indeed, a somewhat over-punctiliousness at times in the effort to do justice—and it is uniformly interesting. The absence of an index seriously detracts from the usefulness of a book of this character for purposes of reference, but as a whole it constitutes a decidedly valuable contribution not only to naval history generally, but to the full history of the civil war.—*Nation*.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, December 30th.

FRANCE AND CHINA.

Paris journals urge the occupation of Hainan, Formosa, and Chusan, as a guarantee for war expenses.

London, January 2nd.

THE CONDITION OF IRELAND.

Disturbances created by Orangemen and Parnellites continue in Ireland.

Earl Spencer has arrived in London, and is everywhere guarded by police.

[FROM THE "HONGKONG DAILY PRESS."]

London, 12th December.

Mr. Parnell, when receiving in Dublin a testimonial of £38,000 sterling, counselled patience and said he had every confidence that the independence of Ireland is obtainable.

London, 14th December.

The hillmen are threatening Suakim. Baker Pasha will take the command of an expedition fitting out consisting of 8,000 Egyptian troops.

London, 17th December.

3,000 reinforcements start for Tonquin next week and 3,000 in the middle January. No attack is expected to be made on Bac-ninh until they arrive.

London, 19th December.

The French Chamber of Deputies has approved vote of credit for Tonquin.

The British Government will not intervene in Soudan.

London, 24th December.

THE RELATIONS BETWEEN FRANCE AND CHINA.

His Excellency the Marquis Tseng, who has had several interviews with M. Ferry lately respecting the Tonquin question, returns to London to-day.

The diplomatic relations between the French and Chinese Governments still remain undisturbed, and there is no talk of a rupture so far.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 7.30, 8.45, 9.30, 10.15, and 11.30 a.m., and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 7.30, 8.45, 10.00, 10.45, and 11.30 a.m., and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

Those marked with (*) run through without stopping at Tsunumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-SHINMACHI RAILWAY.

The Trains leave UYENO at 7 and 11.30 a.m. and 4 p.m., and SHINMACHI at 7 and 11.30 a.m. and 4 p.m.

The Fares are:—Special-class (Separate Compartment), yen 2.65; First-class, yen 1.58; Third-class, sen 79.

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.50 and 10.30 a.m., and 12.15, 2.30, and 4 p.m.; and leave Yokosuka at 7.15 and 9 a.m., and 12 m. and 1.45 and 4.00 p.m.

TIME-GUN.

A time-gun is fired every Saturday from one of the Messageries Maritimes steamers at Noon.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, DECEMBER 28TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
..... represents velocity of wind.
..... percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 30.0 miles per hour on Monday at 2 p.m.
The highest reading of the barometer for the week was 30.493 inches on Thursday at 11 p.m., and the lowest was 29.583 inches on Saturday at 2 p.m.
The highest temperature for the week was 53.3 on Friday, and the lowest was 16.2 on Tuesday. The maximum and minimum for the corresponding week of last year were 62.2 and 25.0 respectively.
The total amount of rain for the week was .044 inches, against .577 inches (rain and snow) for the corresponding week of last year.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Shanghai, Nagasaki, & Kobe per M. B. Co. Monday, Jan. 7th.
From Hongkong, per P. M. Co. Monday, Jan. 7th.*
From Europe, via Hongkong, per M. M. Co. Thursday, Jan. 10th.†
From America ... per O. & O. Co. Friday, Jan. 11th.‡

* City of Peking left Hongkong on December 31st. † Menzaleh (with French mail) left Hongkong on January 3rd. ‡ Oceanic left San Francisco on December 22nd.

THE NEXT MAIL LEAVES

For Kobe per M. B. Co. Tuesday, Jan. 8th.
For Shanghai, Kobe, and Nagasaki ... per M. B. Co. Wednesday, Jan. 9th.
For Hakodate ... per M. B. Co. Wednesday, Jan. 9th.
For America per P. M. Co. Thursday, Jan. 10th.
For Europe, via Hongkong ... per P. & O. Co. Saturday, Jan. 12th.
For America per O. & O. Co. Friday, Jan. 18th.
For Europe, via Hongkong ... per M. M. Co. Saturday, Jan. 19th.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

SUNDAY CHURCH SERVICES.

Christ Church : 11 a.m. and 5.30 p.m.
Union Church : 11 a.m. and 8 p.m.
Roman Catholic Church : 8 and 9.30 a.m.
English Church, No. 12, Sakaicho, Shiba, Tokiyo : 11 a.m.

NOTES FROM JAPANESE PAPERS.

Owing to the extension of the Army, the number of officers will be increased. The term at the Military College will be shortened one month, so that the diplomas will be conferred upon the graduating cadets in June next instead of July. They will then all receive direct commissions.

Yesterday, the celebration of the fire-brigade in honour of the New Year took place in presence of the Superintendent of the Police Bureau and others. At the pre-arranged signal, which was given by fire bells, the firemen assembled at the Police Stations in their respective districts, and, headed by the Chief Inspectors proceeded to the Parade-ground opposite the Police Bureau. After going through manœuvres with the ladders, the firemen retired with pecuniary presents from the Police Bureau.

Mr. Techow, a Prussian officer, will confine himself to remodelling the common education. He will have no concern in the Universities where the scientific technicalities are taught. But as the Preparatory School (*Yobimon*) of the Tokiyo Daigaku belongs to the section of common education, he is paying serious attention to the system. He has often visited it and remarked to its officers that the Universities are not greatly different from those of European countries; but that the system, being entirely mechanical, its spirit is not what it ought to be. Concerning the report of the examinations, he is said to have expressed an opinion that it has had the effect of making students study hard merely for the sake of the examination.

The Press Laws will shortly be revised.

A preparatory Military College is to be erected for the training of young *Kwasoku* in the compound of the Military College at the expense of yen 30,000.

On the 30th of last month, a thief broke into the Tensho-in Temple, at Uyeno Park. He was armed with a long sword. Two police detected him and a fight ensued, in which one of the officers cut off both the arms of the thief and the other officer stabbed him so that he expired on the spot.

On the 30th of last month, three fires took place in succession in Tokiyo and destroyed ninety dwellings.—*Hochi Shimbun*.

A letter from Pusan, Korea, stated the 17th December, says:—On the 4th of November, the day after the Customs Regulations were issued, the steamship *Chinsei Maru* arrived from Inchhôn. Her captain proposed to pay the dues in Korean cash, but the Custom House refused it, demanding that all dues should be paid in silver. This was in contravention of the Trade Regulations. However, the captain paid duties in silver lest he might miss the business opportunity while disputing. Two days afterward, the *Tamaura Maru* arrived and paid the dues in silver. The latter ship then proceeded to Inchhôn and placed the matter in the hands of the Japanese Minister in Sôul in order to obtain redress for the irregularity. The Minister gave assurance that the dues should be paid in Korean cash. Accordingly, the Japanese merchants combined not to pay the dues in silver and to oppose the orders of the Custom House. They have held several meetings in the Chamber of Commerce Rooms. Finally, the Custom House was compelled to receive duties in Korean copper. The Korean rice crop threatens to be short this year.

The total amounts of the Export and Import duties at all the open ports during the 16th year of Meiji (1883) were yen 1,016,541.365, and yen 898,337.331 respectively. These, added to the income from other sources, amounted in the aggregate to yen 1,935,970.423.

A serious affray took place between the police and soldiers at Kiyobashi the day before yesterday. The police-box was demolished, and two officers were dangerously wounded.

Last year, 85,405 gold fish were exported, realising yen 70,200.—*Nichi Nichi Shimbun*.

LATEST SHIPPING.

FREIGHTS.

The general holiday of the past week amongst Japanese has perhaps had less effect on the freight business than in any other direction, but there is still stagnation and nothing worth noting. Similar reports are received from Shanghai and Hongkong, the only enquiry at the latter place being for small sailing bottoms, some of the disengaged tonnage there having been taken up to load sugar at Formosa for this and other ports.

ARRIVALS.

Mikuni Maru, Japanese steamer, 412, Taneda, 29th December,—Kobe 27th December, General.—Seiriusha.

Owari Maru, Japanese steamer, 684, Adair, 29th December,—Glasgow 25th October and Hongkong 22nd December, Mails and General.—Kiyodo Unyu Kwaisha.

Onoura Maru, Japanese steamer, 104, Sugimoto, 30th December,—Fukuda 28th December, General.—Handasha.

Shima Maru, Japanese steamer, 230, Okuma, 30th December,—Kobe 27th December, General.—Kiyodo Unyu Kwaisha.

Niigata Maru, Japanese steamer, 1,097, Hubbard, 31st December,—Hakodate 28th and Oginohama 30th December, General.—Mitsu Bishi M. S.S. Co.

Hiogo Maru, Japanese steamer, 896, R. N. Walker, 1st January,—Kobe 31st December, General.—Mitsu Bishi M. S.S. Co.

Genkai Maru, Japanese steamer, 1,914, G. W. Conner, 2nd January,—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.

Kamtchatka, Russian steamer, 701, Ingman 2nd January,—Kobe 1st January, General.—Mitsu Bishi M. S.S. Co.

Kiyokawa Maru, Japanese steamer, 62, Amada, 2nd January,—Shimidzu 30th December, General.—Seiriusha.

Kowyski Maru, Japanese steamer, 63, Omura, 2nd January,—Yokkaichi 30th December, General.—Kowyekisha.

Seirio Maru, Japanese steamer, 459, Tamura, 2nd January,—Yokkaichi 27th December, General.—Mitsu Bishi M. S.S. Co.

Shidaioka Maru, Japanese steamer, 334, Nakai, 2nd January,—Shimidzu 30th December, General.—Seiriusha.

Toyoshima Maru, Japanese steamer, 946, Thomas, 2nd January,—Nemuro 26th and Hakodate 29th December, General.—Mitsu Bishi M. S.S. Co.

Sumanoura Maru, Japanese bark, 972, Spiegelthal, 4th January,—Nagasaki 20th December, Coals.—Mitsu Bishi M. S.S. Co.

Okame Maru, Japanese steamer, 148, Ichishima, 4th January,—Handa 2nd January, General.—Handasha.

Saiko Maru, Japanese steamer, 65, Minoura, 4th January,—Shimidzu, 4th January, General.—Seiriusha.

Taganoura Maru, Japanese steamer, 459, Matsu-moto, 4th January,—Yokkaichi 2nd January, General.—Mitsu Bishi M. S.S. Co.

Khiva, British steamer, 2,609, P. Harris, 5th January,—Hongkong 27th December via Nagasaki and Kobe, General.—P. & O. S. N. Co.

Kosuge Maru, Japanese steamer, 776, Kawaoka Hikoza, 5th January,—Kobe 3rd January, General.—Kiyodo Unyu Kwaisha.

DEPARTURES.

Saiko Maru, Japanese steamer, 65, Minoura, 29th December,—Kamasaki, General.—Seiriusha.

Kairio Maru, Japanese steamer, 370, Amano, 30th December,—Yokkaichi, General.—Handasha.

Mikuni Maru, Japanese steamer, 412, Taneda, 30th December,—Kobe, General.—Seiriusha.

Pembrokehire, British steamer, 1,760, Davis, 30th December,—Kobe, General.—Adamson, Bell & Co.

Saikai Maru, Japanese steamer, 102, Nonaka, 30th December,—Toba, General.—Seiriusha.

Skobelev, Russian corvette, Captain Blanodareff, 30th December,—Nagasaki.

Niigata Maru, Japanese steamer, 1,097, Hubbard, 2nd January,—Kobe, General.—Mitsu Bishi M. S.S. Co.

Tokio Maru, Japanese steamer, 1,146, R. Swain 2nd January,—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.

Shima Maru, Japanese steamer, 230, Okuma, 3rd January,—Yokkaichi, General.—Kiyodo Unyu Kwaisha.

Hiogo Maru, Japanese steamer, 896, R. N. Walker, 4th January,—Hakodate, Mails and General.—Mitsu Bishi M. S.S. Co.

Seirio Maru, Japanese steamer, 459, Tamura, 4th January,—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.

Toyoshima Maru, Japanese steamer, 597, Thomas, 4th January,—Oginohama, General.—Mitsu Bishi M. S.S. Co.

Yechigo Maru, Japanese steamer, 750, MacFarlane, 4th January,—Hakodate via Otaru, General.—Kiyodo Unyu Kwaisha.

Kamtchatka, Russian steamer, 701, Ingman, 5th January,—Kobe, General.—Mitsu Bishi M. S.S. Co.

Volga, French steamer, 1,858, Benois, 5th January,—Hongkong, Mails and General.—Messageries Maritimes Co.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Shima Maru*, from Kobe: 80 Japanese.

Per Japanese steamer *Niigata Maru*, from Hakodate:—Miss Andrews, Rev. Andrews, Messrs. Batchelor, Mansbridge, Mihara, Watanabe, and Idzumi in cabin; and 121 Japanese in steerage.

Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—Sir James Duke, Bishop C. M. Williams, Mr. and Mrs. Matsudaira, Captain B. Carrick, Lieutenant F. H. James, Mrs. Graham and infant, Mr. and Mrs. Mori, Messrs. E. Moriss, Nishimura, Takano, F. Dubois, C. W. Hoffmann, L. D. Abraham, A. Anatoly, Asada, Seki, Toda, and Makino in cabin; and Mrs. Graham's servant, and 149 Japanese in steerage.

Per Japanese steamer *Toyoshima Maru*, from Nemuro via Hakodate:—50 Japanese.

Per Japanese steamer *Kosuge Maru*, from Kobe:—20 Japanese.

Per British steamer *Khiva*, from Hongkong via Nagasaki and Kobe:—Mr. and Mrs. Lo Wai Tong, Rev. J. C. Davidson and servant, Messrs. Lase, J. Mahlmann, Luc Tai Sung, and Chun Ching in cabin; and 4 Chinese and 14 Japanese in steerage.

DEPARTED.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Miss E. Hartwell, Miss M. N. Roberts, Master Hachisuka, Messrs. W. Sagel, C. Taylor, J. F. Twombly, Juai, Miyaki, Fujikawa, Nakazato, Zeisho, Katsube, and Takagi in cabin.

Per French steamer *Volga*, for Hongkong:—Mrs. Mantelin, Mrs. H. Fon, Messrs. Alan Owston, Thomas Napier, Telfer, and Hector Ponsigliam in cabin; and 29 Chinese in steerage.

CARGOES.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Treasure, \$57,500.00.

Per British steamer *Khiva*, from Hongkong via Nagasaki and Kobe:—Twist, 697 bales; Cotton, 249 bales; Sugar, 2,425 bags; Sundries, 1,147 packages.

Per French steamer *Volga*, for Hongkong:—Silk, for France, 84 bales; for England, 15 bales; Total, 99 bales.

REPORTS.

The Japanese steamer *Niigata Maru*, Captain John C. Hubbard, reports leaving Hakodate on the 28th December, at 6.45 a.m. with hard N.W. gale and heavy snow squalls to Oginohama where arrived on the 29th December, at 7 a.m.; and left Oginohama on the 30th December, at 6.30 a.m. with fresh westerly gale to Inuboye; thence to Sagami blowing a very heavy W.S.W. gale with mountainous head sea and clear sky. Arrived at Yokohama on the 31st December, at 3.45 p.m.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker, reports leaving Kobe on the 31st December, at 4.40 p.m. with strong N.W. winds to Omiasaki; thence to port light N.E. winds and fine weather throughout the whole voyage. Arrived at Yokohama on the 1st January, at 11.20 p.m. Passage, 30 hours.

The Japanese steamer *Toyoshima Maru*, Captain Thomas, reports leaving Hakodate on the 29th December, at 3 p.m. with moderate S.S.E. winds

and thick rainy weather accompanied by snow squalls, to Siria Saki increasing to a heavy gale and during to the S.W. on the midnight of the 30th December, gale increasing with terrific force and mountainous sea making a clean breach over the vessel fore and aft, at 6 a.m. increasing wind W. S.W. barometer 29.23. At 9 a.m. moderated some and thence to port fresh West and S.W. gales with a high sea. Arrived in Yokohama on the 1st January, 1884, at 8 a.m.

The British steamer *Khiva*, Captain P. Harris, reports leaving Hongkong on the 27th December, at 1.30 p.m. with fresh to moderate monsoon along the China coast; thick, rainy weather off Turnabout; between the coasts of China and Japan strong N.W. gale and a high beam sea, ship labouring and straining considerably. Arrived at Nagasaki on the 1st January, at 5.30 a.m., and left on the same day, at 3.45 p.m. In the Inland Sea and between Kobe and Yokohama light variable winds and fine weather. Arrived at Kobe on the 3rd January, at 7.15 a.m. and left for Yokohama on the same day, at 2.51 p.m. On the 2nd January, at 7 a.m., off Isaki Lighthouse, passed the steamship *Zambesi* bound west.

Stella, Russian schooner, 40, Isacs, 19th November,—Kurile Islands 8th November, Furs.—F. Retz.

LATEST COMMERCIAL.

IMPORTS.

The enquiry and improvement noted last week in Yarns and Shirtings, although on a small scale only, have ceased on account of the holidays of the past week, but hopes are entertained of a revival shortly, especially in Piece-goods and Velvets, these being held for an advance which will probably have to be paid. Metals of all kinds are in no better request.

Brown Formosa	3.90 to 4.00

EXPORTS.

RAW SILK.

Our last issue was dated 28th December, 1883, and since then the usual holidays at the turn of the year have tended to restrict business. Buyers and sellers have, apparently with one consent, given themselves to civility and festivity; still there has been some business passing, and Settlements for the week are returned as 300 piculs. Telegrams reporting better Markets on the other side have been received; buying has recommenced;

and the New Year opens with more demand for most classes and a stronger Market all round. Prices have an upward tendency for some kinds, and sellers anticipate a still better time in the near future.

The *Zambesi*, which left with the English mail on the 29th ultimo, took 275 bales only, of which 75 were for England and 200 for the Continent of Europe. This brings the total Export for the six months up to 23,704 bales (the largest ever known) against 18,295 bales to same date last year.

Arrivals have come in rather more freely, and the total Stock of all descriptions is now about 4,500 piculs. No doubt supplies will presently fall off, especially from some provinces; but the crop has been exceptionally large and there should be a good reserve of silk in the country still to come forward.

Hanks.—Better news have brought in a few buyers and some fairly large parcels have been taken at full rates. Among the sales we notice good Shinshu at \$490 and Hachoji at \$450. We leave quotations unchanged, with the turn against buyers.

Filatures.—There has been some demand for these, and but for the reticence of holders (some of whom have returned to the interior for "Shogatsu") more business would have been done. In fine-sized silks we observe transactions in Mino sorts at about \$620: in coarser kinds, fair to good 1½ have found purchasers at \$585 to \$590. Buying for the outgoing American mail does not seem to have yet commenced in earnest, but the scarcity of good silks suitable for that Market will doubtless tend to harden prices.

Re-reels.—But very little has been done in these. Quotations are unchanged at \$575 for "Five Girl," and \$555 for "Stag."

Kakedas.—These have been in some request: the market is for the moment rather bare of sorts grading from 2 to 3, present Stock consisting largely of 1½ to 2, with a sprinkling of No. 1, and some ultra-common.

Oshu.—The style of business noted in our last continues, and Hamatsuki good to best are worth \$475. In other kinds little or nothing doing.

Taysam Kinds.—No purchases reported, prices nominally unchanged.

QUOTATIONS.

Hanks—No. 1½	\$500 to 510
Hanks—No. 2 (Shinshu)	490 to 500

Total	23,704	18,295	8,798

WASTE SILK.

The holiday season does not seem to have greatly interfered with business in this department, the daily purchases giving a total of 400 piculs for the week under review. With the single exception of *Pierced Cocoons*, all kinds have shared in the demand, and Stocks are still further reduced. We leave all quotations unchanged, but some Wastes are getting scarce and hard to find at any price.

Pierced Cocoons.—No transactions, and very little Stock. Judging from the quantity exported

last season, there should be some further supplies to come from the interior but there are no signs of fresh arrivals at present.

Noshi-ito.—Again the principal demand has been for *Joshu*, "good medium to good" being freely taken at from \$85 to \$87½. Desirable kinds are scarce and prices tend in sellers' favour. There has been something done in *Oshu* at \$142½ for "good to best," and a little fine *Hachoji* has brought \$107.

Kibiso.—The enquiries for "fair to common" have subsided, but "good to best" Filatures are still wanted. Business has been done in "Best selected" at from \$120 to \$115, according to district, and for the moment the demand exceeds the supply. Some sales of *Oshu* reported, at \$107 for best quality, with seconds and thirds respectively at \$95 and \$85.

Mawata.—Some few small arrivals have been readily taken up, and there is practically no Stock remaining. Prices paid have ranged from \$170 for "good" to \$195 for "extra."

QUOTATIONS.

Pierced Cocoons—Medium to Fair	\$ 90 to 100
Noshi-ito—Filature, Best	150
Noshi-ito—Filature, Good	130

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Faker that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia, ONLY GOLD MEDAL—PARIS, 1878, TWO SILVER MEDALS AND "FIRST ORDER OF MERIT," MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the “JAPAN WEEKLY MAIL,” must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JANUARY 12TH, 1884.

SUMMARY OF NEWS.

A NOTIFICATION has been issued by the Government increasing the penalties, prescribed by the Criminal Code, for gambling.

On the night of the 9th instant, a fire broke out in Shinagawa, and destroyed nearly five hundred houses.

THE usual review of the troops in garrison in Tokiyo was held on the Hibiya Parade-ground on the morning of the 8th instant. His Majesty the Emperor, being indisposed, was unable to attend.

THE first snow-fall of the season is reported from the Prefecture of Yamagata. The snow began to fall on New Year's day, and continued without intermission till the 3rd instant.

H.E. ADMIRAL YENOMOTO, Japanese Minister in China, returned to Tokiyo on the 10th instant.

THE vernacular press still continues to circulate absurd rumours about the probable return of H.E. Mori, Japanese Minister in London.

BISHOP POOLE sailed, on the 9th, for Kobe, where he will reside for the present.

A TERRIBLE fire occurred at Osaka on the night of the 10th instant. About fifteen hundred houses are said to have been destroyed.

A SOMEWHAT serious quarrel took place between the Osaka police and a body of soldiers on the 6th instant. Several of the combatants were seriously injured.

Work was nominally resumed, after the New Year's recess, at the various Departments and

offices in Tokiyo on the morning of the 7th instant, but as the following day was a holiday, business did not really commence till the 9th instant.

It is reported from Sôul that one thousand of the Chinese mentioned there have been with-

drawn. It is also reported that the Government has issued instituting a system of allowances and gratuities for the civil service.

A JAPANESE merchant has instituted a suit against the Hongkong and Shanghai Bank for the recovery of a quantity of Japanese paper money said to have been lodged in the Bank as security for a loan of specie.

On Thursday night four houses, in the Japanese quarter of Yokohama, at Yoshida-machi Ni-chôme, were destroyed by fire.

A SHOCK of earthquake was felt on Thursday evening at 8.40 p.m.

THE Korean Government Journal, the *Kankiyo Gumpo*, as the Japanese call it, is so successful that arrangements are said to be in progress for starting another newspaper, as a private speculation, in Sôul.

THE residence of Mr. Brooks, a foreigner instructor in the Agricultural School at Sapporo, is reported to have been destroyed by fire on the 8th instant.

ANOTHER fire is said to have broken out in the Takashima Coal-mine.

CAREFULLY prepared statistics are said to show that the depreciation of *Kinsatsu* during the past five years has borne a remarkably constant ratio to excess of the total issue above one hundred million *yen*.

At the recent examination of law students in Tokiyo, only 17 out of 1,017 candidates satisfied the prescribed tests.

On the 5th instant eight houses were destroyed by fire at Gensuke-cho, Tokiyo.

It is stated that a revision of the Press Laws may soon be looked for.

ACCORDING to the latest census report the population of Japan is 37,017,302.

THE total amounts of the duties collected on exports and imports, during 1883, are stated to have been 1,016,541,365 *yen* and 898,337,331 *yen* respectively, and these, with the income from other sources, brought the total customs revenue up to 1,935,970,423 *yen*.

It was recently stated by the vernacular press that, in discussing the provisions of the English treaty with Korea, Sir Harry Parkes endeavoured to procure the insertion of a clause permitting the import of opium. A letter from the London

Foreign Office to the Secretary of the Society for the Suppression of the Opium Trade says that, in the instructions given to Sir Harry Parkes, opium was to be included in the treaty among the prohibited articles. The rumour circulated by the Japanese newspaper is, therefore, entirely baseless.

THE case of Morf & Co. v. Hirayama Mankichi has been decided by the Yokohama Saishin Saibansho in favour of the plaintiffs with full damages. The claim was for \$263.91, loss of profits caused by an act of fraud on the part of the defendant or his agent, in delivering to the plaintiffs 270 cases purporting to contain fish oil but really containing only a layer of fish oil over a quantity of useless sediment. The fraud had already been proved, but the defendant refused to pay damages on the ground that he was not a principal but an agent. The Court ruled, however, that the wording of the contract invalidated this plea, and full damages was awarded.

On Saturday morning His Imperial German Majesty's Court delivered judgment in the case of P. Bohm and the Chartered Mercantile Bank. Bohm applied to recover possession of a steamer, the *Mary C. Bohm*, which had been seized by the German Consul at the instance of the Bank. The evidence seemed to show that though Bohm had mortgaged the steamer and her cargo to the Bank, he subsequently caused a portion of the cargo to be trans-shipped at Mayako, and tried to prevent the ship coming to Yokohama. The Court rejected the application, and pronounced the seizure by the Consul valid, so far as the ship was concerned.

WEEKLY NOTES.

THE news of the capture of Sontai has naturally been received with much pleasure in Saigon. The *Independent de Saigon*, writing on Christmas Day, says:—“The public will recall the *fan-faronades* of the Black Flags, before, and above all after, the death of Commandant Rivière. It was before Sontai, and especially at the passage of the Dai, that they were waiting for, and meant to destroy, the French. They had built advanced works and fortifications at this post which formed their base of operations in the part of Tonquin between Sonkai and the Annamite frontier. In the face, however, of visits more and more frequent from our artillery, who were easily able to send shells from the river to Sontai—a distance of about two kilometres as the crow flies—the Chinese had come to understand that they could not hold out long at Sontai. Recently, therefore, they adopted the plan of changing their centre of resistance to Bac-ninh, which is situated so far inland as to be beyond the range of cannon, and is accessible only by routes strongly fortified, or by a little path where mountain guns alone can pass. Moreover, the Chinese, in view of their possible expulsion from Sontai, had already prepared a new line of defence at Hung-hoa, behind the confluence of the Black and Red Rivers. There also they are sheltered

from heavy artillery, as the ships of the squadron cannot pass the rapids at Sontai. The capture of Sontai is not, therefore, an event, which must result in the disappearance of the Chinese, and in securing to the French peaceful possession of Tonquin. It is, nevertheless, an important achievement from many points of view. To begin with, it is the first act of resumed hostilities after China's insolent menaces. It is France's answer to the insolent defiance flung at her by the Marquis Tsêng. It is a formal citing of the Government of Peking either to retract its menaces or to declare war against France. Everybody will recognise that for this reason the taking of Sontai is an event of the greatest importance." The writer then goes on to point out that hitherto the French troops have been confronted chiefly by irregulars, but that at Sontai they met the Chinese army, and beat it, though it was entrenched behind fortifications and out-numbered its assailants in the proportion of three to one. "Sontai has proved," says the *Independent*, "that despite all China's efforts, it is only a question of time and prudence to overwhelm, one after another, all the positions occupied by the Chinese." We scarcely think that this fact was ever in doubt for a moment. When French and Chinese soldiers come within striking distance of each other, the result is a foregone conclusion. Some day, perhaps, the Celestial braves will be able to give a respectable account of their foes, but at present they are scarcely fitted to carry arms more scientific than lances and bows—as witness the Krupp guns which they loaded with spherical shot at Sontai, and which consequently became unserviceable after one round. But if the events of December the 17th showed that an army of Chinese irregulars can not endure the onset of French troops, the events that preceded that day showed equally that any effective exercise of French strength in Tonquin is beset with difficulties. The fall of Sontai does not materially alter the position, whatever moral influence it may have on China. The real struggle is yet to come, in the district to the north to the Red River, and especially at Bac-ninh. Not that France will meet with any serious check there either, but that her campaign must be preceded by preparations on a much more extended scale than anything heretofore required, and that, as she will then be unquestionably fighting China, many inconvenient side-issues will have to be contemplated. There is not, perhaps, in the universe, another Government which would have carried the pretence of Peace and the reality of War so far as the Peking Government has carried them. Frenchmen seem to be actually growing angry with China's hesitation. The journal from which we have quoted above, writes:—"The Marquis Tsêng said that if we advanced, China would declare war. Well, we have advanced, to Sontai, and China will be obliged either to make war or to show that her menaces were only bluster." But China will shuffle along in the old route for the present. It rather suits her dignity to have an European Power struggling with the skirmishers of her army. Formerly her generals were careful to convert all their defeats in the field into victories on paper. Now they can fall back on the more truthful subterfuge that China's strength, has never been engaged at all. As a specimen of the dual device we take the following from the columns of the *North China Herald*:—

"The following particulars have been telegraphed to Hongkong, and placed at our disposal. It appears that the victory of the French troops at Sontai was not so satisfactory

as might have been expected. The place was garrisoned principally by Annamese troops, the remainder being composed of contingents of Black and Yellow Flag bands. It is denied that any Chinese regulars were there, as has been reported. Some time before the French troops had started from Hanoi for Sontai, the redoubtable Liu Jung-fu, Chief of the Black Flags, visited that place, and according to his instructions Sontai was honeycombed with subterranean mines connected with each other by means of electric wires. When it was found to be impossible to withstand the impetuous assaults of the Turcos and foreign legionary troops, as well as the artillery fire of the French troops on the heights commanding Sontai, the Annamese, Black and Yellow Flags, who, by the way, seem to have been under the command of one of Liu Jung-fu's lieutenants, retreated, the main body at double quick; but a few hundred devoted men under Liu Jung-fu's lieutenant slowly fought on inch by inch, until most of the French troops had entered the breach into the town, when, by a preconcerted signal, the rear-guard of the retreating army suddenly gave way pell-mell. As soon as they were fairly out of the town, the last man touched the battery,—an explosion was heard, and up went a volume of smoke, succeeded by the noise of crashing buildings and the shrieking of the unfortunate troops involved in the ruins. Sontai herself is in ruins, a skeleton of what she was twenty days ago. The men who were left to explode the mines it is feared have lost their lives in their devoted work, as they have not since been heard of. But they never will be forgotten by their countrymen."

A GENTLEMAN writing over the signature of "Themistes," in the correspondence columns of the *North China Daily News*, undertakes to defend M. Tricou against the charge of trickery formulated by the London Press in connection with the celebrated despatch read in the French Chambers on October the 30th. "Themistes" sets out by admitting that "M. Tricou's despatch covered more ground than was intended to be taken in by the message itself," and then goes on to explain that when the French Envoy was taking leave of H.E. Li Hung-chang, the former "remarked that the Marquis Tsêng was threatening France with war unless she gave up her action in Tonquin," whereupon Li Hung-chang "not only expressed himself in thoroughly opposite sentiments to those which were brought to his notice as having been manifested at Paris by Marquis Tsêng, but he even told the French Envoy that he hoped France would not declare war against China." On the strength of this, M. Tricou telegraphed that Li Hung-chang, who disavowed the policy of the Marquis Tsêng, and "Themistes" declares that the telegram was "perfectly correct." We sincerely hope, for the sake of M. Tricou's reputation as the representative of the French Government that some explanation may be forthcoming of a very different nature from this. It is worse than casuistry to pretend that Li Hung-chang's dissent from the declarations attributed to the Marquis Tsêng by M. Tricou could honestly have been construed into a disavowal of the Marquis' policy. China's contention was that France should confine her occupation to the districts South of the Red River, and though the Marquis Tsêng went beyond this in one of his notes to the Foreign Office at Paris, he never said anything which could be properly described as a declaration that unless France gave up her action in Tonquin, China would declare war. When such a threat as this was attributed to the Marquis, Li Hung-chang may well have expressed dissent, and we find it equally possible to believe that he "even told the French Envoy that he hoped France would not declare war against China." But M. Tricou's diplomatic conscience must be singularly elastic if he could construe these statements into a disavowal of the Marquis' policy and an expression of desire that he, Tricou, should remain in China. Our Shanghai contemporary's correspondent professes himself a good deal astonished at "the thorough ignorance of the English Press as to how these things are managed in China," and takes some pains to explain that, Li Hung-chang not being the T'sung-li Yamên, but simply a Chinese states-

man of specially peaceful proclivities, the fact that his reputed disavowal of the Marquis Tsêng did not receive the endorsement of his Government, does not by any means prove that the disavowal was not made. But to us it appears that the ignorance of the French Deputies, and the advantage taken of that ignorance by M. Ferry, were just as remarkable. If it be true, as "Themistes" tells us, that "Li Hung-chang is not the Chinese Government," and that "anything he says may, or may not, be considered as the opinion of that Government, according as the Peking *coterie* choose to adopt or disavow" his assertions, surely the President of the French Council went a little out of his way when he read to Parliament a despatch referring Li Hung-chang's opinion, and surely the French Parliament and the Paris Press were somewhat hasty in the inferences they drew from the despatch.

THE recently reported rising of the anti-French party in Hué, and the poisoning of the King, Hiep-Hoa, who signed the treaty with France, do not seem to have been followed by any serious consequences. It is reported, however, that anarchy ruled in the city, and that the situation of the little band of fifty men who formed the guard of the French Legation might have been critical but for the energetic action of the Minister, M. de Champeaux. The latter, so soon as he heard of the King's death, immediately claimed that as the deceased monarch had left no heir, France had the right, by virtue of her treaty of Protectorate, to be consulted as to the choice of his successor. The Mandarins, acting, presumably, under Chinese instigation, refused, at first to recognise the right, but ultimately entered into negotiations in that sense. The news on December the 20th was that the *Bayard* and the *Alouette* were under orders to proceed to Hué for the purpose of making a "demonstration."

It is a curious coincidence that while France, the one country in Europe where the growth of the population seems dangerously slow, has been visited by an extraordinary epidemic of colonization, Germany has not yet begun to experience any serious access of the same malady, though she thinks that her children will soon find the Fatherland inconveniently small for their numbers. M. Frühauf, who has recently written an interesting essay on the subject of population, shows that during the past ten years the people of Germany have added four millions to the census returns, and wants to know what is to become of them if they go on at that rate. Each of these four million new guests at the national banquet requires, according to the calculations of Viebahn, 180 kilogrammes of wheat, 25½ kilogrammes of meat, and certain other measures of milk, eggs, wool, flax etc. Where they are to find these kilogrammes is the puzzle, unless they go beyond the limits of Germany to seek them. Among Oriental tales with a moral there is one that describes a short-sighted philosopher, who, though a keen observer of nature, was unfortunately prevented, by his infirmity, from examining anything above the level of his own head. The consequence was that, having watched the wonderful rapidity of a young bamboo's growth, he was thrown into a fever of excitement by a calculation of the height it might ultimately attain. Perhaps the Malthusian savants may, like this philosopher, conclude, one day or another, that as with the bamboo, so also with population, natural causes

interfere in due time to restrain excessive growth. But for the moment wise men are perplexed by the problem of mouths that multiply and markets that diminish under the contracting influence of protection. Looking at England, they ask what would have been her fate without her colonies, and looking at Germany, they begin to wonder what will be her fate unless she follows England's example. It does not occur to them, apparently, that colonies are not more accessible, on the whole, than kilogrammes of wheat and beef. Not everywhere are there to be found Tonquinese, Annamites, and Malagasy ready to be exterminated in order that European artisans and farmers may obey the old Testament command, "increase and multiply," forgetting that the earth has long ceased to need the replenishment which prompted the precept.

VIC-ADMIRAL PEYRON, at his examination before the Parliamentary Commission of Inquiry into the Tonquin Affair, said:—"The Chinese Government has thought fit to station at Bac-ninh two or three thousand of its soldiers. It is a matter of imperious necessity that we should obtain possession of the place. Our reconnaissances have enabled us to ascertain that the town, situated, as it is, in the depths of a valley, is more vulnerable than Son-tai, which is surrounded by marshes and bamboo forests. Contrary to what has been reported, Bac-ninh is defended by Chinese troops only. But as M. Jules Ferry has told the Chamber that our safety in Tonquin makes the occupation of Bac-ninh a necessity, the Chinese Government cannot consider that occupation as a declaration of war. Operations against the town will therefore be commenced in two or three days"—this was said on November the 20th—"The epaulments constructed by the Chinese garrison will be destroyed by means of mountain guns placed on the hills which command the place." The Admiral's method of disposing of the Chinese Government's possible objections is very large-minded. Bac-ninh, to be sure, is garrisoned by Chinese troops, and China says that if France attacks it, the act will be considered a declaration of War. But then France has replied that she really cannot do without the place, and under those circumstances, the Chinese Government will not be so foolish as to misconstrue her intentions if she seizes the town and destroys its Chinese garrison. Of course if she assaulted it wantonly, and without any real desire to get possession of it, the business would bear quite a different complexion. But when she wants it so badly, how unreasonable China would be to object.

* * *

Replying to a question from a member of the Commission with regard to the eventual blockade of Canton, Admiral Peyron declared that that matter remained subordinate to China's attitude, and to the decision which sudden necessity might dictate to the Admirals Courbet and Meyer. M. Jules Ferry was evidently anxious to abbreviate this part of the discussion, but enough transpired to show that the blockade is contemplated as a very possible eventuality. Indeed, it seems to us that if China continues to pour troops into Tonquin, as the latest accounts show that she is doing, France has only one of two wise courses to pursue—to blockade Canton, and thus stop the supplies of the Chinese forces, or to carry out the *coup* suggested the other day by the Parisian press, namely, the seizure of Formosa and Hainan. The latter step

would be the easier, and far the more effectual, of the two. It would force China to lower her hands at once. As to its justifiability or ultimate consequences, however, there is a great deal to be said.

THE International Conference of Workmen at Paris was compelled, by the nature of its constitution, to treat the question of foreign labour with uncongenial liberality. Men who had come from all parts of Europe to devise measures for their common benefit, could scarcely begin by resolving that each nation should get its work done by its own people and its own people only. What the delegates could do, however, they did, to protect each other as much as possible from the effects of international competition. Thus they passed a resolution advising workmen who go abroad in search of employment, to submit to the conditions determined by the Trade Unions of the locality, and not to compete injuriously with the artisans of the country by accepting terms lower than those already ruling—advice which will doubtless be followed, seeing that strangers roaming about in search of employment may reasonably claim as much consideration as resident artisans of established character; and seeing, also, that their circumstances are always too affluent to expose them to the necessity of taking whatever they are offered. Perhaps the Conference felt the emptiness of this vapouring, for after having loudly repudiated the "vulgar and superannuated idea" that the works of each country are for the workmen of that country only, and proclaimed the "fraternal union of the workmen of all lands," it passed the following resolution:—"But, seeing that the immigration of foreign workmen into France is a means resorted to by employers to bring about a reduction of the national salaries, the Conference votes: first, for every measure designed to develop the opportunities of the French artisan, as industrial museums &c., secondly, for legislative measures forbidding employers, under penalty of fine or imprisonment, to make either Frenchman or foreigner work on conditions other than those stipulated by the Corporate Societies of Workmen." The delegates who framed this resolution were not perplexed by altruistic scruples. They felt that workmen could not be trusted to look after themselves, or to carry out the recommendation mentioned above, namely to refuse every offer of terms lower than those ruling in the locality. On the other hand, they were much too polite to think of proposing that fines or imprisonments should be the outlook for workmen who violate the Societies' laws. So they wisely decided, that while the privilege of making the laws, and of breaking them with impunity, belongs to the workman, the master's obedience must be secured by criminal enactments. And yet we read that the English deputies went home from the Conference seriously exercised about their French comrades' want of practicality. Englishmen, however, have always been slow of appreciation.

NOTES.

A LETTER to the *Mainichi Shimbun* from Pusan, Korea, dated the 31st of December last, says:—"The local Chamber of Commerce, which was opened on the 10th of October last, has been closed under the following circumstances. The body desired to put a stop to false weights, and to exercise control over the

quality of goods. Some time ago, a merchant from Sōul came to this port and tried to abolish the Chamber of Commerce and thereby to monopolise a certain trade; but in vain. Consequently, he collected a number of infamous characters who were ready to rise in arms at any sign from him, and he thus so terrified the Governor that he closed the Chamber of Commerce. Mr. Möllendorff and the Chinese Minister paid a visit to this place on the 22nd of December last. Mr. Yamada, President of the Japanese Chamber of Commerce, gave a farewell dinner to the Inspector of Customs and others on the 24th December prior to his return to Japan."

IN H.I.G.M.'s COURT, on the 10th instant, Mr. P. Bohm applied that the seizure of the schooner *Mary C. Bohm* and 355 sea-otter skins be declared void and illegal. The vessel, when she had arrived in Uraga Bay from her northern cruise, was seized by the German Consul at the request of the manager of the Chartered Mercantile Bank, to whom, it was stated in the pleadings, the vessel had been pledged on consideration that both she and the "catch" should, on her return from the North, be committed to the Bank on mortgage. Mr. Kirkwood, instructed by Mr. Masfen, the Manager, appeared for the Chartered Mercantile Bank. His contention was that there were ample grounds for the seizure of the *Mary C. Bohm* and her cargo: that the Bank was, by virtue of a mortgage, owner of both vessel and cargo: that Mr. Bohm had been guilty of bad faith, in causing the trans-shipment of the skins, the result of the season's catch, to another vessel, the *Ada*, at Miyako, without consigning it to the Bank instead of to himself, he did; and that the seizure should be held valid, and Mr. Bohm's application be dismissed with costs. The evidence of Mr. Masfen and the captain of the vessel was to the effect that the *Mary C. Bohm* had been ordered by Bohm to transfer the otter-skins to a Japanese vessel: that, the captain failing to find such a vessel, the property had been transhipped to the *Ada* at Miyako; and, finally, that the captain of the *Mary C. Bohm* had been ordered by the reputed owner to provision in Uraga Bay for a trip to the South instead of bringing his ship to Yokohama, as implied in the agreement between Bohm and the Bank. The Court stated that judgment would be delivered on Saturday, the 12th instant, at 10 a.m.

THE *Shanghai Mercury* of the 28th ult. says:—"The Rev. S. A. D. Hunter, M.D., and Rev. G. Reid, both members of the American Presbyterian Mission in North China, have offered to go to Korea to commence Mission work. But we are informed by a friend recently over from Japan that the United States Minister to Korea, although a friend of mission enterprise, thinks it unwise to take the initiatory steps for opening Mission stations at the present juncture.

It has been stated that Dr. Charles Cunningham, of Eastbourne, has arranged to run his schooner-yacht *Vestal* against the clipper-ship *Northern Monarch* from Plymouth to Queensland, Australia, a distance of 14,000 miles. Should this race come off, it will be the longest on record. The *Vestal* was built many years ago by Inman, of Lympington, and was said to be a sister-ship to Count Bathyan's *Flying Cloud*. The start is to take place on the 24th Nov., but no particulars have been divulged.—*World*.

WE referred, in a recent issue, to a communication addressed by the Shanghai Municipal Council to the Chinese Local Authorities on the subject of a disturbance which took place in the foreign settlement during the passage of His Excellency T'so Tsung-t'ang. General T'so's braves had hustled people out of their way and generally adopted methods of making room for themselves which indicated a most reprehensible want of veneration for their environment. The Municipal Council protested against this Bombastes-Furioso fashion of marching, and requested that in future due notice should be given when Chinese officials of note proposed to pass through the Settlement. If we remember rightly the request was supplemented by a suggestion that escorts might be fittingly dispensed with on such occasions. The Council's communication, forwarded, of course, through the usual Consular channel, has elicited from Taotai Shao a reply which is likely to form the basis of some stoutly worded dispatches. The "Intendent of the Soo Sang Tai Circuit," finds it reasonable enough that notice should be given of great men's progresses, but he accompanies this condescension with one or two pointed observations. "With reference to this matter," he observes, "according to established custom in China, when merchants and others (native) meet an officer of high rank passing through the streets, they must stand aside as a mark of respect. On the occasion of Viceroy T'so's recent visit to Shanghai, the writer deputed a Wei-yuan to notify the Municipal Police, so that they could properly over-see and direct the traffic in the streets. It was right that the carriages and people on foot should get out of the way for the procession to pass and that the advance guard of soldiers should shout at any in the way so as to avoid an obstruction and to keep the line clear. Such a course was entirely proper. It was not that the soldiers were presuming on their position and behaved in a disorderly manner." The charge against the soldiers having been thus disposed of, the Taotai then proceeds to point out that on similar occasions in future the plan will be to "prevent carriages and people on foot from crossing streets at their pleasure," and that "they will all have to stand aside when a high official is passing, to the end that trouble may be avoided." We shall be curious to see what answer the Municipal Council return to this epistle. The *North China Herald* calls it "an extraordinary letter," and expresses surprise that it should have been received at all. But our contemporary gives no reason for this astonishment, contenting himself with a hope that "the mistake will be to some extent repaired by a dignified and proper attitude" on the part of the Municipal Council. For our own part we confess that the "extraordinary" nature of the despatch is not quite plain to us. The foreign settlement at Shanghai is quite as much Chinese territory as any other part of China, and it would be extravagant to suppose that the Municipal regulations which foreigners residing there are authorized to make for their own good government, under Chinese sanction, can be considered to over-ride the Imperial laws of the Chinese Empire. If the place were what the land-holders once tried to make it, a free city under imperial charter and altogether abstracted from Chinese jurisdiction, the Municipal Council would certainly be competent to forbid the passage of armed escorts or to prescribe the formation they should adopt. But as the case

stands the braves escorting General T'so, or any other dignitary, seem to have the right of taking up as much of the road as they please, and if vehicles or pedestrians decline to get out of their way, all that can be said is, so much the worse for the pedestrians and vehicles.

THE special correspondent of *The Times* in China says that he fears Sir Harry Parkes "will find the atmosphere of Peking much less favourable to progress than that of Tokiyo," and that "if he can but convince the Chinese Ministers from his Japanese experiences that safety and prosperity are more to be found in development than in stagnation, and that the introduction of railways is by no means destructive to the territorial sovereignty even if they be made with borrowed capital, he will do more to strengthen their hands than all the founders of arsenals and builders of war vessels have done put together." This sounds reasonable enough, yet we have little difficulty in imagining that sundry obstacles might present themselves in the course of such an argument. Sir Harry Parkes, being an exceedingly practical politician, would doubtless desire to set material prosperity in the forefront of the benefits conferred by enlightened progress. To show, however, that Japan has derived this particular species of benefit from her unreserved adoption of liberal ideas, Her Majesty's Representative would be obliged to contradict his own previous utterances and despatches, the gist of which was that the growth of Japan's material prosperity is fatally checked by a policy which still keeps her resources undeveloped, and inaccessible by the only agents that can successfully develop them, namely, foreign capital and foreign enterprise. All that could be justly urged, therefore, is that Japan has certainly lost nothing by her radicalism, and that a great gain is within her reach whenever she takes final measures to grasp it. To this would naturally succeed the pertinent query, why does she not take those measures? "Having gone so far," the Chinese statesmen might say, "and become so intimately acquainted with the nature of the progress you advocate, does not her hesitation to take the last step which will bring the benefits of that progress fairly within her reach, suggest an inference very unfavourable to your argument? Does it not suggest that, so far as Japan's story is concerned, the substitution of Occidental for Oriental civilization is a measure of doubtful advantage, and that experience of its results has a deterrent, rather than an encouraging, effect?" The reply which this query would be most likely to receive from a foreigner—namely, that Japan's hesitation to complete what she has so well begun must be counted of a piece with China's reluctance to begin at all—has the disadvantage of being untrue. There is no hesitation whatsoever on Japan's side. It is well-known that her proposals for treaty revision were framed entirely with a view to the complete opening of the country, and that, in pursuit of this object, her most earnest desire is to obtain same modification of the system set up by the present treaties and devised wholly to suit a state of partial intercourse. The hesitation, therefore, is not on her side, but on that of the Treaty Powers. She is willing and anxious to remove the last barriers which, according to foreign economists and politicians—notably Sir Harry Parkes—impede the development of her resources and constitute a stigma upon her civilization. But, unfortunately, her treaty friends do not consider her fit to

associate with them on equal terms. Conceive the effect such an admission as this would exercise on the mind of a crafty old conservative like His Excellency T'so Tsung-t'ang, for example. Might he not say at once, "Ah! You Europeans think that Japan, after all her efforts to acquire your systems and sciences, and all her apostacy from the venerable philosophy of our sages, is not yet worthy to be granted the privileges of equal intercourse. And you imagine, do you, that China is going to sit at the feet of your Gamaliels in order to receive a similar rebuff? At present we are conservative from choice, and you tell us, with truly wearisome iteration, that we are blind to our material interests and that our attitude has rendered us a byword among nations. But if this immobility of ours be really at the root of the stern treatment we receive at your hands, has Japan's liberalism won her more consideration? Have you, moved by her solicitations and by the sight of the wonderful progress you say she has made, consented to place her on a different footing from China and Korea, or to revise your treaties with her in a sense even remotely indicative of a willingness to recognise her efforts? You have not; and yet you bid us believe that safety and prosperity are to be found in development. To what point, pray, must this development be carried before you agree to abandon your exclusive action, and to show practically that differences of race do not constitute, in your eyes, an insuperable barrier to free international intercourse? You force Eastern nations, at the cannon's mouth, to open commercial relations with you; you tell them that isolation is not only barbarous but suicidal; you utterly refuse to heed their early remonstrances, mistaken, perhaps, but still honest, that long seclusion has made their people distrustful of foreigners; and then, when they desire to emerge completely from that seclusion; when, by reforming their old usages and rejecting their ancient traditions, they show that they have accepted your principles and your civilization, you quietly announce that the distrust is now on your side, and that until you see reason to change your mood, it is your intention to perpetuate the seclusion against which you formerly inveighed so bitterly. Observing these things, we, Chinese, assure you that our own conservatism appears much more dignified than the Japanese liberalism which you treat with such practical contempt, and so far from accepting the inference you bid us deduce from Japan's recent history, the lesson she teaches us is that progress and development, as you define them, by no means advance a nation's practical title to the common rights of independence and equality." This, or something similar, is the answer Sir Harry Parkes would receive if he attempted to use Japan's example as a spur to China. The illiberal, unsympathetic policy pursued by the European Powers towards Japan—the miserable reward she obtains for having welcomed their civilization with open arms—is a fatal barrier to progress throughout the whole Orient, and any politician who quotes her case to Chinese statesmen exposes himself to a most embarrassing retort.

At the present time no military man in all Europe is so much talked about as General Lopez Dominguez, whose military reforms, backed up as they are by his royal master, are tending to place the Spanish army on a widely different footing to that which it has hitherto

occupied. Lopez Dominguez is a nephew of that Marshal Serrano who owed much of his progress, from a mere subaltern to a dukedom and grandeeship of Spain, to the favours of Queen Isabella. Dominguez was brought up at the Court of Madrid, and first came into notice as a soldier at the time of the war with Morocco, when he was on the staff of Serrano. The revolution of 1868, which found him a young brigadier, gained him his major-general's lace as the reward of his share in overthrowing the dynasty of the Bourbons. He has since shared in all the leading military events of Spanish history, played a prominent part in the last Carlist war, when he was pitted against the ablest leaders of the Pretender, and also became known by his successful recapture of Carthagena from the insurgents. As the latest addition to the series of remarkable military men who have played so prominent a part in modern Spanish politics, his progress will be viewed with interest, especially by those who recognise in him a man who will find it difficult to resist the temptation of becoming a political leader in his country.—*Whitehall Review*.

THE letters addressed to scientific journals on the subject of the curious atmospheric phenomena that have been observed during the past few months, contain some very interesting particulars. A gentleman writing from Christian College, Madras, to *Nature*, says that all through September the air was in a state of very unusual electrification, and that from the 8th to the 14th of that month the colour of the sun at sunrise and sunset was a bright green, the orb "appearing as a rayless globe, at which you could easily look, and yet so sharply defined that sun-spots could be seen with the naked eye." Another observer, writing from Haslemere, Surrey, under date November 10th, says:—

Yesterday evening a most extraordinary sunset effect was seen here, which made a deep impression on all who observed it. The sky was nearly clear when the sun set at 4.18, and the air transparent. A few cirrocumulus fleeces became lighted up with a pink and then with a deep red colour immediately after sunset. A very peculiar greenish and white opalescent haze now appeared about the point of the sun's departure, and shone as if with a light of its own, near the horizon. The upper part of this pearly mist soon assumed a pink colour, while the lower part was white, green, and greenish-yellow. About 4.35 the sky from near the horizon towards the zenith had begun to turn to a brilliant but delicate pink, and some pink cirrus-like streaks stretched apparently horizontally towards the south-east. The coloured portion of the sky spread out like a sheaf from the horizon, and apparently consisted of a very high, thin filmy cirrus disposed in transverse bands or ripples, close together, and very delicate in form, outline, and tint. Below the pink, and between it and the point where the sun had set, remained, the very curious, opalescent, shining, green and white vapour, hanging, as it were, vertically, and changing very little during many minutes. The borders of the pink sheaf were definite, and finely contrasted with the deep blue sky. As darkness came on, the pink glow seemed to increase in brightness, and at five o'clock cast a fine weird light over the hills. The moon was now bright in the south-east, and began to cast dark shadows. About five the colour slowly receded from the part nearest the zenith towards the horizon, and as it retired left a clearly visible filmy ripple of cirrus of a faint gray tint. At 5.25 the greater part of the colour was gone, and the cloud remained bright only near the horizon. At 5.32, however, it began to grow again, and in a short time (5.40) the whole extent of the film was again glowing bright pink, producing a most striking effect in contrast with the silvery moon, dark sky, and bright stars in the north and east. The pink light then slowly withdrew towards the horizon, remaining bright and deep-coloured low down till 5.50. At 5.58 the last pink disappeared. The whole phenomenon from first to last was in the highest degree peculiar and striking. It was remarkable, first, for the interval which elapsed between the time of sunset and the time at which the cloud became bright, next for the light, filmy character of the cloud, thirdly for the bright green glow near the place of sunset, fourthly for the small transverse ripple form of the cloud, fifthly for the permanence of shape and immobility of the cloud,

sixthly for the very long endurance of the coloured reflected sunlight after sunset, one hour and forty minutes, and seventhly for the second illumination, which began more than an hour after sunset. It was certainly due to cirrus or a higher kind of cloud, because (1) parts of the illuminated sky stretched in long streaks southwards, and the glow remained long in these streaks, resembling very high cirrus; (2) when the light left the sky the first time, the part which had been illuminated remained visible as silvery gray cloud ripples, before the second after-glow rekindled it, and (3) because the colour became very gradually darker as time went on, and because the recessions of light both times were towards the place of sunset. A similar very high cirrus had also been specially marked long after sunset on November 8, and about the time of sunrise on November 9. The night following this rare display was exceedingly clear and fine. This evening (November 10) the light, high cirrus, all but invisible in full daylight, with its delicate ripples, assumed the pink tint about fifteen minutes after sunset, showing the upper air to be in the same abnormal condition as yesterday, and the phenomenon was feebly repeated. It would be interesting to ascertain the approximate height of cirrus on which sunshine remains one hour and forty minutes after sunset at this time of year.

From Kurrachi, also, a correspondent writes to the same journal, on October the 16th, that from the 28th of September "there has been an exceptional red glow after sundown, and a strange green tint in the sky, while till the last few days the moon has had a distinctly green tint." This observer encloses a communication from the commander of the P. & O. steamship *Sam*, to the effect that when the vessel was on her voyage from King George's Sound to Colombo, on August the 1st, going at a speed of eleven knots, "she passed, for upwards of four hours, through large quantities of lava which extended as far as could be seen. The lava was floating in a succession of lanes from five to ten yards wide, and trending in a direction north-west to south-east. The nearest land was the coast of Sumatra (distant 700 miles), but as there was a current of fifteen to thirty miles a day, setting to the eastward, the lava could not have come from there," and the writer concludes that it must have been an upheaval from somewhere near the spot. He mentions that there was a submarine volcano in the vicinity four years ago, and says that the soundings on the chart show over 2,000 fathoms. We place the facts of the atmospheric phenomena and the discharge of lava together, because it has been suggested, as our readers will doubtless remember, that the former may be due to the passage of our planet through a quantity of cosmic dust, and because, according to the idea of a French philosopher, of whose theory we recently gave a short account, earthquakes and volcanic eruptions are also produced by the presence of cosmic dust or other similar matter in the paths of the planets. We cannot venture to express an opinion as to the soundness of these views, but the coincidences noted above, and others recorded during 1883, are very interesting.

THE Director of the Washington Mint in his annual report, reiterates his estimate that the amount of gold and gold bullion available for immediate coinage in the United States is about \$606,000,000—a statement which, an American journal says, has been greatly criticised by experts—and makes additional estimates as to the world's money, which, possibly, may not meet with less severe criticism. The Mint bureau certainly, adds our contemporary, should have the best means for accurate information on the subject. "Nearly all the gold and silver obtained from our mines is in some form deposited in the Mints and Assay offices, or exported through the Custom Houses. Records are kept of the character of every deposit, and of the locality of the production of domestic

bullion. The gold product for the calendar year 1882 declined \$2,200,000, while the silver product increased \$3,800,000. The deposits of gold bullion for the first eight months of 1883 show also a decrease as compared with the corresponding period of last year, while the silver deposits show an increase. The estimate for the present calendar year is that the production of gold will be at least \$500,000 less, and that of silver at least \$2,000,000 greater, than that of the previous year. We read further:—"Director Burchard's estimate of the coin in circulation in the United States is \$846,595,749, of which \$606,196,515 is gold, and \$240,399,234 silver. The Director bases this estimate on the statistics of the Mints and Assay offices as to the amount taken from the mines; on the reports of the Treasurer of the United States as to the amount in the Treasury, and on the Custom House returns of the amounts exported. To all adverse criticisms upon these statements he simply answers, 'the amount is there.' The Director's returns, so far as they are based on actual figures of the Government, and not upon estimates, can probably not be successfully combated. His statement as to the total United States circulation is subject, unquestionably, to greater exception, for it is based, to some extent, upon estimates. His conclusion is, that, on October 1, 1883, the total United States money in circulation was \$1,070,364,021, as against \$1,051,248,386 on October 1, 1882, or a net increase during that calendar year of \$19,115,635. Mr. Burchard takes no account in this estimate of the unredeemed legal tender, demand and interest-bearing notes, which he considers as out of circulation. He does include the gold and silver bullion in the Treasury, and he states that it may properly be counted as a part of the metallic reserve, for the reason that it is capable of conversion into coin. The statement as to the paper currency is based upon the returns of the National Banks of June 22. Since that date several calls of 3 per cent. bonds have been made, with the result, as the Comptroller of the Currency estimates, of an aggregate retirement of National Bank circulation of some \$12,000,000. This sum should properly be deducted from the estimate of Director Burchard as to the amount of money in active circulation, which would reduce his net gain of the calendar year to \$7,000,000.

* * *

The returns as to the coinage of foreign countries contain some interesting facts. In Great Britain no gold was coined in 1882. The best estimate of the gold coin in circulation in the United Kingdom is 110,000,000 pounds sterling, and of paper money 42,721,000 pounds sterling. The gold coinage of France in 1882 amounted to 3,742,000 francs, and the silver coinage to 7,159,859 francs. Mr. Burchard put the total paper circulation of the thirty-eight principal countries at \$3,832,920,903; the gold circulation at \$3,333,433,000, and the silver coin at \$2,712,226,000.

THE London *Times* has invented a new and ingenious method of saying unpleasant things and, at the same time, evading the responsibility of saying them. If a man were to assure his neighbour that he did not call him a rascal at some particular time, but that had he done so, subsequent events would have justified the term, that would be a fair illustration of the leading

English journal's new device. "When Lord Ripon was appointed," writes our London contemporary, "we had numerous protests addressed to us from all parts of the country, on the ground that a man who changes his religion in middle life is not fit to govern an empire. Though sympathising with these protests, which came not from fanatics but from their antipodes," (how necessary is this disclaimer!) "we were unwilling to take up an attitude that might have seemed invidious. But had we done so, no one would now be bold enough to say that we had been unjust." It is fair to observe that *The Times* had reason to be considerably exasperated when it descended to such an assault as this. From the first an uncompromising opponent of the Ilbert Bill, it had just seen its staple arguments torn to shreds by Lord Northbrook, who, speaking at the Colston Festival at Bristol in the name of the Liberal Party, and replying to Sir Fitzjames Stephen's attempt to reduce to a question of legal technicalities the assurances contained in Her Majesty's proclamation when the direct Government of India was undertaken by the Crown, said:—"I can say for myself, and I am sure I can speak with equal confidence for those who preceded and followed me in the office of Viceroy, that we have all of us regarded this proclamation as the guide of our conduct, and I can assure the natives that they may appeal with confidence to the noble sentiments expressed in it as declaring the deliberate opinion of the people of England as to the principles upon which the government of India is to be conducted." But the incident which must have caused *The Times* most chagrin was the discovery and exposure of the truth with regard to the celebrated telegram which formed the basis of such strange accusations against Lord Ripon and his government. The telegram, it will be remembered, gave a *précis* of the opinions sent in by the various local officials who were consulted with regard to the Bill, and the *précis* was subsequently found to be gravely misleading. Thereupon some of the Conservative party allowed themselves to be betrayed into preferring a charge of deliberate duplicity against the Ripon Government, *The Times* itself writing as though such an accusation might be credible. The sequel of this miserable episode was that the sender of the telegram, Mr. Rattray, Reuter's agent at Simla, immediately addressed the following letter to the *Friend of India*:—"I beg to state that the facts of the case are these:—A copy of the official papers on the Jurisdiction Bill was supplied to me, as the representative of an important news agency, in anticipation of the appearance of the *Saturday Gazette*. No table of figures giving the number of opinions for or against the Bill was included among the papers, and I myself compiled the letter—the telegram—which appeared in a manipulated form in the English papers on the morning of Saturday, the 8th of September." To complete the discomfiture of the politicians who professed to think that English officials could descend to such wild subterfuges, it turned out that Mr. Rattray represents, at Simla, the *Calcutta Englishman*, a journal prominent among the opponents of the Ilbert Bill. Thus the telegram which was supposed to have been officially garbled for the purpose of leading the public to think that the Bill was approved by a majority of the local authorities in India, was in reality composed and sent, without any reference to the officials, by a man who is

himself a strong opponent of the measure. We are not surprised to find that Lord Northbrook, referring to this matter, said:—"Although I have had more than 30 years' experience of political life, I can call to mind no instance of a more reckless and unfounded attack than this which Mr. Stanhope has made on the Viceroy of India." The some-time Secretary of State for India will not find his reputation much enhanced by this story, nor will people readily forget that the leading English journal, in the year of grace, 1883, could apply to Lord Ripon the following language:—"A man who, at the mature age of fifty, or thereabouts, apostatizes from the religion of his fathers, on the ground of 'grave doubts' as to the validity of English orders or the views of the Anglican Church about the nature of the Eucharist, certainly does not possess the strength and solidity of intellect required in a ruler. A man who, at that age, passes a crushing vote of censure upon his own private judgment by handing it over to a priest, deserves no more confidence from others. Men of sense make up their minds on these subjects at an early age, and it is only rather poor and narrow brained persons who are troubled at thirty with any question about the form of religion they have lived under. To have gone over to Rome is not Lord Ripon's offence, but rather that he is of the type of man who thinks of going over at all to any new Church in middle life. The Romans had a contempt for those who deserted the faith of their fathers, and it was well founded. A man who at forty or fifty has not found some way of reconciling his religion and his life is a weak creature, no matter in what trappings he may be decked or on what pedestal partiality may place him."

A CORRESPONDENT in a recent issue of *St. James's Budget* describes "an extraordinary after-glow" which was observed at Southampton. "On Friday, the 9th of November," he says, "the sun set about 4.20; and just afterward, some ten degrees over where it had gone down, a light space rather pale in colour appeared, which steadily increased in brightness and size until nearly five o'clock, when it had spread over a large portion of the western sky, rising into it quite 30 deg., rather like the sky just before a bright sunrise more than anything else. In fact, some fishermen remarked that 'it looked as if the sun was coming up again.' There were long irregular-shaped clouds, telling dark upon the pale-orange light at this time. Otherwise the sky was nearly clear of cloud, and to the southward, where the moon was shining brightly, it looked very dark by contrast; while directly opposite the eastern sky, particularly near the horizon, glowed a rosy red almost like a large fire or a display of aurora. Buildings, especially the town steeples, and vessels' masts, were all lighted up and glowed against the low-toned sky as though lighted by red stage-fire; while the water looked brighter and lighter, with dark ripples upon it, than before sunset. This lasted nearly an hour, being at its brightest about 5 P.M., or quite forty minutes after sundown. There had been strong mirage or refraction over the water here all the forenoon."

THE special correspondent of the *Hongkong Daily Press* in Tonquin, writes:—"After Son-tai was taken, on the evening of the 16th, the place was given over to the troops for some hours.

Over what happened then, let a veil be drawn." The French in Cochinchina are gradually furnishing materials for a record that will not redound much to their credit. If we may judge from the stories published by the newspapers, they appear to have commenced the campaign in Annam with the idea that everyone venturing to oppose them was a rebel or a bandit, and therefore unworthy to be treated according to the recognized usages of warfare. The reward they set upon the head of the leader of the Black Flags; the summary execution of prisoners, and the punishment meted out to officials who made any show of disputing their authority, all combined to betray a spirit as unjustifiable as it was disgraceful. Then followed the news of the heartless massacre at Hué, an act for which no excuse whatsoever could be offered; then came vague rumours of excesses committed by the Turcos, excesses so terrible that the female population of the district where the men were quartered chose to spend the night hiding in the fields rather than, by remaining at home, to run the risk of receiving a visit from these brutal ravishers; and now we have the above brief sentence, descriptive of an event that recalls the horrors of 1813. It is, of course, possible that all these accounts may be grossly exaggerated. We sincerely trust that such is the case. But the gradual accumulation of evidence has an ugly appearance, and one cannot help fearing that whatever may be the issue of the war in Tonquin, its effects will not conduce to the popularity of Western civilization in the East.

On the 4th instant, Notification No. 1 was issued over the signatures of Their Excellencies Sanjo (Prime Minister), Yamagata (Home Minister), and Yamada (Minister of Justice). The first clause sets forth rules for the punishment of gamblers with imprisonment for terms of from one month to four years and fines of from *yen* 5 to *yen* 200. Those who lend their premises for gambling purposes, and gamblers' watchmen and other persons who give assistance to gamblers, are subject to the same penalties. Those who band themselves together for gambling purposes, and arm themselves with murderous weapons for the purpose of carrying on this depraved pastime, are punishable with imprisonment for from one to ten years and fines of from *yen* 50 to *yen* 500. Persons who are known to be members of the band, but who are not taken while participating in gambling, are also subject to punishment. The Police can enter any house where gambling is carried on, provided they possess the knowledge that the offence has been or is being committed. It may be presumed that the issue of this Notification was dictated by the exceptional prevalence of gambling, but we are not in possession of any certain information on the subject. Turning to the Sixth Chapter of the Penal Code, which treats of delicts against public morality, we find that the keeping of a gambling-hell is punishable with imprisonment for from three months to one year, together with a fine of from 10 to 100 *yen*, and that persons caught in the act of gambling incur a penalty of from one to six months' imprisonment with a fine of from 5 to 50 *yen*. The comparatively heavy penalties prescribed by the new Notification seem to indicate that the enactments of the Code were found, in practice, insufficiently prohibitive. But the point which will doubtless attract most attention in connect with the Notification is the power

it confers on the police of "entering any houses where gambling is carried on, provided they possess the knowledge that the offence has been or is being committed." It will be at once apparent that this power is essential to the efficiency of any system devised with the view of checking a crime at once so easy of perpetration and so difficult to detect as gambling. Of course in the event of anything resembling an abuse of their powers, it would rest with the police to prove that they had possessed sufficient information to warrant their action, and this is, perhaps, as much as would be exacted in practice. The difficulties that attend any vigorous attempt to prevent gambling have no where been more fully illustrated than in Hongkong. As an example we transcribe the following account of a raid made by the police on a house in that Colony on the 20th of last month:—

Yesterday afternoon, some considerable amount of excitement and horror was created among the Chinese community in Queen's Road West by three of their countrymen being killed during a raid by the Police on a suspected house. The circumstances of the affair, as disclosed at the Police Court and at an inquest held on the bodies of the persons killed to-day are as follows:—For some time past, Sergeant Butlin, whose instructions, generally, are to disturb all associations of bad characters or of those formed for the purpose of gambling, which congregate in untenanted houses, has had his eye on the top floor of house No. 72, Queen's Road West, and for the past fortnight he had kept particular watch on it. He knew it was not occupied by any fixed tenant, and he had also received information from several sources that gambling was carried on in it, that it had two strong trap doors, with spring locks, and that there was a system of watchmen kept to give warning of the approach of the Police. About ten minutes to four yesterday afternoon, he determined to try and gain entrance to the floor, and, perhaps, surprise a gambling party. Being aware that it was impossible for any European, even although in plain clothes, which he was, to get admittance by the legitimate entrance, the trap door being slammed down the moment one was observed, he sent a lukong, who was in plain clothes, to enter the floor, while he himself, accompanied by Mr. Clerihew, Inspector of Nuisances, entered house No. 70, the one adjoining that suspected, by a stair at the back which led from the Chinese Recreation Ground, which was on a level with the second floor. Having got thus far, Butlin made his way to the verandah of the house. Those inside the house suspected had by this time been warned of the vicinity of the Police, and Sergeant Butlin heard them rushing about, but he was unable to get at them, his way being barred by a wooden partition, which divided the two verandahs. With the assistance of Mr. Clerihew, he proceeded to pull this partition down, and as he was engaged doing so, he saw some thirty or forty men make their escape into the verandah of house No. 74, the partition of which had been partly pulled down. Having succeeded in tearing down a sufficient portion of the wood to enable him to enter the gambler's den, he did so and drove some men who were trying to escape as the others had done inside the house, and there secured eleven men, while the lukong caught one man whom he found hanging by the leg out of a window at the back of the house. Leaving Mr. Clerihew and the lukong to look after the prisoners, Sergeant Butlin went to the verandah to see if he could secure any more prisoners. His attention was then attracted by hearing a loud noise in the street, and, on looking over the verandah, he saw two Chinamen lying in the street, apparently dead. He at once rushed downstairs, and there saw a third man, lying in the side channel with blood oozing from his nose and ears. Two men were dead, but the third was still living, and Sergeant Butlin first had him removed to the Government Civil Hospital, and the two dead bodies afterwards. The third man died in Hospital about twenty minutes after admission. Sergeant Butlin then went back to the house, picked up all the paraphernalia usually found in gambling houses, and took the twelve prisoners to the Police Station. No one can be found who saw the deceased men fall, or leap from the verandah; even the lukong who was in the house when the first alarm was given cannot do so, as after getting admission he stood at the top of the staircase, and waited the arrival of Sergeant Butlin. A partition in the room prevented him from seeing what was going on in the front part of it. There were four ladders on the verandah leading to the roof, and it was suggested that they might have fallen from them, but, unless the ladders were thrown back, the men would have dropped on to the verandah, and not on to the street. It is impossible to believe that the men deliberately leaped from the verandah to the ground, a distance of 61 feet, and the most reasonable supposition is that they were accidentally pushed or fell off the parapet in the bustle and excitement of the moment in trying to escape from one verandah to the other. Sergeant Butlin believes there were somewhere about 100 men on the floor when he surprised the party, and it may there-

fore easily be perceived that considerable confusion and excitement would ensue when the alarm was given. No gambler if, surprised, ever thinks of making his escape by the stairs, so that the rush would all be for the other means of escape, which were, in this case, very limited.

The body of one of the deceased, a man of about 40 years of age, was frightfully mangled about the head, the skull being almost completely smashed. All three bodies were greatly bruised. This afternoon they were all identified. One was said to have been a coolie, who had been employed in a shop here for 10 years, another a cargo boatman, and the third a rice-pounder.

After hearing all the evidence this afternoon, the Coroner adjourned the inquest until Thursday next, to get evidence from Captain Dempster as to what the Police instructions are with regard to entering empty houses. Sergeant Butlin entered the house without a warrant, and he was not acting under sworn information. He was armed with a truncheon when he entered it. The jurors were Messrs G. Fenwick, F. Rickards, and A. G. B. Soares.

The twelve men arrested in the house were charged with public gambling at the Police Court to-day, but the case was adjourned.

From this account it is plain that the instructions issued to the police in Hongkong confer on them a great deal of discretionary power. In the particular case under consideration, the house was entered not only without a warrant, but by force, as a partition in the verandah had to be pulled down to obtain ingress. Moreover it appears that the sergeant of police who directed the proceedings had been watching the place for some time, and we may therefore infer that application for a warrant would not have proved an inconvenient preliminary. On the other hand, it is easy to conceive that, in a majority of instances, such a step, if compulsory, might seriously impair the efficiency of the police, and we are disposed to expect that no abuse of power will be proved against either Sergeant Butlin or Inspector Clerihew. What we would principally draw attention to, however, is the similarity between this affair and a recent occurrence in Japan. Here we have English policemen in an English Colony forcibly effecting an entry into a Chinese house where gambling is supposed to be going on in an upper room, though no evidence of the fact is outwardly observable, and in the confusion and alarm caused by the raid, three Chinese fall, or leap, from the verandah, and are killed. In the recent affray at Nagasaki, about which so much indignation was expressed by certain English journalists, the police entered a house where they saw opium smoking going on, and the resistance they experienced, there or elsewhere, in their attempts to arrest the offenders, led to the stabbing of a man. It has been loudly contended that the action of the Japanese constables in entering a Chinese house at all without a warrant was illegal. But apparently English constables do exactly the same. Are we to conclude, then, that the extraterritorial clauses of the Chinese and Japanese Treaty surround the preservation of order in Japan with obstacles which are not suffered to impede English constables in English colonies? More than once practical demonstrations have been furnished that Englishmen residing in the foreign settlements in Japan may with impunity convert their houses into asylums for Japanese law-breakers, but we should have thought that all respectable foreigners would regard such proceedings as a shameful abuse of privilege. If the police at Nagasaki behaved illegally in entering, without a warrant, a Chinese house where they saw Chinamen openly violating the laws of the land, whereas the police in Hongkong did not behave illegally, when, equally without a warrant, they broke into a house where they had reason to believe that Chinamen were engaged in gambling, it follows either that what

is generally lawful for English police is not lawful for Japanese police, or that law-breakers enjoy a special immunity in Japan under the provisions of extraterritoriality. With reference to the fatal results of the two affairs—which results must, of course, be considered entirely apart from the propriety or otherwise of the act of entry—we may remark that this is by no means the first occasion on which raids made by the Hongkong police on the houses of Chinese ended in the violent deaths of one or more of the inmates. We can recall two similar cases which occurred in former years. The first happened in a house which some constables had entered on suspicion that secret prostitution was carried on there. Two girls made their way to the roof, and in attempting to effect an escape, one of them fell down the smoke-hole, and was crushed to death. The second was a gambling case. The gamblers were surprised under circumstances resembling those described in the above extract, and one of them actually essayed to leap across a narrow alley from roof to roof. He missed his footing and, describing a series of summersaults, fell to the pavement below, a height of nearly 70 feet. With these records before them, the police in Hongkong ought to be careful how they break into houses to seize gamblers or other immoral characters, yet that they do break in without the troublesome preliminary of a warrant, is plain. It is true that if the gamblers quietly submitted to be apprehended, no lives would be lost, but it is equally true that if the Nagasaki opium-smokers had not resisted arrest, nobody would have been stabbed.

* * *

"One of the Seven Wise men was wont to say" (according to Bacon's *Apothegms*), that "laws were like cobwebs, where the small flies are caught and the great break through." If this had been written with direct reference to the practice of justice in Hongkong and elsewhere, it could not have been more apposite. Suppose that instead of the coolies and petty tradesmen who assembled in the third storey of a Chinese house on the night of December the 20th for the purpose of backing their ability to guess the number of units in a heap of counters, the party had consisted of British and American gentlemen, whose pastime was to guess correctly, and to deceive one another into guessing incorrectly, the composition of combinations of five cards—would the police have ventured to interrupt the proceedings? It may, perhaps, be supposed that the Chinese gamblers carried on their game in such a riotous, disorderly fashion as to disturb the neighbourhood, or that the nature of the sport was particularly demoralizing. On the contrary, it appears from the details of the story that their methods were so quiet and orderly as to furnish no external evidence of their presence or of the manner in which they were engaged, and so far as the game they played is concerned, it is a straightforward affair, not demanding any exercise of those peculiar moral qualities which when exhibited by poker players, for example, constitute polite accomplishments, but which, if permitted to have scope in the business of everyday life, would soon end in prison or social ostracism. One fails to see quite clearly where the distinction comes in, or why the police should smash down partitions and terrify men into breaking their necks in the one case, while in the other, they pass by with bated breath, or even lend their assistance to preserve the players from

interruption. This is one of those problems which may well recall the old saying "laws grind the poor, and rich men rule the laws."

A NEW and interesting "monster of the deep" (says a home paper) has been discovered, which, to judge by the description given of its appearance, is likely to put the sea-serpent's "nose out of joint." The monster was seen on the 2nd of October by Captain D. Seymour, of the American whaling-barque *Hope On*, off St. Elmo, one of the Pearl Islands group, situated between forty and fifty miles from Panama. The boats were out waiting signals from the vessel as to the direction in which the whales were heading, when suddenly, to the surprise of Captain Seymour, who was steering, and the men in one boat, an animal somewhat like a horse slowly rose out of the water, and then dived, apparently alarmed at the sight of the boat. The animal, which was seen by another boat's crew on the following day, is, according to Captain Seymour's account, "about 20 ft. in length, with a handsome horse-like head, with two unicorn-shaped horns protruding from it, with four legs, or double-joined fins, a brownish hide profusely speckled with large black spots, and a tail which seemed to be divided into two parts." An effort would have been made to catch the animal had it not been that whales were about at the time. Captain Seymour and his officers believe the monster is peculiar to the locality, and that it could be easily killed with lances and bomb-guns. Officers of the Pacific Mail Company state they have seen the animal on several occasions, although they never had the opportunity for close observation which was obtained by the crew of the *Hope On*.

WHEN, in the middle of August, the House of Commons was called on to debate the new code of procedure, now in operation, one of the objections raised was that the proposed Rules left it discretionary with the judges to decide what cases they should try themselves and what cases they should remit to a jury. To this objection it was replied that the only effect of the Rules on the jury system would be to substitute in certain cases the order of a judge for a mere notice by the parties, the judge, however, having no more option than before to refuse the order if applied for. The objection, however, was an interesting illustration of the unreasoning reverence still entertained for that institution which was once called the palladium of English liberty, but is now coming to be rightly regarded as a relic of barbarism. Mr. Montague Cookson, Q.C., discussing the New Rules in an able essay published by the *Nineteenth Century*, not only thoroughly and clearly explains their effect upon trial by jury, but also makes some pointed and instructive remarks upon the jury system itself. "As the law previously stood," he tells us, "there were numerous actions in which a jury trial could not be had, but even in that class of actions which admitted a jury, it was imperative on the party seeking one to 'signify' his desire for it." The only difference now is that the method of signifying that desire is prescribed. In six specified cases¹ it must be signified by giving notice to the opposite party; in all other cases, by applying for a judge's order. The change is very trifling, but Mr. Cookson thinks that "with a large majority of litigants the wish for a jury is so faint that anything which

breaks the force of habit will extinguish it altogether." In proof of this he points out that "in the County Courts, where a jury is optional, *but an active step has to be taken to obtain one*, the proportion of jury to non-jury cases is about that of 1 to 600." All this will be very shocking to those good folks whose hair is stirred with horror at the bare notion of disparaging, or attempting to abolish, the grand old palladium. But if the drift of intelligent opinion has any signification, the days of the grand old palladium are numbered. Little by little, experience has crystallized into a belief that were choice between trial by jury and trial by judges optional, the guilty man would invariably elect the former. We are not surprised, therefore, to find an expert like Mr. Cookson writing as follows:—

The jury system in civil cases is, in truth, a relic of an age when judges were supposed to be capable of being bribed or corruptly influenced in some other way; and, indeed, it is not a hundred years since scientific writers on law made this imputation part of their argument in favour of its continuance. Thus Paley writes in 1785:—

As the judge is known beforehand, he is accessible to the parties, and there exists a possibility of secret management and undue practices. The judge imparts to the jury the benefit of his erudition and experience; the jury by their disinterestedness check any corrupt partialities which previous application may have produced in the judge. If the determination were left to the judge, the party might suffer under the superior interest of his adversary; if it were left to an uninitiated jury, his rights would be still in danger from the ignorance of those who were to decide upon them. The present wise admixture of chance and choice in the constitution of the court in which his cause is tried guards him equally against the fear of injury from either of these causes.²

Is there a single sane man or woman in England with whom this argument would have the slightest weight at the present day? 'Influence' is no doubt still exerted, and that of a very powerful kind, but it is no longer brought to bear upon the judge, but on the jury. It is well known that to have the last word in a jury trial—technically called the reply—is of the greatest advantage. So great is it felt to be in practice that with the view of securing it the counsel for the defendant frequently avoids calling witnesses, even though they would improve his case. The exercise of a wise discretion on this point is one of the most delicate and difficult parts of the duties of an advocate at Nisi Prius.

Let us try the question in another way. A fair test of the value of an institution is this. Supposing it did not exist, should we set about to establish it? Would any one who had any belief in his case, if he had never heard of a jury before, think of entrusting the decision of it to twelve men who, for all he can tell, have not been in the habit of exercising their intelligence—who certainly have not been in the habit of exercising it in concert—shut up in a close court, rather than to a man of known integrity, trained experience, and general knowledge of the world, accustomed to deal with such questions all his life long? The experiment was tried in Scotland in 1815 when juries were introduced there by Act of Parliament. What has been the result? It has turned out a distinct failure. Merchants in Glasgow have been heard to say they would rather surrender their rights and interests than submit their case to a jury of their countrymen.

But, at all events, a jury is free from prejudices? On this head I must again quote Lord Bramwell, because his testimony will hardly be gainsaid. This is what he told the Law Courts Commission after thirteen years' experience of juries as a judge, and a long brilliant career as an advocate before them:—

In an action against a railway company juries generally go wrong; in actions for discharging a servant they generally go wrong; in actions by a tradesman against a gentleman, where the question is whether articles supplied were necessary for his wife, they are sure to go wrong; in actions of malicious prosecution³ they are always wrong. You may say to them—"The question is not whether the man is innocent, but whether there is absence of reasonable cause and malice"—but in vain. They find for the innocent man. In cases of running down⁴ they generally find for the plaintiff; so much so that a man who has run down another, if he is wise, will bring the action first. I have been in causes

¹ Actions for slander, libel, false imprisonment, malicious prosecution, seduction, and breach of promise of marriage.

² *Moral and Political Philosophy*, Book VI., chap. viii. "On the Administration of Justice."

³ This, it will be remembered, is one of the 'six excepted actions' in the New Rules.

⁴ In a running down case tried before Mr. Justice Day in the summer of last year a verdict had been given for the plaintiff for £100. The plaintiff was the widow of a man who had been run over by a van, and the testimony, as is usual in such cases, was conflicting. Although the learned judge was strongly of opinion that the deceased was in fault, the jury took the view that a man with a wife and family was less likely to have been careless, when carelessness would lose him his life, than the driver of a van, who at the most would lose his situation. On an application for a new trial the Divisional Court considered the case for the plaintiff so hopeless, that, instead of ordering a new trial, which would probably have resulted in a like verdict, it directed judgment to be forthwith entered in favour of the defendant.

myself where each party has brought an action, and each has recovered.

Probably if asked to explain this paradox, the jury would answer that, while the judge looked only to the strict letter of the law, they took a more liberal and enlarged view according to the 'morality' of the case. A verdict so gained is only a temporary triumph, and inevitably results in an order for a new trial.

It will be retorted that, although this liability to error may hold good in the case of a common jury, a special jury is exempt from such failings. But what are the qualifications of a special jury, and how is it composed? The qualifications, as fixed by the Act of 1870, depend either (1) on the occupation of lands or houses of a certain rateable value, or (2) on rank and social position. Every male person who is legally entitled to be called an esquire, or is a person of higher degree, or is a banker or merchant, and is between twenty-one and sixty, and resident in the country or city where assizes are held, is eligible as a special juror. Bankers and merchants we know, but esquires have no outward marks of distinction, and any one may enter the special jury box in that character who has been designated such by the churchwardens or overseers whose duty it is to prepare the jury list. These lists are often very carelessly prepared, and, even if the Act were strictly complied with, is it certain that esquires proper, or even bankers or merchants—to say nothing of those who are only qualified by rateability—are proof against the bewilderment caused by the use of strange law terms or the disputes of contending advocates? Assume that there is a great advantage in having a commercial case tried before a special jury of merchants in London or Liverpool, or a case relating to a watercourse tried by a special jury of country gentlemen, the existing system of classifying jurors furnishes no security that such a panel will be struck. It has actually happened in practice that, the question being whether corn delivered was equal to sample, not a single corn-chandler or even farmer was on the special jury, and this is only one instance out of a thousand. Why, again, should a banker or merchant, as such, be more likely to form a correct opinion on a point of real property than a squire who rides to hounds on the effect of a bill of lading? *Ne sutor ultra crepidam* applies to all specialists alike. Or, if we turn the corner of the adage by empanelling none but those who are experts on the particular question to be tried, surely it would be well to reduce their number below twelve and turn them into assessors, or else to leave out the part of the judge altogether, and to establish tribunals of commerce as in France, Belgium, and Germany.

Trial by jury is not only more expensive than any other mode of trial, but, for reasons known to every practitioner, it occupies about one-third more time, and every restriction which is put upon it is, therefore, a direct proportionate saving of our judicial strength. Incidentally, however, it is much more than this, for when the jury are misdirected by the judge, or they bring in a verdict against evidence, this cannot be set right by the Court of Appeal. A new trial must be had, and the whole of the work must be done over again. Where, on the other hand, the appeal is from a judge without a jury, it is simply a rehearing, which is a very different thing. The recent abolition of the absurd practice of applying *ex parte* for new trials, and of granting rules to show cause, cannot be too warmly applauded, but new trials with fresh juries still remain with their attendant cost, threatening to secure ultimate victory, as in the now famous case of *Belt v. Lawes*, to the litigant with the longest purse. It may be that in actions where the honour of a man or woman is the main issue to be tried, the popular element of a jury will find a place in our judicial system for some little time to come, but it is to be hoped that it will shortly disappear from all other actions for the enforcement of contracts or the redress of private wrongs. The assimilation of the modes of trial in the two divisions of the High Court will then, and not till then, be fairly complete.⁵

NEWSPAPERS, like everything else, are occasionally the creatures of accident. Under the manipulation of malicious compositors their columns sometimes become liable to prosecution for offences against public morals, and by the contrivance of ill-disposed contributors they are sometimes betrayed into unwarrantable expressions of opinion. There have been journals distinguished for the unwavering consistency of their views, and there have been journals still more distinguished for their weathercock propensities, as was notably the case with the Ohio editor who "took a darned sharp turn" by telegraph. But we do not believe that the history of ephemeral literature contains any incident so curious as that connected with the recent experiences of a Kentucky paper, the *Calloway*

⁵ Not quite; for cases of personal fraud, as much involving questions of character as any of the 'six excepted actions,' are constantly tried by a judge sitting in the Chancery Division where a jury cannot be had.

News. What happened to the paper, and how it happened, will be understood from the following paragraph, extracted from its own columns:—"Since our last issue made us Radicals and advocates for Grant for President, and Butler for Vice-President, and also made us declare for an additional tax for school purposes and the co-education of the races, it now becomes us to explain these matters. The editors, moved by a simultaneous desire to visit the Exposition, concluded to go together, whereupon we called upon Judge Oury and W. L. Weathers to edit our paper in our absence. They graciously consented to do so, and the last issue is the work of those two gentlemen. Of course it was all a joke, and nearly every one will at once so recognize it, but lest there be some who failed to note our local in the preceding issue, in which we stated that the next issue before this would be edited by those gentlemen, and therefore may be laboring under some misapprehension as to the facts in the case, we have concluded to say that the articles in last week's issue were intended as jokes, and never had existence save in the mental world of the pranky gentlemen. We understand that by most of our subscribers the joke was highly appreciated. We hope that none will find fault with us in any event, as the matter *in toto* was a complete surprise to us."

THE protectionist bubble blown in Canada seems likely to burst. We read that there is something of an excitement in that great province, growing out of a depression in business and a fear, on the part of traders, that they are going to be ruined by cheap American manufactures. A few years ago Canada enacted a protective tariff, and for a time all went swimmingly. But a reverse has overtaken a fictitious prosperity, and many of the factories have stopped, while others are being closely pressed by competition with American goods. Hence there has arisen a cry for more protection against cheap American manufactures. "But on this side," says the *Alla*, "of the imaginary line, we are just as much afraid of cheap Canadian products, not so much manufactured goods as raw material and agricultural products, such as lumber, coal, furs, barley, oats, etc. Congress says that because those things can be produced cheaply in Canada we must be protected against them, even though in retaliation Canada imposes a heavy duty on manufactured goods which we can produce cheaper than she can. If, instead of being a question between two nations, it affected merely two States of the Union, it would not be denied by anybody that both parties would be benefited by making such exchanges as their natural resources rendered possible. If Ohio can produce cheap iron and New York has the waterpower or skilled labor enabling her to turn that iron into finished products at the minimum of cost, it is clearly for the benefit of both that Ohio should sell her cheap iron to New York, and take cheap manufactures in return. To erect an artificial barrier between the two and say that New York must use high-priced iron extracted from her own mines, and that Ohio must manufacture for herself at a heavy cost, would be obviously a detriment and a loss to both States, because it prevents each from devoting herself to whatever she can do to most advantage. But the case is the same between Canada and the United States, and for either country to stand in fear of the cheap products of the other and try to exclude them by protective tariffs is the height of ab-

surdity. It is equivalent to saying that commerce is something odious and malignant, instead of being one of the beneficent industries by which the comforts and pleasures of life are increased."

A FRENCHMAN, who has patented a machine for the use of concentrated solar rays as a general motive-power, has set up three of his machines in Algeria, for the French Government. He is now carrying on experiments on the island of Porquerolles near Hyeres, where he is threshing Indian corn, and raising water by the action of the sun's rays. The *World* adds that Sir Charles Dilke has also lent him part of his land at Cap Brun, near Toulon, for his experiments; and he purposes to utilise the sun is boring the holes for blasting, for tree-planting in the hard rocks, as well as in pumping water from the winter wells into the summer cistern.

AMERICAN newspapers are beginning to use very strong language about "giant monopolies of the age," "blighting shadows that hang over the country," "oppressive and flagitious black-mailers" and other commercial monstrosities. One of these, the Standard Oil Trust, is thus described by a Brooklyn journal:—

It was started in 1872 upon the ruins of the notorious South Improvement Company, of Pennsylvania, which collapsed upon the discovery of a secret contract with the railroads, by which it received a rebate of \$1 a barrel on crude oil and more on the refined article. The Standard company started with a capital of \$1,000,000. By a system of rebates from railroads, which constituted a series of special rates, the profits on which were secretly divided between the company and the railroad officials—the stockholders, of course, knowing nothing of the matter—this capital has since swollen to a figure variously stated at from \$50,000,000 to \$70,000,000. The exact figure in such a case is not significant. It is a close corporation, owns but a fraction of the oil producing power of the country, but controls four trunk lines of railroad, all the railroad tanks for transportation and two pipe lines to the seaboard, beside controlling in various ways railroad transportation on the roads running North and South. It compels railroad companies to advance rates for rival companies; it deals in grades of oil forbidden by law; it manipulates legislatures in such a way as to kill water transportation of oil and so to make submission to it compulsory in many States; it has stifled investigation by bribery, and has a reserve fund for buying off witnesses and, where that is possible, prosecuting officers also.

These charges are of a somewhat vague character, especially that which refers to dealing in grades of oil forbidden by law. It is explained, however, that the company represents what is known as the naphtha gas interest. By a process known as the water-naphtha method, it is possible to manufacture gas which, though of very inferior quality and dangerous to life, can be sold at a profit for about 25 cents per thousand feet. In this gas the company is said to have dealt largely, thus cutting down rates until all but three of the Brooklyn gas companies were compelled to abandon coal gas. By threats of ruin, the directors forced their way into the established companies, and at last having obtained virtual control of nearly the whole gas interest, a combination was effected, prices were restored, and the good people of Brooklyn have to "pay the piper." The most hopeless part of the affair seems to be the difficulty which the public feels about trusting anyone after such disclosures. The professed reformers of these abuses may be themselves black-mailers in an altered form.

The manipulation of stock is another phase of the methods by which unparalleled wealth is fast gravitating into the hands of a few, and creating a moneyed oligarchy, whose members are described as "conspirators that bind together and interlace the various sections of the country with bands and wires of iron and steel,"

subject the majority to slavery of a new type, and contrive a "destruction of equal rights that would not be tamely submitted to under a monarchy." Some interesting facts with regard to this abuse are contained in the following extracts:—

The successful accomplishment of the great Vanderbilt-juggle in this State was but the example and incentive to similar operations throughout the country. About 100 per cent. or \$45,000,000 of fictitious stock was thereby divided, in 1869 among the shareholders (Vanderbilt & Co.) and added to the capital of the New York Central and Hudson River Railroad. Fully 100 per cent. (8 per cent. per annum) has since been paid on same in cash dividends. The previous capital contained so much "water" that 8 per cent. dividends thereon were alone equivalent to 10 per cent. on the money actually expended. The sum of over \$45,000,000 in cash has, therefore, already been filched from the people to pay dividends of this one huge block of \$45,000,000 "water" alone, without calculating interest thereon, or the market value of the watered stock itself, over \$50,000,000 additional.

But this is only one instance of many. Its fruits enabled the acquirement of other great connecting roads to the West, now recognized as "Vanderbilt" lines, and which have been manipulated in like manner for the same nefarious purpose.

The evil example has been followed to the same extent, 100 per cent., by many dividend paying roads under other control and in other States. Wrecking and reorganization have proved profitable mines by similar methods, securities, without limit, being fed to confiding investors and Wall-street speculators. New railroads are built far out on the Western plains and prairies, not because they are required by population along the line, but because Government, by unwise financial laws, has so inflated the currency and cheapened money, and enabled the legal reserves of over 2,200 national banks to be largely accumulated in New York, and used in Wall-street, that so-called "securities" are readily marketed for twice the cost of construction or more; so that every 1,000 miles of such new roads produce a profit to the constructors of not less than \$10,000,000 to \$15,000,000 by that means alone. *Poor's Railroad Manual* for 1883 states that during the years 1880, '81, and '82, 28,019 miles of road were built, at an increase of capital shares and debt of \$2,024,646,842—over \$70,000 per mile. half being "water." \$1,000,000,000 "water" in three years! No wonder again that Gould can, on occasion, exhibit his investments by the bushel, or that he and other Wall street railroad kings can rival royalty in the magnificence of their exclusive steamships or so called yachts. Scores of others, in various ways, sometimes even by grand munificence, demonstrate their sudden attainment, as by magician's wand, of princely opulence. And this wonderful "development of the country" yet proceeds.

The Western Union Telegraph has over \$50,000,000 "water" included within its present capital, the New York Elevated roads \$18,000,000, and among public corporations there are few throughout the country which have not been prostituted to this base use. It is no exaggeration to assert that the various issues of stocks and bonds now extant are \$2,000,000,000 in excess of the money actually expended—on a large part of which interest or dividends are regularly paid already, and the remainder is to be made income producing also, when the condition of the country and people along the lines, will enable it to be done.

By freight discriminations, rebates, and "special rates," favorites have been permitted to acquire great fortunes on the ruins of many others. Chief among such offspring of violated rights is the Standard Oil Company, to whom as proven by sworn testimony, over \$10,000,000 was paid by railroads as rebates, within eighteen months. The members of this company have amassed not far from \$100,000,000, by such dastardly advantages, competitors having been compelled to relinquish business or surrender to their dication and control. This vast monopoly and outgrowth of railroad abuse has thus become the supreme regulator of oil production and traffic throughout the world, and is now endeavoring to subordinate gas companies and obtain a like control of that method of illumination. In like manner the handing of grain, provisions, and other commodities has been largely concentrated in the hands of a special few—the difference of freight being sufficient to stifle competition and insure immense gains. Railroads have thus become the controllers of industry, trade, and commerce, and wreckers and builders of fortunes.

For the speedy building and completion of the Pacific railroads during war time Government aid was, perhaps, required; but the history of these roads, and of others since projected, is one dark line of Credits Mobilier, reckless squandering of the public lands and utter disregard of public honesty and the people's rights.

Published statements of the United States Treasurer show that, notwithstanding the mines of wealth, these roads have proved unprofitable to their builders, and though they regularly pay liberal interest and dividends on their grossly excessive issues of bonds and stock, but about \$17,500,000 has been repaid on account of the Government loan to them, now amounting, with interest to over \$123,000,000, and that \$40,000,000 of interest has already been paid by the Government—that is, the people—which the roads should have provided for. By the system of pooling, the entire traffic over paral-

lel lines is apportioned, rates fixed and harmonized, and all the roads made practically one. Competition is thus banished and dividends on watered capital are assured. Products of farm, factory, and workshop, including the labor and industry of all classes, are forced to contribute to that end, either by reduced proceeds or enhanced cost of everything. One of the saddest effects of the iniquitous system is shown by the telegraphers' strike. The Western Union Telegraph Company pays regular dividends, amounting to about twenty-five per cent. per annum upon the capital actually expended, and grinds its employes—skilled and common labor alike—into the dust, to aid in making dividends on the huge volume of "water."

Railroad and telegraph lines have, therefore, been wrested from the beneficent and impartial ends they only should have served, viz., a great and universal public benefit, and a liberal return not exceeding 10 per cent. yearly upon the capital actually invested, and have become instruments of oppression, and of public robbery so vast and all pervading as, but for the hard facts, to stagger belief. The greed for dollars without limit is strong enough among many of those who build, control, and manipulate them to stifle all sense of public duty and appreciation of private rights, to ignore the reserved rights of the people, and boldly to claim a full and exclusive ownership. The evils of their mismanagement and manipulations have crystallized, as intended by their captors, in building up within fifteen years overtowering fortunes, which are growing and spreading like a blight throughout the land, constantly absorbing and increased proportions of the industry, sweat, and blood of the people.

These immense fortunes, so wrongfully acquired, are inconsistent with free institutions, and are a constant and growing menace to public rights and liberties. They stand forth monumental evidences that the greatest financial successes are attainable by ignoring honesty and just business methods and over-riding public rights, and are, therefore, a constant source of demoralization and enticement to seek success by other than industrious and legitimate means. This effect, especially upon the growing generation of young men, is one of the greatest resultant evils.

Halls of legislation and of justice have been invaded by them and influenced by their corrupting power; and the unscrupulous effrontery of ill-gotten concentrated wealth warrants the belief that the Court of Appeals and United States Supreme Court are by no means safe against its assaults. A striking instance of the subserviency of State governments is afforded by a recent enactment in Pennsylvania (under Democratic reform control) limiting, i.e., permitting, railroad issues to \$150,000 per mile of bonds and same amount of stock; total, \$300,000. Every well informed man knows that this is many times the honest cost of any road, even when built through difficult country and including large equipment. What is it but a legal cover for gigantic swindling?

The distribution of wealth among a people who value their liberties and intend to remain free should be comparatively even, and should be jealously watched. The accumulation of enormous fortunes by methods opposed to the general welfare should be prevented in the interest of all the people. Such vast accumulations are impossible of attainment by any fair industrial or commercial pursuit within the compass of any lifetime—certainly not, as in these instances, within one generation.

THE rector of a Roman Catholic Church in New York recently met with an experience which has attracted much attention among his medical friends. His parish largely consists of tenement houses of the poorest class. While visiting a person dying of small-pox, he felt himself bitten by a flea. He took little notice of this at the time, but toward evening the bite became extremely annoying, and the limb was much swollen. Next day the place assumed all the appearance of a boil, and it continued suppuration for ten days. The physicians are of the opinion that the flea had just left the body of the small-pox patient, and had inoculated the priest with the poison.

REFERRING to the telegram announcing the adoption of the Tonquin telegraph cable project by the Senate, the *Saigon Independant* of the 22nd ultimo says:—The inconvenience resulting from the absence of telegraphic communication between Saigon and Haiphong will shortly disappear, the cable project having been voted in France. Unfortunately, if the agreement is adopted by which the English Company undertakes to lay the Saigon, Thuan-an, and Haiphong cable in sixteen days and to open it immediately, offers great advantages, we nevertheless regret

certain of its provisions. Notably we regret the provision by which France authorises the laying of a cable to be under English management between Haiphong and Hongkong. The Colonial Council while out of session has accepted this annulment of the vote it passed in two extraordinary sessions. The fact is truly regrettable.

THE Egyptian national party is said to be recovering from the shock of Tel-el-Kebir. They have started a newspaper called the *Egyptian Patriot*, which is to appear in Paris, in support of their views. In a proclamation recently issued by one of their unknown leaders, it is said that the sword must be now exchanged for appeals to public opinion and legitimate agitation. In the first number of the paper, the people were invited to elect the seven exiles in Ceylon to the new Egyptian Chamber, but every copy was seized on arriving in Egypt. Arabi's influence amongst Mahomedans all over the world has greatly increased since his arrival in Ceylon. Thousands of his Indian co-religionists have visited him at Colombo, which is now regarded as a sort of halfway house to Mecca. —*Indian Mirror*.

A CORRESPONDENT of the *Shanghai Mercury*, writing from Korea, says:—Both the steamer and sailing ship tonnage at the new port of Jenchuan are speedily increasing every month, and the place is improving rapidly. Building material and skilled labour in the house building line are at a premium. Japanese carpenters now charge \$1.50 per day! Where are the Celestials? Washermen, shoemakers, tailors, masons, blacksmiths are wanted too; in fact artisans of all descriptions could find any amount of employment. Native papers please copy.

AN entertainment is announced in our advertising columns of this issue, the French Amateurs having consented to give a performance at the Gaiety Theatre on the evening of Saturday, the 19th inst. The programme consists of two of the comedies of Labiche, sufficient, with the anticipated completeness with which the pieces will be placed upon the stage, to draw a good house, but as the amateurs appear on this occasion for the benefit of the funds of the Yokohama General Hospital, it is safe to say that there will not be a seat vacant when the curtain is rung up.

FROM telegraphic enquiries made at Shanghai we are able to state that nothing is known there of the reported recapture of Sontai by the Black Flags. The Shanghai newspapers are quite silent on the subject. It may, therefore, be concluded that the recent wonderfully circumstantial account of the great havoc sustained by the French troops had its origin in the fertile brain of some patriotic Chinaman, in whose mind, probably, the "wish was father of the thought."

PÈRE HYACINTHE, in a recent address in New York said:—"There is yet to come a new people from the vast continents of Australia and New Zealand, from Japan and China, who shall inaugurate a new era. These shall bring about the glorious prophecy of the apostle, that the earth's scattered and divided races shall be drawn together by the Divine Redeemer and bound together as the children of one universal father."

HERE is an item taken from the first number of the Korean Government *Gazette* of which 3,000

copies have already been printed:—"Some years ago Chinese literature was commenced to be taught in Oxford College, England, and we now learn from foreign journals that other colleges near the chief city of Great Britain intend following the example of Oxford. Thus Chinese is obtaining recognition in the West. Is Heaven endeavouring to establish Chinese as the universal language?"—*Shanghai Mercury*.

DURING the strong N.E. blow on the night of the 5th inst. the British bark *E. von Beaulieu*, which has recently been converted into a hulk, dragged her anchors and got on the bank opposite the English Hatoba. Attempts were made yesterday to tow her off, but the tug used was not equal to the occasion, and the vessel still lies on her bilge, her position and appearance indicating that she is rapidly making water.

AT half-past eleven yesterday morning, opposite the Machigaisho a very successful trial took place of the new steam-fire engine imported for the Police Department. It is much lighter in build than either of those belonging to the Yokohama Fire Brigade, but nevertheless throws a good stream of water and will be a great safe guard to the native town, as from its lightness it can be taken cross the bridges without danger. The makers of this engine are Messrs. Shand, Mason & Co.

OWING to the peculiarity of Chinese characters, each of which represents a word, not a letter, as in our Western tongues, the Danish Telegraph Company (the Great Northern) working the new Chinese lines, have (*Engineering* says), adopted the following device:—There are from five to six thousand characters or words in ordinary use in the Chinese language, and the company have provided a wooden block for each of these. On one end of this block the character is cut or stamped out, and on the other end is a number representing the character. The clerk receives a message in numbers and takes the block of each number transmitted and stamps with the opposite end the proper Chinese character on the message form. Thus a Chinese message sent in figures is translated into Chinese characters again and sent to its destination. The sending clerk, of course, requires to know the numerical equivalent of the characters, or have them found for him.—*St. James's Gazette*.

A NOTIFICATION has been published by the Council of State, providing for the grant of pensions to Government officers who have served for upwards of fifteen years. To carry out the provisions of this notification a Pension Bureau has been established.

THE British ship *Haddon Hall*, Captain Leighton, which left here on the 4th ultimo for Kobe, arrived at that port on Saturday last, having been 33 days on the passage.

IF the Chinese Restriction Act is not a total failure, it is in a fair way to be made such. It will be the first duty of the Pacific coast Congressional representatives to decide what shall be done to remedy the manifold defects of the law.—*Alta*.

MR. E. WHITTALL filed a petition of appeal yesterday against the decision of Judge Hannen in the case of Yukioka Shobei v. E. Whittall. The petition was granted.

"KINDLY SYMPATHY WITH NATIVE ASPIRATIONS AND PROGRESS."

THE letters of the London *Times*' special correspondent in China are always pleasant reading, and the source from which they emanate is a sufficient guarantee of the accuracy of their information. Just now, too, the duties of special correspondent are performed by a gentleman who attaches such an obviously paramount importance to the commercial aspects of a British Representative's functions, that his views are, doubtless, particularly acceptable to his nationals at the open ports. In his last letter dated at Shanghai, September the 20th, he alludes, in the following terms, to the appointment of Sir HARRY PARKES as Her Majesty's Representative in China:—

The arrival of Sir Harry Parkes, the new British Minister to China, has been greeted with enthusiasm on the part of all our countrymen resident in the East. The valuable services which he rendered during the last China campaign, his intimate acquaintance with all questions affecting our commercial relations with this country, and his long, successful tenure of the post of Plenipotentiary in Japan, have all combined to point him out as the most fitting successor to Sir Thomas Wade. It used to be thought, and indeed has recently been asserted, that the Chinese had objected or would object to his appointment on the ground, presumably, that the recollection of his former rough treatment while a prisoner in their hands could not but operate as a barrier to the harmonious relations which ought to exist between the two Powers. There is no reason whatever to suppose that such views are entertained by the Chinese Government. The circumstances referred to occurred nearly a quarter of a century ago, and whatever objections might possibly have been urged at an earlier period have long disappeared by lapse of time. There is no doubt the new Minister will receive a cordial welcome at Peking as the representative of a great and friendly Power with which it is now more than ever the interest of the Chinese to stand well. Not less gratifying must it be to Sir Harry to reflect on the leave-taking he had with his friends in Japan. From the Mikado downwards, all classes and all nationalities appear to have joined in a general expression of esteem and goodwill. In a country where there is still a good deal of the irreconcilable between the East and the West, it is no small praise to say his departure seems equally regretted on both sides. It shows that a kindly sympathy with native aspirations and progress, and on occasions even with native tradition and prejudice, may and ought to go hand in hand with the first duty of a Minister—the protection and development of British trade. We fear, however, that the new Minister will find the atmosphere of Peking much less favourable to progress than that of Tokio. If he can but convince the Chinese Ministers from his Japan experiences that safety and prosperity are more to be found in development than in stagnation, and that the introduction of railways is by no means destructive to the territorial sovereignty, even if they be made with borrowed capital, he will do more to strengthen their hands than all that the founders of arsenals and builders of war vessels have done put together.

Of the opinions expressed here the greater part will be endorsed by all the English residents in China, and Japan, who have justly learned to associate Sir HARRY PARKES' name not less with the most stirring events of China's foreign relations than with the story of Japan's recent progress. But if Sir HARRY PARKES himself were asked whether the "expressions of esteem and goodwill" he received on leaving Japan might be regarded as an honest sequel to the latter years of his official career there, we have little doubt that his answer would not be in the affirmative. The

first duty, we apprehend, of a British Representative at the Court of a friendly Power should be to promote cordial relations, and to show that the policy of his government is neither wholly selfish nor entirely indifferent to the national sentiment of the people among whom he lives. Judged by this standard, it is a mere mockery to say that the impression conveyed by Sir HARRY PARKES' policy was, in any sense, one of "kindly sympathy with native aspirations and progress." It was as nearly as possible the opposite. We are dealing here with facts, not fancies, and we unhesitatingly affirm that whether the treatment this country received at the hands of Sir HARRY PARKES was well or ill judged, its unmistakeable outcome has been to stifle much of the trustfulness and admiration which the Japanese people had begun to feel for Western civilization. If any one fancies that he finds here an exaggeration of the truth, let him consider dispassionately in which direction the feelings of the Japanese public tend at present. Do they tend towards friendship for England and faith in the justice of her international policy? Or do they tend towards a conviction that England is indifferent to Japan's claims and wholly careless of the consideration her conduct entitles her to receive? He must be entirely blind to the indications that surround him who does not see that among all her treaty friends there is not one whose illiberal attitude Japan has less hope of moving than Great Britain. If to convey this impression of his country's sentiment can be regarded as the proper object of a British Minister's policy, then indeed it may truly be said that the latter years of Sir HARRY PARKES' career in Japan were eminently successful.

It is proper that this criticism should be separated from the general verdict of applause which Sir HARRY PARKES' character and achievements have won. To that verdict we subscribe with the utmost heartiness. It would be difficult to find an official who combined in a more marked degree the highest qualities of fearless integrity and unflinching industry. But, paradoxical as the statement may appear, what chiefly contributed to the ill success of Sir HARRY PARKES' policy in Japan was the very strength of a characteristic which Englishmen are accustomed to admire. He could not bear to swerve from a course that he had once persuaded himself to consider the right course, and this inflexibility was above all things unsuited to the conditions he had to deal with here. It needs but little reflection to see that a policy which was necessary and wise when pursued towards the Japan of a quarter of a century ago, must have ceased to deserve those epithets when applied to the Japan of recent years. If the treaties made with this country at a time when all her instincts were believed to be anti-foreign and anti-progressive, can be considered to have been,

in any sense, suited to her condition, it follows inevitably that she is entitled, by every principle of justice, to ask for some modification of those treaties now, after she has proved her firm attachment to the principles which constitute the basis of Western civilization. This plain fact never received the least practical recognition at Sir HARRY PARKES' hands. From first to last he treated the Japanese as children to be coerced into the right path, not as men who had learned to discern that path for themselves and to follow it of their own election. The representatives of other nationalities were changed by degrees. The men who had been here under the old *régime* were replaced by others who were not obliged to divest themselves of any prejudices in construing Japan's sentiments, and who were as free, as they were willing, to adapt their policy to circumstances which in general exceeded their most sanguine expectations. The British Representative alone remained unchanged and unchanging at his post. Had it been possible for him to follow the bent of his kindlier inspirations without the shock of disturbing contrasts, his attitude might soon have photographed the generosity which was always a marked trait of his private life. But the very staunchness and honesty of his disposition probably invested with some semblance of intrigue or hypocrisy the successive alterations of his colleagues' policy. The pleasantest path seldom leads to the best goal, and it is easy to see how pride of conservative loyalty may impart a false appearance of duty to the maintenance of a position, merely because others seem disposed to abandon it. When Sir HARRY PARKES returned to Japan in 1882, his opportunity was unique. His Government, in answer to hostile criticisms, had conferred on him a mark of favour so high that he could well afford to shake himself free from tradition; while Japan, on her side, was ready to welcome him back as an old friend and trusted adviser, and even to show him practically that she had nothing in common with the attacks which had been made upon him. But Sir HARRY PARKES entirely failed to appreciate the position. He found a Government and a people united in their desire of one thing and one only, namely, to have their country restored to her place among independent nations. What the Japanese wanted was to put an end to the partial intercourse which they felt to be a stigma on their civilization; to see foreigners enjoy the same privileges under the same conditions in Japan as Japanese enjoy in Europe and America. To this aspiration, which ought to be the end and object of every foreign representative's policy, Sir HARRY PARKES replied by bidding the Japanese be practical. "You want your tariff revised," he said. "Get that done first, and consider the other question afterwards." No advice could have been less sympathetic. The

Japanese really cared very little about tariff revision. They would doubtless have welcomed an acknowledgment of their right to regulate their own tariff, like every other free country, but as for the permission to impose an extra tax of two or three per cent. on yarns and shirtings—a tax which might augment their revenue by a million dollars annually, but which would come almost entirely out of their own pockets—they thought it a mockery to mention such a paltry matter in the same breath with the incomparably greater question of throwing open the whole country to foreign enterprise and foreign capital. Therefore it was that they desired to give the latter question precedence. They did not ask for the immediate abolition of extritoriality. That is a demand which has been put into their mouths by persons who apparently desire to misrepresent them. The position they assumed was that a majority of the Treaty Powers had taken no steps to provide a proper substitute for the territorial jurisdiction from which their nationals were exempted; and further, had so construed the treaties that in many cases the power to preserve law and order could not be exercised at all in Japan. This state of affairs the MIKADO'S Government declared itself resolved not to extend beyond the bounds of the treaty ports, and called upon the Foreign Powers to remedy by restoring to Japan a very limited amount of criminal jurisdiction; Japan, on her side undertaking that until such time as her Judicature should have won confidence abroad, a majority of the Judges empanelled to try any case in which a foreigner was concerned should be foreigners: then, after a fixed term of probation, this system might be developed simultaneously with the complete opening of the country. The very nature of these proposals ought to have demonstrated the earnestness of Japan's purpose. But HER MAJESTY'S Representative had lost his touch of the times. He seems to have set the infinitesimally petty claims of a crippled and circumscribed trade above the broad interests which, for his country's sake not less than for Japan's, he should have laboured above all things to promote. He offered Japan, after twenty-five years of pleasant intercourse and sixteen of the most remarkable progress on record, the same tariff as Korea has obtained from the outset, and in return for this concession (?) he asked her to grant—trading passports. Could there be conceived a more absurd fiasco? All this talk of treaty revision, all the trouble it had cost and the expectations it had excited, to end in trading passports! If foreigners are to trade in the interior of Japan, they do not want passports. Passports would be no guarantee for their lawful behaviour, while for the conduct of the Japanese with whom they would come in contact the Government of Japan is ready to hold itself responsible. But the Government of Japan declares that it will not consent to anything which would

tend to perpetuate the present condition of partial intercourse. Every year that passes renders this state of affairs more irksome, and brings into greater prominence the exclusiveness and race prejudice of foreigners who claim the right to hold themselves apart from the people of the country where they come to earn their bread, and to enjoy in Japan, at Japanese expense, privileges which Japanese subjects themselves do not possess. At present England is regarded as the head and front of this exclusive and narrow-minded policy, and since the real sentiments of the English people and of the English Government towards Japan are wholly inconsistent with such a character, we cannot pretend to think that "kindly sympathy with native aspirations and progress" is the impression this country learned to associate with the name of the official who recently represented HER MAJESTY at the MIKADO'S Court.

ECONOMICAL RAILWAY CONSTRUCTION.

THE United States *Railroad Manual* for 1883, gives the number of miles of new lines built throughout the States during 1880, 1881, and 1882 as 27,019, and says that the nominal cost was \$2,023,646,842. This latter figure is obtained by calculating the increase of capital shares and of debt. It does not, however, represent the actual cost of the lines. Before determining this, the compilers of the *Manual* say that half the aggregate increase of shares and debt must be deducted on account of "watered" stock. If this subtraction be made, it results that the average cost of constructing this enormous length of roads was thirty-five thousand dollars per mile. We commend this figure to the consideration of Japanese financiers. If report speaks truly, the Tokiyo-Kumagaye line has cost nearly seventy thousand *yen* a mile, though it runs through a country presenting a minimum of difficulties, and is apparently built on the most economical principles. Speaking, early in 1881, of the prospects of this line, we said that at the then value of paper money, forty-five thousand *yen* per mile ought to be amply sufficient for its construction. This estimate was made by a competent English railway engineer, who had examined the surveys throughout and was familiar with the features of the country. At the time of writing, *Kinsatsu* were at a discount of 45 per cent. The discount to-day is less than ten per cent., so that, making due allowance for the fact that the price of labour has not yet fully adapted itself to the appreciation of paper money, we shall be safe in reckoning that the cost of construction ought not, under existing circumstances, to exceed thirty thousand *yen* per mile. Assuming, however, that *Kinsatsu* remained, throughout the past two years, at the heavy discount quoted in the spring of

1881, the expenditure on the line ought not to have been within thirty per cent. of seventy thousand *yen* a mile. How has the money been wasted? Now that Japan is disposed to busy herself seriously about railway construction, it is most important that the question of expense should be honestly considered. In every part of the world, work done under official auspices is proverbially uneconomical, but there are circumstances which render this specially true of Japan. Chief among them is the want of an efficient body of contractors. This, perhaps, is not much to be wondered at, when we remember that Japanese experts are little familiar with the character of the works which the country needs most. Railroads, docks, buildings in masonry, and similar undertakings, are still comparatively new to them. But what strikes us as specially hopeless is that the means of remedying this want of knowledge are inaccessible under existing conditions. Were it possible for foreign contractors to compete in the Japanese market, the economical and rapid methods which long years of dearly-bought experience have taught the West, would very soon become this country's property also. But unfortunately this is not possible, and will not be possible until the present treaties are revised in such a sense as to permit Japan to extend to foreigners unrestricted rights of residence and property throughout the Empire. Still the fact stares us in the face that while good permanent lines can be built in the United States at an average outlay, taking rough and smooth alike, of thirty-five thousand dollars a mile, they cost in Japan from fifty to sixty thousand in an exceptionally easy district. There is a popular fallacy that American engineers are principally skilled in the building of "backwood" tracks, and that their so-called economy of construction signifies nothing more than scamped work. We need scarcely say that there could be no greater mistake. It is true that American engineers have acquired an exceptional experience of the insolvency which invariably results from too cheap work, but they acquired that experience, not because they originally believed in excessive economy, but because circumstances occasionally compelled them to practise it. The scientific principles upon which they proceed are precisely the same as those that guide English engineers. The United States are so near Japan, and railway construction is in process there on such a large scale, that it might be worth the while of those who have charge of similar undertakings here to find out, by actual inspection, how thirty or forty per cent. is saved in a country where labour is proverbially dear and rails cost more than anywhere else. When Japan is thrown open to foreign professional enterprise, these things will be speedily remedied, but we fear that a considerable interval still separates us from that day, and in the meanwhile this unnecessary drain upon the country's purse seems likely to continue without interruption.

THE ANGLO-KOREAN TREATY.

THE writer in the *Choya Shimbun*, whose article we translate elsewhere, is a politician of very decided views. He has evidently formed an exceedingly poor estimate of European justice, and is disposed to think that the interests of Oriental states receive no more consideration at Western hands than the pocket of a pedestrian at the fingers of a pilferer. His writing has some appearance of being the expression of thoughts slightly disarranged by anger or other cerebral excitement, but, so far as we can discern, his objections to the Anglo-Korean Treaty are two—first that its provisions with regard to the opening of ports are framed so as to confer a vague right of selection upon the British authorities; and secondly, that while securing to British subjects the privileges of trade and travel in the interior of the country, it makes no provision for their government outside the limits of the Settlements. It is a little difficult to apprehend the precise nature of the wrong-doing in the former case, or to foresee the evils Korea is likely to suffer should she be required hereafter to open two new ports as substitutes for Pusan and Yangwhachin. The writer in the *Choya Shimbun* apparently desires to suggest that the British Envoy craftily induced the Korean Government to pledge itself to open two extra ports, under pretence that they should be substitutes, but really with the intention of making them additional. Surely the assumption of Korean incompetence implied in this accusation is as exaggerated as the deceit charged against the QUEEN'S Representative is objectless. Every Japanese who has taken any trouble to inform himself about the resources of Korea and the prospects of her trade, must know that the attractions she offers to foreign merchants are exceedingly few. It is, indeed, a moot question whether every one of the proposed settlements will not ultimately be found to have cost the foreigners who settle there a great deal more than Korea can ever repay. Certainly the commerce of the country must for a long time be of such a nature that its vitality will depend upon the places selected for carrying it on. If it is to succeed at all—and its success is presumably Korea's object no less than Great Britain's—the wisest course that can be pursued is precisely that outlined in the Treaty, namely, to arrange that the positions most suitable for trading purposes shall be determined by actual experience. This much, at all events, Korea must be competent to understand. Questions of tariff or jurisdiction may be, as yet, beyond her conception, but she must be singularly simple if she cannot foresee that by pledging herself to substitute two new ports for Pusan and Yangwhachin, should these be found unsuitable, she confers a certain discretionary power on the British Government. That the power will be abused,

there is not the smallest reason to fear. Nothing but absolute necessity will persuade foreigners to abandon settlements where they have sunk capital in offices and workshops; while as for the notion that the real object of the Treaty is to provide for the establishment of additional settlements, it may be disposed of by observing that every new port opened is so much benefit conferred on the country. If the *Choya Shimbun* doubts this, we recommend it to compare the Yokohama of to-day with the Yokohama of twenty-five years ago.

Of a different character is the contention that the privileges of trade and travel in the interior ought not to have been sought or granted unless they were accompanied by some provision for the efficient control of foreigners outside the settlements. If the Treaty confers any such privileges under a system of extraterritorial jurisdiction similar to that now existing in Japan, it will be impossible to deny that Korea has been induced to make a concession, the danger and inconvenience of which her inexperience alone hides from her. But we do not believe that the Treaty is framed absolutely in this sense. So far as can be judged from the skeleton of its provisions that has been published, the intention is that the municipal and police regulations, framed by mutual consent of the Korean and British Governments, shall apply to foreigners outside, as well as inside, the limits of the settlements. Unless this stipulation was intended as a mere farce, it must have been supplemented by some arrangement with regard to the machinery by which the regulations are to be enforced in the interior. What that arrangement is, we confess ourselves unable to divine. But, on the other hand, it is equally difficult to suppose that the British Representative, thoroughly conversant as he is with the inconvenience and wrong Koreans in the interior might suffer were justice against foreigners accessible in the settlements only, can have failed to make provision against these contingencies. The *Choya Shimbun*, however, does not wait to learn the facts. It is apparently in such haste to convict European Powers of selfishness and injustice, that it cannot pause to find out whether its accusations have any foundation.

THE DIARY OF HENDRICK HEUSKEN
(1856-1858).

(From the German of Dr. G. Wagener, in "Transactions of the German Asiatic Society of Japan" June, 1883).

(CONCLUDED).

After the audience the two strangers receive presents of silk garments and pieces of silk, and a little banquet is prepared in their residence. The 12th of December is settled upon for a conference with the president of the great Council. In the meantime Harris is visited by the commissary, and expressed a wish to obtain two plans of the city of Yedo. The Prince of Shinano informs him that the great Council has taken the subject into consideration, but has not yet come to a decision. Moreover, he informs

him that Herr von Siebold had managed to get two maps of Japan 20 years before: but the official who had been the means of his getting them had been crucified as the reward of his pains, and von Siebold was forbidden to remain in Japan.

As to the dwelling of the Ambassador, it was occupied by not only officers and soldiers from Shimoda, but also by officers from Yedo; and the spies, whom Harris had driven out of his residence in Shimoda, have settled down in his immediate vicinity. The officers often treat Mr. Heusken coolly or with indifference, but in private they beg his pardon, for they are compelled to act thus and avoid all familiarity, or these spies would immediately give information of any sign of friendship. Harris, who for a time had been indisposed, did not wish to upset things too soon, now complains bitterly to the Prince of Shinano about these unbidden guests, and demands the right of being master in his own house: the present state of affairs was an insult to the President of the United States, and if a change be not immediately made, he would consider himself a prisoner, he would not leave the house, and would not appear on the morrow (12th) at the conference with the President of the Council. The poor prince is in a sad predicament, and implores Harris almost abjectly, at all events to go to the conference, and these household affairs would be arranged to his satisfaction. With this understanding Harris yields, and on the 12th of December the Conference as held at the residence of the Prince of Bichiu, President of the Council, which Mr. Heusken looks upon as of greater importance than the audience with the Taikun. The American Plenipotentiary makes a somewhat lengthy address, in which he enlarged on the improvement of national intercourse by means of steamships and other products of modern progress, the advantage and the necessity for Japan to enter the comity of nations; at the same time he seeks to remove any possible religious suspicion which might be entertained by the Japanese. He emphasizes the fact that the times are gone by in which Spaniards and Portuguese united the thirst for gold and the desire for conquest with a forceful propaganda of the Christian faith, and that now freedom of conscience and tolerance were the fundamental principles of all nations. The Japanese Minister listens attentively without the slightest indication of displeasure, and after having asked if Mr. Harris had done, he thanks him for the information, but makes no further reply, simply asks Mr. Heusken if he didn't smoke. Tea and fruit are served, and in the course of the conversation the Japanese feel greatly flattered as Mr. Harris dwells on the prospect of the Japanese flag showing itself in American harbours as American whalers had shown their country's flag on the coast of Japan, for the Japanese were bold and excellent sailors.

So long as the date of a new conference and the commencement of negotiations for a new treaty are not fixed, the two strangers have rather a lonesome time of it, for Mr. Harris does not wish to see much of the city while the treaty is making so little progress. Fortunately they succeed in having pointed out to them an open elevated common from which they have a good view, and to which they can ride daily and enjoy some hours of exercise and change. A question as to whether they could see the Mint and the University, i.e., the Chinese School in Seido, brings the reply that a visit to the Mint was impossible, for the greatest princes of the realm had no admission there; he might visit the University, but there was there a statue of Confucius, which received from all Japanese, high and low, honours similar to those accorded the Taikun, for he was revered in the whole empire as divine, if not as god himself. Mr. Harris is therefore requested to observe towards this statue the same ceremonial as before the Taikun. This Mr. Harris declines to do, and gives up the visit.

January 16th, 1858.

On the 16th of January, 1858, a conference is held with the President of the Council, who informs Mr. Harris that the principle of the ap-

pointment of a resident minister is accepted, that greater freedom of commerce will be allowed, that in place of Shimoda another port will be opened, but no new ones. On the 18th of January the two plenipotentiaries, the princes Shinano and Higo presented themselves and received the outline of a treaty, whereupon on the 25th, the actual negotiations begin. The Japanese allow that a diplomatic agent may come to Japan, but he must reside between Kanagawa and Kawasaki and may come to Yedo whenever he has diplomatic business there. This is at once negated by Harris as an unworthy proposition.

New ports cannot be opened because the people still entertain prejudice against foreigners and public feeling must be respected. When the people are better acquainted with the strangers and become accustomed to their presence, the whole land will be gradually opened to them. Instead of Shimoda, Kanagawa shall be the open port. Diplomatic and consular agents may journey into the interior on official business, but not merchants; for in regard to the first the Government can undertake to protect them, but this would not do for everybody who wished to go into the interior. Such protection was necessary. Only a short time before three *ronin* had been arrested charged with evil designs against the American Plenipotentiary. Moreover, the Government was in great anxiety about the ambassador, and had to watch his house day and night. Harris expressed himself as having no fear, and that he looked upon the Japanese as a decent people; of course there were rascals everywhere; however, he was thankful to the Government for their care for him. Religious freedom is granted to foreigners. For dwellings and other buildings, certain places in the open ports shall be set apart for the Americans. As to commerce, they were to receive the same privileges as the Dutch and Russians, and for the purchase of Japanese wares they should be supplied with paper money for their coins, as had been stipulated with the above-mentioned countries in the Nagasaki treaties. When the Government should have had more experience with these treaty affairs they would remove disadvantages and make improvements. In the following conference, January 26th, the Japanese begin with the demand that the treaties should not come into force within three years. This question Mr. Harris at once dismisses with a reference to the fact that a treaty must first be settled before the time could be stipulated during which it would be in force. Finally they agree that a resident minister may be appointed to reside in Japan from July 4, 1859, but that the Government of the U.S. be informed that the Japanese Government do not wish to see him arrive inside of three years. As to travelling into the interior, it was agreed that the Ambassador and the Consul-General could travel at pleasure, but the consuls only on official business. Harris says he will think about that proposition, whereupon the Japanese tell him that he must not misunderstand the term "official business;" an official always travels on official business even when he seeks the fresh summer breezes for the preservation of his precious health. Mr. Harris now tries to convince the Japanese of the advantages of opening more ports, but does not succeed this time, nor at the next conference on the 28th of January. The Government wish first of all to gain more experience by means of these three ports already opened; moreover, they have to consider not only the interests of merchants whose only aim is to make money, but also the princes and warriors of the land, amongst whom very strong prejudice against foreigners still existed. The President of the Council had personally taken great pains to obtain the consent of the princes, but the half of them were absent from Yedo, and could be communicated with only by letter. As soon as the princes were convinced of the advantages of foreign intercourse they would themselves wish to open more ports. Harris eventually agrees to be satisfied with the opening of Nagasaki, in the island of Kiushiu, and instead of two ports on the west coast, only one, which provisionally was to be Niigata;

they decided that this port should be opened on the 1st of January, 1860, and Kanagawa on the 4th of July, 1859, Shimoda being closed six months later. As to the Capital, Kioto, the Japanese declare it is only a square *ri* in size, the books, Kaempfer even, have all been telling fables, there were only 20 silk factories there and the city was exceedingly poor. Harris remarks that as the Emperor and his Court were there, the city must be very rich, whereupon the Japanese begin to laugh and evince very little reverence for the spiritual head of the realm. Moreover, they declare that Kioto belonged entirely to the priests, and even the princes could do nothing there. As to Ozaka, that lay too near Kioto to be opened. Harris proposes that Yedo be opened in five years, Ozaka in three, reckoning from January, 1858, and after that they should talk of Kioto. In the next conference Mr. Harris asks that the three *ronin*, mentioned some time before, be set at liberty, and that the Government should make it known that it was done at his request, he expecting that it would have a good influence. This, however, is refused on the ground that the *ronin* have sinned against the Government more than against Harris, and, moreover, the whole thing had to be searched into. Then the treaty discussion goes on; the Japanese maintain that the concessions granted to the Dutch and the Russians are sufficient, but Harris protests. On the 30th of January they tell him that the Government have done their best to settle the question of open ports and have decided that Yedo shall be opened from January, 1863, for Americans to carry on commerce but they must live in Kanagawa. Harris remarks that the distance was too great for the merchants to come to Yedo and return in one day, and that direct trade with Yedo would be of the greatest importance on account of so many *daimio* living there, but they reply that the principal trade would not be in Yedo, but in Kanagawa, for large ocean vessels could not reach Yedo at all. He sees, however, that they are willing to go farther than in the Dutch and Russian treaties for they are willing that Americans shall buy and sell in Yedo as much as they like. The Prince of Higo adds that he hopes some day to make the voyage to America himself.

In the next two Conferences the Japanese are willing to allow Americans to have offices in certain parts of Yedo, and also to live there with their servants, etc., as long as their business required them. But their families must remain in Kanagawa, for Yedo should be opened only for trade and not for permanent residence. As the discussion on this subject threatens to give rise to all sorts of side issues, Harris passes over to the article which stipulated that Americans, under certain conditions, could travel into the interior. This is, however, declared point blank to be an utter impossibility; for there were still provinces in Japan in which Japanese themselves were not allowed to travel. That would of course right itself in time, but at present it was entirely out of the question to open the country even to Osaka or Kioto, for in these places there were many holy temples and the coming of strangers within those sacred precincts would certainly give rise to excitement and uproar. And besides, Osaka was not a good harbour at all. On the other hand, they were willing to open Sakai, where Spaniards had formerly lived and where a church had been built, or Hiogo, one of the best harbours in Japan. The Japanese now insist upon the statement that the President of the U.S. had charged Harris to make propositions in the interests of the Japanese only, the President, sought only the welfare of Japan, and now why should he, Mr. Harris, insist so strongly on points which could not but bring trouble upon the country. Political commotions were certainly not advantageous to a country. The land was opening itself, it had already made much progress in that direction, little by little all hindrances would vanish, but it could not be done in a moment. The President speaks of certain dangers which threaten Japan on the part of European nations if certain things are not done which are proposed in this treaty; but misfortune is mis-

fortune, and if it has to come it makes no difference from what quarter it comes whether from within or without. Travel in the interior could have no other object with merchants than to make money; and how could any one compare the importance of that aim with the certainty of throwing the whole land into a commotion.

Heusken cannot avoid declaring these utterances to be the most to the point of any yet brought forward and to acknowledge their justness. Even Harris admits that these speeches contain much that is true, "and that in many points he is of the same opinion," but tries to make it clear to the commissaries that he has been sent here not to help a certain number of people to earn so much money, but to draw Japan into the peaceful paths of national intercourse, that "Commerce is a source of power," as England and Holland plainly show, while Spain and Portugal had lost their former power because they had neglected trade; and that Japan with her favourable situation might well become the England of Asia. He winds up with the request that they should once more consider the question of travel into the interior, and indicates that the question of opening Yedo and Ozaka will give rise to no great difficulty. The commissaries promise to consider the subjects to which he referred: as to the question of travel in the interior it was quite useless to spend more time on it, for there could be no object in discussing the impossible. Upon Harris's remarking that he thought the Government of Japan was all powerful and could do what it liked, it was replied that that was certainly so, but only so long as old laws and customs were observed.

February 4th, 1858.

On the following morning the Prince of Shinano makes Harris a private visit, and begs him in the name of their mutual friendship, not to insist on the article referring to travel in the interior; for it was not a mere apprehension but a settled conviction on the part of the Government that it would cause a seditious uprising. Hereupon Harris yields the point, but insists on another concession in its place—the opening of Ozaka for the residence of Americans, who otherwise, according to the Japanese proposition, were to reside in Sakai and visit Ozaka only on business. But the Prince of Shinano thinks that will be a difficult point to grant.

The following conferences arrange several details regarding land concessions for foreign residence, as well as certain regulations for the export of copper, while the export of rice and other grain is prohibited. As to Ozaka, the Japanese offer to build a hotel between Ozaka and Sakai so that if an American should be taken sick in Ozaka—a case supposed by Mr. Harris—he would not need to return all the way to Sakai, and yet not remain in Ozaka. Mr. Harris expresses himself very sharply as to the absurdity of such treatment, and eventually they come to an arrangement by which the regulations for Yedo should also be applicable to Ozaka, that Yedo should be opened in 1862, and Ozaka and Sakai in 1863. The Japanese themselves now put into the article the words, "these places shall be open for settlement and for commerce," and Heusken thinks that without knowing what they did, they opened these places for everybody, although it had been previously stipulated that no one should remain in Yedo for any purpose other than for commerce. The ratification of the treaty is to take place in Washington, and for that purpose a Japanese Ambassador shall go to San Francisco in a steamer of his own nation, and betake himself thence to the Capital. As to the commercial regulations the commissioners declare that, as Mr. Harris assures them that they are proposed for the sole purpose of securing a revenue for Japan, and that they are prepared on the basis of the treaty between England and the United States, they accept them blindly.¹ Harris advises them to levy a tonnage and export tax,

¹ In the Diary the words are: "Aujourd'hui (Feb. 9, 1858) les commissaires disent que comme Mr. Harris leur assure que les régulations du commerce ont été proposées dans le seul but d'assurer le revenu du Japon, et qu'ils (elles) sont sur les bases de celui d'Amérique et d'Angleterre, ils acceptent aveuglément."

and proposes an import tariff, but that matter had to be regulated by other authorities than the two commissioners, viz., the Treasury department. Some discussion arises on the subject of the limits of foreign residence which the Japanese now wish to put at 2½ *ri* radius, while in the first treaty at Kanagawa they had allowed 7 *ri* for Shimoda and 5 *ri* for Hakodate.

The negotiations are now at a standstill for a few days on account of the Japanese New Year's festivities, and intercourse is limited to a number of private visits. On the morning of the 12th of February the interpreter Moriyama brings word that the commercial regulations will probably give no further trouble. So far as money matters go, said he, the *daimio* care nothing about money, and taxes and customs; we Japanese know nothing about commerce, and if you assure us upon your honour that these regulations are only for the benefit of Japan, we must only believe you; but as to the other important concessions of the treaty, that is where the danger lies with the *daimio*.*

During the afternoon the Prince of Shinano makes a visit, and begs Mr. Harris, as a friend, and particularly Mr. Heusken, who had ventured a walk in the streets on the second day of the festival, not to go out during the festival days. There was at that time a great crowd in the streets. The *daimio* went out with three and four times as large a body guard as usual, quarrels often occurred, if not between *samurai* at least between persons of lower rank in the retinue of the princes; and, moreover, at such times numbers of *ronins* were running riot. Everything was to be feared from these desperadoes; he himself had passed judgment on one of them who had committed eighteen murders; he tells of another who, while hanging on a cross with two spear thrusts in his body asked that they should wait a moment, thereupon he composed a poem, and only after the thirteenth spear-thrust yielded up his life. Generally speaking, he adds, whenever anyone becomes so bad a subject, it is the result of his having a bad wife.

February 14th is new year's day and Heusken describes the sights. The Prince of Higo brings some cabinets as presents.

February 17th, 1858.

On the 17th of February another conference is held, and now the Commissioners begin a speech which seems never to come to an end. They say that as soon as the opinions of the *daimio* have been received, the President of the Council will permit the opening of three ports, but no more; that in these negotiations much more has been assented to than the Prime Minister has told them; that the *daimio* have been called together in the castle to have the treaty laid before them and that there would be tremendous excitement. A great part of the princes will assent to nothing beyond the three ports, and the Government would have to expect a rebellion if they concluded the treaty. They do not intend on that account to withdraw their assent, and there were but a few unimportant points still to settle. But as the President of the United States had sent Harris here for the benefit of Japan, of course he could not wish to insist on anything that would cause a rebellion in the land. The Government would certainly fulfil every promise and at the stipulated times; but they would like to delay the signing of the treaty, in order to gain time to quiet the minds of the people. Just at the present moment the *daimio* would listen to nothing and declare, "Our life is nothing to us, but we will remain true to the ancient laws of our forefathers." In order to pacify them the Government would send a member of the Cabinet to Kioto to obtain the endorsement of the "Spiritual head of the realm," for which purpose 13 days of preparation, and 28 days for the journey there and back would be necessary besides the delay in Kioto. "And," asks Harris, "sup-

posing the Mikado refuses,—what if he makes objections?" The commissioners reply, "that the Government have no fear of objections on the part of the Mikado; but to make the treaty acceptable we wish to observe all possible formalities. In the meantime the Government will be able to open one hand of the *daimio* and the decree of the Mikado will open the other."

Harris explains to the commissioners that it was an unheard of thing in the history of diplomacy, to formulate a treaty and then not wish to sign it; if the Government wished to maintain what had once been decided upon, they might, so far as he was concerned, make the signing of the treaty a secret; but he could consent to no further delay; for the time being the question of signature might rest, but he demands the continuation of the negotiations. The Japanese now make all kinds of objections against entirely unimportant things in the treaty, evidently with the sole purpose of delaying the matter.

February 18th, 1858.

On the 18th of February Mr. Harris asks the Prince of Shinano to come to him, and declares that he can remain no longer in Yedo, that he will soon suffer a collapse; he has been living here all this time like a prisoner, has remained in seclusion for the purpose of avoiding any possible disturbance that might hinder the negotiations. But now he proposes to make the treaty ready for signature; the President of the Cabinet should then give him a written declaration that the treaty was arranged, but that for weighty reasons it could not be signed before the return of the messenger from Kioto, but this should be done at the latest inside of two months. He, Mr. Harris, would in the meantime, return to Shimoda, to be again brought to Yedo on the occasion of the signing of the treaty. The Prince of Shinano, after he had received these propositions, informed him that 30 of the 100 *daimio*, and 6 of the 18 greater princes were favourably inclined; the rest were at home and their opinion had not yet been received.

February 19th, 1858.

Harris's proposition is accepted, and everything is about to be finally settled. First of all the question of the right of consuls to travel in the interior. The Japanese object that, where 7 or 8 of the 18 great Lords live, whenever even a Japanese, of another province shows himself, he is at once executed. Amongst these were for instance the possessions of the Prince of Kaga the mightiest of all, and those of the Lord of Satsuma whose family had ruled there for 700 years. The Government itself never sent an official there excepting solely an *o'metsuke* on the occasion of the death of one prince and the accession of another to the hereditary throne. Just on this point, that the consuls should have the right to travel in the interior, the *daimio* were particularly enraged, and Japan was almost on the point of a rebellion. For the diplomatic agent and the Consul-General the thing was more easily done, because of their higher rank. Besides, as Mr. Harris urges, these could claim the right to travel as a matter of course, without any particular stipulation. The thing was eventually settled according to the views of the Japanese.

February 20th, 1858.

On this day M. (probably Moriyama the interpreter) relates to Mr. Heusken a variety of interesting things about Japan, amongst others the following:—When the Prince of Kaga first saw the outline of the treaty he was almost insane with wrath, and declared he would "rather strike at once than give his consent to such things." As long as the Taikun governed with sense the great princes obeyed; but under the present circumstances they say, "We are not your subjects, we are your friends." The proud Prince of Kaga alone has 10,000 officers besides his other subjects. The 300 smaller *daimio* are not so much to be feared in themselves, but in case of conflict they would join one or another of the great princes. Now there was a superstition in Japan that if there existed a serious doubt about any important question they should write two characters on two slips of

paper and "hand them up to the god (the Mikado)" to ask which to choose. The Mikado would open the papers and his decision would be final. Wherefore the Government has determined to send a member of the Cabinet to Kioto to obtain the consent of the Mikado. "But," asks Heusken, "what if the Mikado decides averse to the wishes of the government?"—Oh, the interpreter replied, we have various means: we give the Mikado's officers money. The present affair is costing the Taikun a great deal of money; he has decided that the treaty is for the benefit of Japan, and it is his wish that it should be signed. The Government have the greatest trouble to make the princes submit to their will. The Prince of Bichiu, President of the Cabinet is strenuously making every effort; if he or his colleagues undertake anything that is not proper or that does not succeed they have to disembowel themselves; and now should the treaty be signed, and a rebellion arise which would prevent their carrying it out, what then?

On the same day another conference is held, the worst of all. The Japanese begin again at the very first article of the treaty, and bring things in question to which they had long ago agreed or which they themselves had proposed, raising at times most comical objections. For instance, in the article which runs:—"The place in which Americans may build houses shall be designated by Japanese officials and the consular agents," etc., they object to be expression "The place." In Dutch that would mean "a place or any number of places;" for you say "(The) man is mortal" and that means that "all men are mortal." As Harris remarked to the commissioners that their interpreter did not understand Dutch, but Mr. Heusken was a born Hollander and would make no such blunder, the Prince of Shinano replies that he had as much right to have confidence in his interpreter Moriyama as Harris had to trust Mr. Heusken. There were other difficulties of a similar nature, so that the meeting was a rather unpleasant one.

On the 27th of February Mr. Harris took sick and on account of his illness, could not meet the Prince of Shinano on the 1st of March, so that Heusken was left to negotiate with him alone.

March 2nd, 1858.

On the 2nd of March, as the commissioners had promised, they agree to the treaty after a few unimportant changes had been made; two copies of it are prepared. The President of the Cabinet himself is to go to Kioto along with the Prince of Higo on the 6th of March. The draft of a letter is left for Mr. Harris, in which he is asked to desire his Government to communicate to the English and Russian Governments the fact of the conclusion of the treaty.

Harris is so sick that he desires the Government to have him sent at once to Shimoda in a steamer; he would sign the two copies prepared, Heusken should remain in Yedo until the remaining copies were finished and then follow him. The Prince of Shinano however declares that he cannot travel alone, and Heusken must go along with him, the two copies were sufficient for the time being and they had no objection to his signing them. The Japanese signature could, however, be added only when the consent of the Mikado had been obtained. In the evening Harris signs both copies, one of which he retains, the other he gives to the Prince of Shinano and in return is handed a letter of the great council in which the promise is made to sign the treaty within two months.

March 6th, 1858.

On the 6th of March the journey back to Shimoda begins. Harris is already very weak, and has scarcely arrived in Shimoda when he falls dangerously ill. The Japanese declare it to be brain fever of the most serious kind, and look upon the case as hopeless. Poor Heusken, whose diary during this time is scarcely legible, nurses him with loving fidelity, despair meanwhile rending his heart, but he gives ample testimony to the kindness of the Japanese, that from the governor, the Prince of Dewa, down to the lowest, they all evinced the

* "Moriyama ne pense pas qu'il y aura plus de difficultés sur les réglementations." "Pour l'argent dit-il, il n'y a pas de difficultés. Les *daimio* ne regardent pas l'argent, les taxes, et les douanes; ils ne disent rien de tout. Nous ne comprenons rien au commerce, et vous qui nous assurez sur votre honneur que les réglementations sont pour le bien du Japon, nous devons vous croire. Mais pour les grandes concessions du traité, voilà des choses où le danger est avec les *daimio*."

greatest sympathy and gave every assistance, and that his smallest wish was for them a command. The great council in Yedo sends a letter, and the Taikun a present to show their sympathy. Whenever such a present is brought from the Taikun, the bearers call out "*Shita nero*" the whole way, and all the people have to kneel as it passes. Eventually on the 13th of March the crisis comes, and thenceforward Harris convalesces so rapidly that on the 2nd of April he wishes to return to Yedo.

April 7th, 1858.

On the 7th of April, the Governor informs him that he had a letter from the great council in which his attention is called to the fact that they have done all that they could, had sent him three physicians to cure him, and these had declared that he ought not to travel before the 13th of May. Harris will not agree to this at all, as he aims at as early a signing of the treaty as possible, and so goes on board the steamer on the 15th of April. After various efforts to go forwards, a return to Shimoda, running into Uraga, etc., by which it becomes evident that the captain knows very little of his business, they land at Shinagawa, on the 18th April. Several days later Messrs. Donker Curtius, and Polsbreck arrive in Yedo, and while awaiting the return of the messenger from Kioto they pass the time in visits and trips to such places as Asakusa, Oji, etc.

May 18th, 1858.

On the 18th of May a conference is held, as the Prince of Higo has returned from Kioto with a message from Hotta, the Prince of Bichiu President of the Great Council, in which he gives the information that matters do not shape themselves very favourably. The princes were still averse, and in nine places they had found public placards threatening "We will slay Hotta." The Mikado had given no answer, as he was afraid to give his consent "on account of the gods" ("a cause des dieux" the last word is almost illegible). They were about to call all the princes together, and if they agree everything will be rapidly accomplished. Hotta was still in Kioto trying to bring the matter about. If he should not succeed he would return to Yedo to consult further with the Taikun and the Government. The Government was determined to sign the treaty; but under present circumstances it could not be done. As Harris tells them that this would have bad results for Japan, they reply that the Government are well aware of that, but if they should sign the treaty now, a rebellion was a certainty, and it made no difference whether the danger came from within or without. Two days later Harris sends a letter to Shimoda, for the commander of the first man-of-war that should arrive with the request that he should come at once with his ship to Kanagawa. This letter is communicated to the Japanese, they make no objection.

On the 1st of June, Hotta returns, and on the 5th communicates the fact that it has been impossible for him to arrange matters as they had hoped, so as to sign the treaty. The Government of the Taikun were, however, unmoved in their determination to sign the treaty, and it would not take much longer. On the 7th of June there is another conference with the commissioners, at which time they repeat what had already been said, that for fear of a revolution they are not yet able to sign the treaty, but they promise to do so within three months. Harris reproaches them for this continual delay, and asks what is to be done if the Mikado and the *daimio* persist in their opposition. Why then, he was told, they would use force, and carry out the treaty against their wishes. Thereupon Harris proposes that they should await the arrival of an American gunboat, or sign at once on the morrow but date the treaty three months later. As far as the princes were concerned, their solemn promise to sign was equivalent to their signature. The commissioners wished to lay these propositions before the Government.

At this point there is a lamentable break in the diary; it does not begin again until January 1861. It would also seem that during all this

time Heusken kept no diary, for the entries which furnish the above facts for 1858 end in the middle of one page and those for 1861 begin on the next. It is known that the treaty was signed before the end of the proposed three months,—on the 29th of July, 1858.

The subsequent entries relate nothing that is not already well known. It will be interesting, however, to note the entry regarding Hori-Oribe-no-Kami, whose suicide in many works on Japan is brought into juxtaposition with Heusken's behaviour towards him: the entry in Heusken's diary on the subject will be given literally.*

Outline of Diary from 1st to 8th of January, 1861.

On New Year's Day, 1861, Mr. Harris was in Kanagawa at the American Consul's; while there the great council informed him by special messenger that the Government had heard that 500 or 600 *ronin*, probably from Mito, had some designs against the foreigners on account of the rise in the price of provisions, and were about to set fire to Yokohama. The Government feared they would also attack the Legations in Yedo and the Consulate in Kanagawa; two Japanese steamers were ordered to lie at anchor close to Yokohama, and two princes had already sent off 500 or 600 troops to protect the foreigners in Yokohama. The Government, therefore, desired the Consuls in Kanagawa to betake themselves to Yokohama and the Ministers in Yedo to retire into a house within the castle walls. Mr. Harris was the first to receive these communications, and they were anxious to have his opinion. He thought the matter was not at all so serious, but sent Mr. Heusken to Yedo to inform the other Ministers. In the evening the Prussian Embassy, where Heusken was stopping received the same official communication.

On the 3rd of January, a conference is held in which the treaty with Prussia is concluded. Then the diary contains the words:—"Hori-Oribe-no-Kami died on the 31st of December. Report says that he committed *harakiri*, but this the Government denies."†

On the 7th of January the Daimio of Bungo comes and announces that matters are much better: the Government had discovered a conspiracy of 600 people, and had arrested several; to arrest all would create too great an excitement. He wishes for safety to put a few more officials into Mr. Harris's house, but the latter will not consent. On this occasion Mr. Harris demands also that all the *Takunin* in his house should treat him with ordinary politeness. As to political affairs, the Prince remarks that the report that the Lord of Satsuma would not come any more to Yedo was false; he had been already on the way, but was taken sick and had to return; next year it was not his turn, but he would come the following year. And the other report that various *daimio* had refused to send any more rice of Yedo was also false; any way the rice was not sent direct, but through the hands of Ozaka merchants. A rich merchant who had bought and held a quantity of rice in order to raise the price, had been arrested and banished, and his property confiscated. "Whenever the Government is in need of money they make a kind of forced loan; the merchants are not forced directly to produce their money, but they are in constant dread that the officials will come sooner or later. Each one gives according to his means; this is called *gohio-kin*. Six years ago the above merchant had paid 6,000 *ko-ban* as *gohio-kin*."

On the 8th of January an unimportant change is made in the Prussian treaty, and Heusken translates a letter in which Count Eulenberg asks, for the last time, to be received in audience by the Taikun.

Here ends the diary. On the 14th of January Heusken was wounded in the evening, and expired the same night.

* See also Adams, History of Japan Vol. I., p. 129, and the perhaps more correct version in "The Prussian Expedition to East Asia," Vol. II., pp. 139 and 159.

† "Hori-Oribe-no-Kami est mort le 31 Decembre, Le bruit cours qu'il s'est coupé le ventre, quoique le Gouvernement le nie." That is all that Heusken has to say on the subject.

STRONG VERSUS WEAK NATIONS.

(Translated from the *Choya Shimbun*.)

The most cunning of men would, at the first impulse, hesitate about cheating a simple-hearted rustic and thereby getting him into trouble. A ruffian, however wicked, would be ashamed to intimidate a helpless child, and for some selfish object avail himself of its weakness. If he plundered it, he would be punished. Human society, however, is a strange paradox. He who steals a cash is punished; while he who usurps a country is proclaimed King. We wonder when we shall see the last of the barbarism of the nineteenth century and have a world of reason. A man who steals another's purse in an unguarded moment we call a pickpocket. What then is the trained diplomatist who, availing himself of the weakness of a nation, destroys its happiness and usurps its rights? He is called a smart statesman who beguiles a people and imperceptibly robs them of their property in the form of taxes. On the other hand, the world hates the man who robs another's purse and calls him swindler and so forth. The treatment the strong nations of Europe serve out to the weak nations of the Orient, betrays sentiments precisely parallel to the above. Is it not strange that such powers not only exult over their success, but loudly proclaim their achievements?

The treaty so speedily concluded between England and Korea at Söul by Sir Harry Parkes, the British Minister to China, confers—though it may produce unfortunate results for Korea—every benefit upon English residents. Article 4 of the treaty provides for the opening of Inhhön, Wönsan, Yanghwachin, and Pusan to British trade. If the latter two places are found unsuitable, other places are to be substituted for them. The Article further says that at each of the places named, British subjects many rent or purchase land or houses, and may erect dwellings, warehouses, and factories. The sites for the foreign Settlements are to be selected and laid out by the Korean Government, in conjunction with the competent Foreign Authorities, and will be managed by a Council, the constitution of which will be determined in the same way. British subjects will have full liberty to travel and trade in the interior of the country, and will be amenable, in the Settlements or elsewhere, to such Municipal, Police, and other Regulations as may be agreed on by the authorities of the two countries.

This is a parallel to the case of the sharper and rustic, or the ruffian and the child. The above provision may be classified into two parts, viz., (1) the opening of ports; and (2) trading and travelling in the interior. Provision is made for the substitution of suitable places in case Pusan and Yang-whachin are found inconvenient. But what does this "substitution" mean in the face of Article 10 in the English treaty which says that whatever right, privilege, or favour the Korean Government has actually granted or may hereafter grant to the Government or subjects of any other State shall be equally extended to the Government or subjects of England? Pusan and Yangwhachin are the ports opened to the Treaty Powers, and the English have an equal right to trade there, no matter whether the ports are suitable or otherwise for British trade. They will, however, secure two other ports on the strength of the word "substitution." That being the case, although nominally five ports were opened for British trade, in fact seven ports are to be opened. Is this to be accounted for by the fact that the Korean officers, being ignorant, were entrapped by the experienced English diplomatist? There is another point still more glaring than this. Article 3 of the Treaty in question says that all cases, civil or criminal, brought against British subjects in Korea, either by the Korean Government or its subjects, or by other foreign subjects, shall be under the exclusive jurisdiction of the British Authorities, and any complaints involving a penalty or confiscation, for breach of the Treaty or the

Regulations annexed thereto shall be decided by the same Authorities. While thus exterritoriality is fully guaranteed, English subjects have the right to travel and trade in the interior—a condition which can be properly stipulated for only between nations on an equal footing. The only means by which a weak nation can ultimately claim the abolition of extra-territoriality, is to adjust her domestic administration so as to prevent the mixed residence of foreigners and natives. But the Korean Government has granted tradal and travelling rights in the interior, while the extraterritorial system still exists. How could the Koreans be so devoid of forethought? Some may say that English merchants can travel in the interior for commercial purposes, but cannot reside there: otherwise there would be no necessity for establishing settlements, the sites of which are to be laid out by the Korean authorities in conjunction with the British. Indeed, it is inconsistent that, while settlements are selected, British subjects should reside and trade in the interior. But the Korean officials will be unable to advance anything in the form of an argument, and the English will freely invent any plea to counteract the opinion of the Korean authorities. Since the Treaty grants full travelling and tradal privileges in the interior, the result will be the same as if mixed residence was allowed, and as the affairs of the foreign concessions are to be conducted by a Council composed of British and Korean officers, everything will be decided according to the will of the stronger party. Moreover, as the cases between Koreans and British subjects are to be decided by the latter's authorities, the people living in the interior will doubtless experience frequent and serious inconvenience. Englishmen, shielded by extra-territoriality, will be guilty of all sorts of arbitrary proceedings, and Koreans will have no power to protect their country from being overrun by them. This being the case, there is no telling what troubles may befall Korea in the future. The harrassing by foreign powers of all the countries of the Far East having near relations with Japan must prejudicially affect this country, yet there are writers who claim that as Japan comes under the most favored nation clause, she can obtain whatever privileges are extended to other powers. They therefore praise Sir Harry Parkes, saying that we shall benefit by his gift. Supposing England conquers Korea, we should occupy half of it, according to these writers, without sacrificing a single soldier. Do the logicians take delight at the prospect of such an occurrence? Korea's calamity does not end with her people: it strongly bears upon the whole Orient.

THE WEEK OF PRAYER.

The Twenty-fifth observance of the Week of Prayer at Yokohama commenced very auspiciously Monday at 5 p.m. at the Seamen's Mission Rooms, No. 86, Settlement. There was an attendance of seventy persons, composed of ladies, several of our oldest residents, and many new faces not accustomed to be seen at these annual gatherings. The subject for the day was Praise and Thanksgiving the importance of which was illustrated from scripture and by happy remarks of the leader Rev. H. Loomis. Hymns and prayers and remarks followed each other in rapid succession, and all felt it was a most intensely interesting and profitable hour. An invitation was extended to recent converts and inquirers to meet later in the evening at the same place for special services for their instruction and up-building in their faith. The meeting for to-day is to be led by A. J. Wilkin, Esq., the subject being "Confession and prayer for cleansing and renewal."

Of national sins,—intemperance; desecration of the Lord's day; increase of love of pleasure; widespread impurity; misuse of property; imperfect acknowledgment of God's hand under any recent chastisement; indifference to God's Word; open antagonism to things holy. Of personal sins,—

unfaithfulness to God's calls; defects in patience, in mutual love, Christian activity and zeal in God's service, in consideration for the needy, the ignorant, the lost. Prayer that God the Holy Ghost may convince men everywhere of sin; entreaties for pardon, renewal, full surrender to God, whole-hearted obedience and devotion to God's service.

The native meeting, with the same subject as the foreign meeting, was held at the American Methodist Church on the Bluff, 150 to 200 persons being present. The subjects for thanksgiving were many and were responded to with the warmth of devotion. The meeting for this evening is at *Sumi Yoshi Cho Kaido* 7 p.m.

Several items of interest to the general public were brought to light in both the native and foreign meetings as regards the circulation and reading of the scriptures. The entire circulation of portions of the New Testament was estimated at 50,000 copies of Gospels, Epistles, or entire New Testaments; while the amount received for sales in the first half of 1883 exceeded the entire amount received in 1882. The Daily Bible Reading Union, in Japanese, but recently started by a young lady in Tokio, not associated with Missionary labors had 800 to 1,000 readers. A fervent address was made by a Native Pastor showing the need of the 5,000 Protestant Christians being not only Bible students, but practically exhibiting its truths in their lives, if they were to expound the truths of the scriptures to the 50,000 persons who had become possessed of the scriptures. Very hearty prayers were offered for the Rulers and leaders of thought in Japan that they might become enlightened by the teachings of the Word of God.

SECOND DAY.

The meeting of last evening at the Seamen's Mission Rooms, No. 86, like the former one, was well attended. The meeting was most acceptably led by A. J. Wilkin, Esq., who selected and read most impressively the 59th chapter of Isaiah. His address on introducing the topic of the evening viz., Confession and prayer for cleansing and renewal, was as follows:—

We have suggested to us, in our subject for this evening, the outlines of a dark picture. What a fearful catalogue of sin or shortcoming is placed before us. And where shall we look for the reality of this picture,—where for the practice and exhibition of this great evil? Is it something past, in the far distance of time,—or is it so recent that it is not yet well known? Is it down in the depths of hell, or is it, at least, only in the dark places of the earth? Alas, it is from the beginning, and still is; it is around us on every hand, it is within us. What is evil, how came it among men, why came it? These are questions over which earnest hearts, appalled with the facts and verities around them, have pondered, and pondered in vain, only to seek refuge from the dark problem in unbelief. And there is no refuge from such distracting considerations, except at Calvary. To those who bow in humility before the cross alone can come a sense of rest from them. We are invited this evening for a short space to turn our thoughts to this subject, and lament for ourselves and for others the sinfulness which meets us. What is Sin? It is rebellion against the Most High, Jehovah,—the most merciful Father. It says to Him, we desire not the knowledge of thy ways. What are its effects? It has brought discord into the harmonies of Paradise, it is the parent of misery, it issues in eternal death. It has made man prefer evil to good, it has placed him under the tyrannical dominion of the flesh, it has brought him into bondage to hateful passions. It has alienated him from all that is pure, holy, and peaceful;—it is the destroyer of happiness, it fosters all that is vile. It blinds the eyes and perverts the senses, and the degradation and misery it produces now are but an earnest of the eternal rain which follows. Recall to yourself the loathsomeness of disease which makes havoc with

the freshness and openness of a youthful face, or the havoc and ruin of a conquered country, once smiling and peaceful, now given up to pillage. Such is but a poor picture of the defilement wrought by sin in the soul. And where do we find this terrible power? Let us go to some barbarous land, to the centre of dark Africa, and there amid the habitations of cruelty, amid the groanings of the oppressed, the shrieks of the slave, we see its bitter fruits in hate, murder, uncleanness, and falsehood. Pass we on to a less benighted country. Shall we look around here, amidst smiling valleys and an apparently contended and peaceful people? But it is a land of false gods, under whose shadow corruption flourishes and bears down what is good. Still on, then, to a nominally Christian country, or, higher still, to our own home lands. A fairer sight meets us here: the precepts of the Gospel are acknowledged, the banner of the cross floats over our cities, the day of God is honored. But yet, if we draw aside the veil, still what corruption. How many still openly scorn the Most High, and what formality under the profession of God's service, what worldliness and half heartedness among the seeming Christians, what selfishness and pride among the rich, and restlessness amongst the poor, and Oh what streams of licentiousness, drunkenness, impurity, everywhere beneath the surface—Sodom disputing the ground with Zion. Sin and the Devil holding reign in the very outskirts of the Temple Court. And yet there is more to be known. Shall we look into our own hearts with the prayer, "Search me, O God," and with the light of his Holy Spirit on its hidden chambers? Who will not say with one of old—behold I am vile. Yet, God forbid that we should not know ourselves, that we should be blind, for they that are who have no need of that Physician without whom we die. And what a retrospect it would be could all our unfaithfulness of the past year be shown to us: if all our sins of indulgence, of ease, of temper, of pride, of selfishness, of half-hearted worship, of self-righteousness, of grieving of the Holy Spirit, of worldliness, of impurity in our holy things—what a revelation this would be, if it were all brought before us. Is it too much to say that none of us could bear a full and complete and sudden revelation of the plague of his own heart? "O wretched man that I am! who shall deliver me from the body of this death?" To night we stand for a moment looking up to the beetling cliff of Sinai. Around us is the hoarse roar of the seething ocean of Sin—wars, murder, slavery, adultery, uncleanness, drunkenness, sensuality, strife, discord, envy, hate, wrath, falsehood, hypocrisy, worldiness, the pleasure-loving, the God forgetting, the sabbathless, idolatry, heresy, false-worship, polluted worship, half-hearted worship—this ocean of Sin is surging out its defiance to the thunders of the mount. But a still small voice sounds from Bethlehem,—it is heard above the roar from this hell of evil—"Thou shalt call his name *Jesus, for he shall save his people from their sins.*" The reign of righteousness and peace moves onward, and a light from Calvary is streaming athwart the darkness of the world. The stone is rolled away from the sepulchre, and the jubiliant anthem "Christ is risen! Sin shall no more have dominion over you," revives our fainting souls, and the terrors of Sinai pass away. Oh, come Lord Jesus, take to thyself thy great power and reign, take us individually and consecrate us to thee: take thy church and baptize it with a new outpouring of thy spirit; take the heathen for thine inheritance and the uttermost parts of the earth for thy possession.

This very earnest address, and graphic description of the terrific evils and exceeding sinfulness of sin, coming from one of the oldest and most esteemed of our Yokohama merchants, made a deep impression on the minds of all present, if we may judge from the spirit of the prayers, remarks, and hymns that followed.

The subject for this 5 p.m. meeting was an-

nounced to be prayer for the families and instructors of youth—meeting to be led by Rev. S. S. Booth, principal of the Ferris Seminary for Japanese Young Ladies at this place. The native meeting was crowded at the Sumiyoshi-cho Church and very interesting remarks were made regarding the low state of morals in Japan, and the universally felt need of a true religion of purity to ennoble the hearts and lives of all classes of the people. The spread of infidelity was lamented, and the only adequate remedy for all these evils was asserted to be the power of Divine truth in the hearts and lives of Christians filled by the power of the Holy Spirit.

The Meeting for to-night was announced to be held at 7 p.m. at the Union Church. The lack of attendance of Europeans, notwithstanding the enthusiasm of the native congregations, is very noticeable at all these meetings, but two persons being present last evening.

THIRD DAY.

The meetings, foreign and native, were in no wise less interesting than those of the preceding days, but owing to its being mail-day, and a cold wind blowing at night, the attendance was somewhat less at each meeting. The subject was one that must have come home to every man's heart, namely, prayer for families and instructors of youth. And those present, not parents or youths, could not but feel the deepest interest in what brought tears to many an anxious parent's eyes, while the plea for orphans and uncared for children brought all nearer to the great loving heart of God—the Father of all. The Tenth Annual Meeting of the Evangelical Alliance of Japan was announced to take place 2.30 p.m. to-day at the Union Church, Tsukiji, at which time addresses would be made by the Rev. Hugh Waddell, by Dr. Knott, and by Rev. A. A. Bennett. The subject for to-day's Meeting is Prayer for the Church of Christ,—the meeting to be led by Dr. W. Gulick. The Native Meeting is to be held at the *Ten-Au-do* Church of the Methodist Mission, 223, Bluff.

FOURTH DAY.

The Meeting at the Seamen's Mission Rooms was well attended, and the services were of a very spiritual character, the subject being Prayer for the Church of Christ. The services were participated in by several ladies, a large number of whom were present. The Meeting of the Evangelical Alliance took place as announced yesterday 2.30 p.m. in the Union Church, Tokio. The services were of an interesting and highly edifying character, a full report of which will be given to-morrow. The Native Meeting at *Ten-au-do*, on the Bluff, was well attended, and very earnest and solemn were the prayers offered for the outpouring of the spirit of God on all hearts in Japan, particularly upon all the preachers and Christian brothers, and upon all assembled at that hour in that place. While the whole congregation was bowed in prayer a very severe shock of earthquake was felt, but not a sound or sign of fear escaped from a single child or person, while the leader of prayer passed on in his entreaties for spiritual blessings. This circumstance suggesting that recorded instance of the whole house being shaken where the disciples were assembled praying and encouraged some to express their thanks to God, and to believe that their prayers were heard, and that they might look to being filled with the Holy Ghost as were the first disciples. The subject for to-day's meeting is "Intercession for the Nations." For National Rulers and all in authority; for the enactment of just laws and the removal of such as are favourable to vice, cruelty and ungodliness; for the prevention of war, and for deliverance from the plots of wicked men; for the cultivation of mutual respect, forbearance, and goodwill; that the spirit of infidelity and lawlessness may be subdued; for the spread of wholesome

literature and the counteraction of immoral propaganda; that the opium traffic may be abolished; for a continued blessing on the efforts made to promote temperance and social purity, and for the devout observance of the Lord's Day. The meeting is to be led by the Rev. W. G. Davisson, the pastor of the Union Church. The Japanese meeting was announced to be held at Sumiyoshi-Cho at 7 p.m.

FIFTH DAY.

The meetings for prayer and intercession for the nations held yesterday p.m. and evening, were among the most interesting of the meetings held at this place during this Week of Prayer. Many encouraging facts were mentioned of the benefits received from prayers for Rulers, and very special petitions were offered for the enlightenment by Divine truth of H.M. the Emperor of Japan and all associated with him in Government. Much interest was expressed and shown both by remarks and in prayers for the prevention of war, and for the removal of the twin evils of the opium and liquor traffic. At the native meeting, nearly all present pledged themselves to total abstinence, and to seek to discourage the sale and use of intoxicating drinks. This was itself an unlooked for answer to the petition "to promote temperance" offered that day throughout the whole world. The remarks of native speakers on this subject were very earnest; one man, a saké dealer, made confession of his intemperate habits, and pledged himself against continuance of its use or further dealings in the article.

The subject for the sixth and last day of the week are as follows:—Prayer for Missions at home and abroad. That the Lord of the Harvest may send forth more labourers into his harvest field endued with power from on high; that those who are sent may be preserved from danger, may be given boldness to proclaim Christ's gospel among Nominal Christians, Mohammedans, and the Heathen; that many souls may be won to Christ from among God's ancient people Israel; that the various missionary agencies may be under the manifest guidance of the Holy Spirit; that Christians in general may have a deeper sense of the obligations to make known the gospel to all people; that young converts may be established and built up in the faith of Christ, and that an earnest and intelligent native ministry may be raised up throughout the mission field. That the blessing of God may abundantly rest upon the Conference of Christians of various nations (postponed from last year) to be held, D.V., in September next in Stockholm.

The foreign meeting will be led by Rev. T. P. Poate. The native meeting will be held at the Union Church, 7 p.m. The Sermon on Sunday, 11 a.m., at Union Church, will be preached by the Rev. F. C. Klein, of the Protestant Methodist Mission of America. The Meeting for Prayer, at 212, Bluff, Mission Home, Sunday, 8 p.m., will be led by Rev. C. E. Garst.

MEETING OF THE EVANGELICAL ALLIANCE.

Among the addresses delivered at the Annual Meeting of the Evangelical Alliance, Union Church, Tokio, on the 10th instant, was the following, by Dr. C. G. Knott, of the Tokio Imperial University. Reports of proceedings, and abstract of addresses are reserved for future publication:—

Since the day that Cæsar divided all Gaul into three parts, three-fold sharing of things to be said or done has been much in vogue. Mr. Gladstone, a statesman of whom his country, of whom the world, is not worthy, is constantly displaying his "three courses open." The daily newspaper chronicles the on-go of humanity under the headings of Births, Marriages, and Deaths. Comte and his self-proud followers are prating eternally

of their three stages—mythological, theological, and scientific. How often are pulpit orations unified by Firstly, Secondly, Thirdly! In many concerns of life from the loftiest to the humblest, there is a three-corneredness that to some superstitious minds is a sacred emblem of the lucky. "The three-fold cord is not easily broken," says an old old-world philosopher. The triple mitre is full five hundred years old; and the power it symbolises has outlived many dynasties. We have the Christian graces—Faith, Hope, Love. We have the great temptations the World, the Flesh, and the Devil. And long ago ecclesiastical man, with a sense of the incompleteness of the two-fold conditions of futurity, invented Purgatory. Now, whence this love for the Three? For remember man is himself bi-lateral—his various organs for the most part are in pairs. The true social unit is a dual—man and wife. In these days when popular fancies and traditions are traced back to solar or cosmical myths—we might find the three-fold origin in the Sun, Moon, and Stars. Or we might imagine ourselves carried back to the dim shadowy times of prehistoric man, and there regard our human savage discovering the number *three* as distinct from *many*. One and Two he had early recognised—one in his own individuality, two in the contrast between himself and the rest of existence, between the Ego and the Non-ego, as the philosopher of these days calls them, and thinks he has thereby solved a great problem. How this intellectual giant must have rejoiced in his Three and scorned his less brilliant associates who could not attain unto it. In this naming of the Three—for after all an idea must be named before it can be used—lies the germ from which has sprung all progress. Which ever explanation be adopted, we cannot gainsay the fact that man is a Three-worshipper. The past, the present, and the future form a similar triplet; and yet in strictness the present is infinitely small compared to the two infinities between which it is squeezed. It reminds one of the so-called meat sandwiches which one occasionally picks up at wayside railway stations. The present is like the shadow border that separates the daylight of the Past from the darkness of the Future. It is the wave on the ocean of time, on whose crest we are borne, whether we will or no. Hence it is difficult to judge of the facts of the present. As we gaze at them they dwindle away rapidly in the perspective of the past. We may fix some of them by a kind of instantaneous mental photography; but even then we fail to see them on all sides. And a one-sided view frequently leads to bitter strife and wrangling, as the old fable of the knights and the golden-silver shield well shows. And then again we must distinguish between the facts of the present, and what we deem to be the facts of the present. We are all partial judges. Our past is a huge factor in our view of the present. In the pride of our hope when we lived in the past then we pictured the now. But when the now comes it does not quite square with our former dreamings. So, not wishing to seem to ourselves so foolish as we are, we form a picture of the present which is a half fact, half fancy. When we are young our imaginings are bright; fact is nigh lost 'neath the glitter of fancy; we misjudge. When we are old, the big past furnishes more straws to form withal our fancy burnishes; we build us a castle of dreams; we misjudge, too. So it ever has been; so probably it ever shall be. I come from a country famed for the power of its Puritanism. Beneath grey skies, beside rugged mountains, it grew in stern rigour—a Calvinistic plant, scarce warmed by the fiful sunshine. But now it is dying—or rather perhaps it is growing to grander life. The iron and brass bound stump is shooting forth broad spreading boughs to catch the heaven's dew. Its rootlets are drawing nourishment from new and strange soils. Over the spirit of Scotland's theological dreaming a change is creeping, whether for weal or

woe who dare say? The old sigh, as they witness the thawing of the icy foundation on which they built some of their most cherished beliefs. They sigh, and tell of the golden days of their youth. The young rejoice in the shiftings and siftings, and eagerly look for the more definite future. Where the old see but earthquakes of destruction, the young think they see vaster and firmer continents forming. The dreams of the past and the facts of the present are at variance. Adjustment and compromise are alike impossible between them; and where compromise is not, there must be war. And in this struggle as in all struggles the fitter must survive. Might is right, after all; and the baseless fabric of the vision of the past must dissolve. Ceaseless change is the order of things. We hear it in the wind-wail, in the ocean-moan, in the thunder-roll; we read it in the short-lived writ of the lightning flash and the meteor flare. Change, change, change—'tis the cry of nature; and evil be to him who evil thinks of it. What sings the sweet-voiced poet of our Victorian era:—

Are God and Nature then at strife
That Nature lends such evil dreams?
So careful of the type she seems,
So careless of the single life;
"So careful of the type?" but no,
From scarified cliff and quarried stone
She cries, "A thousand types are gone;
I care for nothing, all shall go."

And yet amidst all this change, amidst all this ceaseless see-saw of things that are, amidst all this complex of shivering lights and shades, there are eternal verities which shall live—like to the steady, starlight that outlasts the crimson quiverings of the northern lights! There are truths that cannot die. But who can name them? Within half a century many of the old-seeming verities have vanished with the old world politeness. New seeming verities and new world veneering have taken their place. The youth does not now, if ever he did, sit calmly at the feet of the older in years and learn of him. He is imbued with the proud spirit which Job discovered in his comforters: "No doubt but we are the people, and wisdom shall die with us." Probably the same spirit was abroad in the young days of our fathers, though perhaps not so rampant. But in these days there is another spirit moulding life, and thought, and manners; a spirit which is not new, but was in olden times the possession of the few. It is essentially the spirit of progress, the spirit that believes in infinite improvements that knows no Best, the spirit that will have no guide but fact, the spirit that forms theories to explain facts and does not evolve facts to suit theories. It not only sounds the well of truth, but dredges it to find the hidden treasures. It is the spirit of true curiosity; it is the Scientific Spirit of the Age. Methinks the positivists had done better to have taken this real existence as their God instead of their ideal Humanity. No doubt they lay claim to it, as they lay claim to every obvious practical good. It is a pity they were not more possessed by it, and correspondingly less possessed by the demon of self-opinionativeness. This insatiable spirit of enquiry which so characterises our nineteenth century and tinges its whole thought, is the real foe which the conservative, the dreamer, has to fear. In politics, in commerce, in literature, in theology, in science, in philosophy, in everything that goes to make our modern civilization, this spirit of criticism and reform is working. Within a generation the aspect of things has been completely changed. The thoughts and problems that stirred the youthful blood of our grandfathers are silently shelved, and the thoughts and problems of to-day are all in all. We read Chalmers' Astronomical Discourses and the Bridgewater Treatises, and wonder what they would have said in these days when evolution has taken everything by storm. Evolution! The wrath of the righteous against this word has always seemed strange to me, especially as there is no more striking instance of it than is given in the growth of Judaism up to the advent of Christianity. The idea of evolution is no new one. We have it in Buddhism in a certain form. The special glory of our era lies in the fact

that it formed a name for itself and so made it common property. We now see its influences every where. It has given a new meaning to History, it has unified science. It has struck a death blow at system, at the dreams of the past. Perhaps, after all, it is little wonder that the dreamers have been roused to antagonism. As the stage coach to the locomotive, so their advance to the world's progress. Their stiff mental armour hinders; they lag behind and cannot see the new beauties. They understand not the language of those who do; for their mental vision is filled with the images of their dreams. And it has been always so. In the darker days of human history the dreamers of the past had at times very much their own way. They stayed the words and deeds of any who dared to picture things that concurred not with their dreamings. So Elijah had to flee for his life; so Galileo, had to swear away his faith; so the noble army of martyrs suffered at the hands of the conservative ecclesiastics. In these days, fortunately, an enlightened humanity has abolished atrocity. But the spirit of antagonism to everything new, because it is new, still lingers. There are still social friction-brakes in the world; and they are our dreamers of the past. But we also dream—dream concerning the future. And twenty years hence we may be in our turn acting the part of friction-brakes. Not necessarily so, however. If we are imbued with this great scientific spirit, which by searching all things holds fast that which is true, we shall be able ever to help on the truth. In these days not one lone potentate asks, what is Truth? The whole of thinking humanity echoes the cry, and what is more to the purpose desires an answer—aye, demands an answer. In whatever walk of life he is, the earnest man is ever urging to the greater light. And shall he not strive to smooth the way for those who follow, or aid his near companions in their gropings. So doing in singleness of heart, he will make things evolve more easily and more quickly. Yet while recognising the greatness of man's intellect and his power in making for progress we should consider his limitations. To give an idea a name does not explain the idea. Evolution is the name of an idea, of a fact; but we know not the Why and Wherefore. If by enquiry we can learn a little of the How, we must rest content. A good old professor in one of our Scottish theological schools is fond of saying "Conserve the mystery." No, it is incompatible quite with the scientific spirit to conserve any mystery. Its object is to explain the mysterious, to reduce one by one the mysteries of existence to the one great mystery—the existence itself to probe down to the heart of things, even though it should kill them. The scientific spirit is no respecter of whims, as it is no respecter of persons. At the same time to scorn the mystery is no true function of the scientific spirit. Many self-styled scientists do so jeer at the mysterious; but thus do they show a vainglorious spirit, a spirit of dogmatism and self-centered narrowness. We may know the whole course of evolution from the far spreading nebulae, to the systems of fiery stars and peopled planets; we may know how the mountains arose, and whence the meteors come in their airy flash; we may know the mechanism by which the daisy lifts its opening face to the kindly sun-light warmth; we may be able to tell why this minute seedling develops into an oak and that into a butter-cup; we may be able to account for the first variation that gave development its start; we may know exactly the chemical process that accompanies a thought or a word; still we shall be unable to pierce below it all to the mystery of Being. Evolution requires a start, and it can never explain the beginnings of things. Whatever we do know, or whatever we may know, let us take heed that we read not the facts of the present in the light of the dreams of the past, or imagine our dreams of the present to form of necessity the facts of the future. If we do so dream away our day, we shall have a rude awakening some day; and, like Samson, shorn

of his locks, find our power vanished. Do we wish to influence the time, in which we live? Then must we be filled with the spirit of the times; and in moulding events we must to a certain extent humour them. In making history we should use no dynamite. No doubt but we do dream; will dream; but let not our life be all dream. To work while it is day with a strong faith in the evolution of the Divine purpose in this our little world is what is required of us.

Oh yet we trust that somehow good
Will be the final goal of ill,
To pangs of nature, sins of will,
Defects of doubt and taints of blood;
That nothing walks with aimless feet;
That not one life shall be destroyed
Or cast as rubbish to the void
When God hath made the pile complete;
That not a worm is cloven in vain;
That not a moth with vain desire
Is shrivelled in the guileless fire,
Or but subserves another's gain.
Behold we know not anything;
I can but trust that good shall fall
At last—far off—at last to all,
And every winter change to spring.
So runs my dream; but what am I?
An infant crying in the night,
An infant crying for the light;
And with no language, but a cry.

UME.

AN INCIDENT OF THE GREAT FIRE AT TŌKIYŌ.

CHAPTER I.

"My son! he who would aspire to be a guide, the spiritual teacher of men, one able to demonstrate the true from the false, and to point out that path which leads to eternal felicity, must himself resist, while fully appreciating the value of, the pleasures around him. He knows the worth of woman, for instance, as a helpmate to man, but many a moral he may wish to convey will be more effectual with his hearers if he himself is denied such a companion in life. Though too wise to attempt to deprecate the varied delights of an earthly existence, he knows, too, that the tendency of the carnal appetite in man is not to be governed by reason but by the limits of its own strength, and he will do well to render himself a living example of the doctrine he teaches, for in this way alone can he expect to influence his fellow-men. Is not the pure and gentle life of Bhudda the perfect pattern set for all to follow? Note this well, Kohei!"

So spake the old priest to his adopted son; the simple homily conveying a potent meaning, but bringing little comfort to the listener. Youth cannot be retrospective. Belonging to a sect that never married, Shimidzu, the priest, had adopted young Kohei, for the purpose of rearing him in his own faith, so that when advancing years should compel him to relinquish his task, the doctrines he had ever faithfully expounded would, through his disciple, be carried down to the children of another generation. There must have been signs of remissness in Kohei to have prompted such a serious discourse on the part of the old priest. If the truth must be told, there were. Kohei had dutifully followed the dictates of his preceptor during his younger days, but he was a rebel both in thought and action now; and this, too, in the form most objectionable to Shimidzu, because one of the vital tenets of his faith was imperilled by his son's conduct. The reason may be conceived. Kohei was in love! Nothing heinous in itself, but, under the circumstances, a very awkward fact for the priest to face. It was useless, however, for Shimidzu to preach; plainer language became necessary. So one day—a day, too late, perhaps—he called Kohei to him and said in tones such as the son had never before heard proceed from his adopted father's lips:—

"Yesterday, you went with Umé to *Dangozaka without my knowledge or consent, and this betrayal of the trust I have always reposed in you is unworthy of a son of mine. But you have gone beyond even that, and I ask whether you consider

* In the suburbs of Tōkiyō, famed for its brilliant displays of Chrysanthemums.

such conduct as the return I have a right to expect at your hands?"

Kohei made no response, but sat with his head bent forward. Shimidzu continued:—

"In taking charge of my dead brother's child to tend our simple household wants, you ought to have known how I wished her position to be regarded, and how any attempt on your part to imitate the laxity of some of our brethren in these changeable times would be looked upon by me. A priest should have other cares than those which are always attached to woman. You have asked Umé to be your wife. Is it possible that my labour of years can have led your thoughts to no other purpose than this?"

Kohei remained immovable, his head still respectfully bowed. There was no note of wrath in the priest's tones as he uttered his ultimatum:—

"Kohei! you will renounce any intention of this kind now and for ever if you wish to remain under my roof. To-morrow morning I shall expect and hope to see you at your orisons with this determination in your heart. Should you decide otherwise, let mine eyes no longer rest upon you."

The son bowed his head to the ground and remained for some time in that position, apparently absorbed in silent meditation. Shimidzu arose, and as if to find distraction from the thoughts that disturbed the even tenor of his daily life, proceeded to water the flowers and dwarfed trees ranged on a raised dais within the temple court-yard.

The lofty pines were casting weird and lengthened shadows before Kohei arose, prepared to take his departure from his well-beloved home; no token of trouble until this supreme one of Love, having yet crossed his path. He was going forth into the great city as he stood, and though he yearned for one last look at little Umé, he felt it would be a breach of the duty he still owed to his adopted father to take any undue advantage of that kind. It was undoubtedly under the plea of apostasy on the part of members of his own sect in the particular respect alluded to, that Kohei had followed the natural instincts of his youth and hoped to overcome the scruples of his preceptor. And when you come to think of it, Umé with her seventeen summers, her eyes of brightest lustre, her amiable disposition, and her household management, as demure and methodical as that of a matron of twice her years, even a saint—of the male persuasion, of course—might well have been turned from the study of revered rubrics and the contemplation of holy beads, into admiration, to say the least of it, of such a dainty womanhood. That is, however, only my opinion. But Shimidzu's decision was irrevocable, as Kohei was too well aware; and though Umé had pledged her troth to the excommunicated one, it was with a leaden heart that he passed under the massive, arched gateway, into the rush and turmoil of the vast city, without lifting his head or casting one lingering look behind.

CHAPTER II.

I believe the city of Tōkiyō—the fabulous Yeddo of our school-days—deserves a two-fold reputation, the one however, having no connection with the other. Tōkiyō is, I think, the safest city in the world; by which I mean, that any man, day or night, may traverse its immense length and breadth with almost absolute immunity from the hundred and one dangers that beset unwary wayfarers in great European or American centres. And when one recalls to mind the fact that the city contains over one million inhabitants, he will admit that this security of life and limb is remarkable and much to the credit of its peace-loving population. My only surprise is that I have not seen the fact sufficiently insisted on before. Tōkiyō also deserves the reputation of being, in a different sense, one of the most dangerous places under the sun, for its permanent residents. The fires which devastate it are of so periodical a character and of such extent that the average life of the city, say as it stands to-day, has been computed at the short period of

three years. It need scarcely be said that the primary cause of this excessive waste of wealth is the combustible nature of the buildings of which the city is composed; and yet it is marvellous to witness how Tōkiyō, phoenix-like, arises from its ashes after a calamity of this description.

At about eleven o'clock on the 29th of November, 1876, a bleak, cold and blustery night, the fire-bells in high every part of Tōkiyō gave forth their discordant notes of alarm. Few respectable citizens were then abroad, and those resident within districts distant from the outbreak, around Inari Bashi, Kiyō Bashi, and Tsukiji, for instance, who unwillingly turned out, to find the fire raging near Nihon Bashi, mostly turned in again with a feeling of relief that it was far from their own doors, and a sigh for the sufferers exposed to the inclemency of such a pitiless night. But their repose was of short duration. The wind increased in intensity and there was no cessation of the frenzied clanging of the bells. The sky became one lurid mass, and huge volumes of glowing sparks were driven along by the wind for miles—myriads dying out above the waters of the Bay of Yeddo. Folks who had gone to rest again had barely time to arise once more and remove their goods and chattels, every moment rendering this more difficult, owing to the rush of thousands of feet before the fury of the fiery fiend. The crash of falling timbers was terrific, followed by sheets of flame, which hissed and coiled like serpents of gigantic growth around all within their reach. Innumerable voices, harsh with excitement, joined in the uproar, families hurrying from the scene of the disaster and the fire-brigades hastening to it. And could there be a more moving and picturesque panorama—the lanterns carried by every one swaying aloft, their lights flickering and dancing in the murky, midnight air. See! just above the burning masses how the glare illuminates the figures of the men who play the hose upon the very buildings beneath them; how, for a moment, they are visible like spectres, the next, and for ought the multitude know, they may be engulfed within the glowing furnace below. All honour, then, to these brave intrepid soldiers of the fire-brigade!

So midnight passed—one o'clock, two o'clock struck, while the bitter, northerly gale continued, and the fire spread in every quarter but that from which the wind came. The main thoroughfare, leading through the central portion of the city, with its varied and valuable storehouses was entirely demolished, the work of destruction being only arrested on one side by the wide moat which surrounds the old Castle of the Shoguns; on another, by the Occidental character of the buildings; and on the other, the force of the storm was such that the fire swept over several of the canals that here intersect the city—until, at about six o'clock on the morning of the 30th of November, the conflagration exhausted itself in the Foreign Concession, close by the shores of the Bay of Yeddo. And in the dull light of that winter morning, only a few scorched and blackened *godowns*, scattered at irregular intervals, stood to indicate the labyrinth of streets where, a few hours before, much of the wealth of the Capital reposed, and where thousands of our fellow-men were absorbed in the happy oblivion of peaceful slumber.†

That it fared hardly with old Shimidzu, whose sacred abode was overtaken by the great fire, may have been surmised. But the temple was saved by heroic exertions. Its situation to the westward of Nihon Bashi was out of the direct line over which the fire passed with the greatest rapidity. Immediately, however, the danger to the structure became imminent a number of volunteers stood ready to protect it, but in spite of truly herculean labors, its fate was, ever and anon, a matter of the greatest uncertainty. The wood work, of which these temples are entirely composed, repeatedly caught fire, and the flames were only kept from enveloping the whole structure by the unremitting efforts of the brave fellows who were devoting themselves to the task.

Unnoticed amongst these was one who toiled as if possessed of exhaustless strength—foremost at every point of danger, never for a moment deserting his post even when the fire raged at its fiercest around him; he fought with Titans and was not vanquished. It was impossible, too, to recognise amid the infernal uproar to whose single-hearted courage and example, perhaps, the ultimate safety of the temple was due.

But there is a sudden, short cry of alarm from the crowd. A portion of the building falls. Upon it, a few seconds before stood, he of whom I speak.

† In this great fire an area of something like two and a half square miles was cleared by the flames, and on this ground had stood upwards of seventy streets, composed of over 8,000 houses. The number of persons of all ages rendered homeless was estimated at 50,000.

He has fallen with it. There is a rush towards the *débris*. Soon, from beneath a heavy beam an insensible form is removed and carried to that part of the temple now out of danger. Shimidzu hastens towards the scene and pushes his way through the dense throng of people. One glance at the rigid features of the victim, and a cry of pain escapes from the lips of the old priest. "Kohei! Kohei! my son, Kohei!"

CHAPTER III.

It is needless, as not being essential to our story, to relate the life led by Kohei after his expulsion from his adopted home. Suffice it to say that he found means elsewhere of continuing his studies, and if not happy, he was still contented with the knowledge that little Umé would remain faithful to him. Indeed, she was not likely to look for a lover of her own free will at any time, as we ought to know. Kohei, himself, honorably kept on his way, and the city was wide enough to hide all traces of his whereabouts had any one felt disposed to search for him. Thus time passed away until we come to the night of the 29th November. What more natural than that on the outbreak of the fire, Kohei should hasten to assist in protecting, if necessary, his old home. Certainly, a strong arm and stout heart were never more needed, and had it not been for the accident which befell him, when the temple was virtually out of danger, we may rest assured the inmates would not, at that time at all events, have known to whom they were so much indebted.

The recognition of Kohei, however, under such circumstances, gave much concern as well as a certain amount of gratification to the old priest; gratification, that is, when Kohei somewhat recovered and the doctors declared that no serious injury had been sustained. But a relapse set in, fever supervened as a result of the exposure and the external injuries inflicted by his fall. For many days the young life flickered; and even while it thus tottered on the brink of the Great Unknown, Shimidzu was obdurate enough to resist all entreaties on the part of Umé to be allowed to tend the poor sufferer. No—there should be no renewal of the cause of the first estrangement between himself and Kohei by any exhibition of weakness on his part. The conviction of a life-time is not to be ruthlessly imperilled in such a manner. If Kohei again took up his abode under that roof, he must do so as a son who adheres to the entire code of filial obedience.

Only in the meantime there was no sign of improvement in Kohei's condition; while in his delirium he called upon "Umé, Umé," with such persistency that the doctors decided to throw in the force of their own weighty opinion and appeal to Shimidzu to accede to the request of the young maid. It is scarcely necessary to add that it was finally though reluctantly given. And now an extraordinary change took place. I am here to state facts and not to explain them, but will it be believed, that from that very day the patient rapidly recovered? In point of fact, Love would appear to have succeeded where all the nostrums of the pharmacopœia signally failed.

EPILOGUE.

Some short time ago, on my return to the capital after a lengthened absence, I called upon Shimidzu at his old home. There were few if any indications then of the ravages made by the great fire of 1876. The trees in the Temple Court-yard wore their mantle of green as if they lived in perpetual spring; the rooks cawed merrily—if such is possible—among their branches, and that general atmosphere of calm and placid rest characteristic of the precincts of many religious edifices took possession of the senses. As I stood before the priest's domicile, a tiny maid of some five summers approached me, her bright, liquid eyes looking up to mine with only a shadow of wonder in them. Was this Umé transformed into a little fay, for a more perfect reproduction of our heroine it would be hard to imagine? But there was another Umé just behind to welcome me, and Kohei himself soon appeared. And then, of course, nothing could be more apparent. I heartily congratulated them—Shimidzu was within, teaching the art of ideographic writing, in which he had achieved some fame, to his pupils. The active prosecution of the priestly duties had long before this devolved on Kohei, with whom Shimidzu, later on, confided to me the fact that he was now thoroughly satisfied.

"But," I enquired hesitating, "how about his marriage with Umé san?"

"Well," he replied, with a naïve evasion of the point at issue, "I think Kohei serves his Master just as well and faithfully as if he had never taken unto himself a wife."

From which we once more see that one is never too old to learn, and that our strongest convictions are very apt, like our own lives, to be modified by circumstances.

Correct answer received from "TESA."

The new Copyright Regulations will shortly be issued.

Information has reached us from Korea to the effect that owing to the breaking out of actual hostilities between China and France, about one thousand of the Chinese troops stationed in Sôul have left for China. According to some authorities, the number is estimated at 800. The news of the outbreak of hostilities emanated from the Chinese commander.

It is reported that H.E. Mori, Minister to England, will shortly return to Japan in consequence of the cropping up of an important matter that affects the rights of this country and that demands his personal communication with the Ministers of State.

The Japanese Garrison in Okinawa Ken (Riukiu Islands) is about to be doubled.

The ironclad ordered in England will be built on lines giving extraordinary strength, consequently, its completion cannot be looked for before the end of this year.

It is contemplated to take recruits for the Navy from among those for the Army. The selection will depend upon the decision of the War and Naval Departments. The examination of conscripts will take place in the presence of officers from both Departments.

One hundred and fifty officers of all ranks were discharged from the Post Office in December last.

According to investigations made by the Government into the fluctuations in *Kinsatsu* since the 12th or 13th year of Meiji (1879-80) up to the present, it has been found that if the amount of paper money is one hundred million *yen*, an equal value can be maintained between silver and paper currency. If it exceeds one hundred million *yen*, then silver will rise at the rate of *sen* 1 per every one million *yen* of paper money. This fact has been proved by the latest fluctuations in the money market consequent upon the decrease of *Kinsatsu*. In 1881-82, silver was 160 to 170. This was when Mr. Okuma issued paper money so recklessly, and when there was a floating *yen* currency of 175,000,000 of *Kinsatsu*, including the reserve notes. Under the present Ministry, paper money and reserves have been largely redeemed, being reduced to *yen* 115,000,000. In addition to this, the silver reserve has been increased from *yen* 3,000,000 to between *yen* 22 and 23 million. It is, therefore, expected that silver will not rise to more than 115 or 116 in future.—*Fiyu Shimbun*.

SUGAR.

There is very little to report in the Sugar Market, business being still restricted to retail transactions. The only change to note in prices is a decline in Brown Formosa sorts, evidently the effect of the approach to hand of the new season's Sugar.

	PER PICUL.
White, No. 1	\$8.00 to 8.35
White, No. 2	6.75 to 7.00
White, No. 3	6.30 to 6.50
White, No. 4	5.80 to 6.00
White, No. 5	4.60 to 4.75
Brown Formosa	3.90 to 4.00

EXPORTS.

RAW SILK.

Since our last report of the 4th instant, there has been much more doing in this Market, and Settlements for the interval are nearly 700 piculs. Arrivals have not been on a par with the business done, and Stocks are reduced a little, being now estimated as 4,150 piculs of all kinds. Prices generally are higher; in some descriptions the advance is freely paid, while others are more or less nominal. Telegraphic news from European Markets is more encouraging than that from New York, and kinds suitable for either destination are influenced accordingly.

The *Volga*, which left this with the French mail on the morning of the 5th, took the small quantity of 99 bales; of these, 15 were for England and 84 for France. The P.M. steamship *City of Peking*, which sailed this morning for San Francisco, carried 258 bales for the New York Market, about half the quantity being on Japanese account. These shipments bring the total Export up to 24,061 bales, against 18,624 at same date last year.

Exchange has weakened about two per cent., and this partly compensates for the higher range of dollar prices.

Hanks.—The movement reported last week has continued, and Settlements reach fully 300 piculs. Prices are again higher, and "best" are held off the market for a fancy price. Among the purchases recorded, we observe *Shinshu*, \$490; *Omama*, \$485; *Annaka*, \$480; *Chichibu*, \$480; *Maibash*, \$475; *Hachoji*, \$455. Holders are conservative in their ideas, hoping for a still further rise.

Filatures.—Fine sizes have been in demand, and the advance asked has been freely paid; in coarse kinds, buyers have hesitated to enter the Market at the range of prices now quoted, and the American mail of this date took but a small quantity on foreign account. In the settlement-list we notice "*Yamanashi Ken*," \$630; *Mino*, \$620; and a parcel of "*Hokosha*" which a short time back was offered at \$590, has also realised \$620; the foregoing are all fine-size. In coarser kinds there has been very little passing. *Nihonmatsu*, \$635; *Rokosha*, \$625; *Tokosha*, \$620; *Shinshosha*, \$610; *Tenrushi*, \$600; are among the lots now offering. Some little has been done in *Koshu* filatures at \$590, and a mixed parcel of "*Hikone*" brought \$555.

Re-reels.—These have been more or less neglected for some little time past, the quality of some brands of *Maibash* not having been up to standard. Dealers ask an advance which is not responded to at present. For a really good parcel *Shinshu* re-reels, "*Fan*," \$610 is asked: probably something less would be accepted. A parcel *Bushu* "*Nakashima*" has been done at \$590; while in *Maibash* descriptions, "*Five Girl*" is quoted \$585, and "*Stag*" \$557½.

Kakeda.—These have been in fair request, and prices for some grades are higher, the Market being almost bare of "*Good*" and "*Good Medium*" kinds. In No. 1 and 1½ nothing doing. Among the transactions recorded are a parcel of *Sano-musume* at \$605, \$570, and \$530 for firsts, seconds, and thirds respectively. Other sorts at \$545 and \$520, with *Niwatori* at \$540, complete the list.

Oshu.—A fair business has been done in *Hamatuki* at about previous quotations: in *Sendai* nothing done, but prices are nominally strong, and best No. 1 are held for \$510.

Taysam Kinds.—Some few small purchases reported on basis of *Nagahama* \$405, and *Nambu* \$410: these are apparently no *Sodai* left.

QUOTATIONS.

Hanks—No. 1½	\$510 to 520

England	2,401	2,950	1,961
Total	24,061	18,624	9,345

WASTE SILK.

Since last writing, a fair business has been done, the daily list showing settlements of 300 piculs. The transactions have all been in *Noshi* and *Kibiso*, other kinds not appearing. Quotations for some descriptions must be advanced; and although the total Stock is larger than it was a week ago, in some special lines the demand exceeds the supply.

Pierced Cocoons.—Nothing done, and the position remains exactly as last advised.

Noshi-ito.—The demand has again run upon *Foshu* at hardening rates for good assortments. The Market is very bare of Stock, and the quality begins to run down as usual at this period of the season. In fine *Hachoji* some little passing at \$107 as before. In *Filature* a little *Koshu* reported at \$125.

Kibiso.—A moderate business, ranging from *Filature* \$117½ to Common *Foshu* at \$22½. Some low middling *Oshu* done at \$50. Nothing reported in *Neri*. About two-thirds the unsold Stock is *Kibiso*, the bulk being low, undesirable kinds. Good *Oshu* and *Filature* sorts are scarce and wanted.

Mawata.—No transactions, and nothing to note beyond the arrival of a few piculs from the interior.

QUOTATIONS.

Pierced Cocoons—Medium to Fair	Nom. \$ 90 to 100

Taysam Kinds	100		
Total piculs	4,150	Total piculs	1,000

TEA.

Our Market has undergone no change during the past week, and we have still to report few transactions and a general disinclination to purchase on the part of buyers. The aggregate Settlements amount to only 360 piculs, giving a daily average of about 52 piculs. Prices for all grades during the latter part of the week have had an easy tendency, more particularly for Teas grading Medium, which may be quoted a half dollar lower. The following are the various grades: of Teas settled during the interval:—Good Common 35, Medium 70, Good Medium 134, and Fine 110 piculs. Settlements at Yokohama to date are 151,976 piculs, against 159,465 piculs for the same period last season. Total receipts at this port for the season are 153,554 piculs, against 162,789 piculs for the corresponding date in 1883. The total Export to the United States and Canada from Japan are as follows:—For New York and Boston, 15,674,183 lbs.; for Canada, Chicago, &c., 11,598,301 lbs.; and for California, 3,993,006 lbs.; making a total of 31,265,490 lbs. of fired Teas, against 31,290,665 lbs. Tea at the same date last season. The last American steamer (*City of Peking*) sailed on the 10th instant, taking 1,909 packages Tea for United States and Canada. Weights in this shipment will be given in our next Market Report. The steamships *Mosser*, *Benvenue*, and *Mark Lane* recently advertised for New York via the usual ports have all been withdrawn from the berth, and at present there are no steamers advertised for New York. The overland rate for the next steamer (*Arabic*, January 18th) has been reduced to two cents per lb. gross to the Eastern States and Canada, but the rate for San Francisco will be \$12 per ton as previously.

QUOTATIONS.

Common	\$10 & under
Good Common	12 to 14
Medium	16 to 18
Good Medium	20 & up'ds

EXCHANGE.

Rates have again considerably declined during the week, but the amount of the Private Bills on offer has been small. The demand for Bank Paper has increased. Quotations at the close are weak.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S
PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878.
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S
GOLD MEDAL EAU DE COLOGNE

is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S
OLD BROWN WINDSOR SOAP,

celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR,

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,

and other Specialties and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JANUARY 19TH, 1884.

BIRTH.

At Sapporo, Yezo, on January 8th, 1884, the wife of Professor W. P. BROOKS, Imperial College of Agriculture, of a Daughter.

DEATH.

At the German Hospital, on the 16th inst., at 3.45 a.m., ERNST ADOLF FRANZ REIMERS, native of Hamburg, in his 36th year, son of the late Wolf Reimers, Esq., of Hamburg.

On the 18th instant, at No. 45, Bluff, Yokohama, ARCHIBALD HAMBLE L. COLE, aged 42 years, eldest son of the late Hon. and Rev. W. G. Cole, of Trinity College, Dublin.

SUMMARY OF NEWS.

It is stated that the attack on Bac-ninh will take place on the 28th instant.

At the recent fire in Osaka, one policeman and three firemen were severely injured, and 140 persons are reported hurt.

THE working of the amended Conscription Regulations is producing some discontent throughout the Empire.

A SUBMARINE cable has been completed, connecting Kotomo, in Hizen, with Pusan, in Korea. It is announced that the line will be open for public use from February the 15th.

TOKIO and Yokohama were visited by the first snow-fall of the season on the night of the 17th instant. The snow began to fall at about 11.30 P.M., and did not cease till a short time before dawn, when a depth of from three to four inches was measured in Tokiyo.

ONE hundred and twenty-one houses, in Kobiki-cho, were destroyed, and seventeen injured, by fire in the afternoon of the 17th instant. This district is inhabited by persons of the poorer

classes, and great distress was caused by the conflagration. A fire-man fell through the roof of a burning house and was badly hurt.

At 3 a.m. on the morning of the 18th instant, a fire broke out in a store in the second ward of Mita, Tokiyo. Two hundred and seventy-five houses were reduced to ashes, and nineteen partially burned.

A TELEGRAM from Kashidzuka, in Shidzu-oka Prefecture, reports that at 4 o'clock a.m. on the 16th instant, a fire broke out in a theatre, in Togi-ya Street, and destroyed more than 330 houses. Thirteen people lost their lives, and several were injured.

THE man who was recently reported to have murdered a woman in Kanda, mistaking her for his wife, of whom he was jealous, has been sentenced to nine months' imprisonment with hard labor.

THE performance at the Gaiety Theatre by the French Amateurs, announced for this evening, has been postponed to Thursday next,

AN accident happened on Thursday afternoon on board the British bark *Cross Hill*. A lad named Green, whilst at work on the main-yard, lost his hold, and fell to the deck, striking the rail in his descent. He is reported not hurt and progressing favourably. It is almost a miracle that he had no bones broken.

THE details of the negotiations in Paris show, as was explained by us some weeks ago, that the Cabinet at Paris is willing to take for the northern limit of French occupation in Tonquin, a line passing through Bac-ninh and Son-tai. China, however, seems disposed to insist upon maintaining the Red River as a line of demarcation.

THE special correspondent of the London *Daily News*, who spent some time in Japan last autumn, telegraphed to that journal an account of an interview he had with the Japanese Minister for Foreign Affairs, on which occasion the latter declared that his Government is very desirous of opening the whole country to foreign commerce.

FURTHER intelligence goes to contradict the report that Son-tai was sacked by the French, as well as to show that the Chinese troops took no part in the defence. The *North China Herald*, however, publishes an account from which it appears that the French executed the prisoners taken at Son-tai, and that a leader of the Black Flags, having been wounded in the thigh and brought before Admiral Courbet, was immediately shot by the Admiral's orders. The same account says that 37 Chinese sailors, the crew of a junk which was discovered in the act of conveying arms concealed under bales of cotton, were beheaded within a few hours of their capture. Whatever may be the rights and wrongs of the war in Tonquin, it is evident, if these reports be trustworthy, that France's method of conducting the campaign must have the effect of giving a

serious shock to the reputation of Western civilization, and of alienating the sympathies of all civilized peoples.

A FIRE is reported to be burning in the Takashima Coal mine.

SOME excitement has been caused in the Settlement by the arrest of two Swiss gentlemen, Messrs. Ludwig and Trueb, on a charge of obtaining money from two local banks under false pretences.

It is stated that the competitive exhibition of Japanese paintings will be held at Uyeno, Tokiyo, in April.

It is rumoured that the new Railway Bonds of the Japanese Government will be issued at 90. This would make the rate of interest $7\frac{7}{10}$ per cent.

A VERNACULAR journal says that the Yokohama Specie Bank has realized a profit of six hundred thousand yen in connection with appreciation of *Kinsatsu*.

THERE is talk of a line of steamers being placed on the Yokohama-Kobe route to compete with the vessels of the Mitsu Bishi and Union Steam Navigation Companies.

THE total number of criminals sentenced by Japanese Courts during the first half of 1883 was 36,507, of whom 33,979 were males and 2,528 females. The number of capital punishments during the same period was 28, viz., 24 males and 4 females.

A CONSIDERABLE export of rice is said to be in process from Ise.

THE recent fracas between the military and the police at Osaka has been the cause of the death of one soldier, and four others are reported seriously wounded. The general opinion is that the custom of allowing soldiers to wear side-arms is to blame for this trouble, no less than for many similar disturbances in the past.

THE British barque *Sattara*, 940 tons register, has gone ashore on the Totomi coast, in the Tsuruga Gulf. There is no hope whatever of saving the ship.

A HEAVY fall of snow is reported from Niigata.

THE loss of a British steamer, the *Nisero*, off the coast of Acheen, and the capture of her crew by the natives are reported. The most strenuous exertions have been made by the Dutch Government to obtain the release of the prisoners, but hitherto without success. We learn, also, that some French naturalists who, despite the warnings of the Dutch authorities, persisted in conducting scientific researches in Acheen, have been massacred by the natives.

ABOUT eleven o'clock on Saturday morning, Yoshihama-bashi, the small temporary bridge crossing the canal near the Japanese Iron Works at Ishikawa, which has been in a very dangerous state for some months, gave way. Fortunately

only two persons were precipitated into the water, and neither of them were injured.

THE President of the United States, in his message to Congress, said:—"The question of the general revision of the foreign treaties of Japan has been considered in an international conference held at Tokio, but without definite result at yet. This Government is disposed to concede the requests of Japan to determine its own tariff duties, to provide such proper judicial tribunals as may commend themselves to the Western Powers for the trial of causes to which foreigners are parties, and to assimilate the terms and duration of its treaties to those of other civilized States."

INCENDIARISM has been rife in the capital during the week; several arrests have been made, and the police succeeded in extinguishing no less than nine fires (obviously the work of incendiaries) before they attained serious dimensions. At half-past three in the morning of the 15th instant, a fire broke out in a well-known restaurant called Ota-ya, near the iron bridge at Shinbashi. Seventeen houses were totally destroyed and three partially consumed before the flames were controlled.

A LITTLE after midnight of the same day (15th) a conflagration occurred on the site of the former Industrial Exhibition (*Kanko-ba*), in Kanda, Tokiyo. The site had been purchased, on the 29th of December, for a sum of 1,560 yen, by one Jô-ya Chobei, whose purpose was to erect a smithy there. There being a go-down already on the lot, its new owner sent there, as caretaker, a man called Sashio Riusuke. The latter was accompanied by his wife, a woman of thirty-two, and their daughter, a child of eight. The front of the go-down had been closed, and the windows hermetically sealed, so that the only available exit was in the rear. This, however, was completely in the possession of the flames before the attention of the inmates was aroused, and the three unfortunates were burned to death.

WEEKLY NOTES.

RUMOUR is very busy about the origin of the fire at Shinbashi on the 15th instant, and on this occasion her testimony is sufficiently uniform to be credible. Ota-ya, the house where the fire broke out, was a restaurant where both foreign and Japanese viands were provided, and where the strictest social virtues are not supposed to have been uniformly practiced by all comers. On Tuesday night, it is said, three Japanese, on the eve of their departure from Tokiyo, and two foreigners, described as residents of Tsukiji, hired a boat, and went a-pleasuring on the river, not unaccompanied, we may presume, by the usual elements of conviviality. Returning very late to the restaurant, and growing somewhat weary of the sound of the *Samisen* and the sport of *Ken*, the five sat down to a good solid game of draw poker, not taking much trouble to set any special limits to the betting. In what particular fashions the cards combined themselves, whether straight flushes encountered fours, or a "bobtail" collided against a "full," the police have not discovered, but, at any rate, somebody having bounced somebody else to the tune of fifty dollars, was bounced back again to the extent of five hundred, and not being provided with specie to that amount, re-inforced his previous bet with a brass candlestick which he discharged at the head of the gentleman that

"jumped so hard." The candlestick, at the highest point of its trajectory, encountered a kerosene lamp, and the two coming down together, "bust up" the game and fifteen or sixteen houses at the same time. Poker is a nice amusement, but in mixed societies, where gentlemen are not averse to adding brass candlesticks and kerosene lamps to their piles, there is just a chance that the *partie* may lead to unexpected developments.

It is stated that the term of office for Japanese Prefects will be increased from ten to twenty years. Originally the term was only four years, and as we cannot recall any case of a Prefect whose tenure of office exceeded that period, we are disposed to think that the contemplated change, if indeed it be really contemplated, will have little practical effect.

It is not so long since California's clamour against the ruin of cheap labour forced the Congress of a country which boasts itself the personification of freedom to pass a law diametrically opposed to all the principles of liberty. Yet we find that California is already beginning to feel the want of the hands she drove away, and to cry out for the cheap labour she so recently denounced. From the moment that the celebrated (shall we say infamous?) act became law, the Chinese settled in California knew that for ten years a monopoly was secured to them. Proverbially they are a shrewd people, not slow to realize and avail themselves of the advantages of a position. Quietly, therefore, but resolutely and steadily, they began to take the market in hand, until, in less than two years, wages went up from fifty to a hundred per cent. At first the good folks of the Pacific slope seem to have struggled against this tyranny, but the mild-eyed Ah Sins and Ah Hows were prepared for resistance. They did not bluster, neglect their daily task, or indulge in any of the petty annoyances which constitute the weapons of sulky Bridgets or frowsy Janets. On the contrary, they simply preferred their request for a rise of salary, and being refused, would turn up placidly in two or three days, hat in hand, and observe nonchalantly:—"My go now. More better you catchee 'nother boy." Out-door labourers are said to be even more intractable, and ranchmen have to pay now for what they call "unintelligent labour," more than Eastern farmers give for the very pick of harvest hands. Indeed, one journal, apparently well informed, states that in consequence of the impossibility of procuring men to pick and pack fruit for market, half the crop was lost upon some of the ranches last season, while a few grape-growers were so unfortunate that the produce of their ranches barely sufficed to pay off the Chinamen who stripped the vines. The hop-growers are still more seriously circumstanced, for while the price of hops has fallen fully one half, wages have doubled. Since the passage of the Restriction Act the number of Chinese who have left California on passports or return certificates, is stated at twelve thousand, and but a small fraction have yet returned. These twelve thousand are the very pick of the skilled workmen, and in a great majority of cases they have carried away savings sufficient to provide them with a competence for the rest of their lives in their own country. The effects of the exodus are partially mitigated by the arrival of smuggled Chinamen, *vid* British Columbia, but this source of supply is quite inadequate. We

need hardly comment on the consequences of the Act in the case of the Pacific Mail and the Oriental and Occidental Companies. The proceeds of their Chinese passenger traffic used formerly to average \$1,000,000 annually, but now scarcely half that sum is realized. The outward-bound vessels of the Companies have still their full quota of steerage passengers, as witness the *Oceanic* and the *Coptic*, which recently carried from San Francisco 800 and 1,200 Chinamen respectively, but on the return voyages lists almost blank are the rule. Altogether the troubles that were prophesied for California in the sequel of the short-sighted and unconstitutional policy of 1881, have come upon her with unexpected rapidity. It is not that Chinese labour alone grows scarce and dear. The price of all labour is correspondingly affected, for European immigrants, when they consent to work for hire, invariably demand better wages than are paid to Chinamen, as a tribute to the superiority of the Caucasian race. Never was there a more signal instance of mistaken legislation bearing witness to its own unwisdom. There is little hope, either, that any attempt to modify the Act will be made in the immediate future. The Californians were so violent in their demands for restriction that they will suffer a good deal before they consent to confess their error.

SOME statistics have recently been published which tend to show that Ulster is not so completely peopled by Protestants as has been commonly thought, and that Protestantism and prosperity do not necessarily go together in Ireland. The total population of the nine counties of the province consists of 833,566 Catholics, 379,402 Protestants and Episcopalians, and 451,629 Presbyterians. It appears, too, that the number of persons who can read and write is five per cent. greater in Leinster than in Ulster, while the per-centages for the latter province and Munster are about equal. As a test of prosperity the income-tax returns are quoted. They show that the average payment per head for Ulster is 3s. 5d., and for the other three provinces 5s. These facts are adduced with great exultation by the literary members of the National League, and the sternest censure is levelled at the heads of Lord Rossmore and his followers for venturing to disturb the peace or to interfere with the proceedings of the League. The motives of the Orangemen are also denounced as mean and sordid, their accusers claiming that their only object in creating a disturbance is to save their pockets by preventing the extension of the provisions of the Land Act to leaseholders, to which class the agricultural tenants in the north chiefly belong. These accusations of violence and mercenariness would sound better were they not formulated by men who have been committing murder, arson, and all sorts of outrages for the past three years with the object of getting their rents reduced or, better still, done away with altogether. The terms "fanatic" and "rowdy" applied to Lord Rossmore and his followers because they broke up a National meeting where treason, rebellion, and theft were openly advocated, contrast somewhat strangely with the utterances of Mr. Parnell, who told his followers, when they presented him with a cheque for thirty-eight thousand pounds at the Rotunda, that the Government of Ireland was "a system of robbery and fraud;" that emigration was "a murderous blow against the life of the nation;" the Earl Spencer "desired to give full play to

the unbridled insults and passions of the foreign garrison in Ireland; that English rulers were "wanting in common honesty," and that it was the determination of himself and his followers that "this generation should not pass away until it had bequeathed to those who come after it the great right of national independence and prosperity." If such language as this is to pass unchallenged, a new definition of treason will be required. -

THE Irish are an exceedingly sociable people, especially under the influence of a slight alcoholic impetus. When the representatives of the National League met in the Rotunda, Dublin, to "recognize" Mr. Parnell's services by lining his pockets, although there were twelve hundred of them present, they did not find the company nearly large enough for their hearts. So Mr. Dawson, Lord Mayor of Dublin, sat down and composed the following telegram for the purpose of letting the Irish-Americans have a share of the fun:—

Twelve hundred nationalists in meeting here in honor of Parnell greet America and send thanks for her sympathy.

To which the other side promptly replied:—

Irish-America salutes Ireland, re-echoes her cheers for Parnell and will never cease struggling with her for liberty until it is achieved.

The members of the National League have quite a pleasant time of it, dining and wining and reëchoing each others telegraphic cheers. If Irish-America really sticks to her promise, and immediately commences a never-ceasing struggle with Ireland, there is no apparent reason why the spectacle should not be very hilarious and edifying for the rest of the world.

WE mentioned in a recent issue the case of a police constable in New York who clubbed a drunken man to death. Another, and more remarkable, episode subsequently occurred in the same city, when a half drunken policeman, having mortally wounded a citizen by putting a revolver bullet into his abdomen, then proceeded to fracture his skull because he did not respond to an invitation to set out for the station. One result of this ready recourse to batons is that the people have conceived a wholesome dread of getting in the way of the constables, who are thus enabled to keep a crowd in excellent order. On the occasion of the recent fire at the Windsor Theatre, the most interesting incidents appear to have been furnished by the police. Six large engines were playing on the burning pile, and the noise they made was so deafening that it completely overawed the crowd of women, children, and "peaceable lager-beer-saloon keepers," who had assembled to see the sight. It is stated, however, that the constables raised their clubs in the air and rushed at the people, punching the foremost of the throng in the ribs and tapping the skulls of those in the rear, while if anyone offered the slightest resistance or remonstrance he was "set upon and jammed about in a most brutal and reckless manner." But the most noteworthy instances of clubbing were those of Nunan and Lent. The former's experience is thus described by an onlooker:—"When the flames first burst from the entrance of the theater and struck the front of the adjoining hotel, the shrieks of the occupants of the rooms could be heard for blocks. The firemen rushed into the interior of the building and dragged the people down one by one. Then the smoke and flames drove the firemen off. Young Nunan then climbed to the iron fire escape which was built on the front of

the hotel and worked his way to the top of the building, looking into the rooms and doing all in his power to find any victims that might have been left by the haste of the firemen. It was a fearless and courageous thing to do. He was well rewarded. When he arrived at the street, his hands blistered and his face flushed with the heat, the first man who greeted him was a huge Irish policeman. He jammed him up against the elevated railroad post and then clubbed him cruelly, dragged him to the line and pushed him out in the crowd." The second victim, Lent, was even less deserving of the treatment he received. "It became known among the firemen, when the fire had progressed to the first floor of the hotel, that a French woman was imprisoned by the flames in the extension in the rear. Lent rushed up to her room, and found her just about to drop from the window. He seized her and tried to take her down to the first floor, but she broke away from him and went back to her room for her trunk. Lent who was resolved to save her at any cost, dragged her to the floor below again, but her trunk was more to her than life, and she insisted upon going back to her room again. She was crazy with fear. When Lent returned he threw the trunk down stairs, and had no difficulty in dragging the woman after it. It would seem to a casual observer that up to this stage of the game he had not passed a particularly enjoyable evening. The mental and physical wear and tear consequent to a desperate effort to save a woman and her trunk from a burning building were not pleasant, and the severe tussle that Lent had with the woman certainly entitled him to some respect. He got it. The instant he appeared on the sidewalk he was received by the police, and clubbed with even more brutality than the unfortunate Nunan, who had scaled the building. These are only two of the many instances of clubbing that occurred that night." We apprehend that this amusement of the New York police will soon cease to be a one-sided affair. Somebody will begin to club them back again.

NOTES.

A STORY is told of a foreign Representative in Japan whose relations with the Government of the country were occasionally of a somewhat stormy nature. Fifteen or sixteen years ago there occurred an event which seriously disturbed this official's equanimity, and while he was under the early influence of the shock, he was waited on by half-a-dozen Japanese officers, who solicited his aid towards obtaining instruction in a particular branch of military science. Their answer was an angry recommendation to learn manners first and tactics afterwards—advice which perplexed them not a little, seeing that they were entirely without knowledge of the incident which prompted this outbreak. Nor was their ignorance wonderful, seeing that the thing had happened ten miles away and that the actors were men of a different clan. Another instance of vicarious misfortune is reported of the Dutch authorities, who recently applied to the Government of Japan for permission to employ Japanese coolie labour in the West Indies. The answer they received was, "Treaty revision first and coolie labour afterwards," and this, we believe, brought the negotiations to a standstill. It is, perhaps, somewhat hard on the coolies that treaty revision, a matter of which

their ignorance must be tolerably profound, should be used as a barrier to their obtaining lucrative employment. But their case is no worse than was that of the *Samurai* who were debarred from studying the manual and platoon exercise because an Englishman riding on the Tokaido had been obliged to subscribe to Japanese sumptuary laws. At the same time we trust that the sequel of the application for coolies is not to be taken as an index of Japan's future policy. It is very comprehensible that the Government of this country, assured finally of the hopelessness of obtaining any revision of the present treaties in a more liberal sense, might make up its mind to abide, hereafter, by the strict letter of those documents, and to withhold every privilege not specially stipulated for by their provisions. This would be an intelligible policy, but highly unpleasant. We should not like to be strictly confined, once more, to the areas included within the treaty limits, and compelled to forego summer trips to Hakone, Miya-no-shita, or Yukao. The fate of the Dutch application for coolie labour, reminds us, however, that such a contingency is by no means impossible.

It is with much pain that we record the sudden death of Mr. A. H. Cole, which took place at his residence yesterday (Friday) morning. Mr. Cole had for many years filled the post of sub-editor of the *Japan Mail*, and his abilities and cheerful industry won him the respect and regard of those with whom he was associated. Since last summer his health had been slightly impaired, but not sufficiently to inspire any apprehensions, and up to Thursday evening he was able to perform his usual duties. These sad events are, unfortunately, all too common in Yokohama, but the circumstances of the present case establish a special claim upon the sympathy of the public.

WE read that the Italian Minister of Justice intends to submit, for the approval of Parliament, a modification of the press laws actually existing. It is not pretended that the Italian press has abused its privileges, as a rule. The good sense of the public has always interfered to deprive of their power journals which attempted to make mischief. But there have been cases, it appears, where writers, encouraged by their irresponsibility, did not scruple to overstep the limits of fair criticism, and where persons assailed found the remedies offered by the law slow and unsatisfactory. The intention of the proposed modification so far as we can understand, is to fix the responsibility by establishing a clearer legal relation between the newspaper and the public. To accomplish this, a responsible director is to be substituted for the manager. In this crude form, the change does not promise much, and the leading Italian journal is of opinion that the Minister of Justice is in the wrong route: what is wanted is not a new definition of responsibility, but a law whose repressive powers can be exercised with the utmost possible expedition. This language has a retrogressive ring; but Italian journals are not alone in the opinion that among all abuses none can be more despotic or baleful than the abuse which vulgar and violent men call liberty of speech. We are not without an example in Japan, where there exists an English journal whose unique aim seems to be to persuade the Japanese that Englishmen hate and despise them. With such a mischievous nuisance staring us in the face every day, it is hard to believe that liberty of

the press ought to be universal, or to be quite contented with a system which permits one of the noblest results of Western civilization to become, under certain circumstances, one of its greatest disgraces.

THE Continental journals are making things as pleasant as possible for England in connection with the disaster in the Soudan. They have now quite a respectable list of items which will stand, they say, to Egypt's credit in the day when she makes her final reckoning with the self-invited occupant of her territory. There are: first, the bombardment and ruin of Alexandria; then the expenses of the war, of the bombardment, of the occupation, and so forth; then the introduction of the cholera; then the loss of the Soudan, and destruction of the Egyptian army that went there under the command of an English staff. If the occupation lasts a little longer, these friendly critics think that there will not be much left of Egypt. What they admire most is England's wonderful *sang-froid*. Now that the tenure of the Soudan has become troublesome, she calmly says, "give it up." But then it is not she, but Egypt, that has been making large sacrifices of men and money for sixty years back to keep the Soudan; so perhaps there is no special reason to be surprised at this exhibition of robust British egoism. One would imagine that these cheery analysts might be content to let the matter rest there. But no. They mean to be provided with something charitable to say in every eventuality, so they proceed to declare, first, that if England makes no attempt to recover the Soudan, she will have deliberately caused the loss of Egyptian territory; secondly, that if she tries to recover it, her object will be to keep it for herself; thirdly, that if she withdraws her troops now, she will be disgraced; fourthly, that she will make the loss of the Soudan an excuse to keep them where they are in perpetuity; and fifthly, that there are grave reasons to think that the loss was deliberately contrived with the intention of furnishing the excuse. We fear that with all her practicality it will puzzle England to steer clear of these various pit-falls. But on the other hand, if she falls into them, the shock will not be very serious.

TIN mining must be an exceedingly profitable speculation under some circumstances. At the first annual meeting of the Selangor Company of Shanghai, the Chinaman read out, to the shareholders assembled, a few very appetizing facts from the records of the Mt. Bischoff Tin Mine, in Tasmania. It appears that the total paid up capital of the Company working the mine is £29,600, and that during 1882 the net profits were upwards of £106,000. Nine dividends, of £60,000 were declared, at intervals of three weeks, during the latter half of that year. The chairman of the Selangor Company assured his hearers that, on comparing the prospects of their venture with the leading features of the Tasmania mine, he was unable to find one point in which the advantage rested with the latter. The Selangor Company was formed in 1882 for the purpose of acquiring and working a concession of four blocks of 250 acres each, to be selected at will in the State of Selangor, Malayan Peninsula. Only one of the blocks has been definitely selected as yet. It adjoins a famous mine called the Ampang, and trial borings go to show that the same deposit runs through both. The total produc-

tion of tin throughout the world in 1882, was divided as follows:—

	TONS.
Straits	11,705
Australia	10,067
Cornwall	9,400
Banca and Billiton	8,599
Peru and other countries	500
Total	40,721

The maximum price per ton during the past ten years was £148, and the minimum £55, while the average from 1878 to 1882 was £90 to £100. On the other hand, the cost of production in Selangor is estimated at an average of £40 to £45 per ton, and the freight from Singapore to London is 10s. With regard to the Selangor district and the mining methods at present in vogue there, the chairman gave the following interesting facts:—

Tin mining has been successfully carried on by Chinese in Selangor for a great many years past, and upwards of 20,000 men are engaged in it. As, however, they possess no machinery enabling them to drain the mines they open, immediately the mines become flooded, they are obliged to abandon them; consequently they can only work in the higher grounds, where the deposits are poorer, and so a merely infinitesimal amount of tin is obtained and exported compared with what may be, and will be, exported as soon as machinery is brought into general use. The Chinese workings in Selangor, with one exception, are mere scratchings in the hill sides, while the lower valleys, where the richest deposits exist, are completely inaccessible to them. When I was in Selangor, just twelve months ago, there was only one pump worked by steam in the state, and this has enabled a valley to be developed, which is, at the present moment, the richest yet discovered in the whole of the Malay peninsula. This is the "Ampang" mine, which adjoins the "Sungei Puteh" property of this Company, a plan of which property has been sent to each shareholder. The deposit at Ampang where the work is now going on is twenty-six feet thick. In the Appendix to our report you will see that the borings have proved that there is a deposit of nineteen feet thick in Sungei Puteh. A year ago when I was in the Native States the thickest stratum then known was sixteen feet. This in a mine in Perak, and was considered so wonderful that the Resident asked me to visit the mine with him to see it, and I did so. The percentage of ore in the "Ampang" mine is equally remarkable for its richness, and we have on the table a bag containing a sample of the wash dirt which was assayed by Mr. Hampton, the Engineer of the Perak Tin Mining Co., who was passing through the State on a visit, and who, having taken the samples to Penang to assay it, wrote officially to the Resident stating that it produced 47 per cent. of tin ore. The Resident published this letter in the *Straits Times*. The deposits are found so close to the surface, varying from five feet to between forty and fifty, that the cost of the machinery required, and the cost of the working generally, is extremely small as compared with the cost of tin mining in any other part of the world. In order to give you some idea of the value of the deposits of nineteen feet thick found on Sungei Puteh, I may mention that many of the mines being worked by Chinese contain deposits of between one and four feet only in thickness, the percentage of ore being far lower than the sample from the Ampang mine.

THE Tientsin correspondent of the *Shanghai Mercury* says:—"Li Hung-chang continues as peaceably inclined as ever and does not budge an inch in regard to preparations, except in regard to preparations for the defence of Korea; this is his pet scheme, and he is still keeping his eye on the Loochoo Islands. Of all the men in China, Li dreads a visit from the French up here, for he knows well enough if there is war the French will not visit Kwang-si and Yunnan, but that they are likely to pay another visit to the Summer Palace, and blockade Canton." The same writer also says:—"I don't believe China will go to war with France, but she will no doubt pick a quarrel with Japan about Korea. China certainly is making preparations to defend the southern provinces, as it is believed by some officials that France will not be satisfied with Tonquin, but will take Kwang-tung, Kwang-si, and Yunnan." The same authority adds:—"that the latest Imperial Edict issued at Peking is to the following effect:—"Instead of Li Hung-chang, T'so is now appointed Governor-General of Kwang-tung, Kwangsi, and Yunnan, and Generalissimo, and with him is to be P'ang Yu-lin at Kwang-si, Wa Ta-ching at Kang-tung, Li Mi-chu at Yunnan. Governor-General Chang Shu-shêng is to go to Tonquin as Commander-in-chief of all the troops to be brought in the field against the

French and the Black Flags included. Tsêng Kwo-chan is to take the place of T'so, of the Liang Kiang and Nan Ta-ching."

CONSIDERABLE anxiety is expressed in the Hongkong papers in regard to the safety of the China Merchants' Steam Navigation Company's steamer *Hwai-yuen*, that vessel having sailed from Shanghai for Hongkong on the 28th of December. The *China Mail* of the 8th instant, says:—"No news of the whereabouts of the *Hwai-yuen* had been received at the office of the China Merchants' Company here up to a late hour this afternoon. There were \$36,000, in treasure, on board the vessel. It has been reported that a large number of soldiers were also taken on board at Shanghai, and the conjecture has been circulating that possibly these "braves," having no stomach for fighting the French, and preferring cash down to hopes of payment, had taken possession of the vessel and run her into some convenient bay. This conjecture is, however, knocked on the head by the fact that there were no soldiers on board. Another conjecture is that another affair, something after the manner of the *Spark* tragedy, has been enacted, the supposition being that a number of desperadoes, knowing that the *Hwai-yuen* was to carry down treasure, took passage in her, and have made themselves masters of the vessel *en voyage*. It is quite certain that a serious mishap of some kind has occurred to the vessel. She left Shanghai ten or eleven days ago, and has not apparently since been seen from a single vessel, although steamers are always voyaging between here and the Model Settlement.

THE *Nichi Nichi Shimbun* of the 16th instant publishes a telegram from Nagoya, stating that early on the morning of the previous day a fire broke out in the Theatre at Togiya-machi, in Aichi Ken, and spreading with great rapidity, destroyed over four hundred houses, fourteen persons receiving various injuries in attempting to extinguish the flames. On the same morning, at half-past twelve o'clock, another fire occurred in the buildings formerly used for the Industrial Exhibition, at Nurimono-cho, Kanda, Tokiyo, and the conflagration was not extinguished until eighteen houses had been destroyed. The cause of the fire is said to have been through a child dropping a piece of live charcoal. In this case three persons were burnt to death.

THE *Fiji Shimpō* states that the Japanese Naval Department desires to purchase the Kobe Manufacturing and Dockyard Establishments of the late Mr. E. C. Kirby; and that Mr. Matsuda, Superintendent of the Government Ironworks at Tokiyo, is instructed to inspect and report upon the condition of the Kobe factories with a view to negotiations with the liquidators of Mr. Kirby's estate.

THE butter that is exported from California and eaten in perfect confidence on bread and toast, is seldom, if ever, butter. A protest against the manufacture of the oleomargarine that is sent out from the grease factories has been publicly made by the *bond fide* dairymen of San Francisco, who, have taken urgent steps to stop the sale of oleomargarine for butter or for anything but what it is. To this end they have formed a permanent organization, which is likely to be productive of much good in stopping the sale of a spurious and deleterious compound.

THE Rev. G. A. Shaw, in an essay entitled "The Future Prospects of Madagascar," says that when the French ultimatum of last June was received by the Malagasy Government, a great "Kabary," or assembly of the people, was called to determine the answer that should be sent. The Prime Minister, after recounting the events that had occurred on the north-west coast, said:—"The French claim a third of Madagascar, and demand two hundred thousand dollars; * * * and in the event of our not acceding to their demands, or of the answer not arriving in time, or should the Governor of Tamatave make any military preparations, then they will bombard and destroy all the ports on the east coast. Now shall we yield to their demands, or what do you think we should do?" To this query, Mr. Shaw tells us, the people answered, "with a loud shout, saying, 'God forbid that we should do that.' They stood up one after another, and made speeches, tribe by tribe protesting against any cession of territory to the French, though but the size of a grain of rice. In many different speeches they showed that they did not in the least shrink from death in defence of their country; they begged for guns and spears, and that every able-bodied man should be drilled so that one and all might fight in defence of their fatherland." Probably there never was a popular assembly in any part of the universe that would not have returned a similar answer to a similar question, and we should not have been disposed to expect much from the Malagasy merely because their voices were loud in debate. The reverend gentleman from whom we quote, assures his readers, however, that "the Malagasy are a most determined people—their determination approximating to obstinacy—and when they say, 'God forbid that we should give up land even of the size of a grain of rice,' it means that the French will never obtain undisturbed possession of any part of the mainland till the Hovas are exterminated." How completely false this estimate was, our recent telegraphic news demonstrates. The Hovas have consented to surrender the northern part of the island to France, whose claim to this cession rests chiefly on the fact that it was stipulated in a treaty which she formerly concluded with tribes that had revolted from the Hova rule. The cession of Ulster and Munster by the Fenians to an enemy of Great Britain would constitute a parallel claim. Mr. Shaw's description of Madagascar's material prospects possesses special interest in the context of a French occupation that will sooner or later extend to the whole island. He writes as follows:—

From a foreigner's point of view, Madagascar presents an alluring future. The resources of the country, which has long been suspected of being rich, have, nevertheless, never been developed. No industry has been fairly tried except sugar-making, which succeeded so well in the hands of its first promoters that numbers have followed in their wake, seeing in the enormous productive powers of the soil and climate a sure and ready road to fortune. This industry employs plant, &c., to the value of about one million dollars around Tamatave alone, and of this, British interests are valued at 80 per cent., while one English firm estimates its actual loss, from the impossibility of cutting this year's canes, at between eight and ten thousand pounds. Many other valuable products might, it is believed, be raised from the soil and become articles of great commercial value, such as coffee, vanilla, cloves, cinnamon, and tea, while the low-lying swampy tracts might be made a mine of wealth to the rice grower.

The mineral wealth of the country remains to the present day an unknown quantity; the extreme jealousy of all outside influence having induced the Government to make it a criminal offence for any native to search for metals, and a cause for expulsion from the country for any foreigner to prospect for gold, silver, &c., or to sink any mine. There is, nevertheless, sufficient evidence to show that the mineral wealth of the country is great.

The means of communication are at present bad; but roads would not be difficult of construction, and railways might be formed with comparatively small expense. In fact, more

than one firm in London have made the offer to build a railway from the coast to the capital, the only obstacle to the enterprise being the want of security for the land on the one hand, and the still imperfectly settled confidence in foreigners on the part of the people. Now that these troubles have come upon the Malagasy, they are exultant that their opposition to foreigners stood sufficiently in the way of their making roads and railways; because, as they readily see, these would only have been a source of weakness in the present struggle; while the want of any easy mode of moving bodies of men accounted as European soldiers are constitutes their greatest strength. They have cut off supplies from the French troops, who well know the difficulty and danger of penetrating into the country. But when the Government shall feel itself strong enough, within, and by alliance with other nations, to cope with immigrants, there will be no difficulty either regarding the land question or the improvement of internal communication. The Government are not opposed to progress, and the life of the late Queen, just published in Madagascar, shows how much she was willing to do systematically from her private purse for the elevation of her subjects, and for the advancement of the country. The present Queen in a public "Kabary" has intimated her intention to follow the policy of her "mother"; and the Prime Minister, several years ago, in answer to a request from some traders in Tamatave, said that neither he nor the Queen would offer any opposition to the formation of canals between the lagoons near the coast. This could easily be done with but a small amount of capital, thus connecting ports and towns near the coast, which are at present with the greatest difficulty approached from the sea. The rivers are broad and fairly deep inland, and can be made a fine means of inter-communication, although they are of no use as harbours, being blocked with sand-bars at their mouths.

Another essential item in the consideration of the probable advancement of a country from a commercial point of view, and from the standpoint of the foreigner, is the labour question. In this the capitalist meets with no difficulty in Madagascar. There is plenty of good and reliable labour for those who treat the native workmen in a fair and honest fashion; who pay their wages when due, and do not try civilized dodges for cheating the labourers of their fairly-earned wages. It is true they come to Tamatave from a distance inland and farther south, but the foreigner has himself to thank for this inconvenience; the unlimited introduction of Mauritius and Bourbon rum having completely demoralized the natives in the vicinity of the ports, near which the principal demand for labour exists. If, as was earnestly desired by the native Government, a restrictive duty were placed upon this vile importation, and upon its manufacture in the sugar mills of the country, there is no reason in the world why the Betimisaraka should not become as good workmen as the Taimoro and Tanala. But so long as 10,000 barrels of this crude spirit are introduced for consumption in one year, among a people numbering perhaps half a million, it is unreasonable to hope that the labour market will be supplied by them. But as the Government sees this, and recognizing its evil effects upon the people, is desirous of restricting the traffic, surely European nations cannot much longer refrain from allowing the Queen to place a much higher duty on that which is killing off her subjects by thousands.

Turning to the religious and moral progress of the people during the past, there is as great hope for the future in this direction as in that of purely commercial, social, and political elevation. Although some Roman Catholics in the seventeenth century made the first endeavour to introduce Christianity, it was utterly futile; no lasting effect was made on the people, and the fruits of their zeal perished with them. It was not till 1821 that Christianity was really effectively introduced among the Hovas, and the history of its development has been one of the greatest marvels in the history of the Christian Church. A period of less than twenty years of frequently interrupted work on the part of a handful of British missionaries was succeeded by one of the fiercest persecutions for Christ's sake that the world has of late years seen. But the honesty of the people's convictions was shown in the fact that notwithstanding the royal mandate forbidding the reading of the Bible and meetings for prayer—in spite of the number of nobles, of women and of children even, who suffered death for conscience-sake—when the country after nearly thirty years was again opened to the missionaries, the number of Christians had, instead of diminishing, increased nearly thirty-fold. From that time, 1862, to the present day, steady, rapid progress has been made, till now the churches number over 1,200, the native adherents 300,000, and the scholars in the schools over 100,000. In 1862 the only literature possessed by the people was the Bible and one or two tracts; in 1880 it was reported that "the publications of various kinds issued from the Mission Press since 1870 had not been less than 1,500,000."* From the same authority we learn that during nine and a-half years the total issue of Bibles, Testaments, and portions of Scripture amounted to 132,902, while the oldest periodical, *Good Words*, has a monthly circulation of 2,700. English is being taught and eagerly acquired by the people, who will thus find access to the stores of English literature with its ennobling influences to the thoughtful mind. These facts and figures tell their own tale of substantial progress and prospective advancement. Let us hope that whatever may be the outcome of the present difficulty there will be a glorious future for the "Great African island."

THE danger to Australia of French criminals finding their way to those colonies, in the event of the proposed transportation of *récidivistes* on a large scale to New Caledonia being carried out, has according to the *Melbourne Argus*, just been illustrated by a case at Ballarat. Extensive robberies had been taking place in that city, and for some weeks the police were utterly unable to detect the offender. Their efforts were at last, however, crowned with success by

* "Ten Years' Review of Mission Work in Madagascar." Antananarivo, 1880.

the capture of a man whom they have every reason to believe is the perpetrator of the robberies. The man when arrested stated that his name was "Paul Jones," and declined to give any further account of himself. He has, however, since admitted that his name is not "Jones," but "Louis Paul," and that he is a French Communist who arrived in Victoria some months ago from Nouméa. The presence of such a person as Paul in the colony is no doubt inconvenient; but it seems rather hard to stigmatize him as a robber because he appropriated property not belonging to him. He merely acts in accordance with his political principles. We might with equal justice apply the term "thieves" in this country to those who advocate the spoliation of landowners.—*World*.

WITH a fresh batch by every mail (says *The World*) American athletic records are becoming somewhat of a drug. The most recent additions to the list are, however, remarkable enough to be worthy of all notice. The amateur record for walking one mile was held by an American, E. E. Merrill. On the 27th ult. another American, A. P. Murray, walked a mile at Williamsburgh in the wonderful time of 6 min. 29½ secs., and now holds the record. On the 6th instant he supplemented this feat by walking three miles in 21 min. 9½ secs., which supersedes the previous best, 21 min. 28 secs., of H. Webster, England. Murray walks with scrupulous fairness, and has made his records in the presence of able judges of walking.

THE *Saigon Independant* of the 18th ultimo says:—We yesterday had communicated to us a private telegram according to which Admiral Lespes, who was to have taken command of the fleet in China waters, and who left France on board *Galissonnière*, received an order at Port Said to await the formation of a new division hastily composed of a part of the vessels of the evolution squadron and intended for the reinforcement of the Indo-China and China Sea divisions. Vice-Admiral Baron Duperré will be appointed to the command-in-chief of the French naval forces in the Far East.

WHEN M. Tricou commenced his career of muddle, menace, and mystery in China, we alluded, necessarily in guarded terms, to a somewhat shady diplomatic manœuvre, which, according to current report, he had given himself much unsuccessful trouble to accomplish during his residence in Tokiyo. This was nothing more or less than an attempt to persuade Japan that the Tonquin imbroglio offered an unique opportunity for her to wipe off old scores with China, and to dispose finally of that possible bone of future contention, the Riukiu question. There is more than one method of winning a country over to an alliance such as that contemplated by this manœuvre. There is the straightforward plan of laying the pros and cons of the business before the Government, and plainly acknowledging a desire to obtain its co-operation; and there is the more devious and less dignified device of endeavouring to excite a warlike spirit in one quarter and another, with the object of carrying the decision ultimately beyond official control. Those who have watched M. Tricou's career in the East, and who have observed to what length he suffers himself to be carried by zeal for his country's interests, will not have much difficulty in believing that

the latter scheme presented no more deterrent features to his moral vision than the former. Indeed, he is accredited with having employed his belligerent eloquence so assiduously in sundry quarters, and so persistently laboured to depict China's action in the matter of Riukiu as an insult which Japan's national honour was concerned in wiping out, that the good offices of one of his colleagues had finally to be solicited to persuade him to desist. As might have been expected, however, the mischief did not stop there. It was nearly as important to augment China's embarrassment by convincing her that, in the day of battle, she would have to reckon Japan among her active enemies, as to educate a fighting mood in Japan. We cannot, in justice to M. Tricou's abilities, suppose that he neglected the former step, or ask our readers to believe that his contrivances counted for nothing in the rumours which reached us, from time to time, of China's apprehensions as to Japan's possible attitude in the event of war between France and the Middle Kingdom. From the moment that France's restless craving after a colonial empire impelled her towards the delta of the Red River and Yunnan, the most sanguine observer did not fail to foresee that whichever way her enterprises eventuated, some unpleasant contingencies were inevitable. But among these we never reckoned a sensible deepening of China's feeling of umbrage against Japan. It would almost seem as though the fates had willed that, despite this country's really earnest desire to be on terms of the closest friendship with her neighbour, something should perpetually crop up to widen the breach between them. M. Tricou is not a Colossus, either morally or physically, but his powers of doing mischief were augmented by his position, and he used them with remarkable energy. We may be wrong, but we cannot help thinking that the mail-clad Japanese troops placed by the Chinese vernacular press in the van of the French forces at the assault of Sontai, were creations of M. Tricou's imagination. They are, at any rate, the outcome of the policy he pursued here. The *North China Herald*, speaking of these mythical warriors, says:—"Our readers are of course aware that some months ago the French Government made offers of alliance to Japan, which were promptly declined by the advisers of the Mikado. Chinese suspicion, however, has not been allayed, and now we hear of secret despatches and what-not, having passed between certain officials unnamed, the gist of which is that, on the requisition of M. Tricou, acting under the orders of his Government, the Japanese Government has actually furnished France with two thousand brazen-armoured troops to assist the French in fighting China in Annam. Details are not wanting of this singular transaction. A thousand and some odd hundreds of these mail-clad warriors have already arrived at Hanoi, and been used by the French General as the advance-guard against the Black Flags. But they gained little by their disloyalty to China, for the Black Flags, by the exercise of their well-known strategy, surrounded the Japanese mercenaries and almost annihilated them. Some escaped; but these were promptly pursued, surrounded, and captured. It is only due to the more intelligent of our Chinese friends to say that they do not give full credence to these wild reports, explaining them as having arisen from the facts of there being a few Japanese officers in the French army. But multitudes do actually believe the entire rigma-

role; *credo quia impossibile* is a motto acted upon in China quite as much as in some of our European countries." Our Shanghai contemporary cannot, apparently, offer us any more comforting assurance than that intelligent Chinese do not give "full credence" to these ridiculous rumours. M. Tricou may, therefore, congratulate himself on having obtained a certain measure of success. He has helped to sow seeds of discord between China and Japan, and we wish him joy of the achievement. He will long be remembered in the East as a diplomat who accomplished a vast deal of harm by the sheer force of shallow intrigue and unlimited bluster.

MESSRS. MEIKLEJOHN & Co. have published a *Pocket Directory of Japan*, and a map combined with a directory, of Yokohama. The former is an exceedingly handy little volume. The first thirty-two pages contain a calendar and a quantity of useful information; after which we have alphabetical lists of the foreign residents at the various treaty ports; a list of the diplomatic, consular, and other public bodies, and finally a diary. Nothing in the shape of a directory has yet appeared here which so well combines the qualities of compactness and perspicuity. We could have wished, indeed, that instead of giving us eight independent lists, one for each of the settlements and for the interior, the compilers had thrown the whole into one simple alphabetical schedule. But opinions will probably differ upon this point, and doubtless the former method presents facilities which, under certain circumstances, may be very desirable. The miscellaneous information which precedes the directory proper is given in a concise and accessible form. It is unencumbered by superfluous details, and may be said to embody all the facts likely to be required by foreigners in Japan. The map of Yokohama is a handsome sheet, neatly executed, and showing, besides a plan of the Settlement and Bluff, a clearly printed list of the foreign residents, &c., of Yokohama and Tokiyo. Not the smallest recommendation of these publications is their cheapness, the *Pocket Directory* costing only a dollar and a half, and the map one dollar. We feel very grateful to Messrs. Meiklejohn for having saved our time and money by these easily consulted and cheap compilations.

TIME will doubtless enable Europe to make up its mind as to the true character of the Marquis Tsêng. At present opinions differ. Some writers call the Chinese Ambassador a man of singular shrewdness and tact; while others sneer at his diplomacy, and speak of him as a grotesque *parvenu*, who has dubbed himself Marquis with a light heart, and whose title to be listened to by Western statesmen is as unreal as his patent of nobility. It is decidedly a false move to attack the colour of the Marquis' blood, but the journalists who adopt this method of criticism evidently think that a Chinaman is fair game for every species of assault. The most irreverent among them are obliged to confess, however, that the Marquis has at least struck out a new line of diplomacy. The stereotyped idea of a diplomat is a man impassible, silent, thinking first of concealing his own thoughts and doings, and next of probing his neighbour's. But the Marquis Tsêng has given such a rude shock to the sanctity of this legendary image, that among other polite similes his admirers compare him to a novel variety of insect which drags about, suspended from its tail, a cluster of reporters.

Of course the origin of this badinage is the Ambassador's so-called indiscretion in supplying to the Parisian journals copies of his correspondence with the Foreign Office. M. Ferry, it will be remembered, had laid before the Chambers extracts from the same correspondence, and these having been published by the press in due course, were found, on examination, to convey what the Marquis thought an unjust impression of the attitude taken by his Government. He therefore adopted the simple, but highly reprehensible, device of sending the context to be published in the same journals, so that the public might have an opportunity of passing judgment on the whole. Such a breach of official etiquette needs no comment. The proper plan for the Marquis to pursue would have been to preserve a dignified silence *vis-à-vis* the European public, and to have bequeathed to his own Government the duty of vindicating his reputation whenever, in years to come, a favourable opportunity might present itself. There would have been, to be sure, some uncertainty about this method. Neither the Marquis nor the T'sung-li Yamên could exactly foresee the day when it may be in China's power to place a French Ambassador at Peking in a similar predicament by contriving that one-sided selections of his correspondence be published in the vernacular press. So much the worse, however, for the Marquis. A rigid adherence to the rules of diplomatic reserve is far more important than the correction of a public misapprehension calculated to disturb the relations of two great nations.

DR. A. R. PLATT, the United States Consular representative at Chefoo, who has lived in China for eighteen years, paid a visit the other day to New York, and underwent the usual process of interviewing. Some of his remarks are interesting. Asked who is responsible for the present unfortunate state of affairs between France and China, he replied:—

"Whoever dictates the French foreign policy which is carried out by Minister Tricou in Peking. Minister Bourée was inclined to be pacific, but when he was withdrawn there was an instant change in the situation. Tricou is an absurd diplomat and a bully. He is hated and despised by all for his domineering conduct and mere bombast. When he paid his first ceremonial visit to Li Hung Chang he went through the streets surrounded by French gendarmes with drawn swords, and these guards were around his chair while he was actually talking to the Viceroy. Nothing could be more absurd, for if Li Hung Chang merely raised his finger it would be answered by thousands of soldiers. The interview was full of irritating remarks, and Tricou managed to arouse the anger of the Viceroy to a dangerous extent by his disagreeable behavior. Nearly every foreigner in China has turned against France and sympathizes with the Mongolians, who are forced into their present position."

"Do the military leaders of China favor the war?"
"Of course they do, for they are of the same ilk as Prince Kung. The two men who, besides Li Hung Chang, will take the most prominent part in the approaching conflict, are Pang Yu Ling and Tso Tsung Tang. Pang is known as admiral of the Yang Tse Kiang, and not only has the power of a viceroy, but his position is so powerful that he has frequently denounced viceroys. He is frightfully anti-foreign, and also has a morbid love for ferreting out secret revolutionary societies. He often goes around disguised as a poor coolie and talks with the populace in order to find out plots against the Empire or himself. He will sit down with a coolie suspected of disloyalty and say, 'What do you think of Pang Yu Ling?' 'He's an old rascal,' the unfortunate man is likely to reply, whereupon he is seized by soldiers and cast into prison or beheaded. Pang is the commanding military officer of the Empire and is thoroughly honest. He will protect foreigners while the laws allow them to live in China, but he openly avows his hatred for them."

"Next to Pang is Tso Tsung Tang, the general who suppressed the last rebellion and destroyed the forces of Yacoub Beg and his two sons. He is Viceroy of Nankin. Tso is a thorough soldier and sprang from the ranks, but he is a terrible hater of foreigners, and will not read the signs of the times. Flushed with his victories in war and swelled up with the importance of the army he lately led into Ili to meet the Russian forces then in Kuldja, Tso's vanity leads him to think that China can overwhelm the rest of creation. These are the men against whom Li Hung Chang is fighting for his supremacy, and the difference between them can be imagined when I tell you Li employs a man at Tientsin to do nothing but translate articles about China published in the Herald and other great newspapers, so that he knows just what is said about every move of his foreign policy. He is accurately informed even as to the kind of

newspapers he reads from. The recent letter of Admiral Shufeldt reflecting on the Empress caused a tremendous sensation at Peking, and Li Hung Chang was furious. He sent for Minister John Russell Young and remonstrated about it in a very stormy manner. I was present at the interview, and I never saw a man more furious than Li was. He shook like a leaf in his passion. This was the only unpleasant event of the present Minister's official career in China. Mr. Young is a great favorite with the Chinese government, and he has more influence with Li than any other foreign representative. The other Ministers are wild with jealousy at the preference which Li is beginning to show for America. Mr. Young is doyen of the diplomatic corps by right of seniority. When Minister Young met Li Hung Chang on his arrival as Minister, the Viceroy let his steamer wait a full hour beyond the appointed time.

THE Japanese bark *Tsurunoya Maru*, Captain Meyer, which left Shinagawa for Nagasaki in ballast, arrived at the anchorage on Monday last. Captain Meyer reports that on Wednesday last, off Omaisaki, during a strong W.N.W. gale, with a high cross sea running, the vessel sprung a leak, which gained with such rapidity as to necessitate her return to port. Was in company with a full-rigged ship bound up and a laden bark, painted black, beating down. The *Tsurunoya Maru* was formerly the American bark *B. Aymar*, and is partly owned by Messrs. Lake & Co., of Nagasaki.

THE *Hongkong Telegraph* emphatically denies the statement published by the correspondent of the *Daily Press*, that after the capture of Sontai, the town was given over to the troops to rapine and pillage. The *Telegraph* characterizes this as "an atrocious accusation," and we fully endorse the epithet if the *Daily Press*' correspondent did really venture to formulate such an assertion without the most convincing proof of its veracity. The *Telegraph*, after stating that the correspondent "was not within a hundred miles of the scene of action and had no possible means of obtaining trustworthy information," prints, in confirmation of its corrections, a letter from "a French officer who took part in the operations against Sontai." This letter we reproduce below. Our readers will observe, however, that it contains nothing which can be construed as a direct denial of the charge preferred by the correspondent of the *Daily Press*, though in other important respects its information is quite at variance with that supplied to the latter journal. The *Hongkong Telegraph* will be doing a public service if it can furnish some unimpeachable testimony as to the untruth of the barbarous act attributed by the *Daily Press*' correspondent to Admiral Courbet:—

HANOI, 27th December, 1883.

As you must have already heard, Sontai was captured by the French troops, after three days desperate fighting, on the evening of the 16th instant. Particulars of the attack have, no doubt, been sent to you by your special correspondent here, but I think I am perhaps in a position to give you a few details which are not likely to have been published.

Sontai was strongly fortified for an Eastern city, being surrounded by a wall some 16 miles in circumference, and besides being defended by several outlying forts, was protected by almost impassable swamps on every side. Admiral Courbet's plan of action was to make a false attack on the southern defences, so as to draw the Black Flags to that point, and then to make a dash on Phou-sá, a strong entrenchment defending the pathway leading to the eastern gate. This plan was carried out, and proved quite successful, the Turcos and Algerian legion carrying it, after some fierce hand-to-hand fighting. But even after capturing Phou-sá, the French were not allowed to remain in possession in peace, as a strong body of Black Flags issued from the southern gate, and, advancing through the swampy ground, made a desperate assault on the captured position, and were only beaten back after a stubborn resistance.

The Admiral's next movement was to send a strong detachment to take possession of a small hill overlooking Sontai from the north, and this being accomplished successfully, earthworks were quickly raised, and everything was in readiness for the grand assault. Early on the morning of the 16th the gunboats ranged in position, and commenced to shell the city, the field artillery, which was very well handled, doing a fair share of the work. For eleven hours the cannonade continued almost without cessation, and at 5 o'clock in the evening the troops advanced under cover of the guns against the northern gate. An entrance was soon effected, and the citadel was attacked. The citadel of Sontai is a square block, defended at its four corners by fortresses, which were mounted with some heavy guns. After some severe fighting, three of these forts were taken by the French, the Black Flags retreating into the fort at

the south-west corner. When hostilities ceased for the night, the Black Flags were still in possession, but when the French advanced at daylight, it was found that the enemy had abandoned the position and retired during the night. Without any further opposition, the city was entirely at the mercy of Admiral Courbet.

The casualties on either side, considering the hard fighting that took place, are exceedingly light. The French losses amounted to about 400, killed and wounded, including a large proportion of officers, whilst the Black Flags are reported to have lost not fewer than 600 men. On the French side there were from four to five thousand men engaged, exclusive of the gunboats, the total force of the Black Flags, according to a reliable estimate, not exceeding 1,800 men. There were no Chinese regular soldiers in Sontai, and the only resistance offered to the French was by Li Ang Fuk and his hardy Black Flags. The Turcos and foreign legion, who bore the brunt of the fighting, say the Black Flags fought like devils.

The bombardment by the gunboats almost demolished the town, and killed a vast number of Annamites and Chinese, traders, &c., who had sought shelter within the city. The victors captured about 200 small ponies, 250,000 francs, 300,000 cartridges, a number of Remington rifles—this being the arm carried by the Black Flags—5 Krupp guns, and a quantity of bronze and other old-fashioned ordnance. There was a report current that the chief of the Black Flags, Li Ang Fuk, had been killed in the assault, but this has since been contradicted, and the French authorities have no reliable information on the subject.

While the French were attacking Sontai, a body of troops—supposed to be Chinese regulars—marched out from Bac-ninh and opened fire on the entrenchments at Hanoi with some light field guns. However, the French garrison, 500 strong, easily held their ground, the enemy eventually retiring in good order.

After capturing Sontai, Admiral Courbet garrisoned the town with the half of the expeditionary force, and returned to Hanoi with the other half, where he now is, engaged in planning an advance on Bac-ninh. It is reported here that the attack on Bac-ninh will be made about the 10th January, but in some quarters it is asserted that nothing further will be attempted until additional reinforcements arrive from France. Personally, I think the Admiral will risk an attack, if he can see a fair prospect of success, before the arrival of General Millot, who is now on his way to assume the command of the French army in Tonquin.

THE special correspondent of the London *Daily News* telegraphs from Tokiyo, under date November the 28th:—

I have had a long interview with the Japanese Foreign Minister.

The Minister spoke freely on the subject of the opening up of the interior of Japan to foreign trade. He represents his Government as being most anxious for it, stipulating only that foreigners availing themselves of the privilege should be under the jurisdiction of the Japanese Courts. This would involve a revision of the treaties and the abolition of foreign legal jurisdiction in the open ports.

It is well that the people of England should understand the truth about the state of affairs in Japan, and for this reason such a telegram as the above is not unlikely to do some good. It may surprise the public to learn that the anxiety for unrestricted trade and intercourse is now on Japan's side, and that the tendency to perpetuate the present condition of semi-isolation is wholly on the foreign side. There is the plain fact, however. Dress it up in whatever euphuisms we please, its harsh outlines still stand forth unmistakably humiliating. Formerly it was the Japanese who wished to perpetuate the seclusion recommended by tradition and an unfortunate experience; now it is the foreigner who wishes to exclude competition from the commerce he has undertaken to develop, and who, to conserve his monopoly, is content that Japan shall never be admitted to any real intimacy with Western nations. We are aware that this statement of the case will be indignantly denied by many whose position it does not truly describe. There are persons, not a few, let us hope, who earnestly desire to see the work completed which Western envoys and fleets came here twenty-seven years ago to commence, but who, nevertheless, feel an honest apprehension that the time is not yet ripe, and that this country is scarcely fit to assume all the responsibilities of perfectly free intercourse. Such scruples deserve respect, though they might be justly met by pointing to the very scant consideration Japan's similarly inspired reluctance formerly received at foreign hands. But if this mood alone had to be dealt with, some *modus agendi* could soon be discovered, some temporary half-way house between

the present wretched dead-lock and the happier condition which might so easily be brought about. The other mood, the disposition to keep things as they are lest some vested interests should suffer by change, deserves to be differently treated. None of us will be disposed to admit that the interests of foreign countries and of Japan alike, as represented by their common commerce, ought to be subserved to the interests of a few merchants, whose property might be deteriorated, or their particular lines of trade interrupted, were the country thrown open. Yet it is impossible to doubt that this feeling lies at the root of much of the uncompromising opposition which everything resembling equal intercourse with Japan encounters among the foreign communities at the open ports. Some time ago, one of the vernacular journals expressed surprise that the people of Yokohama should be so blind to their own benefit as to oppose the opening of the country, with all the increased opportunities, industrial and commercial, such a measure must bring. The writer had evidently given his subject little serious thought. He did not see that, in commerce, whatever tends to subvert existing conditions must be inconvenient to somebody. Japan's foreign trade is a paltry business, compared with what it might be, and the circumstances under which it is conducted in Yokohama are as fatal to its healthy development as they are irksome to men of enterprise and capital. But, for all that, there have grown up under those circumstances a number of traders whose prosperity depends on keeping things in their present groove. To these men the opening of the country signifies the necessity of branching out in new directions; the certainty of seeing the domain they have hitherto monopolized invaded by capital and enterprise from without; the chance of finding the value of their local investments depreciate, and, in some few cases, the assurance that the illicit advantages which they now derive from an abuse of privilege will disappear with the exclusiveness of the privilege. This is the class which really stands in the path of progress and development. A great deal has been written and said about Japanese guilds and monopolists that environ the settlements and effectually check the growth of trade. But the influence of these guilds and monopolists does not deserve to be mentioned in the same breath with the influence of the foreign conservatives. For while the strength of the former depends entirely upon the permanence of the partial intercourse which alone is now possible, the efforts of the latter tend solely to perpetuate the incompleteness of that intercourse. In other words, the Japanese guilds, monopolists, and *sailori*, so bitterly inveighed against, are the inevitable outcome of conditions which a selfish and short-sighted section of the foreign community devotes all its energies to perpetuate. This is how the skeleton telegram of the *Daily News* reads in its expanded form.

DURING the year 1883 the number of actions brought by foreigners in Japanese courts and published in the columns of the local press, was eleven in all. Of these eleven, eight were decided in favour of the foreign plaintiffs, and three in favour of the Japanese defendants. The cases which went against the foreigners do not appear to have presented any perplexing features. Two were applications for an order to compel the defendant to take delivery of goods imported

by his directions, but in both instances conclusive expert testimony was offered that the goods did not agree with the original sample. The third case was a claim for compensation on account of damage incurred by a parcel of fans on ship-board. The plaintiff alleged that the damage resulted from defective drying and was therefore a fault of manufacture; but the defendant proved that the method of packing was in itself sufficient to have produced the injury. In the hearing of these cases eight different Japanese judges were engaged, one in each case; the judgments were delivered without any unnecessary delay, and the reasons were enunciated succinctly and clearly. Facts of this sort are worthy of record, as showing how partial and exaggerated is the notion, so frequently dinned into our ears in Yokohama, that justice is not accessible in Japanese Courts, and that there would be no security for life and property were foreigners obliged to submit to native jurisdiction. It will not be pretended, we presume, that the eight judges who, in more than two-thirds of the cases brought before them during 1883, delivered judgment in favour of foreigners and against their own nationals, were parties to a scheme for creating a falsely favorable impression of Japanese impartiality and fairness. Some critics, indeed, not shrinking from even this wild contention, avow that the Japanese Government and the Japanese Judiciary are parties to a plot which has for its object to throw dust into the eyes of foreign Governments, so as to persuade them to deliver over their nationals to a power which thirsts to make life in Japan miserable for all aliens. But these suspicions, though sufficiently becoming to lunatics or barbarians, scarcely claim consideration at the hands of sane or civilized men. If the creations of vulgar prejudice are to be preferred to the evidence of facts, it is hopeless to expect that our relations with this country can ever be placed on a footing of mutual liberality and confidence. There is, doubtless, an immense margin for improvement in the practice of Japanese civil law. There is, above all, the want of efficient legislation in matters of bankruptcy; a want which makes itself very keenly felt by foreign merchants. But these are points entirely apart from the spirit in which the law is administered. The latter is what the conservative section of the foreign community declares its inability to trust, and in the face of the evidence furnished by the records of 1883, we cannot but think that, if more attention were paid to facts and less to fancies, such a discreditable exhibition of race prejudice would soon be esteemed at its proper value.

BEFORE the Fisheries Act came into operation in 1865 there were many rivers in the West of Ireland where the continued presence of salmon seemed almost marvellous, having regard to the perils by which they were surrounded at every stage of their career. When, however, bag-nets, stake-nets, and other varieties of murderous engines, were abolished, and when the fish no longer found their passage up-stream completely barred, but were able, by judicious steering, to discover a narrow entrance which, in token of the care bestowed even on her finny subjects by Her Gracious Majesty, was designated "the Queen's Gap," a marked increase was soon observed in the stock of these well poached rivers, and it was generally concluded that all danger of salmon ceasing to be an article of

food was at an end. But there is another and more deadly obstacle to the growth of riverine population, and that is sewage. "It is well-known," writes the Hon. W. Mainwaring, in a paper contributed to the literature of the Fisheries Exhibition, "that the natural salmon stock of five of our largest rivers is practically exterminated, and that the fish present themselves annually at their unsavoury mouths, but to be baffled by causes chief among which is that of pollution; in other cases, less markedly offensive, the fish are known to be slowly but certainly receding." *Nature*, commenting on this paper, justly observes that "all the artificial breeding in the world cannot be of any avail in waters thus becoming more deadly, and to the chemist the utilization of waste offers a good field for work." Curiously enough, the same number of *Nature* contains a brief description by Mr. W. R. Browne of a recently suggested device for purifying sewage by an application of the old principle of the siphon. "Into a tank containing the sewage dips a siphon pipe some thirty feet high, of which the shorter leg is many times larger than the longer. When this is started, the water rises slowly and steadily in the shorter column, and before it reaches the top has left behind it all, or almost all, of the solid particles which it previously held in suspension. These fall slowly back through the column and collect at the bottom of the tank, to be cleared out when needful. The effluent water is not, of course, chemically pure, but sufficiently so to be turned into any ordinary stream."

THE new system of superannuation allowances for the Japanese Civil Service presents one feature which appears entirely superfluous. What is the use of a Pension Bureau? If Great Britain, with her immense Civil Service and its numerous ramifications, finds no necessity for such an office, why should Japan need it? In England the records kept in the various departments amply suffice to determine the ordinary allowances and gratuities, as well as those for special merit, and the deductions for bad conduct. We fail to discover any reasons why a similar system should not succeed in Japan. A Pension Bureau can do nothing that is not properly possible to a department. The officers of the Bureau can not conduct special enquiries into the circumstances of the cases forwarded for consideration. They will be compelled to accept, without cavil, the report of the department to which the claimant belongs, so that in the end their duties will be reduced to writing up purposeless records. We fear that in this matter Japan has thoughtlessly imitated the United States, forgetting that America inherits from her civil war a pension list too bulky to be managed by the departments in their ordinary routine, even if the labour could be distributed on any reasonable principle. It is a pity that a measure so excellent as the institution of superannuation allowances should have been made a pretext for adding another useless excrescence to a bureaucracy already inconveniently bulky.

It would appear, from the news brought by the American mail, that France's ideas with regard to China are daily becoming more intolerant. Under date December 12th, we are informed that M. Ferry had telegraphed to Admiral Courbet desiring him to resume operations with the utmost vigour, and further to let the Chinese authorities know that the French Chambers had given the Cabinet *carte blanche* to proceed as it

thought best in Tonquin. The same telegram says that the Admiral was directed to propose a renewal of negotiations, and that in the event of a refusal on the Chinese side, he was to proceed at once to the attack of Sontai and Bac-ninh. So soon as these places are captured, he is to propose another renewal of negotiations, and if again unsuccessful, is to seize one of the five large ports of China, but not either Canton or Shanghai. It will be seen that the Admiral's movements give an appearance of truth to these telegrams. The date of his attack on Sontai is not inconsistent with the notion that his advance was regulated, in the main, by directions from Paris, and if this view be correct, the assault of Bac-ninh is not likely to be long delayed. The negotiations alluded to are perplexing for two reasons. First, that Admiral Courbet is not situated so as to make negotiations with the Chinese authorities possible; and, secondly, that the negotiations were to have been proposed on the basis of the then military position in Tonquin. Now the French Cabinet has declared, more than once, that the possession of Sontai and Bac-ninh is absolutely essential to the consummation of France's projects; and we can scarcely believe that any arrangement, not including the occupation of these places, would have been deliberately proposed. After their occupation, there is little doubt that France will be ready to come to terms on the basis of the then *status*. The capture of Bac-ninh will not prove, we suspect, an operation of much difficulty. It is true that China does not appear to have put any strength into the defence of Sontai. There is, indeed, good reason to doubt whether she had any troops there at all. Whatever resistance the French encountered, and a pretty stout resistance it was, must be credited to the Black Flags alone. The garrison of Bac-ninh is therefore much stronger numerically, and the place has the advantage of being beyond the range of heavy artillery from the ships. But, on the other hand, it offers few facilities for defence from a military point of view, and, moreover, Pang's braves, raw recruits as they are, will probably be found to have less stomach for fighting than Liu's veterans. Yet even with Sontai and Bac-ninh in their possession, the French must see that they will not have advanced far towards a satisfactory settlement. China can keep up the same desultory species of resistance for an indefinite time, without actually acknowledging a state of war, and in the meanwhile the anti-foreign feeling will be growing, and the chance of unpleasant complications increasing, throughout the Empire. It is probably because M. Ferry foresees all this that he has resolved to make the capture of one of the five ports the next step in the proceedings after Bac-ninh has fallen. Canton and Shanghai are excluded from the programme, we are told, the reason for this forbearance being that France wishes to avoid all possibility of trouble with the European powers. We are disposed to think that, with this object in view, Formosa is likely to be the scene of operations. The seizure of a port of the mainland could only be a temporary measure, but the occupation of Formosa would include contingencies which the Chinese Government could not endure to contemplate calmly. Little as we can sympathise with the French pretensions in this business, or with the manner in which they have been advanced, we feel that some decisive action leading to a final and immediate settlement would be ultimately

more conducive to the interests of both Chinese and foreigners, than the present policy of unconfessed warfare and unreal negotiations.

MR. GLADSTONE'S position after the receipt of the news announcing the destruction of Hicks Pasha's army, seems to have been particularly embarrassing. A Cabinet Council was held on November 24th, and it is stated that every one of those present, with the exception of the Prime Minister, urged the advisability of establishing a British protectorate over Egypt. If this account be trustworthy, the course advocated by the leading London journals would appear to be endorsed by an overwhelming majority in the Ministry. Mr. Gladstone, however, is said to have stoutly opposed the adoption of any policy which would commit England to an active military support of the Khedive's enterprises against El Mahdi. His reported line of argument was that Great Britain's leading objects had already been accomplished in Egypt, and that her honour was concerned in the speedy withdrawal of her troops according to the pledges given to the Powers. At the same time he admitted that this withdrawal must necessarily be delayed, in view of recent events, though it could not be avoided on account of any assistance England might be supposed to owe the Khedive in his movements against the False Prophet. In short, Mr. Gladstone's contention was that the Soudan is entirely beyond the legitimate sphere of British interference, and, for the rest, he is understood to have said that an invasion of Lower Egypt by El Mahdi did not appear imminent. In the face, however, of the Cabinet's universal dissent from the Premier's ideas, it was finally decided to retain the garrison at Cairo, a decision which seems to have produced a most salutary effect in restoring confidence to the Egyptian Government. The Khedive immediately issued a proclamation announcing that the British forces would not be withdrawn, and the announcement was instrumental in checking a panic that threatened to paralyse the whole of Lower Egypt. Meanwhile, the report of the False Prophet's success is said to have seriously alarmed the Porte. The Sultan begged the Ulemas to use their influence against El Mahdi at Mecca, but the request does not appear to have elicited a favorable response. Telegraphic despatches state that the Sultan then ordered immediate preparations for an expedition to the Soudan, and that steps to raise the necessary funds were taken without delay. On the other hand, we read, under date December 4th, that the French Ambassador at Constantinople was "instructed to inform the Porte that under no circumstances would France allow Turkey to intervene in the Soudan." We are at a loss to understand by what possible right such a veto could be interposed, seeing that the revolt in Upper Egypt is openly directed against the Sultan, whom El Mahdi has denounced as a man of impure origin and a corrupter of the faith of Islam. At all events, whether or no the Marquis de Noailles conveyed this intimation to the Porte, we find Great Britain agreeing, a week later, that Turkish frigates might be permitted to act in concert with the English fleet in the Red Sea, on condition the frigates did not carry any troops. The British Government has evidently adhered to its resolution not to engage directly in the affair, and the Khedive has therefore been obliged to fall back upon Baker Pacha and Zebehr Pacha, who were to have set

out from Cairo to Suakim on December the 13th. Baker's force was to consist of 2,300 gendarmes (of whom 500 were mounted), 1,500 black troops, and 4,000 Bedouins with five guns. These troops were additional to those stationed at Suakim; but, according to latest advices, the garrison of that place numbered only 500 effectives, and the danger of night attacks from the rebels was so imminent that H.M.S. *Ranger* was engaged throwing shells over the town to scare the enemy. Baker's plan of campaign seems to be that the Blacks and half the Bedouins under Zebehr shall advance from Suakim towards Berber, while the other half of the Bedouins, under Hussein Pacha, go up the Nile, recruiting *en route*. The two forces will endeavour to effect a junction between Berber and Suakim. It must be confessed, however, that the prospects of this campaign do not look very promising, as will be gathered from the following account, extracted from the *New York Herald*, of the events that occurred in the neighbourhood of Suakim on the 2nd of December:—

Another fearful massacre has befallen a detachment of the Egyptian army while on the march from Suakim to Berber on December 2. At the halting place in a wady, thirty miles from Suakim, a force of 800 negroes and Bashi Bazouks were utterly annihilated by Kabbabish Bedouins who have declared for the False Prophet.

The troops were marching with most of their Remingtons packed on camels, when, suddenly, over five thousand Bedouins, armed with spears and old muzzle loaders, attacked the detachment. The camels all stampeded. About six hundred troops managed to form a square—the blacks on three faces, the Bashi Bazouks on the fourth. The fight lasted only about twenty minutes, the Bedouins crying, "Join us and kill the Christian dogs from Cairo!"

All the Bashi Bazouks were killed. Many of the blacks threw up their hands, shouting, "Aleikum salaam!" "Peace be to you, true Mussulmans," and then went over to the Arabs. The moral effect of this new victory of El Mahdi's followers is spreading like wildfire, his emissaries and dervishes appearing already in Upper Egypt and Assouan—the usual halting place for Cook's Nile tourists—and preaching holy war.

The whole country is in a blaze. The rank and file of the Egyptian army at a favorable moment is likely to declare for the False Prophet, who is now regarded by the entire population as the true Messiah of Islam. Now only 1,000 men are left to form the garrison at Suakim. The Arabs are firing shots into the town every night. Baker Pacha expects to leave on Wednesday or Saturday at the latest, but he can now merely watch events; and any march to Berber is deemed impossible.

Already the effect of Tel-el-Kebir is more than neutralized; and the gravest consequences may ensue in the delta, as well as in Upper Egypt. The Egyptian government is considering the question of laying a cable in the Red Sea between Suakim and Suez. King John of Abyssinia is collecting all the Abyssinians and Gallas tribes of the south and is ready to make a dash upon Massowah and acquire the long coveted seaports.

Another account of the Egyptian defeat says that spies entered Suakim and reported that the hill men were hovering near the town. On hearing this Mahmoud Taper Pacha, anxious to efface the defeat at Toka on the 6th ult., on account of which a court martial was pending, sent forward 500 black troops and 200 Bashi-Bazouks against the hill tribes, he himself remaining at Suakim. At the distance of three hours' march from the town the Egyptians were attacked by several thousand men. The Egyptians fought stubbornly, but were cut to pieces. Fifty, of whom half were officers, escaped. This defeat of the troops which have hitherto been regarded as the flower of the army has caused great consternation, as it tends to show that the task of opening the route from Suakim to Berber with the material at Baker Pacha's disposal is a nearly hopeless one. The Sultan of Turkey has despatched an aide-de-camp to Hedjaz and two court dervishes to the Soudan on errands relating to El Mahdi's revolt.

The present disaster, following on the annihilation of Captain Moncrieff's force near Suakim last month, indicate a general rising of the Bedouin tribes under the banner of the False Prophet. It shows that the relief of Khartoum will be a most difficult operation and that the proposed line of defence between Suakim and Berber will be almost impossible to maintain against El Mahdi's advance. A letter from Suakim gives an account of Captain Moncrieff's fate. He landed with Mahmoud Pacha at Trinkitat, forty-five miles south of Suakim, whence he marched to Toka. The force lost eleven officers and 142 men, besides six Turks and several Greeks; they lost also one gun and three hundred rifles. Captain Moncrieff was last seen on horseback surrounded by the enemy and defending himself with his revolver until he was dragged from his horse, overcome by numbers, and cut to pieces. The reports of the engagement, if so it can be called, are to the effect that the Egyptian troops were formed in a square, as usual, but that the square was broken into by eight of the enemy, who locked their shields and rushed through the line. An immediate panic seized the troops, who fled in confusion, throwing away their arms, ammunition, water, bread; and even stripping off their clothes in order to escape the faster. Mahmoud Pacha returned to Suakim, and refused again to face the rebels with such troops. Toka is held for the Egyptian government by a body of soldiers of the Soudan army, assisted by some impressed convicts. A panic prevails at Suakim, and it is suggested that black troops should be ordered up from Massowah.

Zebehr Pacha, whom the Khedive has selected to act with Baker, is famous as the conqueror of Darfour, and, after the Mahdi, is said to be the most remarkable man the Soudan has produced. It is reported that he is a bitter enemy of Gordon Pacha, and that his ideas of the value of English officers for campaigning in the Soudan are not at all complimentary. One half, he says, would fall sick, and the other half nurse them. What he would like is to have thirty or forty Ulemas to preach the true religion, a process that would dispose of El Mahdi and his pretensions in a very short time.

THE fire at Sapporo, which recently consumed the house occupied by Professor Brooks, of the Imperial Agricultural College, broke out in the servants' quarters and at a most inconvenient hour of the night, namely, eleven o'clock. Professor Brooks and his wife, and a guest, Miss Shaw, escaped in their night-clothes, and nothing was saved. Happily, the inmates sustained no injury.

WE (*Hongkong Daily Press*) hear that the Kwang-tung authorities have officially notified the foreign Consuls at Canton that the river is about to be blocked, leaving only a narrow channel for the passage of vessels up.

THE *Mercury* says:—"A telegram has been received from St. Petersburg, announcing the death in December last of Mr. P. A. Ponomareff, head of the well-known tea firm Ponomareff & Co., in Hankow. Deceased was 42 years of age, and came out to the Far East as a youth, without any means, some twenty years ago. He is said to have left seven million dollars."

THE report of the P. & O. S. N. Co. shows that the net profits of the year amount to £212,310, which after deducting an interim dividend of 2½ per cent. admits of a further dividend of 2½ per cent. and a bonus of 2 per cent., a balance of £9,310 being carried forward to a new account. Considering the badness of trade, and the loss caused to the Company by the enforcement of quarantine in Egypt and Italy, this is a very satisfactory result.

It is reported (says the *Courier*) that the commander of the forces in Chekiang, accompanied by the Ningpo Taotai, has lately visited a place called Chin Wu-kung, near to the entrance to the river reading to Ningpo, and that it has been decided to build a fort there. Some European soldiers are said to have been buried on the spot where the fort is to be built, and a small memorial erected to the memory of an instructor in the British Army is reported to have been removed. Foreigners have to respect the remains of Chinese, and why should not Chinese be respectfully requested to respect the burial place of British soldiers?

THE story of the loss of the British bark *Sattara*, of Liverpool, is a very simple one. It appears that the vessel was in a Westerly gale on Sunday last off Omaisaki, and in an attempt to wear ship, which failed, she drifted and was stranded about five miles to the westward of the light. The accident occurred in the middle of the day, and fortunately no lives were lost. The *Sattara* may be reckoned a total loss, as she lies bilged and with her back broken. The captain has engaged the schooner *Helena* of this port to visit the scene of the wreck to bring back the crew.

THE JAPANESE CIVIL SERVICE.

THE progress of Japanese reform has, of necessity, been very slow in the direction of the Civil Service. The circumstance attending the fall of feudalism, though, theoretically, they overthrew the old-fashioned doctrine so long prevalent in England and still paramount in the United States, that public offices are the property of the ruler, were nevertheless of such a nature as to unavoidably perpetuate that evil. For, while the permanent existence of the Government of the Restoration depended, in great part, on the selection of competent men to fill the various administrative posts, its immediate safety could only be secured by mitigating, as far as possible, the financial disasters which the abolition of the Daimiates entailed in so many cases. It is the statesman's first duty to adapt his reforms to the conditions he has to deal with, and we cannot be at all surprised that the Central Government of Japan, in the early days of its existence, paid more attention to the clamour of needy *Samurai* than to the strict dictates of economy. Members of Cabinet and Heads of Departments must have been more than human to ignore the distress of their clansmen and supporters, and to turn a deaf ear to the appeals of men whose abstract title to the privileges and emoluments of office was as valid as their own. It resulted, therefore, that during the first few years of the Mediatized Government's existence, the public offices were crowded with apparently functionless functionaries, whose principal business seemed to be of a mutually obstructive nature, and whose numbers were so obviously excessive that foreign critics, ignoring, or not caring to know, the exceptional circumstances of the case, saw constant justification for preferring, against the chiefs of the new bureaucracy, sounding charges of corruption, nepotism, and iniquitous alienation of public money.

This was bad enough, but there followed another, and, if possible, a worse, evil. The process of weeding out these redundant establishments had to be undertaken sooner or later. Before long the task was commenced, and, at the approach of financial periods, each department of State was visited by a convulsion—an earthquake, as the light-hearted sufferers were pleased to call it—which shook off a cluster of the useless parasites, and gradually reduced the staff to moderate dimensions. Necessarily, however, there sprung up, under the influence of these constant shocks, an universal consciousness of insecurity. Nobody knew whose turn should come next. It would be unfair to assume, and indeed there is little reason for the assumption, that these winnowings of the grain from the chaff were largely subserved to favoritism or party-spirit. But they probably suffered from such taints at least as much as would have been the case elsewhere,

and they certainly had the effect of inducing a perceptible paralysis, or perfunctoriness, of effort throughout the middle and lower grades of the public service.

To remedy this evil—to restore, or rather to impart, to the service something of that stability so essential to zeal and efficiency—the evident plan was to institute a system of superannuation allowances. Nearly three years ago, the advisability of taking some step in this direction was strongly urged in our columns, but the Government, though, we believe, long cognizant of the necessity, only recently succeeded in adapting other conditions to the proposed reform. A Notification, which we translate elsewhere, has now been issued, enacting various regulations for the grant of superannuation allowances and gratuities to civil servants, and we cannot doubt that the measure will be welcomed heartily by all Japan's friends. It was no light matter that men who had served their country well should be cast off, like worn-out garments, when the occasion was convenient, or when age began to impair their usefulness.

It is right to mention here, that, even before the promulgation of the Notification in question, there did exist, in the Japanese Civil Service, a system of gratuities intended to recompense long service. But it was an exceedingly illiberal system. Half the amount of an official's monthly salary was multiplied by the number of years he had served, and the product represented his gratuity, on retirement. Thus, to take an example, an appointment of 200 *yen* per month entitled its holder, on retiring from office after twenty years' service, to receive a lump sum of two thousand *yen*. We call this an illiberal system, because, first, it contrasts markedly with the rules for the commutation of pensions in England, where the lump sum receivable, by way of gratuity,* amounts to a year's average pay multiplied by two-thirds of the length of service in years; and secondly, because the emoluments of office in Japan are so small that a gratuity calculated on the above basis, represented, in a great majority of cases, the veriest pittance.

Questions of this nature occupied the public mind in England also, not so very many years ago. Looking back at the annals of the English civil service, we find that the present system of superannuation allowances had its origin in a practice which grew up, in certain of the larger offices, during the first half of the reign of GEORGE III., when, by voluntary collections from the salaries of Civil Servants, a fund was provided for the support of those who might be disabled in the discharge of their duties, or who might retire after long service. Indeed, it would surprise a great many Englishmen to be told the truth about their Civil Service.

* This money is paid by a Life Insurance office, not directly by the Treasury.

For up to the year 1810, those doing duty in the State departments were little more than private clerks, or *employés*, of the head of their department. They had no legal status as public officials, and their pay came out of a fund made up of the fees collected in the department; the balance of which fund, like the appointing power itself, was regarded as a part of the perquisites of the Minister or head of the office. This state of affairs was a part of the old "spoils system" which had formerly prevailed, and under which offices and places in the Civil Service were simply saleable property. The statutes of 1810 and 1816 remedied these false conditions by making all those engaged in the established service public officials with fixed salaries. About the same time, too, attention seems to have been directed to the desirability of making the Service more attractive by means of provisions for disability or declining years. In 1811 a partial measure in this direction was inaugurated, and its results proved so conducive to efficiency, as well as to economy, that various modifications followed, always in a liberal sense; until, in 1859, a final revision of the laws brought them to their present form. The rule now is that, if there has not been more than ten years' service, there can be no allowance. The retiring allowance, after ten, and before eleven, years of service, is at the rate of ten-sixtieths of the current salary of which the official is in receipt at the time. At eleven years of service, the allowance is eleven-sixtieths of the salary, and so on, increasing at the rate of one-sixtieth for every year of service up to forty years, after which there is no increase. Thus the maximum allowance, under ordinary circumstances, amounts to two-thirds of the salary.

These data enable us to compare the system now inaugurated in Japan with that prevailing in England. In Japan the general rule is that a minimum of fifteen years' service is necessary to establish eligibility for superannuation allowance: in England the minimum is ten years. On the other hand, the amount of the allowance after fifteen years' service is the same in both cases, viz., one-fourth (in England fifteen-sixtieths) of the retiring officer's salary. The rate of increase, however, is different; being in England one-sixtieth per annum, and in Japan only one-two-hundred-and-fortieth. Again, while in England the increase continues up to forty years, after which length of service the allowance is two-thirds of the salary, in Japan, the increase ceases after thirty-five years, when the allowance becomes one-third of the salary. It thus appears that, in its main features, the Japanese scale is less liberal than the English. Doubtless, under the circumstances, this is an error on the right side.

An integral part of the English method of securing faithful and efficient officers is that the salaries are carefully graded, so

that there are regular additions dependent upon length and excellence of service. We have reason to believe that reforms in this sense are not yet completed in Japan, though much has been undoubtedly effected. It will be seen, however, that the new Regulations embody carefully guarded provisions for the granting of special, or discretionary, allowances, up to a fixed limit, in cases of severe bodily injury or disability incurred in the execution of duty, abolition of offices, and so forth. These details find their counterpart in the English system. We miss, however, in the Japanese regulations, any clauses referring to exceptional merit or special service of great public value. Possibly the power to deal with these cases is specially reserved, but without some provision for its exercise, the system cannot be considered perfect.

A most important regulation is that which enacts that, except in special cases of incapacity through illness or physical injury, no official becomes eligible for a pension before he is sixty years of age. It is evidently the desire of Japanese legislators to make superannuation allowances a genuine provision for old age. We are not prepared to say that the method adopted is too severe, having regard to the peculiar circumstances of Japan's case, but we may observe that the same limit of age formerly existed in the pension regulations of the English Colonial Office, and that its effects proved very harsh in practice. The rule, however, told with most severity in the case of high officials whose offices were not permanent, and who often found themselves, at about the age of fifty, without any hope of re-appointment or any sufficient means of support. In the Japanese Regulations, some provision against these contingencies appears to be made in the shape of special pensions to officials of the upper grades (*vide* second clause of Article II.).

It has been said that the prosperity of the principal European States is owing, in a great degree, to the character of their Civil Service, which has been instrumental to the development of their resources and to public economy. Fully endorsing this, we welcome with satisfaction everything tending to the moral regeneration of official life in Japan. The institution of superannuation allowances is a step in the right direction. It was preceded by another reform, not generally known, but even more indicative of the Government's fidelity to the spirit of improvement. We allude to an order recently issued to the various departments that in future the minimum of service in any grade before promotion to a higher shall be four years. We learn also that the authorities contemplate inaugurating tests of qualification, or, in other words, substituting the "merit system" for the arbitrary methods now existing. It is scarcely necessary to say that the sooner this change can be effected, the better. The consequence of a similar reform in the British Service has been not

only that a limit is set to the exercise of improper authority, to intrigue and venal influence, but that Government itself assumes in the eyes of the people a purer aspect. Men see that while servility and manipulation, partisan scheming and official prostitution, are repudiated, honour and emolument are brought within reach of the best capacity and the highest character: that, in short, fidelity to public interests is an obligation paramount to all the selfish claims of individuals and of parties. It will be a happy day for Japan's prestige and prosperity when she finds herself in a position to remove from her Civil Service the traces of feudal institutions and arbitrary government.

JAPAN'S CRITICS.

THAT a Hongkong journal should be ill-informed in matters relating to Japan is not surprising. Ignorance of this country and its people is the normal condition of foreigners who reside here, and a similar, or even greater, want of knowledge may well be pardoned in a journalist living a thousand miles away. What does, however, surprise us a little is that this lack of information should be thought no obstacle to the delivery of *ex cathedra* opinions on Japanese affairs by a newspaper which, like the *Hongkong Daily Press*, manifests a general desire to be just and accurate. Perhaps the key to this enigma is to be found in the fact that our Colonial contemporary entirely underestimates the extent and importance of the subject he undertakes to discuss. He calls the abandonment of extraterritoriality in Japan a threadbare question, and then proceeds to dismiss it with an airy statement that "when the Japanese enjoy under their own laws the full security for life, property, and reputation which is conferred by the laws of Western nations, then foreigners may cease to claim extraterritoriality." This is an unimpeachable position. It brings the problem at once within reach of a few pretty platitudes and enables the advocates of extraterritoriality to strike an imposing attitude. But we want something more than platitudes. We want to know, for example, who is to be the judge of Japan's condition. Who is to say whether or no she enjoys, under her own laws, full security for life, property, and reputation? The *Hongkong Daily Press* evidently thinks that the judgment is to rest with foreigners, and gives us an example of the grounds upon which the verdict may be based by quoting the recent police case at Nagasaki. "Instead," he says, "of the policeman, accused of causing the death of the Chinaman who was killed, being placed on his trial in ordinary course, and being held convicted or acquitted according to the result of such trial, the case was made the subject of a private investigation." Hence our Colonial contemporary argues that "in

Japan the judicial process is not independent of active interference by the executive, and that consequently the operation of the law is not certain and impartial." This reasoning is perfectly fair and logical so far as it goes, but it stops short at a very important point. It fails to show that there was anything out of "the ordinary course," or that the judicial power was in any way interfered with by the executive, in the case under consideration. We have to remember that the matter of investigation at Nagasaki was the act of a body of police in the discharge of their duty, and that while the act itself might properly have been tried by the usual tribunal, the duty had been made the subject of diplomatic representations by the Chinese Government, and the whole affair had excited feelings by which, unfortunately, those engaged in the controversy on the Chinese side had suffered themselves to be unduly influenced. Under these circumstances it was considered wiser, in the interests of public order and international comity, to conduct the investigation into the conduct of the police with closed doors. In commenting on the fact, we said that "such a course is within the discretion of every Government," of which assertion the *Hongkong Daily Press* declares that "a more lamentable display of ignorance it is almost impossible to conceive," and that "so far from the course followed in the case in question being one which is 'within the discretion of every Government,' it is one which would never be dreamt of in any civilized country of which public trial is one of the institutions." It is unfortunate that before passing this sweeping judgment upon the incorrectness of our position, the *Daily Press* did not take steps to supplement its own singularly imperfect information. In Articles 263 and 264 of the Japanese Code of Criminal Procedure, which came into force in January, 1881, we find the following provisions:—

Art. 263.—All criminal, correctional, and simple police cases brought before the jurisdictions of judgment will be there examined, debated, and decided in public court under pain of nullity of the condemnation pronounced.

Art. 264.—Nevertheless, if, according to the nature of the accusations, the discussion would appear to be dangerous to public order, to decency, or to good manners, the tribunal may, either on the decision of the public administration, or on its own authority, direct that the discussions shall take place without the presence of the public. The judgment must always be given in public.

This code, which in all its leading features reflects the most enlightened spirit of Western jurisprudence, has been critically examined by several juris-consults of European reputation, and their detailed verdicts, published at intervals in the columns of the *Japan Mail*, were, without exception, highly favorable. It did not occur to one of these specialists, who had made the science of law their lifelong study, to find fault with the discretionary power vested in the public administration by the Article we have quoted. It did not occur to them to find fault, for the simple reason,

that the same power is vested, and must always be vested, in the public administration of European States, of whose methods, for the rest, the new criminal procedure of Japan is a counterpart. Yet because exceptional circumstances dictated an exercise of this exceptional power in Japan, the *Hongkong Daily Press* does not hesitate to assert that "healthy public opinion, which in our own country is the greatest safeguard of the purity of the administration of justice, is wanting in Japan, and in the absence of such safeguard, how can foreigners give their assent to the abolition of extraterritoriality?" We know not whether to marvel more at the ignorance or the recklessness of these comments. The commonest principles of justice require that before levelling wholesale denunciations against a Government and a people, a public writer should take some pains to inform himself of the correctness of his premises. This easy precaution has been wholly neglected by the *Hongkong Daily Press*. Our Colonial contemporary will do well to remember, in future, that even among the recognized institutions of Western civilization there may be something which is not yet included within the limits of his profound knowledge.

Nothing in the outlook of Japan's foreign relations appears to us more hopeless than the carelessness and ignorance of those who, from proximity and experience, ought to be best able to appreciate her condition. Here we have a case of a Hongkong journalist who, speaking with all the assurance of authenticated knowledge, informs his readers that "while Japanese ideas on jurisprudence remain so very different from those of Westerns, the maintenance of the present system of extraterritoriality is indispensable." This difference, so loudly proclaimed, rests, as we have shown, on the evidence of a proceeding strictly in accordance with the provisions of a code which, in all its leading features, is an exact counterpart of the systems now obtaining in the most civilized Occidental States, and which has elicited warm encomiums from the most celebrated European jurisconsults. Under ordinary circumstances such grotesque sciolism as that displayed by the Hongkong newspaper would be dismissed with a smile of contempt, but, most unfortunately for Japan, her reputation lies, to a great extent, in the hands of local critics. The outside world, in general, has no means of ascertaining the truth or falsehood of what these critics say, and is naturally disposed to defer to their exceptional opportunities of obtaining information. During the past three years the provisions of the new codes have been carefully observed in Japan. The trial of accused persons, even political offenders, has invariably been conducted with the utmost publicity; every latitude has been given to counsel, and the judges have shown themselves painstaking and im-

partial. All this, however, is passed over in silence, and because the conduct of policemen, in the discharge of an unusual duty, is carried, by a foreign treaty Power, altogether outside the domain of every-day criminal procedure, and is consequently investigated in a manner prescribed by a part of the code specially adapted to extraordinary contingencies, an English journalist flippantly declares that Japanese do not enjoy under their own laws full security for life, property, and reputation. To grapple with such ignorance and recklessness seems truly a Sisyphean task. We do not like to think that the deliberate object of those foreign local writers who discuss the subject of treaty revision, is to throw dust in the eyes of the public. Yet in the face of their sweeping errors and contradictions, we know not what else to conclude. Only a few days ago, an English newspaper, published in Yokohama, contained the following statement:—"Japan is said to demand that the extraterritorial rights of aliens shall be totally abrogated, and that the customs tariff shall be fixed entirely at the will and pleasure of the Government." Now not only have no such demands ever been made by Japan; not only has she never been seriously accused of making any such demands; but the very journal which contains this extraordinary statement, itself published, some time ago, a series of leading articles on the subject of treaty revision, and in them fully explained that Japan asks for nothing more than a limited amount of jurisdiction over foreigners, as a probationary step, but above all, to correct the glaring deficiencies which exist under the present system, and whose existence the journal in question fully and frankly acknowledged. What conclusion are we to draw from such strange tergiversations? A newspaper which yesterday told its readers that the demands of Japan are limited and reasonable, and to-day informs them that the same demands are unlimited and unreasonable, must surely be swayed by passion and prejudice rather than by fairness and love of truth. We cannot wonder that the outcome of all this, so far as the general public is concerned, should be helpless bewilderment. And yet it is most important that the position should be clearly understood. Again we repeat, what we have often said before, that the Japanese Government does not claim the right to "fix the tariff entirely at its own will and pleasure." The day must come when it will enjoy that right, like every free State in the Occident, but for the present it is willing to pay the utmost respect to vested interests, and to proceed with whatever degree of deliberation may be considered advisable. Neither does "Japan demand that the extraterritorial rights of aliens shall be totally abrogated." Even were she prepared to formulate such a demand, its wisdom would be very doubtful, in view of the strong race prejudices

of those over whom she would have to exercise jurisdiction. What she asks is that there shall be inaugurated some system pointing to the abolition of extraterritoriality hereafter, and so contrived as to correct abuses in the present. This end would be accomplished by restoring to her a limited amount of jurisdiction, extending, for example, to misdemeanours and delicts. In the event of such an arrangement being made, she has offered to guarantee that in every case where a foreigner is tried, a majority of the Judges on the bench shall be foreign, and that simple police cases shall be investigated by a Japanese and foreign magistrate, the decision of the latter to be binding in case of disagreement. In making this proposal, Japan's avowed object is the complete opening of the country, so that aliens shall enjoy here all the privileges of trade, travel, and residence, which Japanese enjoy when they visit the West. The extraterritorial system was devised to suit a condition of partial intercourse, and it is as much Japan's desire, as it is the professed aim of the Treaty Powers, to remedy that condition. All this has been repeated over and over again, but when simply and honestly stated, it presents such a reasonable and laudable programme, that those who desire to perpetuate the existing state of affairs find it necessary wholly to misrepresent Japan's proposals, and falsely to attribute to her Government demands which are calculated to excite foreign apprehension and opposition. It is a discreditable state of affairs; discreditable to the honesty of foreign criticism; discreditable to the consistency of foreign professions, and discreditable to the intelligence of foreign judgment. But we have the comfort of knowing that truth will prevail in this instance, as it has ever prevailed. Sooner or later the attitude of foreigners towards Japan will cease to reflect that race prejudice of which they themselves are the loudest deprecators; and sooner or later European Governments will recognise that this nation cannot be condemned to a perpetual state of partial intercourse with its fellows, and to the continued stigma of semi-barbarous isolation, simply because the local interests of a few hundred foreigners have drifted into a groove that runs in the opposite direction from real progress and larger international fellowship.

THE BANKS OF EUROPE.

At the last session of the International Congress of Statisticians, held at Budapest, the Statistical Society of Italy was commissioned to prepare an enquiry into the condition of the note-issuing banks of Europe. The work has been completed,* and is composed of a series of monographs referring to the banking establishments of France, Great Britain, Italy, Germany, Russia, Austria-Hungary, Belgium, the

* *Statistique internationale des banques d'émission.*

Netherlands, Sweden, Norway, and Spain. The details furnished enable one to form an idea of the systems of the different banks, the different circumstances of their origin, and the services they render to Government and the public.

The banks of France, Spain, Belgium, and the Netherlands, possess features which betray, if not a common origin, at least many points of resemblance. We may trace throughout them all general ideas which prevailed at the establishment of the Bank of France. The fundamental statutes of the latter were enacted by Imperial Decree, on January 16th, 1808; and the capital was then 90 millions (francs). After the Revolution of 1848, the departmental banks, founded under the First Empire, were absorbed into the central institution; the power of issuing notes exchangeable on demand was extended to the end of 1897, and the capital was fixed at 182½ millions of francs. The affairs of the bank are in no way mixed up with those of the State, though the latter appoints its Governor. The board of management is elected by the shareholders, and there are 90 branches. In Spain, the *Banco Espanol de San-Fernando*, founded in 1829, after various modifications, became, by a decree of March 19th, 1874, the Bank of Spain. Other banks of issue which had existed up to the latter date in eighteen of the principal towns, were thenceforth obliged to unite with the central bank, or to go into liquidation. The Bank of Spain belongs to a society of shareholders, but is under obligation to make certain advances to the State, as well as to collect the taxes in provinces where no official organization exists for that purpose. The Governor and the two vice-Governors are appointed by the KING, but the board of managers, by the shareholders. The capital is 100 millions of *pesetas* (93 million francs). In Belgium an analogous organization exists. The National Bank, possessing the power of issuing notes payable to bearer, was created by a law dated May 5th, 1850. A quarter of its profits belong to the State. It performs the service of the Treasury; is charged with the care of the public funds and with the manipulation of the national debt. The governor and vice-governor are appointed by the KING, and the Government exercises an active surveillance over its operations. The capital is, at present, 50 millions of francs. In Holland, the Netherlands Bank, which alone is authorized to issue notes, was organized, in 1814, on lines laid down twelve years previously by an official of the Batavian Republic. Its statutes were revised in 1864, and its privilege of issue was extended to March 31st, 1889. The first capital, in shares purchased by the Government, was subsequently allotted to the public. The bank performs, at Amsterdam, the service of the State, gratis, and keeps the public funds, of which the total figures in its balance sheets. The KING names the president and secretary; and a special commissioner, whose functions are almost a sinecure, is supposed to watch over its operations. The capital is 16 millions of florins (33,600,000 francs).

These details show that the Bank of France furnished the model of the Spanish, Dutch, and Belgian establishments. The same privileges, and the same methods of naming the board of management, as well as the principal officers, exist throughout. In every case the Bank renders larger service to the Treasury than in France, but the principles which, from the era of the Consulate, have ruled the French organi-

zation, are plainly traceable in the other establishments.

Great Britain possesses a banking system which differs considerably from those we have just considered. The Bank of England is a corporation created, in 1694, by royal charter. Its capital of £14,553,000 (367,026,660 francs) is divided among a great number of proprietors. It is at present conducted according to the principles of PEEL'S Act of 1844, and has a separate department for the issue of notes. These may be issued to the extent of 14 millions sterling on public securities, but beyond that amount every note must have its equivalent in gold in the strong-room. A plurality of note-issuing banks still exists, but their number is undergoing gradual diminution owing to restrictions imposed by the Act of 1844. No provincial bank established since this Act became law can issue notes, nor can the notes of the 279 banks previously existing circulate beyond a radius of 65 miles from London, or exceed the aggregate already issued in 1844. The consequence of these restrictions is that the number of such banks has been reduced to 150. The banks of Scotland and Ireland, however, have the power of issuing notes in excess of the number they had in circulation in 1844, but only on condition that the extra issues are secured by an equivalent in specie. The Bank of England is the Government's bank. It administers the national debt; keeps the accounts of the holders of public stocks as well as of the Government, and pays the interest on the Funds. In addition to these services, it pays the State a yearly tax of £120,000 on its ordinary note issue of 14 millions, and a corresponding percentage on additional issues.

Returning now to the Continent, we find that the banking systems of all the States other than those on the west, reflect the violent political, and consequently economical, shocks produced there during the last quarter of a century. Beginning with Germany, we have an Imperial Bank surrounded by a number of private institutions. The system is governed by the provisions of a law passed March 14th, 1875. Originally the Bank of Prussia and thirty-two private banks exercised the right of issuing notes. In 1867, it was decided that they should all be submitted to the federal legislation. In 1875, the unification of Germany having been accomplished, the Bank of Prussia disappeared and was replaced by the *Reichsbank*, or Bank of the Empire. Its capital, amounting to 140 millions of marks (172,200,000 francs), was formed with that of the Bank of Prussia, supplemented by funds obtained from an issue of interest-bearing Treasury Bonds, and the whole is divided into 40,000 shares. The State concerns itself directly about the affairs of the Bank. The Chancellor superintends it carefully, having under his orders a board of directors named by the Emperor and holding office for life. The private banks have not disappeared. Fifteen of them do not subscribe to the new régime: sixteen have subscribed. They are not allowed to have any branches, and their notes circulate only within the States from which they derive the right of issue. The *Reichsbank* manages all the financial business of the Empire, gratis. It may also be charged with the conduct of business on account of the Confederate States. In addition, the Treasury shares directly in the profits of the Bank. Thus, in 1877, a profit of 4,296,183 marks remaining after interest on capital and allotments to the reserve fund had

been deducted, was divided equally among the shareholders and the State. Side by side with the notes of the Bank, circulates paper-money, to the amount of 120 million marks, issued directly by the Empire and exchangeable for specie at the Treasury.

Coming, now, to Austria, we find only one bank of issue, the National Bank of Austria. Its administration is less directly controlled by the Government than that of the *Reichsbank*, but it is, nevertheless, chiefly occupied in sustaining the Treasury and the public finances, embarrassed as they are by the existence of a fiat currency. The bank's right of issue dates from 1816, and was renewed in 1862. Arrangements were also made at the latter date, to gradually extinguish the State's debt to the institution and to prepare for the resumption of specie payments. The Governor is nominated by the EMPEROR, who also confirms the nomination of the directors chosen by the shareholders. The institution does not, as in Germany, perform the service of the Treasury, but has charge of the finances of the salt-mines, connected with which there is a circulation of 68 millions of florins. The Bank's capital is 90 millions of florins, and its circulation, in 1876, was 286 millions. In the various crises through which the country has passed, the Bank has always come to the assistance of the Treasury, but the result of these events is the fiat currency, first issued in 1862, and still unredeemed; and side by side with it, a paper money of the State, amounting, at one time, to nearly 400 millions of florins.

In Russia there is a veritable State Bank. Before the Crimean war there existed in Moscow, St. Petersburg, and other large towns, official banks, the assets of which had been absorbed by the State. The Bank of Russia was then founded. It took charge of the reserves, and assumed the liabilities of the former Banks, and its capital, amounting to 20 millions of roubles (80 million francs) was furnished by the Treasury. From whatever direction this institution be examined, it is found to be only a species of ministry, whose operations, good or bad, go to enrich or impoverish the Treasury. It is divided into two parts, one of which has to do with State affairs, the other with commercial. It includes its paper issues among its assets, and the Treasury is supposed to be its debtor to that amount. It includes them also among its liabilities under a slightly different name. In 1881 the Treasury owed the bank, on account of paper circulation, 545 millions of roubles. The institution, simple as its lines appear, is by no means a rudimentary affair. Its mechanism is as well conceived as that of the great establishments of the Occident. Among its functions is the very difficult duty of managing the finances connected with the liberation of the serfs.

Finally, we have the Italian Banks. In 1844 the Government of Piedmont created the Bank of Genoa, under the surveillance of a royal Commissioner and sub-Commissioner. The Bank absorbed that of Turin, which had no business, and took the name of the General Bank. It was the germ of the present National Bank, which, following the Piedmontese flag from capital to capital, has its principal office now in Rome. The ancient banks of issue were not, however, abolished. The five principal ones continued to exist, and ultimately united with the National Bank to form the celebrated *Consorzio*, which helped so largely to cure the country of the leprosy of a forced currency. The National Bank

gives a fair idea of Italy's recent progress. In 1870 its capital was 80 millions (francs); its bills and acceptances 198 millions; its circulation 290, and its reserves 159. In 1881, the capital was 200 millions; the bills and acceptances 244; the circulation 461, and the reserves 170.

We have omitted Norway, because the banks there enjoy a *quasi* liberty, which is supposed to have contributed to the wonderful rôle played by the country in marine transport. With the exception of Norway, however, it is worthy of note that the States of Europe are entirely strange to the free banking system, which is said to count for so much in the wonderful commercial prosperity of the United States. Everywhere is conserved the right of the Sovereign to authorize the issue of notes payable at sight or to bearer. The confusion of public and private interests caused by this interference on the part of the State, is not seriously felt in Western Europe, but already in Germany the Treasury of the Empire absorbs a considerable part of the profits which belong properly to private enterprise. Side by side with the notes of the Bank, we have the notes of the State circulating. In Austria the Bank, though more independent in appearance, suffers from the effects of the fiat currency and from the depreciated notes of the State. In Russia matters are still worse, for we have a State Bank issuing paper money below par. There is to be observed also, a general tendency towards a single Bank. In France this tendency has actually matured, and in other countries the local banks have been absorbed, more or less, by a central establishment. This result, whatever may be its bearing upon commercial facilities, certainly enables the Bank to offer more solid assistance to the State at seasons of peril.

NOTIFICATION No. 1 OF THE COUNCIL OF STATE.

It is hereby Notified that the following Regulations for Granting Pensions to Officials have been enacted:—

REGULATIONS FOR PENSIONS.

Art. I.—Pensions will be granted, on retirement from the service, to Civil Officials of the *Chokunin*, *Sonin*, and *Hanin* classes, according to the number of years they have served and their age.

Art. II.—Pensions will be granted for life to those who, having attained the age of sixty, retire after serving fifteen years or upwards; and to those who, although they have not attained that age, retire on account of the abolition of their office or functions, or on account of incapacity brought about by incurable illness.

Special Pensions may be granted to Ministers of State, Privy Councillors, Ministers of Departments, and Presidents of the Senate or the Council of State, who retire after completing a service of two years, or upwards, in those grades.

Art. III.—Pensions will be granted for life to those who are obliged to retire from the service in consequence of permanent ill-health contracted, or serious injury sustained, in the execution of their official functions, even though their period of service be less than fifteen years.

Art. IV.—In the case of officials who, having become incapacitated for further service by permanent ill-health contracted, or serious injury sustained, in the execution of their duty, shall have forwarded a medical certificate to that effect from a licensed physician, and obtained permission to retire, Pensions will be granted without reference to the number of years they have served.

Officials who come under the categories enu-

merated in Articles III. and IV., and who, moreover, have lost the use of eyes, ears, or a limb, may, in consideration of these facts, whether they apply to retire, or are retired by order, be granted, in addition to their regular pensions (as set forth in Articles III. and IV.), Special Pensions not exceeding seven-tenths of the emoluments of their offices at the time of retirement.

Should the above-mentioned medical certificate from a licensed practitioner seem of a doubtful character, the Head of the Department to which the official belongs, shall cause him to be duly examined by a Government medical officer, and shall be guided by the latter's report.

Art. V.—Pensions shall be based on the salary of which an official is in receipt at the time of retirement. A Pension awarded after fifteen years service will be $\frac{1}{4}$ (or $\frac{1}{4}\frac{0}{10}$) of that salary. For every year after fifteen years service the pension will be increased by $\frac{1}{40}$ of the salary, until, at thirty-five years' service, it attains an aggregate of $\frac{3}{4}$ (or $\frac{3}{4}\frac{0}{10}$) of the salary; after which it will not be increased. In the case of officials who retire when not on the effective list, their Pensions will, nevertheless, be calculated on the basis of the salary of their office.

In the cases enumerated in the second clause of Article II., and in Articles III. and IV., Pensions will be awarded amounting to $\frac{1}{4}$ (or $\frac{1}{4}\frac{0}{10}$) of the salary of which the official is in receipt at the time of retirement.

In the case of officials who retire within a year after promotion, the Pension will be calculated on the basis of the salary attached to the grade immediately below that to which they have been promoted. This does not apply, however, to the case of those who retire in consequence of ill-health contracted, or injuries received, in the execution of their duty.

Art. VI.—Those who retire, for reasons connected with their own convenience, before attaining the age of sixty; or who retire after receiving a reprimand for irregular conduct; or who are deprived of office in consequence of a breach of duty or of a conviction before a Criminal Court, will not be eligible for a Pension, even though they have served fifteen years.

Art. VII.—For the purposes of these Regulations, the period of service shall be reckoned from the month of August, 1871: those who received office subsequent to that date will count their service from the month of their appointment; but no service can be reckoned before attaining twenty years of age.

Those who were in office before August, 1871, will receive, in addition to, and at the time of obtaining, their Pension, a lump sum, calculated by multiplying the monthly salary of which they were in receipt in July, 1871, into the number of years they served before the former date.

Art. VIII.—In the case of officials who have previously served in the army or navy, or who are reappointed after having been out of office, previous service shall count towards Pension. But this rule will not apply to service at a distance from Head-quarters (*Go-yô tai-zai-chiu*), or to the case of those who have already received Gratuities at the expiration of a fixed period of service, or on giving up office.

Art. IX.—Officials who, being already in receipt of Pensions, are reappointed to office, and who receive, in their subsequent office, emoluments less than they formerly received, will have their ultimate Pension calculated on the basis of their previous emoluments.

Art. X.—In the case of officials of the *Chokunin* or *Sonin* classes, who, being entitled to, or already in receipt of, a Pension, die; or who, though not yet entitled to a Pension, die in the execution of their duty; a special Allowance, not exceeding one half of the Pension of which the deceased was in receipt, or for which he would have been eligible, will be granted to his widow for her sustenance, during life. Should there be no widow, the same Allowance will be granted to his child and heir,

whether boy or girl, own or adopted, until he or she shall have attained the age of twenty years. In order to be eligible under this Regulation, a widow must have been duly registered in her husband's family.

In the case of officials of the *Hannin* class, the provisions of this article shall apply to those only who, being eligible for Pension, die in the execution of their duty. Further, the Allowance shall be made to widows only: orphans, parents, grandparents, brothers, and sisters shall not be eligible.

Art. XI.—Should a widow re-register herself in her parents' family, re-marry, or die, the Pension of which she was in receipt will be granted to her child and heir, provided the latter is less than 20 years of age.

A daughter who marries, or a son who enters the Government service and receives pay, or who becomes a student in one of the Government colleges at the Government's charges, shall not receive any Pension.

Art. XII.—When there is neither widow nor progeny eligible for Allowance, or when a widow re-registers herself in her parents' family, or re-marries, and there is no progeny, a special Allowance, not exceeding two thirds of that for which the widow or heir would have been eligible, may be granted, for life, to the parents or grandparents of the deceased, should they have been dependent on the deceased and without any one to support them.

Art. XIII.—When parents and grand parents are living, the Allowance shall be granted to the father; and to the mother, should he die or forfeit it. The grand-father and grand-mother will become eligible after the father and mother in the same order and under the same conditions. To become eligible under this rule, fathers or grand-fathers must be at least fifty years of age, or incapacitated, by permanent illness or deformity, from carrying on any trade: mothers and grand-mothers must be widows, and must have attained the age of fifty at the time of the deceased's death.

Art. XIV.—When a widow who is eligible for an Allowance, has neither progeny, parents, or grandparents, living, a Gratuity, not less than the amount of the widows pension for one year, and not exceeding the aggregate of that pension for five years, may be specially granted to her brothers or sisters, provided they were dependent upon the deceased and are less than twenty years of age, or being more than twenty, are incapacitated, by illness or deformity.

Art. XV.—Pensions shall be paid from the month after retirement from office, and Allowances from the month after the death of the official who was in receipt of, or eligible for, the Pension.

Art. XVI.—After the Head of the Department, or of the Local Office to which the claimant of a Pension or an Allowance belongs, shall have submitted due proofs of eligibility to the Pension Bureau, and after the latter shall have duly investigated the case, the grant shall be finally determined by the First Minister of State.

Should the recipient of a Pension or an Allowance have any complaint to make in connection with it, the grounds of complaint must be forwarded to the Head of the Department, or Local Office, to which the complainant belonged, for submission to the Pension Bureau. Complaints of this nature must not be made to a Court of law.

Art. XVII.—The Council of State will issue certificates to those who are entitled to Pensions or Allowances.

Art. XVIII.—A Pension shall be forfeited by persons who are deprived of their civil rights. Under the undermentioned conditions the Pension will be suspended during the several periods referred to:—

- 1.—When civil rights are suspended.
- 2.—When receiving a salary after a second appointment.
- 3.—When ceasing to be a Japanese subject under unavoidable circumstances.

4.—When living abroad without permission from the Government.

Art. XIX.—Should the recipient of an Allowance be convicted of an offence involving a punishment of major detention or upwards, or come under the 3rd or 4th conditions of Art. XVIII., the Allowance shall cease.

Art. XX.—When an official entitled to a Pension retires from the service, the Head of the Department or Local Office to which he belongs, shall forward to the Council of State an application for Pension, covering the official's records, and, in the event of his retirement being caused by illness or injury, duly authenticated medical certificates and explanations of the circumstances of the case.

Art. XXI.—Applicants for Allowances must forward to the head of the Local Office concerned the following documents:—(1) an application bearing the names of the applicant and two of his or her relatives (and that of his or her guardian, if there is one); in cases where no relatives are living, the application must bear the names of two heads of families of the applicant's locality: (2) a copy of the applicant's registration certificate (and of any grant of Pension or Allowance which may have been already received): (3) in case the official in connection with whom the Allowance is applied for has died in the execution of his duty, an accurate statement of the nature and circumstances of his decease, accompanied by a duly authenticated medical certificate. On receipt of these documents, the Head of the Office, after carefully investigating the facts of the case, will forward the documents, with a covering application, for the decision of the Council of State. Applications, not made within a year of the event to which they refer cannot be entertained.

Art. XXII.—When a Pension or Allowance is stopped, the fact will be notified by the Pension Bureau to the Local Office concerned, and the latter will recover the certificates, from the recipient of the Pension or Allowance, within two weeks. Should the recipient of a Pension or Allowance die, or change registration, the remaining members of the family or relatives must forward a statement of the fact to the Head of the Local Office concerned, for transmission, with a covering statement, to the Pension Bureau.

Art. XXIII.—Pensions and Allowances will be paid by the Finance Department and transmitted through the Local Authorities in June and December, every year, for the whole of the preceding half year, or for such portion of it as may be due.

Art. XXIV.—Those applying for payment of Pensions or Allowances must forward their Pension or Allowance certificates, together with a certificate of the fact that they are alive, and a receipt, to the Local Authorities.

Art. XXV.—When recipients of Pensions or Allowances change their place of residence, they must apply, for payment, to the Local Authorities of their new place of residence, three months before the date when their Pension or Allowance falls due. If the application be not made within the prescribed time, the Pension or Allowance will be paid through the Local Authorities of the recipient's former place of residence.

Art. XXVI.—If application for payment of a Pension or Allowance is not made for a year, or upwards, the portion due for that period shall not be paid.

Art. XXVII.—Petitions concerning Pensions or Allowances must bear the counter-signature of the proper Local Official.

Art. XXVIII.—Should a Pension or Allowance Certificate be stolen, lost, or destroyed by accident, the fact must be immediately reported to the Local Authorities for transmission to the Pension Bureau.

(Signed) SANJO SANEYOSHI,
First Minister of State.

4th January, 1884.

NOTIFICATION NO. 1 OF THE PUBLIC WORKS DEPARTMENT.

It is hereby notified that the construction of a submarine telegraph between Kotomo-mura, Higashi, Matsuura-gori, Hizen and Pusan, Korea, *via* Sato-no-ura, Ishida-gori, Oki and Tsukugahara, Shimogata-gori, Tsushima—permission to undertake which construction was granted to the Danish Telegraph Company—having been completed, the line will be connected with the Telegraph Office at Nagasaki; and branches will be established at Tsukugahara and Pusan. The lines will be open on and after the 15th of February next, and the following tariff will be charged.

N.B.—The opening of the branch at Sato-no-ura will be announced hereafter.

TARIFF FOR EUROPEAN AND JAPANESE MESSAGES.

		Interior.		Interior.
		Nagasaki	—	Nagasaki.
		Sato-no-ura	20	30
		25	40	50
Tsukugahara	25	40	50	Tsukugahara.
Pusan	30	50	60	70
				Pusan.

1.—European messages will be charged according to the above tariff per one word: Japanese, per seven *Katakana* (letters).

2.—*Katakana* will be reckoned per seven; and any fraction of seven shall be counted as seven.

3.—In Japanese messages, the addresses and names will not be charged for. In European messages they will be charged at the same rate as the words in the message itself.

4.—Telegraph communication between Japan and Korea shall be conducted according to the provisions of the International Telegraph Code.

5.—Messages from Sato-no-ura, Tsukugahara, and Pusan, to China and other foreign countries via Nagasaki, will be charged as follows:—Sato-no-ura to Nagasaki 30 cents per word: Tsukugahara to Nagasaki 50 cents per word: Pusan to Nagasaki 70 cents per word.

All further messages will be charged according to the External Telegraph Tariff.

(Signed) SASAKI TAKAYUKI,
Minister of Public Works.

January 15th, 1884.

THE NAKASENDO RAILWAY LOAN AND EXCHANGE BONDS.

(Translated from the *Fiji Shimpō*.)

On the 28th of December last, the Government issued the above regulations. Our readers being acquainted with their tenor, we will now proceed to discuss their merits.

The object for which the Nakasendo Railway Bonds were issued, is, as is mentioned in Article 1 of the Regulations, to construct a railway from Takasaki, Kotsuke, to Ogaki, Mino, *via* the Nakasendo and to defray the cost thereof. It was our earnest wish that Tokiyo should be connected with Osaka, but when the project was first announced, we feared that the work would be delayed. Now, however, the Notification having been issued, we are convinced that the work will be rapidly executed—a fact which gives us unbounded satisfaction. But the projected line is announced only to run from Takasaki to Ogaki, and no provision is made for extending the line west of Ogaki, that is, from Nagahama to Otsu—a distance of 17 *ri*—with the above fund. If it be that the fund—yen 20,000,000—is inadequate to build the railway between Nagahama and Otsu, it might easily be increased by a few more million yen.

In short, the necessity to raise the loan arose out of the want of a line between Takasaki and Ogaki; so, if the extension of the line from Nagahama to Otsu is necessary, it would not be difficult to add a few more million yen to the loan. Is it that the Otsu-Nagahama line is not mentioned in the Public Loan Bonds Regulations because it is believed that the traffic between the two places can be done by steamers on the Lake Biwa? Our views are opposed to this. However great the convenience of steamship traffic may be, it cannot be compared to that of railways. Much more is this the case when the confusion and trouble attending the transfer of cargo and passengers from the cars to the steamers and *vice versa* at Nagahama and Otsu is taken into consideration. Then again, on the passage, the ships may encounter severe gales which endanger their safety. Under such circumstances, the traffic between Osaka and Tokiyo, which would involve much trouble, would be found unworthy of a civilized community. This is, therefore, to be most severely deprecated. If the above short-sighted policy is to be adopted, *kago* can be as well substituted for the tunnels through the Iwagori range and ferry-boats for steamers on the Kiso river. There is no necessity whatever for expending such an immense sum of money for removing a little inconvenience, unless the whole thing be perfected. No satisfactory reply can be made to this argument. The necessity of constructing a line between Nagahama and Otsu, simultaneously with the Nakasendo line, is demonstrated beyond doubt. It is, therefore, unaccountable that the Nagahama-Otsu line was not mentioned in the Notification. If it were intentionally left out, then the reason, we firmly believe, must be, not because the line is considered unnecessary, but because there is another fund for its construction.

As regards the issue of the bonds to raise the funds for the work, we find that they are to be issued as the progress of the work demands, at an annual interest of seven per cent., which is to be paid in June and December. The principal has to stand five years; and, then, it is to be redeemed within twenty-five years by means of drawings. The details in connection with the issue, the amount to be issued, and the price of the scrip, are to be decided by the Minister of Finance. At present, it is extremely difficult to ascertain the condition of the market for such securities. Should the bonds be issued yearly to the amount of, say, yen 2,000,000, no serious effect would be produced in the market. But if they were all issued within the space of a year or a year and a half, the effect would be serious. Considering the existing condition of the market, we find that, though the bonds are worth yen 90, yet, as the market has a peculiar aspect, and is not in a healthy condition, there would be but a small number of buyers who would pay yen 90 for bonds which bear seven per cent. annual interest only, after standing for five years. This is a problem which we cannot solve. Supposing the Minister of Finance should fix no price, they will be issued at yen 90 at first, then at yen 85, owing to no demand, and afterwards at yen 80 or yen 75. Or, reversing the case, they will be issued at yen 75, then at yen 80, yen 85, and yen 90 as the demand becomes brisk. If this method were resorted to, serious injury would arise to the holders of the bonds from their extraordinary fluctuations. This being the case, the Minister of Finance will no doubt avoid adopting such a course. But if he attempts to fix the price, the means which he must adopt will be of an extraordinary character. Indeed, the issue of bonds is a difficult question.

Public Loan Bonds in exchange for *Kinsatsu* were formerly issued; and therefore these are not of the first creation. The first issued were to stand three years and be redeemable in twelve years. Now, they are to stand for five years and be redeemable in thirty years. The old ones were endorsed with the name of the purchaser, while the new ones are transferable. The principle

feature of the latter, however, is that foreigners are allowed to invest in them. The Railway Bonds are similar in this respect. It is the first time since the Meiji Restoration that aliens have been allowed to subscribe to any domestic loan. We believe that the result will be of no little importance.

The bonds are to be issued for the purpose of withdrawing the paper currency; and principal and interest are alike to be paid in silver. The reason underlying this change is apparent without explanation. Originally, the currency system of Japan was based upon a silver and gold standard; and one gold *yen* was equal in value to one silver *yen*. But whatever may be said, when the paper money is redeemed, the Japanese currency system must be based upon the silver standard only, for many years to come. The new bonds are sold for paper money; and when the period of redemption arrives, the principal and interest are to be paid in silver. The new bonds, therefore, present advantageous features; but at present, when the difference between silver and paper money is hardly one-tenth, no benefit would accrue from their possession. With this prospect before him, no capitalist would invest, however great the hopes of the Minister of Finance may be. Thus, so long as the present stagnation continues, nobody will buy the bonds, and their existence will be nominal. Some say that they are not intended for sale alone, but are to be issued on the idea that their presence in the market will check such an unusual rise in the value of silver as was witnessed last year. Should silver stand 150 to 160 against paper money, people could make *yen* 8 or *yen* 9 out of six silver *yen* by buying the bonds. When such is the case, the demand for the bonds will augment to such an extent as to check the fall of the fiat money. Such is the merit of the new bonds. This opinion is plain and simple; but we cannot believe that the bonds are to be issued for no other purpose than that suggested above.

The feature of the two above-mentioned bonds which demands our most serious consideration, is that foreigners are allowed to invest in them. This is of no little importance. Whether or no Europeans will buy them, is a question which we do not desire to answer at present. If forced to answer, we must say that but a few will buy them. Europeans at home are unacquainted with the internal condition of Japan and the Japanese, and, consequently, would not bring capital to invest here, although they may know that the bonds bear seven or eight per cent. interest. Nor would the foreigners living in Yokohama, Kobe, Nagasaki or Shanghai invest. In our opinion, these Bond Regulations are the initiative steps towards bringing foreign capital into the country at a future time, when the national resources will be developed.

Since aliens are allowed to buy our bonds, they can transact business on the Stock Exchanges at Tokiyo, Yokohama, Kobe, and Osaka. If this is inconvenient, they can have Stock Exchanges of their own in the Settlements. Then, we expect that the business in these institutions throughout the country will be rapidly increased. Should Japanese be brought face to face with aliens in the field of business, they will acquire experience, and finally elevate their position to that of "true" merchants. We cannot but congratulate them upon this prospect. But, as it is, the natural order of things that no good is unattended by evil, the fact of allowing foreigners to invest in the bonds adds to our difficulties.

WEEK OF PRAYER.

SIXTH AND SEVENTH DAYS.

The meetings of the closing days of this week have exceeded all that preceded them in interestness and number of the attendants. The addresses of gentleman in the community, not connected with Missions, in testimony to what changes they had witnessed were emphatic and encouraging, while

the many subjects for request connected with Missions were urgently presented at the throne of Grace. In view of the action of the Evangelical Alliance, recommending the observance of a Second Week of Prayer, it was resolved to continue the meetings at the Seamen's Mission Rooms, No. 86, another week and meet from 5-6 p.m. Also in view of the very special services to be held by the native Churches of Yokohama, to-day, at 9 a.m., and 7 p.m. at the Union Church, it was resolved that to-day's subject be Prayer for the Revival of God's work among the Japanese. Dr. J. C. Hepburn was expected to lead the meeting. The subject for the days following to be Prayer for the revival of God's work among the Foreign Residents of Yokohama.

The Foreign service at the Union Church yesterday morning was largely attended, and the Sermon by Rev. Mr. Klein was of so impressive a character that, as far as possible, we will reproduce it in these columns to-morrow.

The Meeting at 212, Bluff, generally of a very interesting character, was more than usually so in view of a number of interesting facts being stated showing the marvelous movings of God's Spirit at present in Japan among all classes, high and low. The question was raised whether we had a right to believe God would convert all Yokohama? Not a few answered in the affirmative that God could, and it was the duty of all to pray that he would do so, and that in order thereto, we needed most of all to reiterate the Disciples' Prayer, "Lord, increase Our faith!" Attention was called by a sea-faring man to the need of prayer for the observance of the Sabbath on the part of our tea-merchants, owing to the extensive effect of their example upon all classes of the people. He himself could bear witness to the ruin Sabbath desecration had brought to men of business profaning the Sabbath.

CLOSING DISCOURSE.

The Sermon on the text suggested by the Evangelical Alliance for the last Sabbath of the Weekly of Prayer was preached at the Union Church, Yokohama, 13th inst., by the Rev. F. C. Klein, of the Methodist Protestant Mission to Japan, and was as follows:—

1ST THESSALONIANS, 3, 12-13.

"And the Lord make you to increase and abound in love one toward another, and toward all *men*, even as we do toward you: To the end he may stablish your hearts unblameable in holiness before God, even our Father, at the coming of our Lord Jesus Christ with all his saints."

The Apostle's affection for those who were led to Christ by his efforts was marked, and his wise counsel and godly admonitions to them are profitable unto all. Unquestionably there were reasons why the Thessalonians should increase and abound in love, and that similar reasons exist to-day is, doubtless, why the text has been presented for elucidation. When we stand with earth's unfortunates amid scenes of degradation, where the spray from the rushing current of iniquity falls at our feet, and our hearts sicken at the sight of lawless transgressions, our thoughts turn to the seared innocence of Paradise as the starting point, and the absence of love as the cause which reddened the earth with a brother's blood, and has sent wild, ceaseless pulsations of enmity coursing through the forms of men. 'Tis the reign of malignant hatred to God and man which tarnishes the name of man, and sullies still more his lowered manhood. Human conception can form no realization of a grander work than this, the restoration of fallen humanity, and the reestablishment of its love, elevating and unfolding, as it does, human nature into the image of God; and this sublime work well merited the direct interposition of God in the great act of substitution, whereby the plan of redemption was fully and forever consummated. Why should we abound in love? Because it is God's command, and an essential requisite of Christian character. Because we are the subjects of prejudice; we draw our conclusions with improper motives, influenced, too

often, by local, personal, and other considerations; we are prone to unduly depreciate the merits of others, and unduly magnify our own, and other manifestations make it a necessity for us to increase and abound in love, for as Spurgeon aptly says:—"Love is the marrow of the bones of fidelity, the blood in the veins of piety, the sinew of spiritual strength, yea, the life of sincere devotion." The source of Love is in God, "for love is of God," and the apostle says "the love of God is shed abroad in our hearts by the Holy Ghost." A sincere, and an earnest trust in God insures it as an inevitable result, and "The consciousness of its presence in the heart is what makes the Christian," for his newly awakened powers are actively exercised by love as the motive power; and with it he possesses the sure and only foundation of all hopes which are inspired by the acceptance of the Gospel of Jesus Christ. To properly love we must know something of the object of our affection, consequently knowledge must come in to satisfy and also develop the love possessed. A true man can only love the truth, and as God is truth, the more we know of him the more we can love him. There can be no doubt that love is a creation, for both doctrine and experience teach that he whom God loves, in him he creates love on the principles of cause and effect; for when the man fully realizes that God does love him he loves God in return; and the slightest drawing to him, I may remark, is the result of His Spirit, and should be encouraged by us. Why love one another as Christians? Because "We know that we have passed from death unto life, because we love the brethren." "He that loveth not his brother abideth in death." Our hopes centre in a common object, we each seek the same dwelling of the Almighty where alone can come no footstep of decay, and we ought to be closely united in the endeared ties of true brotherly love, for as we feel it will be thus in Heaven, only intensified, why not have it begun here below? "If God so loved us we ought also to love one another." 'Tis human to love those who love us, but the Gospel love is as broad as Christendom, and sweeps out over the whole earth; and if we selfishly limit ours we fall short of the christian standard. The Psalmist never threw upon the canvass of humanity's ever-unfolding picture a more sublime scene than is depicted in "Behold how good and how pleasant it is for brethren to dwell together in unity." With such love as is urged upon us by the Gospel the Christian rises far above the ravings of prejudice, the ambitions of limited self, and the clanishness of church or party, but, loving God most of all, he loves Christians because they are God's children. Therefore this love is a necessity in the life that seeks a steady development here in righteousness, and a full fruition of all hopes in the beyond where life will be lived in its purity, peace, and love. Why should we love all men? God is no respecter of persons, since he loves all men, how can we do otherwise than love them? We must never forget that the soul of the lowest wretch is as precious to him as our souls are to us, and that the same Saviour died to regain him and develop all his faculties. All men, especially sinners, need the warm sympathy of true hearts, and if we turn to them a cold heart we not only disobey God, but stultify our Christian manhood, for if he is ever ready to shed abroad his love in their hearts, how dare we fail to love them. Paul was only a Christian man, laying aside his special gifts and powers, yet feeling his weakness, but here he holds up his manner of love to the Thessalonians, as an example of what their love should be to one another and to all men. To-day we possess the same hopes, privileges, principles, and character-moulding forces of Christianity as he possessed, yet can we begin to say to others what he said to the Thessalonians? Have not God and men the right to expect it of us with the profession we make? None rejoice more than I that we are in these times of true philanthropy and great advance, where the revived principles of a

broad humanics are felt in the widening of thought and feeling, and where the reign of keen asperities, impassioned thought, and embittered prejudice recedes further into the past. But let us be honest, and acknowledge that it is the basis of our Christianity which has caused it, the lever which moves raises and develops the world; that which has done so much to harmonize men's differences, to soften the asperities of their estrangements, to focalize their sympathies and to centralize their efforts, and that upon which all worthy enterprises can rest; 'tis the love of God to man, and man's love to God and his fellow-men. Therefore we, with the moving millions of Christians, who, feeling the common ties, having the common interests of a uniting brotherhood, are panting, amid life's struggles, for the one eternal peaceful bivouac on the marshalled plains beyond, ought, and I trust do, possess the love which rises above the affected friendships of earth, and sees in every man a brother, and has for such a brother's heart and open hand, seeing in him, as in all men, latent powers and possibilities which, if roused and improved, will develop grand results for God and humanity. I honor and love all who thus feel the promptings of a pure unselfish brotherly love; and I would rather far be an humble votary at the shrine of those who, in thought and labor, in life and in death, sought the elevation of the degraded, the broadening of fraternal relations, and the inculcating of principles which bind heart to heart the sons of men, than to stand over the mouldering dust of the greatest warriors who have ever stained the earth with the blood of their fellow men. We are here, as Christians, in these fair isles, not to seek the further degradation of the inhabitants; not, with rude iconoclastic act, to demolish their temples; not to offer them a substitution of rites and ceremonies, neither force on them the emptiness of pretentious vicegerency claims, nor bind their thought; not to turn their allegiance from the Mikado and the powers that be; but with the open Bible—thank God for it in Japan to-day—with its grand principles, glorious doctrines, and inspiring promises, to wage a peaceful warfare in those spheres of thought and feeling where the reason, judgment, and conscience of men are touched and acted upon for their eternal interests. We seek the elevation of the Japanese that they may become what they ought to be, and what they will be by the acceptance of the Gospel of Jesus Christ, which we believe they will do. And surely while here, far from the associations of our native lands, we need to be closely united in love as God's children, and possess true love for all who tread the soil of the Mikado's Empire. What has our love to do toward having us presented unblameable in holiness? Love is the foundation and ramifier through the superstructure of Christian character; and from it come the natural and expected developments which mark the ornamentation of a pious life, and, if properly used, it can not fail to promote our growth in grace, and in the knowledge of our Lord Jesus Christ. The text assures us that, at the coming of Christ our hearts are to be presented blameless in holiness. Why? Because Christ is holy, and we are to be like him, and because "without holiness no man shall see the Lord." Our condition, and the time when, in that condition, we are to be presented are set forth. To my mind that is clear enough. A man's body is imperfect. Jesus Christ was the only perfect man since the fall. When a man's body is consigned to the grave it is still an imperfect body, but his soul, if he died in the faith of Jesus Christ, will be cleansed by the blood of Jesus, for "the blood of Jesus Christ his Son cleanseth us from all sin," and it will be fit for Heaven, and angelic associations. At the resurrection, that body will be raised a prefect, glorious body like unto Christ's. The soul already perfect will reinhabit that glorious body, and thus will be presented unblameable in holiness at Christ's coming. Bear in mind that God is thus to present us there,

at the coming of our Lord Jesus Christ. But he can not there thus present us, unless we now commence the work of elevation and growth in grace. Heathen philosophers asked the question, is the soul immortal? Some accepted a kind of affirmative answer, but it was for this divine revelation, with its matchless power to lift the veil of the future, and declare in unmistakable tones that "this corruptible must put on incorruption, and this mortal must put on immortality;" and the words of the Son of God, are "I am the resurrection and the life, he that believeth in me though he were dead, yet shall he live." Thus forever are scattered the shadows which hung round the grave, for now we see immortal life rising before us resplendent in unclouded glory, a fixed, immutable verity. We therefore see why the Apostle said "if in this life only we have no hope in Christ we are of all men most miserable," for the future is before us, into it we each must enter, and if alone as we are, where can we go, what can be our hope there without Christ? It is just as easy for me to believe that Jesus Christ, the Son of God, came into this world in human form, that his advent was heralded by angelic choirs, and that he received the homage of the wise men of the East in the manger of Bethlehem, as it is for me to believe that George Washington lived and died, on the banks of the Potomac, in the frame house on the slopes of Mount Vernon. And as I rest the interests of my immortal soul on my belief that Jesus trod the streets of Jerusalem, spent that awful season in Gethsamene, was crucified on Calvary, even though "he did no sin, neither was guile found in his mouth," that he rose from the sepulchre's gloom and walked and talked with men after his resurrection, so do I as firmly believe he is coming again, because scripture declares it. He himself said, "I go to prepare a place for you. And if I go and prepare a place for you, I will come again, and receive you unto myself, that where I am ye may be also." No, theory, argument, or anything else is now needed. I can add nothing to this positive declaration from the Son of God. And as not a single statement he made ever fell short, or has ever been proven to be untrue, I am fully persuaded that my belief is settled in One who is both mighty to save, and mighty to come again. The hard, stubborn, immovable fact stands out before the world that he has fulfilled all he promised, in the time designated, and with the gilding of the western hills by the daily setting sun, hastens to us, with silent tread, the dawn of eternity's glad morn. The outlook to-day is flooded with the glory of coming universal triumphs for Christ. Already the camp-fires of the Lord's army are burning on the mountain-tops and in the valleys, lighting up the heathen lands and the isles of the sea. He is coming, surely coming; and then shall be heard the trump's loud alarm, and the glad triumphant song of Christendom, growing louder and louder still as nation after nation catches the grand refrain, till, mingling with the music of the spheres, the universe will magnify the eternal Majesty of the earth and skies. When, in conclusion, is this to occur? I do not know, no man knows, for "the day of the Lord will come as a thief in the night." A lack of knowledge of when it is to be does not, in any sense, lessen the certainty of its coming. How is it to occur? By the power of the Almighty; "according to the working whereby he is able to subdue all things unto himself." And the same power which swept victoriously through death's dominions, and triumphantly waved the broken bonds of the grave, will likewise cause "The heavens to pass away with a great noise and the elements to melt with fervent heat, the earth also and the works that are therein to be burned up." Why will this occur? That Christ's divine sovereignty may be universally acknowledged. "As I live, saith the Lord, every knee shall bow to me, and every tongue shall confess to God," that the wrongs of earth may be righted, and there are many waiting for that day, and that Jesus may gather his own

from among the children of men. But, while He tarries his coming in visible form, He is here this hour, and knocks at the door of your heart, not only somebody else's, but your heart, for admission, that he may dwell and reign there without a rival. 'Tis his right thus to reign, and if acceded to by each, happy will be the hour, grand will be the life, triumphant will be the death, and glorious will be the crown worn in Heaven. Well, the past is irrevocably passed. If we loved not Christians and all men as was our duty, 'tis now too late to go yonder to do or undo. The record has been closed. May God grant that, taught by our mistakes and encouraged by our successes, we may press boldly onward to the coming struggle, seeking ever to increase and abound in love, looking unto Him who will guide us to the end, and at last will present us unblameable in holiness when He comes.

MEETING OF THE EVANGELICAL ALLIANCE.

The Tenth Annual Meeting of the Evangelical Alliance of Japan took place at 2.30 p.m. on the 10th inst., in the Union Church, Tsukiji, Tokiyo. There was a large representation of ladies and gentlemen members, and a few native gentlemen present.

The President, Rev. Hugh Waddell, called the Alliance to order by a fervent prayer for the purity and spiritual prosperity of the whole Church of Christ in Japan and all the world. This was followed by a Hymn, and the President's address. The latter was based upon a review of the statistics of the advance of Christian work during the past year in Japan. These statistics, he said, though incomplete, were such as might well fill all hearts with gratitude to God, and encouragement to wait more earnestly upon God in the time to come, especially during the present year. The statistics given were as follows:—In 1859, No. of converts, 0; 1876 (17 years later), 1,004; 1879, 2,965; 1882, 4,987; 1883, 6,598. Amount of contribution, 1859, 0; 1879, yen 3,189; 1882, yen 12,344; 1883, yen 16,166. In 1859 copies of scriptures or parts, 0; 1876, 21,000; 1883, 109,003; of bibles or testaments 20,368. 1859, religious books and tracts, 0; 1876, volumes, 6,000; 1883, in Yokohama, American Tract Society, 37,357; London Tract Society, 38,330; Christian and various, 31,620; total 107,307. Two weekly papers, circulation, 2,000; two monthly papers, circulation, 2,700.

After giving the above comparison of statistics, the speaker called attention to the remarkable increase of the past year alone, nearly equalling in numbers that of any three years preceding it. This was great cause for rejoicing, when each one of these sixteen hundred souls was viewed as a temple of the Holy Ghost. If we ask how comes this great increase? The answer was that the Holy Ghost has been specially sought, and here is an answer in some hundreds of souls being added to the Church. If all real Christians, what a glorious sight. If not, many among them are undoubtedly the Lord's true disciples. He then alluded to the Evangelical Alliance having been originally organized to appeal to the Courts of Europe on behalf of religious liberty. Here in Japan, we happily have little occasion to do this. What, then, is the object of our Alliance, asked the speaker unless it be to lift up our hands to the Court of Heaven on behalf of those among this people enthralled in the slavery of sin and superstition. He spoke of the representative character of the Alliance—composed of many nationalities and denominations, yet bound together in the closest bonds of unity and affection. Our mission, then, is only this, to seek the unifying and consecrating influence of the Holy Spirit to dwell in each one of these souls, and make them temples holy unto the Lord. He spoke of the anxiety and apprehension felt by many prior to the conventions

and gatherings together of the past year, lest some cause of disagreement might arise among brethren of so many nationalities and difference of ecclesiastical view. But on coming together as at Osaka, what was the result? Only harmony and fraternity, love and concord. A native brother said to the speaker, "I am astonished to see men of so many nationalities and denominational peculiarities, all rejoicing together and working for the common good." And so again on the return from Osaka, we saw the same thing here in the Great Fellowship Meeting, or Native Evangelical Alliance, when both Native and Foreign laborers were bathed in tears of a common joy at the presence and power of the Spirit of God. The only danger for either the churches or ourselves is that we should ever be without the Spirit of God. As converts increase we should continually cry unto God to fill them with His Holy Spirit, for what with the Spirit's presence might be a virtue, without His presence would easily become a vice. The speaker referred to the contrast that met his eyes to-day and ten years ago on his arrival in Tokiyo. Then, but a few paces from where we now were met, he was present at an examination of Mr. Canother's first candidates for baptism. Now, that little company had become a great host and a power in the land. Wherever we go throughout Tokio, chapels and preaching places stand out, as lights to guide to Christ. But last year's blessing was only a foretaste; we want a wider and deeper one this year. We have plenty of wells, they are sunk on every side, we want them to be filled. He acknowledged the danger of excitement or of mere moving men's sympathy. What we want, is a deep flowing river flooding all hearts, and overflowing the whole land. Think of the thousands of scripture portions in the hands of the people needing the Spirit's illumination to bring its truths to their hearts. Think of the thousands of Christians throughout this land lifting up their hands in prayer with and for us. The speaker alluded to the great pleasure he had experienced in meeting with the native brethren in their observance of this week of prayer. At a place where but a few years ago he had been called to visit a poor sick blind man, and who dying left some to witness to the true light that had irradiated his soul's darkness, now three churches are flourishing in that neighborhood, and as he listened to the remarks of one and another, and their appeals in prayer for the presence of the Holy Ghost, he could not but feel we are all one, all have common wants and common experience of the grace of God. He spoke of the privations and sacrifices of a missionary's life, how dull and unimproving if destitute of the Holy Spirit's presence, but with that presence what a delight now, as of old, to be a missionary. Our joy will be great; our work will endure when all material churches and structures are crumbled to dust. Let us then, as an Alliance, emphasize this as our mission above all else; to seek the Holy Ghost, for ourselves, for the Churches, for each individual heart. He remembered the great revival in Ireland—of whole hamlets turning unto God, but a reaction and coldness set in. He did not believe there was any necessity for a reaction, but if, with increasing desire, God be sought, the blessing may go on widening and deepening till it flooded the whole land. For this purpose let us thank God we are united as an Alliance, and let that Alliance be to call upon God. The President alluded to the presence of Korean Christians here in Japan, and of the visits of Japanese Christian and Bible Colporteurs to Korea, and of the desirability of the love of God dwelling in all hearts and all being made one in Christ Jesus.

This earnest address on the part of the retiring President was followed by the election of officers for the ensuing year, and of a number of persons as members of the Alliance.

The following were proposed and elected members:—Rev. H. Kozaki, Rev. G. F. Smith and wife, Rev. C. E. Garst and wife, Rev. F. C. Klein and wife, Rev. C. H. D. Fisher and wife, Rev. William E. Walz and wife, Rev. J. P. Moore and wife, Rev. J. C. Spencer and wife, Rev. D. C. Spencer and wife, Mrs. Carrie Van Peten, Miss A. P. Atkinson, Miss M. H. Whitman.

The following were elected officers for the ensuing year:—Rev. R. S. Maclay, D.D., President; Rev. E. R. Miller, Vice President; Rev. J. H. Ballagh, Cor. Secretary; Rev. H. Loomis, Rec. Secretary; W. T. Austen, Esq., Treasurer; Rev. H. Loomis, Librarian. Council:—J. C. Hepburn, M.D., I.L.D.; Rev. N. Brown, D.D.; Rev. J. L. Amerman, Rev. M. C. Harris, Rev. J. Hartzler, Rev. P. K. Tyson, Dr. C. G. Knott, Rev. A. D. Gring, J. Thompson, Esq., Rev. H. Waddell, Rev. C. S. Eby, Rev. F. C. Klein, Rev. W. J. White.

Following these elections the Committee on Arrangement of Programmes reported having circulated 2,500 in the Japanese language and 400 in

English. They also recommended the adoption of a proposition for observing a Second Week of Prayer especially for the outpouring of the Spirit of God upon Japan, and all flesh, according to the promise in Joel 2-28. The reasons adduced were as a fitting memorial of the Twenty-fifth Anniversary of the Week of Prayer, and especially on account of the very intimate relation of the observance of the Week of Prayer with every advance of mission work in Japan. This was shown in the appointment of Missionaries to Japan by three societies the very year the request for prayer first went forth, and representatives of these societies were able in Japan to unite with their brethren in all the world on the first observance of the Week of Prayer and have continued so to do yearly with ever widening and increasing interest and good results. The request for prayer that was made from Japan during the Week of Prayer 1865, for the removal of the edict against Christianity, was followed not long after by that blessed result. The first outpouring of God's Spirit upon Japan took place in 1872, during the observance of a Second Week of Prayer at beginning of the Japanese New Year, and which resulted in the establishment of the first Church of Christ in Japan. During the Fifteenth Anniversary of the Week of Prayer, the Japan Branch of the Evangelical Alliance had its first Annual Meeting and which now celebrates its Tenth Annual Gathering. Also the revival of 1883 originated in the blessing of God experienced during the Week of Prayer at Yokohama and elsewhere. But the special reason for approval of the recommendation was that it arose from the expressed desire of earnest native Christian workers in Central and South Japan for a special day to follow the present week for that purpose. This proposal led to the suggestion of its being extended to an entire week which also has met with a hearty approval on the part of native and foreign brethren in different parts of Japan. The recommendation was approved of by the Alliance and the committee was requested to make arrangements for united meetings as far as possible with their native brethren.

Following the transaction of these business items, were the address of Dr. C. G. Knott on "Dreams of the Past, and the Facts of the Present;" and an address, by the Rev. A. H. Bennett, on "Allegiance the Strength of Alliance." The former has already appeared *in extenso* in this journal, the latter can only be presented, as the President's has been, in abstract.

Owing to the rapid and easy flow of Mr. Bennett's speech any attempt to reproduce his address must be disappointing to those having experienced the pleasure of hearing him. Not unfrequently it happens that addresses affording most pleasure at the time appear quite meagre in print, and vice versa, and those disappointing when delivered give most delight in print. The speaker said that faulty ideas were common in regard to the principles requisite for an alliance of any kind. The two words Allegiance and Alliance in the theme "Allegiance the Strength of Alliance," which he had chosen for his subject had a common origin and might be rendered ad-linking, or joining to, one to peers the other to superiors. Some alliances were without allegiance, as of the Four Kings in Abraham's time, and the defensive alliance of the Canaanites against Joshua; and as were the alliances of men binding themselves to slay others as in David's and Paul's time, which in the nature of things could have no long continuance even if they had ended successfully. Most alliances may be represented by the mighty chain around the dome of St. Peter's binding by its several links every stone together. But a great iron wheel bound together to the centre would be a more fitting representation of the power of Alliance based on allegiance. But some consider that allegiance interferes with alliance. The Jews thought themselves hindered by not being able to join in alliances with other nations. Much as we may have observed how the glazing of some pottery is cracked by the shrinking away of the weightier body of the clay, so the Jews were kept from confederacy with the surrounding nations that they might be a great integer relying upon the Rock of Israel. Is the emphasis to be laid on love our neighbour as ourselves, or on love God first and then let the other come as the various parts of a musical harmony. Attention had been called very properly to the need of prayer for the Spirit of God, but it seems to me that the great and primary duty of each and all is to obey their King and their God; to follow his commands as each may have the knowledge to know His will, and in God's own good time and way we shall be able to keep step with step, and eventually to see eye to eye when the Lord shall build up Zion. The proceedings of the Alliance closed with singing, and the benediction pronounced by the President

IN H.I.G.M.'S CONSULAR COURT.

Before ED. ZAPPE, Esq., Consul-General.—SATURDAY, 12th January, 1884.

P. BOHM V. THE CHARTERED MERCANTILE BANK.

This was a petition for the raising of the arrest on the schooner *Mary C. Bohm* and some skins which had formed part of her cargo and were afterwards transhipped to the British schooner *Ada*. The arrest had been ordered on a motion of the Bank for a debt for which the said property was pledged to it.

Mr. Kirkwood appeared for the Bank, and Mr. Bohm appeared in person.

The following judgment was given on Saturday. In the action of the coal merchant, P. Bohm, of this place, arrest-defendant, against the Chartered Mercantile Bank of India, London and China, at this place, arrest-plaintiff, for the raising of an arrest, the Imperial Consular Court at Yokohama, composed of Consul-General Zappe, gives judgment to the effect that the arrest caused to be put upon the vessel *Mary C. Bohm* is confirmed, whereas the arrest caused to be put upon 358 sealskins is to be raised again. The costs of the litigation are to be borne by plaintiff and defendant, one half by each.

FACTS.

On the 8th November, 1883, the plaintiff bank, for a claim of up to the amount of \$15,000, alleged to be due to it from an agreement of pledge, caused an arrest to be placed on the vessel *Mary C. Bohm*, owned by the arrest-defendant, and on the cargo consisting of 385 sealskins. At the hearing set down for the 10th January, 1884, the arrest-defendant disputes both the claim and the existence of a ground for the arrest, and moves that it be raised. He adduces that since the 8th November last year, the plaintiff has taken no steps to settle the question of the claim disputed by him. In proof of its claim (plaintiff alleges) the bank relied solely upon the document of pledge of the 22nd August, 1882, according to which the arrested vessel *Mary C. Bohm* had been pledged to it for \$44,000. That debt, however, had been paid off by payments which he had made to the bank amounting to \$58,683.70. The pledging of that vessel had moreover only served as an additional security for the amount of about \$44,000, due to the bank in account current, which fact was already shown by that amount being far in excess of the value of the vessel; for the same purpose, and under the same conditions also the other vessels belonging to him had been pledged to the bank. On the 5th November last year he had requested the bank to render him an account, which the bank had promised him in its letter of the 9th November, but up to the present it had not done so, instead of which it had, however, between the 5th and 9th November, caused the arrest to be placed on his ship and her cargo. With regard to the proceeds of the hunt of the *Mary C. Bohm*, he acknowledged having given the plaintiff a promise in his letter of the 30th June last year, to send the skins taken to England, through the plaintiff, for sale, that, however, had been done when he still owed money to him, which was no longer the case. The plaintiff, moreover, with regard to the arrest on the skins, had only relied upon the letter of the 30th June last year, without making credible the claim for which the skins were to be delivered to him. Arrest-plaintiff, for the maintenance of the arrest, quotes sections 707 and 885 of the O. o. C. P., and contends that the demand for the arrest has been sufficiently substantiated by the document of pledge of the 22nd August 1882, and by defendant's letter of the 30th June 1883, which is not disputed. The plaintiff does not dispute that payments have been made to him by the defendant to the amount aforesaid, but alleges that by those payments the debt as shown by the said document of pledge had not been paid. Plaintiff further says that, according to the notes to section 805 of the O. o. C. P., the Court, in a procedure of arrest, was not to go beyond arguing the question whether a claim has been made credible, because only the arrest is the subject of the obligation and not the establishing of the claim. As a ground for the arrest it was sufficient that the defendant made the attempt to withdraw the pledged vessel—which according to the agreement of pledge could only leave the harbour with plaintiff's permission—after this permission had been given for an otter-hunting expedition, from the plaintiff's control, by instructing the captain who was then, after that expedition was completed, on his return voyage to Yokohama, not to return to Yokohama, but, after newly equipping himself in the neighbourhood of Yokohama, to go South with the vessel. If defendant had not been prevented from the execution of this purpose by the imposition of

the arrest, then the plaintiff's claim for which the vessel is security, would have been seriously endangered. With regard to the 358 sealskins the plaintiff contends that the arrest on the same has not been carried out. In any case, it was no longer in force, because the skins, in consequence of an agreement with the defendant, and with permission of the Court, had since been sent to England for sale. Should the Court, however, in spite of this, still consider them to be under arrest, then with regard to them also the letter of the defendant of the 30th June 1883, and the document of pledge of the 22nd August 1882, would be sufficient for the substantiation of the claim and of the ground of arrest, combined with the illegal proceedings of the defendant already described. For those reasons the plaintiff moves that the arrest be confirmed. Defendant moves that the witness Baade be heard to contradict the grounds of arrest asserted by the plaintiff.

GROUND.

For the maintenance of the arrest of the vessel *Mary C. Bohm* and her cargo, consisting of 358 sealskins, which was ordered on the 8th November last year, on a motion of the plaintiff and against the deposit of a security, it is required, that plaintiff in accordance with the provisions of section 800 al. 2, of the C. o. C. P. make credible both the claim, which is to be secured by the maintenance of the arrest, and a proper ground for the arrest. To the first requirement, the plaintiff has in so far conformed as he shows by the document of pledge of the 22nd August 1882, that the arrested vessel is thus pledged to him, so as to make himself paid out of the vessel, in default of payment of the debt set down in the document of pledge at \$44,000. It is true defendant raises the objection that that debt has been paid off by payments amounting to \$58,683.73 which he made to the plaintiff, but as the plaintiff disputes that those payments were made against the debt on the pledge, this contention of the defendant which has not been proved, cannot be considered in the present proceeding. With regard to the pledged vessel, the ground for the arrest also is to be considered as sufficiently established. According to the tenor of the above-mentioned document of pledge, the pledged vessel may only leave the harbour of Yokohama with the permission of the pledge-creditor. If the plaintiff, by way of exception and in the defendant's interest, gives him the permission to let the vessel make a particular voyage, for an agreed upon purpose, and if defendant, after this has been done, without the consent of the plaintiff gives the order to the vessel—the same then being on the return voyage to Yokohama—to avoid Yokohama, and to extend the voyage, which then might have been considered as nearly completed, in another direction, which is in direct contradiction to the agreement with the plaintiff, then the plaintiff is justified in regarding this proceeding of the defendant as endangering the claim which was to be secured by the previous pledging of the vessel. The conduct of the defendant has only been confirmed by the evidence of the witness Baade as contrary to the agreement. Under the circumstances of the case the arrest on the pledged vessel had to be confirmed. With regard to the arrest on the 358 sealskins, the establishment of the claim, as required by the provisions of section 800, al. 2, of the C. o. C. P., is wanting. Even if the conclusion be drawn from defendant's letter of the 30th June, 1883, that the plaintiff at the time when that letter was written to him, had an undisputed money claim against the defendant, for which the skins in view were to be transferred into his possession, the letter in question does not afford the least information as to the amount of the claim and whether it still exists. Nor have there been other circumstances adduced by the plaintiff through which the existence of a claim other than the claim on the pledge already argued, is made probable. Nor has the plaintiff given the Court any clue to judge, whether for the securing of his claim, as pledge creditor, a further security, besides the arrest on the pledged vessel, can be demanded by confirmation of the arrest imposed on the skins. For the plaintiff has not at all named the amount of the sum which, he alleges, defendant owes him, and, although, according to the document of pledge, the vessel is security for a claim of \$44,000, he has only moved for the arrest to the amount of \$15,000, and does not at all assert that the arrested vessel is not worth that sum. The confirmation of the arrest which has been imposed on the 358 seal-skins, had therefore to be denied. The contention of the plaintiff that no arrest had been imposed upon the skins, and that even if the arrest had been decreed, it was no longer in force, because of the shipment of the skins to England in the mean time, is an erroneous one. According to the records, the arrest on the skins has been decreed, and it can only be raised by the decision of the Court. The arrest thus decreed is

not made illusory by the fact that the skins which form its object, from reasons of advisability, and on a motion of the parties before the Court, have been handed over to a third party for sale, for the proceeds of the sale take the place of the object under arrest, and remain deposited in Court till a final decision has been given on the arrest. The decision with regard to the costs is in accordance with section 88 of the C. o. C. P.

THE SILK TRADE OF JAPAN.

The following is taken from Messrs. Griffin & Co.'s Half-yearly Silk Report, just published:—
RAW SILK.

In reviewing the Trade for the past six months, we observe the following salient points:—

- 1.—The enormous Export (no less than 23,704 bales); being, without exception, the largest crop ever handled at this port since the opening of Japan to foreign trade.
- 2.—The great increase in "Direct shipments by Japanese;" these amounting for the six months to 5,654 bales, against a total of 2,006 for the same period of last season.
- 3.—The reappearance on this market of *Sodai* and *Taysaam* sorts, the like not having been offered in quantity for many seasons past.
- 4.—The generally moderate scale of prices, which have been rendered still more unremunerative to dealers by the marked appreciation of *Kinsatsu*. These, which in the first part of last season ranged about 160, have recently averaged 110 per \$100.
- 5.—The aspect of the crop as to quality.

1st. EXPORT.—Looking at the comparative tables at the end of this report, we see that the figures show a total of 23,704 bales for the half-year; or an excess over last season of no less than 5,409 bales. The increase is greatest in the export to Continental Europe (4,990 bales); next comes the United States with an increase of 960 bales; while to England there is a decrease of 541 bales.

In this connection we would notice the rapid growth of the trade in America; seven years ago the export was but 62 bales for the six months, now it is 6,856—an increase of more than a hundred-fold. It is curious to note that the excess of Export to New York over last year is entirely made up of increased shipments on native account, and is more than counter-balanced by the shrinkage in the outturn of the North China crop. The American demand has in fact run strongly upon *Kakeda* and other *Oshu* silks, to supply the falling off in re-reeled *Tsattees* from Shanghai.

It will be seen also that fully three-fifths of the silk exported (or say 14,462 bales) has found its way to Southern Europe. Fashion would seem to have run upon goods requiring fine silks; and notwithstanding the good average *raccolta* in Italy, and there has been a current demand in the Lyons market for good Japan raws. Coarse kinds also have been freely shipped to fill the expected short supply of *Taysaams* from China.

The trade to Great Britain, once so important, appears to be slowly but surely on the wane; and it would seem—however well English manufacturers may be able to hold their own in some branches of the trade—that the industries of Silk-throwing and weaving are certainly passing into other hands. The shipments to London (which seven years ago were equal to one-half the total export) have now declined to the insignificant figure of 2,386 bales; or, say one-tenth part of the whole (23,704)—one-third of that to the United States (6,856)—and less than one-sixth of the export to France (14,462). With increased financial and Banking facilities, shipments can now be made direct to the markets of consumption; the business of London as an *entrepôt* has in consequence much diminished, and the quantity of silk actually used in Great Britain is only sufficient to support a feeble trade in the Raw material.

2nd. DIRECT SHIPMENTS.—The statistics show an excess of 3,648 bales over the total at 31st December, 1882. Of this increase 984 bales have gone to New York and 2,664 to Europe. Various theories have been started to account for the sudden activity displayed by native shippers, some holding that the Government were remitting money in silk instead of in bullion or Bills of Exchange, while others take the alarmist view that Japanese have determined to do their own business without foreigners' intervention. However this may be, there is no doubt that, at least, some of these "Direct Shipments" have resulted unsatisfactorily, and at the time of writing such business has been much curtailed.

3rd. COARSE SILKS.—A prominent feature in the present season has been the large supply of

good *Hamatsuki*, *Sodai*, *Nagahama*, and other coarse silks, such as are not commonly exported. Foreigners have been ready buyers of these kinds, the rumoured short crop in the *Taysaam* districts of North China furnishing a good opening for similar silks from Japan. On the other hand, the fact of Japanese being also ready sellers would seem to argue a general unhealthy state of the interior trade, as these kinds usually form the bulk of the raw material used in the native looms.

4th. PRICES.—The season opened on 22nd June at high rates, in sympathy with markets in Europe which had experienced a sharp rise on a rumoured failure of the crop in Italy and France. Here on that day, \$540 was eagerly paid for some ordinary *Maibashi* grading 2½ to 3, with \$490 for *Hachioji*. Within a week prices had dropped fully \$40, when it became known that, after all, the Italian crop would be a fair one.

July.—This month opened with still lower prices, business passing on a basis of \$475 for *Maibashi* Hanks averaging 2½. By the middle of the month there was a little more tone in the market, and the top quotation for 2½ Hanks rose to \$500. Filatures from Koshu province made their appearance about this time, and were found to be bright in color and of good quality, No. 1 being dealt in at about \$630. The month closed weak on a fall of \$10 in Hanks, desirable Filatures holding their own. Settlements for all July 1,400 piculs.

August.—Business began in earnest during the first half of this month; supplies came in more freely; holders were firm, and prices generally were well maintained. This state of things continued all through the month, which closed with a strong market for all classes. *Kinsatsu* rose from 125 to 115, and producers began to complain bitterly that their already attenuated profits were in consequence still further reduced. Settlements in August total 3,100 piculs.

September.—The market being now fairly well supplied with nearly all grades, both buyers and sellers settled down to hard work; and *Hamatsuki* sorts began to show in the daily list at slightly higher prices. Up to the middle of the month the market was active; scarcity of money among the dealers made them current sellers; *Sodai* and *Yechizen* kinds put in an appearance; arrivals of all descriptions came in freely from the interior, and a good business was done. This continued along with a slight reduction in prices, and the end of the month found us with a settlement-list of 4,900 piculs and a stock on hand of 5,000 piculs.

October.—Prices wilted during the first few days and business was in full swing, purchases averaging 150 piculs a day; all classes were freely taken, a marked preference being given to *Oshu* and full-sized silks. The same state of things continued throughout the month, prices drooping and buyers operating freely as rates declined. Sellers were ready to do business, and the transactions for October are returned as 5,400 piculs, shipments of Filatures and *Kakedas* to New York being well up on the list.

November.—The very low range of prices now reached induced free buying and business went on apace. By the middle of the month Hank sorts were lower than they had been for years—Good average *Shinshu* being weighed at \$455. From this point things began to mend; better news arrived from Europe and sellers managed to establish an advance all round. Filatures were also freely bought, medium kinds at lower prices, while the better classes were well supported. The U.S. Mail steamers leaving October and November took large cargoes, shipments on Japanese account being specially heavy. Transactions during the month, 6,000 piculs.

December.—Business generally fell off: holders had recovered some of their *sang-froid* and began to express hopes of better times, the stronger among them resolving to wait until the turn of the year before realizing further. Supported by better news from European markets, prices were raised, especially for Hanks; by the middle of the month the strength extended to other kinds, and demand ran strong in the direction of coarse *Taysaam* sorts. This course of events was further accelerated by still better reports from Lyons, and the year closed with settlements in *Shinshu* Hanks at fully \$35 per picul above the lowest point touched in November. Reports from New York were not so good, owing to forced sales there of Japanese-held silks, and buyers for that market were proportionately discouraged. Stocks of good desirable silks, however, are small, and holders maintain a strong position believing that the beginning of 1884 will bring higher prices. The general feeling, both among buyers and sellers, seems to be that good descriptions suitable for the U.S. market will be scarce for the next two or three months. Settlements for December 2,200 piculs, bringing the total for the half-season up to 23,000 piculs.

5th. QUALITY.—In spite of some complaints in certain districts as to light yield, there is no doubt

that the crop has been exceptionally good both in quality and quantity. From Oshu province the arrivals have been especially good; *Kakedas* (which now embrace *Haremichi*), *Sendai*, and *Hamatsuki* being alike plentiful. In *Filatures* and *Re-reels*, some of the producers who have a reputation to maintain have turned out good, trustworthy silk; while other chops, especially in the Medium Grades, have been uneven and unreliable as of old.

It is beyond question that the production of Raw Silk in Japan is capable of much greater extension; and, if reellers will carefully attend to the *quality* of what they produce they may rest assured of a good demand for their wares in the future.

WASTE SILK.

The trade in this important article shows a steady growth during the last few years as will be seen by the Tables on the other side. The recent advance in the art of Silk-spinning has combined with the requirements of fashion to cause a good demand for Waste Silk generally, and notably for the high-class *Kibiso* and *Noshi-ito* of Japan. The manufacturers of the North of England claim that in "spinning" they can hold their own against all competitors; and certain it is that a fair proportion of the fibre exported hence finds its way to Great Britain. Large quantities have also been shipped to Marseilles *en route* for Switzerland and other manufacturing centres; but shipments to the United States have been small, and it would seem that the trade there is yet in its infancy. Out of a total export for the six months of 16,689 piculs, about 16,000 have gone to Europe and not more than 700 to America.

The market opened in the latter half of July by the settlement of about 100 piculs *Noshi* and *Kibiso*. *Pierced Cocoons* also began to come in, but no transactions were effected until later on. During August, buyers and sellers settled down to work and a considerable business was done at good

prices:—Best *Filature Noshi* bringing \$155, and Best *Filature Kibiso* \$125; Good *Joshu Noshi* being quoted \$90 to \$95. This state of affairs continued till the middle of October when business slackened off, buyers looking for concessions in price, and by the beginning of November quotations for *Kibiso* generally, and *Joshu* kinds of *Noshi-ito*, were reduced \$10. On this level buyers again came in, and the year closes with prices somewhat above the lowest point, the available Stock in Yokohama being reduced to 800 piculs. There should be considerable supplies in the interior, but dealers assert that the present range of prices does not offer much inducement to bring them down.

PIERCED COCOONS—The supply of these has not been large and the export to date is 1,933 piculs against 3,065 on 31 Dec. last. Best qualities, giving heavy per-centage, have not been plentiful, and prices have been fairly steady on basis of—Common, \$80; Medium, \$90; Good, \$100; and Best \$110. There should be some yet to come down; but they may be held over for what producers would consider better times. The bulk of purchases were made as usual in August and September.

NOSHI-ITO.—A large business has been done in this class, and transactions have ranged from Common *Hachoji* up to the Best *Filature* kinds, with extra quality and length of fibre. Demand has been good for *Noshi* from *Joshu* province grading "Good Medium to Good;" while best fine sorts have also found buyers at full rates. *Oshu* has been sought for all along at from \$140 to \$150 per picul, and good *Shinshu* has been freely taken at \$110 to \$100. At the time of writing, Stocks of all kinds are reduced to a minimum and "arrivals" come in dribbles.

KIBISO.—"Filatures" and the better kinds of *Hank* sorts have been eagerly taken, especially during the last two months; after the drop in prices noticed above buyers came in freely and the

demand has fully equalled the supply. Medium and Low *Kibiso* have also at times had their turn, and the year closes with scarcely 600 piculs in stock, the bulk of same being low undesirable kinds. Quotations have recovered something of the fall in good to best descriptions, these being scarce and wanted.

MAWATA.—For the first few months next to nothing was done, sellers and buyers being wide asunder with respect to price. Latterly business has resulted at \$175 to \$195 for *Oshu*, according to grade; and the market has been practically cleared at about these figures.

EXCHANGE.

During the six months, shippers have had the benefit of fairly low rates without great fluctuations. Credits on London at 4 months' sight opened at 3/8 $\frac{1}{2}$; dropped temporarily to 3/8 $\frac{1}{4}$; hardened to 3/8 $\frac{1}{2}$ as the season got well underweigh; improved another farthing by the end of September, bounding by quick steps to 3/10 at the beginning of November. (The great stagnation in Imports and consequent preponderance of Exports had caused a real scarcity of dollars; but the stringency soon passed when news came in reporting shipments of bullion from East and West.) Thence to date a fairly steady market, about on the level of 3/9 $\frac{1}{2}$, closing weak.

KINSATSU.—Those important factors in the native merchants' calculation have seemed persistently adverse to his interests throughout the period under notice: quotations at the opening of the season being 133 per \$100, or about 15 per cent. less than at the opening of last season when the rate was called 156 per \$100; a steady appreciation continued with slight fluctuations until, in November, business was done at less than 110, showing a further loss to the dealer in silk of another 18 per cent. Since that date currency has varied between 107 and 110, closing fairly steady at about 109 *yen* per 100 silver dollars.

THE REVENUE FOR 1883.

The revenue for the past year amounts to £90,000,000, showing an increase of £3,690,000 as compared with that of the previous year.

London, 4th January.

THE RISING IN THE SOUDAN.

The threatening of Upper Egypt by the Mahdi and his followers is engaging the serious attention of the British Government at present.

A Cabinet Council was held yesterday, when Egyptian affairs were discussed. The Council is summoned again for to-day.

It is rumoured that an important decision in connection with the measures to be adopted to cope with the rising in Egypt is imminent.

London, 5th January.

ENGLAND AND EGYPT.

The Egyptian Government has sent a vigorous Note to the British Government, stating that if England refuses assistance in the Soudan the Egyptian Government will relinquish the Eastern portion to Turkey.

London, 7th January.

THE CABINET COUNCIL ON THE EGYPTIAN CRISIS.

At the Cabinet Council held on Saturday no decision was arrived at respecting the steps to be taken by the British Government in Egypt for the preservation of order should the Mahdi continue to advance.

BRITISH REPLY TO THE EGYPTIAN NOTE.

The British Government, in reply to the Note sent by the Egyptian Government, state that they have no objection to Egypt giving up the eastern portion of the Soudan to Turkey, nor would they object to a Turkish expedition for the suppression of the rising in that country, provided that the whole expense of the same was charged to the Turkish exchequer.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 7.30, 8.45, 9.30,* 10.15, and 11.30 a.m., and 1.00, 2.30, 4.00,* 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 7.30, 8.45, 10.00,* 10.45, and 11.30 a.m., and 1.00, 2.30, 4.00,* 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

The Yokosuka steamers leave the English Hatoba daily at 8.50 and 10.30 a.m., and 12.15, 2.30, and 4 p.m.; and leave Yokosuka at 7.15 and 9 a.m., and 12 m. and 1.45 and 4.00 p.m.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, JANUARY 11TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dotted line—represents velocity of wind.
Percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 23.0 miles per hour on Tuesday at 7 a.m.

The highest reading of the barometer for the week was 30.302 inches on Saturday at 10 a.m., and the lowest was 29.820 inches on Tuesday at 2 p.m.

The highest temperature for the week was 53.2 on Monday, and the lowest was 29.4 on Saturday. The maximum and the minimum for the corresponding week of last year were 53.5 and 26.8 respectively.

The total amount of rain and snow for the week was 0.105 inches, against 0.108 inches for the corresponding week of last year.

Correct answer received from "TESA."

NOTES FROM JAPANESE PAPERS.

It is said that two men-of-war are under orders to visit Europe.

The ward-offices experience considerable pressure of business, owing to the recent revision of the Conscription Regulations.

The Yokohama Gas Company propose to reduce their rates of lighting both houses and streets.

The Buddhist priests have held meetings respecting the Conscription Regulations. The Chief priests of different sects from various localities, have arrived in the Capital to forward a petition to the Government praying that those who have successfully passed the Theological School shall be exempt from service.

Emigration to Hokkaido shows an increase of 738 as compared with last year.

In rural districts great confusion prevails owing to the military service having been made compulsory. In the prefecture of Shiga, seventeen ward officers have been arrested on suspicion of having assisted the people to evade the conscription. In the prefecture of Shidzuoka, young girls have been espoused or young boys have been given inheritances, in the idea that married men and heirs of families are exempt from the service. The engravers are consequently busy in making stamps for the people who require them for making application to the ward offices.

A few days ago a curious accident occurred in Benten Dori. A servant in a watchmaker's shop was cleaning a clock with kerosene. Suddenly the oil took fire; and the man, naturally, threw the vessel outside the shop. It fell into a bucket of water, and the flames spread over the surface. The unwitting author of the mischief made matters worse by rushing out and kicking the bucket over so effectually that the burning oil not only flashed over the street but caught the clothes of a passer-by, who had the presence of mind to throw off his garments, and escaped with some burns on his arms and legs.—*Mainichi Shimbun*.

A fort will be erected at Hishijima, Sagami, in the prefecture of Kanagawa.

The guns of the *Tsukushi Kan* have been tried at Boshu and the results were most satisfactory.

A letter from Ogasawara-jima (Bonin Islands), dated the 28th of December last, says:—On the 5th of October, Chichi-jima was visited by a most severe gale, increasing in force toward 2 p.m.; houses and trees were demolished. At 5 p.m. the wind changed from S.W. to S.E., when all danger was over. Next day, the local officers went round the vil'ages on a tour of inspection and found the roads impassable owing to the ruins of houses, trees, and rocks which were strewed about. The damage to the rice fields was considerable. In Hana-jima, the damage to houses was less severe, only five being destroyed, but the rice-fields suffered most severely. Coffee planted for experimental purposes has suffered more or less severely. In Kiyodai-jima, the damage was confined to trees.—*Choya Shimbun*.

LATEST SHIPPING.

FREIGHTS.

The berth continues to be well filled with steam tonnage for usual destinations, but there is little doing in coastwise freights. The German steamer *Hesperia*, 1,136 tons has been chartered, Nagasaki to this port, \$1.15 per ton, and several small sailing vessels have found employment from Formosa to Yokohama with sugar. Although freights are low, there appears to be no more tonnage idle at the moment than is usual at the time of year in China and Japan.

ARRIVALS.

Kiyokawa Maru, Japanese steamer, 62, Emada, 12th January,—Shimidzu 10th January, General.—Seiriusha.

EXPORTS.

RAW SILK.

Since our last issue of the 10th instant, we have had a quiet Market with but moderate business, Settlements for the week being returned as 400 piculs. Arrivals have been very scanty, and this combined with some demand for native requirements has reduced the available Stock to 3,700 piculs. Prices are nominally without change; but (with some exceptions) may be said to be the turn in buyer's favor. Still further depressing news from New York has caused almost a cessation of buying for that quarter. The bulk of the business done has been in Common Re-reel and Filature kinds grading very low in the scale.

The P. & O. mail steamer *Khiwa*, which left on the morning of the 12th instant, carried 563 bales; of which, 482 were entered as going to France and

81 for England, Japanese exporters being again well represented. These figures bring the total Export up to 24,624 bales, against 19,007 to same date last year, and 9,479 the year before.

Hanks.—Business in these has fallen away, and very little has been done. Prices are nominally unchanged, but it is likely that firm offers for a quantity at a trifle under present quotations would lead to business. Among the few purchases made we notice Omama, \$480; Joshu, \$475; Annaka, \$470. Stock is stationary at last week's figures.

Filatures.—Again fine sizes of good quality have been sought after, and true 10/13 denier silk has commanded its price: Common and mixed Filatures have also been in demand at from \$510 to \$550 per picul. Buyers for the New York Market have again held back for better times and lower prices; meanwhile, good desirable sorts are scarce and firmly held. Among the recorded business we observe some fine-sized Shinshu at from \$610 to \$620. In coarse sizes the little doing ranges from *Nihonmatsu* at \$635 down to common rejections at \$500.

Re-reels.—Rather more doing in these, demand running chiefly on 2½ to 3. Anything Good is firmly held, and the Stock on offer embraces *Shinshu* "Fan" chop \$610 "Helmet" \$585. In *Maibash* "Turtle" chop is offering at \$590, and two or three lots "Five Girl" have been settled at \$580. Other kinds down to "Inferior" at \$550, \$545, \$535, and \$525 according to quality.

Kakeda.—Very little doing in this class, and the small purchases made have been more than counter-balanced by the return of silk previously taken into godown. All quotations must be considered more or less nominal except for quality grading 2½ to 3 which is enquired for at late rates.

Oshu.—About 60 piculs have changed hands among which are *Sendai* \$490 and *Hamatsuki* \$470 to \$445. Stock same as last reported.

Taysaam Kinds.—A sale of *Shimada* reported at \$420, beyond this nothing done.

QUOTATIONS.

WASTE SILK.

There has been rather more doing in this branch; Settlements for the week about 400 piculs, again equally divided between *Noshi-ito* and *Kibiso*. Stocks are slightly increased, but desirable parcel are scarce, and command full rates especially *Joshu* *Noshi* and *Filature* *Kibiso*.

Pierced Cocoons.—Without change; no transactions, and no Stock worth mentioning.

Noshi-ito.—Good sorts in demand, and business done in *Filatures* at \$130 to \$135 (for a parcel *Tomiyoka* \$160, perhaps \$155 is asked); *Oshu*, \$145; *Joshu*, Best Fine, \$110; Good Medium, \$87½; Common, \$65. Supplies are not coming in very freely, and the Market is fairly supported at the advance.

Kibiso.—The week has seen a marked rise in

Filature kinds, Best *Shinshu* having touched \$125, with ordinary "Cocoony" at \$117½. A little done in *Oshu* at \$97½, with something passing in low kinds of *Joshu* and *Hachoji* at \$40, \$30, \$18, and \$15. Stock shows a slight increase.

Mawatta.—No transactions: a few bales have come in from the country, bringing the Stock in Yokohama up to 110 piculs.

TEA.

The same desultory kind of business reported in our last Market Report continued up to the 14th instant, when daily Settlements only amounted to 55 piculs; for the past four days, however, an increased demand has been ruling, and total Settlements for the week show an increase over previous Settlements for like period for some time back. Prices again have a firmer tendency, especially for Teas grading above Medium which are in very small supply. Receipts from the country during the interval have about balanced the demand, and Stocks are about the same as they were a week ago. Total Settlements for the interval are about 695 piculs, and comprise the following grades:—Good Common 135, Medium 305, Good Medium 90, Fine 70, Finest 20, and Choice 65 piculs. The cargo of the *City of Peking*, despatched on the 10th instant, consist as follows:—For New York, 15,654 lbs.; for Chicago, 4,385 lbs.; for Portland (Oregon), 150 lbs.; and for California, 67,201 lbs.; making in all for United States 87,390 lbs. Fired Tea.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Faker that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JANUARY 26TH, 1884.

BIRTH.

On the 2nd January, 1884, at Sadec, near Saigon, French Cochinchina, EDGAR DE LAHOGUE, son of Monsieur Thony de Lahogue and of his wife Anna Nègre, eldest daughter of Mr. A. F. Nègre, of Yokohama.

SUMMARY OF NEWS.

FURTHER particulars of the fire in Shidzuoka show that eleven persons were burned to death, seven of whom were women.

THE vernacular Press estimates the number of native Christians in Japan at 5,591, and the number of churches at 88.

SEVERAL arrests of incendiaries have been made in Tokiyo during the week, and a considerable diminution is noticeable in the number of fires.

A PERFORMANCE was given by French Amateurs at the Gaiety Theatre on Thursday evening, in aid of the funds of the Yokohama General Hospital.

It is said that the Japanese nobles have memorialized the Government in favour of a national constitution on the basis of that of Great Britain.

THE Minister of Finance has notified the issue of Railway Loan Bonds to the amount of five million *yen*. The bonds are to be issued at 90, so that the rate of interest will be $7\frac{1}{10}$ per cent.

THE case of Yukioka Shobei v. Edward Whittall came up again before H.B.M. Court for Japan, on the 22nd instant. Judgment was given for the plaintiff; damages, \$1,097.67.

ON Tuesday evening a ball was given at the Masonic Hall by the ladies of Yokohama in aid

of the funds of the Ladies' Benevolent Society. Upwards of six hundred tickets were disposed of, and the affair was in every respect a great success.

THE Minister of the Interior, General Yamagata, has published a notification embodying very strict rules with regard to the use of swords by the police.

THREE wardens of Hiroshima Prison, at which a disastrous fire attended by serious loss of life occurred some months ago, have been sentenced to major seclusion for nine years, having been found guilty of neglect of duty in failing to open the prison doors when the conflagration broke out.

THE trial of the police concerned in the death of the Chinaman Wai Hinno at Nagasaki has been concluded. The vernacular press states that the policemen charged with stabbing the Chinaman has been sentenced to five years major confinement.

THE much talked of pier at Shinagawa seems likely to be really commenced ere long. On the 22nd a number of persons from the offices of the Tokiyo Municipality and the Water Police were engaged marking out the position of the pier, which is to be carried out in the direction of the second fort.

ON the morning of the 23rd instant, the Meteorological Department, Tokiyo, received intelligence of a remarkable rise of temperature throughout the country. At Nagasaki the thermometer registered a difference of 14° F. in 24 hours, and from Sapporo a rise of 13° was reported. These changes of temperature were accompanied by heavy rain throughout the south-eastern districts, and snow in the north.

THE Annual Meeting for receiving accounts and electing a Committee of the Yokohama General Cemetery, was held at the Chamber of Commerce Rooms on Tuesday, 22nd instant. The financial condition of the Cemetery was found to be satisfactory, there being a credit balance of \$590.48. The total number of interments during 1883 was 50, which was also the number for 1882 and 1881.

AT three o'clock in the afternoon of the 20th, a fire, the work of an incendiary, broke out in Kotohira-cho, Shiba, Tokiyo. The flames, which made their appearance in a pile of firewood, quickly attracted attention, and would probably have been extinguished at once but for the strength of the wind. Eight houses were ultimately destroyed, and three more or less injured. At 7 o'clock, the same afternoon, a bath-house in Bakuro-cho took fire. The flames were quickly got under but the owner of the house was badly hurt in the operation. Another conflagration occurred, the same evening, in a shed which had been erected for building purposes at the temple of Kaianji, near the grave of His Excellency Iwakura. The shed was demolished.

WEEKLY NOTES.

It is nearly nine hundred and fifty years since Masakado took the title of Hei-shin-ô, and building himself a palace at Sarushima, in Shinôsa, reigned, for a brief period, as Emperor of Eastern Japan. The rebel monarch's pretensions were effectually disposed of by the warriors Sadamori and Hidesato, but it is related that his vanquishers had nearly yielded to the bewilderment of a Protean spell which enabled the pretender to multiply himself into the similitude of seven horsemen, among whom one alone was mortal or sentient. The eagle-eyed archer Tawara Todo proved too much, however, even for this imperial Hydra. His sight was so keen that among the seven heads he singled out the only one in whose temples a pulse was beating, and his skill was so unerring that he shot an arrow which pierced the vulnerable temple at this very spot. In those days the measures taken to exterminate troublesome subjects were of Old-Testament efficiency. Everybody was cut off, even to the children in the womb. Sadamori and Hidesato were not the men to neglect their duty in this respect, and for centuries it was universally believed that the race of Masakado had no representative, however distant, throughout the empire. That this was a popular fallacy has recently been proved after a somewhat singular fashion. It appears that there lives in the village of Sugefu, of the Sôma district in Shimôsa, a wealthy farmer by name Hanchô-bei. This man, whose estate is one of the widest in the province, is the direct descendant of Masakado. Near his house there is a sepulchral mound, known as the "Tomb of the Thirteen" (*Jiu-san-dzuka*), in allusion to the thirteen families into which Hanchô-bei's blood relations are divided. This mound, it is needless to say, has always been regarded with the utmost veneration. There is also, among the heir-looms in the yeoman's possession, a black lacquer box, which from generation to generation remained unopened. Each son and heir, as he received the box from his father, was solemnly informed of a tradition that whoever ventured to raise the lid should lose his sight forthwith. No one, it appears, ventured to test the truth of this superstition until the present representative of the house, being a man of considerable learning and enlightened ideas, concluded that duty forbade him to respect such old wives' tales. At the beginning of this year, therefore, he invited his relatives of the thirteen families, and having informed them of his resolve to see what the box contained, proceeded to open it in their presence. It contained a worm-eaten scroll, on which were written, in characters scarcely legible, the following words:—"Two hundred pieces of gold are buried in the Tomb of the Thirteen. Let none but a soldier venture to use them." Below this sentence was the seal of Hei-shin-ô (the usurping emperor), and the date, "New Year's day, A.D. 938." The astonishment of the assembled party is said to have been great, but they concluded that, as sensible men, they ought not to leave such a

treasure unemployed in the bowels of the earth. Having agreed, therefore, that when the gold was taken out, one-half should go to Han-chôbei, and the remainder be divided among the thirteen relatives, application was made, a few days ago, in due form, to the local authorities, and with their permission, steps have been taken to open the tomb. Should the search be successful, the value of the gold, expressed in the paltry coin of these latter days, will be about twenty thousand dollars. The only question that puzzles us is, of what shape will the pieces be? We say "pieces," but it would perhaps be more correct to translate the Japanese by "slabs" (*Ogon no ita*). It has never been stated, however, so far as we know, that gold, as an instrument of exchange, was used in Japan in any form other than dust so long ago as the tenth century. From an antiquarian point of view, therefore, the treasure buried in the Tomb of the Thirteen will possess great interest. Meanwhile, it has yet to be found, and though the story we have recounted receives general credence among Japanese, the sequel seems somewhat problematical.

A TOKIO journal tells a very sad story of insanity caused by grief. Some days ago the wife of a fishmonger, by name Matsugoro, living in Tobe-machi, Yokohama, received news, from Tokiyo of the sudden death of her father. The event affected her so much that she could neither sleep nor eat, and though her husband watched her with the utmost anxiety, she managed to escape from her home during the night of the 22nd, and with her child, a girl three years old, on her back, jumped into the canal from Yukimibashi in Kami-sakuragi street. Both the mother and the baby were drowned.

PRISON statistics, prepared this month, show that the number of persons confined in the jail at Ishikawa is 1,977, of whom 66 are soldiers. In the prison at Ichigaya, there are 1,321; in the prison at Kajibashi 356, of whom 23 are women, and in the Tokiyo Penitentiary, 941. Thus the total number of persons confined in civil prisons in Tokiyo is 4,595.

The route from Tokiyo to Tateyama, in Boshu, used, until quite recently, to be the scene of a most animated competition between two steamship companies, the *Boshu-maru-gwaisha* and the *Miura-gwaisha*. The public, as usual, benefited by the rivalry, for fares were gradually lowered until the passage cost only forty cents. At this point the *Miura-gwaisha* succumbed, and the *Boshu-maru-gwaisha*, having things all its own way, suddenly raised the price of a ticket to one *yen*. Travellers by that route are thinking of petitioning the Government to establish another *Miura-gwaisha*.

WE referred yesterday to a report that a certain European firm had been authorized by the Korean Government to prospect for deposits of metalliferous ores in the interior of the country. It appears that a contract was made shortly after the Korean Treaty with Great Britain had been drafted, and that steps have already been taken to carry out the plans therein specified. Should the prospectors meet with success, the mines may be worked without further delay; but the profits beyond a stipulated sum must be shared with the Korean Government. Gold and silver mines are excluded from the contract, as the government has resolved to keep these precious metals—if such there be in Korea—under its

direct personal supervision. One cannot but admire the energetic fortitude with which the merchant prospectors have entered upon this interesting work. As for as our present knowledge of the country's resources is concerned, copper currency is as scarce as silver, and it seems hardly probable that the mountain fastnesses of Korea conceal another Comstock lode. Enterprise is laudable, and we sincerely hope that in this case it will meet with success. Korea may turn out something after all.

TERRIBLE accounts of the disasters caused by the recent fire in Shidzuoka appear in the vernacular press. In addition to severe injuries suffered by members of the police-force and fire brigade, the loss of life was very considerable. The fire, it will be remembered, broke out in a theatre, where a company of actresses had been performing a few hours before. Six of these actresses, with an old woman and four men, were sleeping in the back part of the theatre when the flames reached them. Not one of the eleven escaped. Among them an actress called Umeji was *enccinte*. In her agony she gave birth to a child, which was found dead beside her corpse. Another, Harukichi, had joined the company the preceding day, accompanied by her father, mother and brother, who came to see her first performance. These four were also among the victims. A second party of six actresses, accompanied by one man, made their escape from the burning theatre, only to find their further progress blocked by a godown. The flames had almost reached these unfortunates when their cries were heard by the owner of the godown, who was just then plastering the doors and windows in the front of the building. This man, Kichiyemon, immediately guessed what had happened. Running to the back of the godown, he succeeded, by an exercise of great strength, in pushing open a door which had been hermetically sealed, and through this entrance the seven fugitives passed or were carried, some having already lost the command of their limbs. They were all saved, but not so Kichiyemon's godown. The flames gained admission by the same door as the actresses, and the building was reduced to ashes.

WE read in the *Yomi-uri Shimbun* that, during the last three months of 1883, the number of passports granted to foreigners by the Kobe authorities, for the purpose of travelling in the interior, was 197 in all. Of these 94 were granted to British subjects; 35 to Americans; 34 to Russians; 12 to Frenchmen; 11 to Germans; 4 to Dutchmen; 2 to Chinese; 2 to Swiss; 1 to a Norwegian, 1 to a Portuguese, and 1 to a Dane. During the same period the number of permits to travel abroad (*Kaigwai-riyoko-ken*) granted to Japanese subjects were 29, of which 14 were for New York; 5 for Hongkong; 1 who for Fusan, Korea, and 1 for Germany. We learn from another journal that the number of pleasure-seekers who visited the eighty-five lodging houses in Gokenmachi, Yoshiwara, Tokiyo, throughout 1883, was 33,409, and that the amount of money they paid for their rooms, &c., was 15,698 *yen*. It appears from this that the takings of each house scarcely amounted to 15 *yen* per month. There are, therefore, more lucrative professions than that of letting temporary lodgings to the Lotharios of Tokiyo. The record of the two little steamers, the *Tsu-un Maru* and the

Nakajima Maru, which ply from Riyogokubashi and Yeitai-bashi to Shimosa and Yashiu, is more promising. The number of passengers they carried during the latter half of 1883 was 45,329, that is to say, an average of about 124 each per diem.

THE Chinese Government appears to be growing seriously apprehensive of the results of the disasters that visited the Shun-t'ien Prefecture and the provinces of Chili, Shantung, Hupei, and Anhui, last season. There is a prospect, by no means remote, that Peking itself may be besieged by an army of desperate mendicants, and, to avert such an inconvenient state of affairs, an Imperial Decree orders the establishment of a refuge at Tsing-kiang Pu, a place to which the waterways communicating with the northern and southern portions of the Empire converge, and whither a continuous stream of destitute refugees is constantly making its way. Hitherto the Cabinet at Peking has not applied to this trouble the active remedies its magnitude now appears to have demanded. Small donations from the Imperial purse and the diversion of tribute grain to the relief of the sufferers, were measures which contrasted ill with the strong terms of His Excellency Li Hung-chang's memorials, and with the announcement that the Viceroy of Chili and the Lady Li had contributed, from their private funds, no less a sum than one hundred and fifty thousand taels to buy food and clothes for the refugees. The decree, mentioned above, alludes to the sufferings of the people in feeling terms. The Emperor says that his "heart is filled with compassion," and that "the thought of the homeless and suffering condition to which the lower classes of the people have been reduced, affects him so deeply that he can neither sleep nor eat." These natural, if somewhat exaggerated, expressions are alluded to with scant courtesy by the *North China Herald*, which interprets them to mean, "in plain English, that the Government is both embarrassed and alarmed, and appears anxious to do anything that may be calculated to save itself from a severe internal shock." It is not an uncommon thing with Governments to dislike, and try to avoid, severe internal shocks, but if our Shanghai contemporary's estimate be correct, there is more sound than substance in the Emperor's order that a hundred and forty thousand taels shall be immediately distributed among the sufferers. It is stated that the Viceroys to whom the decree is addressed, will have much difficulty in raising the money; that the people have already been heavily taxed to meet the expenses of war preparations, and that numerous commercial crashes have largely expanded the circle of distress. The perplexity of the Viceroys was recently illustrated by a proposal of Li Hung-chang, embodying, apparently, a plan for obtaining charitable contributions by the sale of titles of nobility. The *North China Herald* says that "the rotten state of affairs which exists at present points very unmistakably in the direction of events which can not but be fraught with disastrous consequences to the Manchu Government, unless a more practical and enlightened policy be adopted before it is too late." Some will be disposed to think that this forecast is not unworthy to be placed in the context of the Chinese Emperor's pathetic utterances, but it can scarcely be contested that the lot of the Imperial Government is cast in somewhat troublous times.

It was not very wonderful, though certainly very regrettable, that the President and Parliament of the United States should yield to the clamour of the people of the Pacific slope, and, in a moment of weakness, pass a law which violated the first principles of the American Constitution, and will always remain an indelible stain upon the civilization of the "Land of Liberty." But we should have thought that, after this first act of mischief was performed, after a concession had been made to the momentary madness of uneducated monopolists, the American Administration would have gladly closed its eyes to any devices calculated to nullify the effects of its pernicious error. Such, however, is not the case. On the contrary, telegrams from Washington speak of "the earnest purpose of the State Department to prohibit the illegal immigration of Chinese," just as though the Government of the Republic were engaged in some philanthropic undertaking of a nature to confer lasting reputation on the country, instead of devoting its energies to enforce the provisions of a measure which, had it been enacted three centuries ago, would scarcely find one apologist to-day. It may be that the State Department feels a little vindictive over the business, and means to let the people of California reap the full fruits of the folly they have sowed. Such an intention would certainly seem consistent with the zeal exercised to prevent anything like evasion of the anti-immigration bill. Not content with formulating strongly worded remonstrances against the laxity of the Department of Customs at Canton in issuing certificates to everybody that chooses to pay for them, although the applicants may be really of the common-labourer class and not merchants or students, the United States' authorities now declare, that they are not content to leave the settlement of the matter entirely to the good-will of the Chinese, and that if additional legislation on the subject be deemed necessary, "a bill will be introduced in Congress by Senator Miller, providing further guarantees against imposition by subordinate officers in China." One wonders how long it will be before America rouses herself to a sense of the insult she is doing to her own intelligence and civilization. There are many prejudices which, though wrong, command a certain measure of respect, but to our thinking, nothing resembling a passable excuse has ever been urged in defence of the anti-Chinese Immigration Bill.

NOTES.

HIS IMPERIAL HIGHNESS PRINCE HARU, having almost reached the age of seven, is to have a separate Palace built for his use between the Imperial Palaces of Awoyama and Akasaka. The little Prince has hitherto lived under the care, and in the mansion, of His Excellency Nakayama. He is the only surviving child of the Emperor, and for a long time the state of his health was a constant source of anxiety, though happily of late he seems to have gained strength. The plan of the new palace has already been decided upon, and the building will be commenced immediately, so as to be ready for occupation next August. It will be of wood, after the usual Japanese model. His Majesty the Emperor does not appear to be progressive in the matter of buildings. He still prefers the Japanese style, though it is more expensive, far less durable, more exposed to the danger of fire, and less healthy than the European. It may be,

indeed, that the form of the Prince's residence has been fixed without reference to the Emperor, but wherever the responsibility rests, it does seem a pity that while brick and stone are used everywhere throughout the capital in the various offices, official residences, and other buildings erected under Government auspices, the palaces for the Emperor himself, and for the Princes and Princesses of His Majesty's family, should be of wood. Japanese houses are very beautiful, very æsthetic, very cleanly, and very airy—though those who have lived in them know that they are several degrees hotter in summer and colder in winter than European houses—but even if all these advantages were several times multiplied, there would still remain the unanswerable objection of inflammability. Fires are the curse of Tokiyo. The citizens can never be rich, prosperous, or happy so long as their residences and all their household goods are reduced to ashes once in every five years. The heroic measure of rebuilding the city in brick is, of course, out of the question, though, from a financial point of view, it would be one of the best speculations ever made. But we should be prepared to find that every patriotic and enlightened Japanese would endeavour to promote building reform, and to encourage the use of brick and stone by himself setting the example of employing them whenever the opportunity offered. So long, however, as the Emperor is of a different mind it is inevitable that the old fashions should survive, and that the energies and resources of the people should be wasted, year after year, in weary efforts to recover from disasters which a little steady resolution would soon enable them to avoid altogether.

WE observe, with much pleasure, that the Order of the Rising Sun has been conferred on Lieutenant A. H. Hawes, Captain J. James, and Mr. B. H. Chamberlain. We believe that Lieutenant Hawes has served the Japanese Government longer than any other foreigner, and there can be no second opinion about the excellent work he did in connection with the organization of the navy, and, above all, of the Marines, whose discipline, soldierly bearing, and efficiency reflected the highest credit on their instructor. Captain J. James reputation also stands very high. He has been the originator of some valuable suggestions with regard to the mercantile marine, and his professional knowledge was of considerable service in the sequel of the *Imeute* at Sôul, the year before last. Mr. B. H. Chamberlain's duties have not, perhaps, been of a nature to establish a special claim to the honour now conferred on him; but his exceptional attainments as a sinologue, and his highly valuable contributions to Western knowledge of Japanese literature, render him worthy of any distinction. While offering our congratulations to these gentlemen, and recording our sense of the justice of the Government's choice, we may be permitted to note with satisfaction this practical departure from the mistaken notion that the distinctions which a foreign government has to bestow are less accessible by Englishmen than by any other nationals. Writing upon this subject nearly a year ago, we said that, though official permission must be sought and obtained before one of Her Majesty's subjects may publicly accept and wear a foreign order, such permission, in the case of civilians at all events, can be procured without any difficulty; and that, under the circumstances, the comparative

exclusion of Englishmen from these distinctions in Japan was calculated to convey an impression certainly at variance with the sentiments of the Japanese Government. Since then, six British subjects have been decorated, viz., the three gentlemen mentioned above, and Mr. W. H. Stone, of the Telegraph Department; Mr. A. S. Aldrich, of the Railway Department; and Mr. P. Osborn, of the Kanagawa Kencho.

OUR telegraphic news includes an announcement of maritime disaster which involves the loss of over 200 lives and a valuable ship and cargo, amongst the latter being fifty thousand dollars in specie. We recently published paragraphs from Hongkong papers referring to the extraordinary disappearance of the *Hwai-yuen*, which sailed from Shanghai on the 28th ult., for Hongkong, and had not been heard of up to our latest advices from that port dated 12th inst. The *Hwai-yuen*, Captain Wilson, was a steamer of the China Merchants' Steam Navigation Company, of 984 tons register, and for some years past has been running regularly on the Shanghai-Hongkong-Canton line. She last left Hongkong for the North on the 20th ult., and left Shanghai for the South on the 28th, having on board \$50,000 in specie belonging to the Hongkong and Shanghai Banking Corporation, about 150 Chinese passengers, and a numerous crew, and when only one day out, off Yuesan, which is not far from Chusan, struck a rock and filled and sank so rapidly that there was only time to get out two lifeboats, one of which capsized. Whether the few Chinese who were saved to tell the story were in the second lifeboat or not does not appear, but it would seem that all on board were lost except five Chinese. There would be six or seven Europeans on board, as the deck officers and engineers in this company's ships are foreigners, the crew being Chinese.

MANY doubts have been expressed with regard to the prospects of colonization in Yezo, for though the place offers many attractions to immigrants, the nature of the agriculture it requires is said to be distasteful to Japanese settlers. It is to be observed, nevertheless, that the number of persons proceeding thither augments every year. This was notably the case during 1883, when, it is stated, Hakodate Prefecture alone contributed 738 colonists.

A NOVEL petition has been presented to the French Government. The petitioners pray to be delivered from "*un vacarme superlativement inutile, arbitraire, et impertinent*." One of them explains the case thus:—"My physicians had given me over. I could find no peace from my sufferings except during a few moments of slumber just before day-break. But I had reckoned without the clocks. Scarcely had the first beneficent sensation of rest come upon me, when the striking of a clock roused me with a shock. As if one did not suffice, another chimed in, and soon, heaven knows how many were clattering and clanging. Heaven knows, too, how many other unfortunates were suffering like myself, and how many are still suffering. It hurts me when I think, every morning, at the first stroke of five o'clock, of all the miserable folks who may be writhing, unpitied, on their beds of torture in the vicinity of some inexorable clock." Another petitioner declares that he has seen, in the streets, the very

dogs protesting against the nuisance, and almost driven mad, as their paroxysms of barking showed, by the "*frisson épileptique des cloches*." Anyone who can honestly laugh at these petitioners must be a person exceptionally blessed as to his nervous system.

REFERRING to the report of the British Board of Trade of its proceedings under the Weights and Measures Act of 1878 for the year, *Bradstreet's* remarks that one of the most interesting points in the report is that relative to the comparison recently made of the English standard of length (yard No. 1) with the United States standard (yard No. 57). The examination was made by Prof. C. S. Peirce, of the United States Coast and Geodetic Survey, who went to London for that purpose, in June last, on behalf of Prof. F. E. Hilgard, who has charge of the Bureau of Weights and Measures at Washington. The result is curious as showing the extreme degree of accuracy attained in mechanical instruments in modern times. After a large number of comparisons made with all possible care, it was found that at 62° F. the United States standard was longer than the one deposited at the office of the Standard's Department by .00022 of an inch. The accuracy of the standard kilogram in the British office was also tested by comparison with the French standard, and was found to be 2.0178 milligrams, or .03047 of a grain avoirdupois, too light. Among the new measures referred to in the report, those for the measurement of mechanical and electrical energy are deserving of particular mention, though it appears that no practical meter capable of use in commerce and daily life has as yet received official sanction.

THE Horonai Coal Mine is an example of a Japanese enterprise crippled by causes which ought to be easily capable of remedy. The present out-put of the mine is only about twenty thousand tons per annum, not because its capabilities of production are limited, but because the local demand does not require a larger supply than that quantity. All that is needed, however, is that the coal should be better known. Access to the mine, which is situated in the province of Ishikari, Hokkaido, has now been rendered easy by the construction of a railway, but the coal, having to compete with that of Karatsu, and other varieties of established reputation, is naturally slow to make its way. From what we have been able to learn its quality is excellent, and very satisfactory results are obtained by using it with due regard to its properties. Coal, like everything else, has its peculiarities, and to burn it profitably these must be consulted. There is a coal whose ashes and dust cake and solidify into hard masses, which will effectually choke the fire unless ventilation is promoted by constant stirring. On the other hand, there is a coal which does not thus solidify, and if this variety be unnecessarily stirred, the consequence is that it falls, unconsumed, through the bars of the grate. Horonai coal is of the latter sort. Its clinker is very small, and when it is used in stoves or ordinary grates, it may be left to burn itself out comparatively undisturbed. Its heat-producing power is very high; it gives off a light smoke, and as it contains hardly any trace of sulphur, and leaves very little ash, its wearing effects upon the interior of the furnace are trifling. In Sapporo stoves burning this coal are said to require a minimum

of cleaning, as it is found that the fire may be continually replenished without removing the ashes. We learn that several steamers have tested the quality of the coal and reported on it favorably. For the information of the public we re-produce three of these reports:—

REPORT OF A TRIAL OF HORONAI COAL IN H.B.M.'S
GUNBOAT "ZEPHYR."

	HORONAI.	WELSH FERDALE.
No. of Hours' run	7	7
Expenditure	42 cwt.	35 cwt.
Speed attained	8 knots	8 knots
Consumption of Coal per } hour per H.P.	3.45 lbs.	3 lbs.
Quantity of Smoke	2 to 5	1 to 2
Percentage of Ash	9½ %	14½ %

REMARKS.

At the expiration of the run, the fires were very dirty, the fire bars being covered with clinkers and ashes. The clinker and ash left by burning this coal is much lighter than that produced by Welsh Coal, the mean weight of a bucket of clinker from Horonai Coal, being 20lbs. against 35lbs. Welsh. The smoke was heavy on first firing, but quickly cleared. I consider this a fair coal being superior to Takashima, though inferior to Welsh.

(Signed) G. N. A. POLLARD,
Lieutenant and Commander.

August 21st, 1883.

REPORT OF A TRIAL OF HORONAI COAL IN THE
"KOSUGE MARU."

	HORONAI.	KARATSU.
No. of Hours' run	8	8
Expenditure	6.25 tons	7 tons
Speed attained	9 knots	9 knots
Consumption of Coal per } hour per H.P.	2.76 lbs.	3.09 lbs.
Percentage of Ash	8.1 %	

REMARKS.

In trying Horonai Coal, I have found it to be a very good steaming coal with a small percentage of ash as compared with Karatsu; the consumption is also less; the smoke from this coal is lighter than from Karatsu or Takashima. I consider this coal equal to good English coal.

(Signed) J. NAISMITH, Chief Engineer.

REPORT OF A TRIAL OF HORONAI COAL IN TOKIO BAY
IN H.L.J.M.'S "RAIDEN KAN."

	HORONAI.	KARATSU.
Consumption and Time required until steam.....	388 lbs.	400 lbs.
Gauge represents	52 minutes	1 h. 20 m.
Consumption and speed per hour at 85 Revolution per minute.....	327 lbs.	500 lbs.
Expenditure during the Trial	5½ knots	5½ knots
Percentage of Ash	1,435 lbs.	
Pressure	8½ %	14 lbs.

* Density of Boiler Water at 200° average 1½
Temperature of Condensed Water..... 32°
Temperature of Feed average..... 93°
Temperature of Fire Room..... 96°
Temperature of Engine..... 60°
Remarks on Karatsu Coal are extracts from the Log Book and are not actually trialled.

The Horonai Coal, as mentioned in the above table, we believe to be a very suitable steaming coal, its smoke being light, its heat violent, and having no property of solidifying.

(Signed) HIRATSUKA GIDO,
Dai Ki Kan shi "Raiden Kan."

AN extraordinary series of games at billiards has just been concluded at Paris. It is understood that it is the French game that has been played. The final heat "for the championship" was between Schæffer and Vignaux, and was witnessed by a large crowd. Before play commenced Schæffer announced that, whatever the issue, he challenged Vignaux to play a new game with cushions only, the points and stake to be the same as in the present match with him. Rudolph, who played some exhibition games last year in Yokohama, challenged the winner of the present game to play a similar match with him. Vignaux accepted Schæffer's challenge; but Schæffer did not answer Rudolph's challenge. Vignaux began the play with a run of 62. Schæffer then began to make up the ground lost the previous day, and made runs of 164 and 156, reaching a total of 615; Vignaux having made 237. At this point there was an intermission. When the game was resumed Schæffer made runs of 69, 47, 72 and 81; Vignaux made runs of 110 and 76. Vignaux

finally won, leaving Schæffer 124 behind. Vignaux played twenty-eight times; Schæffer twenty-seven times. At the conclusion of the match Vignaux was loudly cheered.

MUCH as has been said about the remarkable cheapness of cremation in Japan, it would appear that the compulsory practice of that habit bears somewhat severely on the poorer classes. Our readers are probably aware that within a certain area of the city of Tokiyo no interments are permitted unless the body has been previously reduced to ashes. This area of prohibition—encircled by a red line on the map, and hence designated *shubiki-uchi*—includes many temples whose parishioners have inherited there burial places used by generations of their people, but now virtually closed to all who cannot afford to defray the cost of cremation. The temples in their turn, suffer by the veto, inasmuch as no inconsiderable portion of their income is derived from donations received on account of masses for the dead or tendance of the tombs. A joint petition was accordingly addressed, some short time back, to the authorities, praying that the prohibition might be relaxed, and we learn from the vernacular press that this petition has been favorably considered to the extent of designating certain places in the suburbs where interments will be permitted without cremation. The necessity for this change is decidedly to be regretted.

OUR readers may remember a story, the details of which we published some time ago, to the effect that the English Vice-Consul at Kertch was the head and promoter of a piratical association, and that, being pursued by the Russian police, he had escaped to Constantinople in a bale of goods. It would appear that this wonderful tale was an invention of somebody connected with the Central News organization, for it is now denounced as a falsehood from beginning to end. Mr. Colledge, the gentleman whose romantic adventures were made the subject of such ingenious fabrications, has instituted legal proceedings against the papers which published the statement, and it is expected that he will recover heavy damages.

THE *Whitehall Review* tells the following singularly inaccurate story:—"About five years ago the Japanese Government commenced to build an imperial palace in the European style at their capital, Tokio. Unfortunately the site chosen for it did not afford a good foundation, and when the building was one storey high it fell down. An English architect was then sent for, and since that time the building has gone on satisfactorily, being now on the eve of completion. One wing is to be the residence of Prince Arisugawa, and will be devoted on State occasions to the entertainment of distinguished Europeans. It is being fitted up in great luxury. The style of the furniture is French, but the larger part of the order has been made in London by the well-known house of Jackson and Graham. This firm has furnished the ball-room, in which the furniture is in Louis XVI. style, superbly carved, and covered with a very fine white silk brocade, which has been specially manufactured in Spitalfields. The grand piano, built by another eminent London firm, is a very fine instrument. The case is an enamelled white-and-gold one, and there is a charming little music cabinet to match. The private dining-room is furnished with light oak richly carved, and the curtains are of peach-coloured

silk. There also is one sitting-room, furnished with decorated satin-wood, and another with carved mahogany. A boudoir is resplendent with marqueterie, with the chairs in rich silk, very tastefully trimmed. There are two ebonised bookcases, with carved panels, in which the details are so refined and the execution so perfect that they are almost more fit for an exhibition or art museum than for a private residence. But emperors are privileged persons, and can afford to combine splendour with comfort."

* * *

It is certainly true that about five years ago, the Japanese Government commenced to build an Imperial Palace in European style, but it is not true that when the building was one storey high it fell down. No part of the building ever fell down. A crack appeared in one of the arches, and it was then determined to build elsewhere. The *Whitehall Review* speaks as though this accident occurred under Japanese architects, but the fact is that an English architect was engaged on the work from the commencement. His place was subsequently taken by another gentleman, but the building has not "gone on satisfactorily" since then, for the simple reason that it has not gone on at all. There seems to have been some insuperable difficulty in determining whether an European or a Japanese style should be adopted, and we do not know that a decision has yet been arrived at. Meanwhile, Prince Arisugawa's palace, a building quite distinct and more than a mile away from the site of the Emperor's palace, is fast approaching competition under the able direction of Mr. J. Conder. The furniture referred to by the *Whitehall Review* is doubtless for the Prince's use.

We extract from the *St. Louis Globe Democrat*, the following interesting notes on the Chinese quarter of San Francisco:—

The Chinese and their Chinatown are of unending interest to the visitors from the East, and the streets, the stores, the theaters and restaurants of the Chinese quarter of San Francisco are always well dotted with wondering and curious white people. During the Knights Templar conclave, Chinatown was uncomfortably full of white people, and special performances were given at the theaters, from which Celestials were excluded. The law and authority of this alien settlement is exercised by the Chinese Consul, who occupies three houses on Clay Street Hill, and floats the Imperial yellow flag of his country from the roof-top. Colonel F. A. Bee, who is the American Secretary of this Consulate, is to all purposes the chief one in authority there, and receives visitors in a sunny office, where some Chinamen are always assembled to relate their wrongs, make oath to legal documents, or have passports made out for their return to "big China." Colonel Bee is a tall, benevolent looking man, greatly resembling Secretary Folger, and his white whiskers and kindly voice are enough to make him a refuge for any one in trouble. Except in special cases, few see the noble mandarins to whom the Emperor has given the charge of this Consulate, and all business is dispatched by the American Secretary and his interpreters. Through the kindness of Colonel Bee we were permitted to meet Mrs. Ching Ling, wife of the Chinese Vice Consul at New York, and several ladies of the higher and most exclusive circles of Chinatown. Mrs. Ching Ling we found to be a tall, slender, and rather stately dame, who trotted into her parlor on feet not quite three inches long. Her hair was dressed in a most elaborate manner, decorated with jade and gold ornaments and a bunch of pink chrysanthemums. Her eyebrows were shaved to their arching lines on her forehead, and the brightest blush of rouge covered either cheek, shading up over the eyelids and temples. Her lips were colored a deep red, and her ears were hung with large gold and jade earrings. She wore the loose trousers and blouse of dark blue silk, and when she had minced in on her poor little feet she greeted us with two or three prettily accented English words of greeting, and gave us the limp handshake appropriate to the woman of fashion all over the world. Mr. Ching Ling had a strange mixture of womanly dignity and childlike simplicity about her, and through her interpreter we carried on quite a conversation, her funny little children clinging to her knees and watching us with their slant eyes all the time. While we were talking to this Chinese madonna, a vision appeared in the doorway in the person of

Mrs. Ching Chung Chow, wife of one of the rich merchants and a woman of most unusual beauty. Mrs. Ching Chung Chow is young and charming, with a delicate olive skin, full round eyes, as softly black as a fawn, and the most graceful little ways of doing everything. She chanted her dainty little English sentences at us, listened with the greatest interest to the jargon the interpreter repeated after us, and had the most bewitching ways of any woman I have seen in a fortnight. While we were raving over this celestial beauty, Mrs. Ching Ling's maid set the tea tray on the round center table, and the hostess proceeded to offer us cups of tea, unattainable in any ordinary way, and of a quality to inspire a poet's song. The tea leaves that floated around in the larger cups, in which they were steeped, were one and two inches long, and the tea itself was of a delicate amber tint. Crystallized sugar was offered us to put in it, and thin wafers and dried ginger completed this unique refreshment. We spent a charming half hour with her, left with many compliments on both sides and assured Mrs. Ching Ling and Mrs. Ching Chung Chow that we should only take too much pleasure in future visits.

In the rounds of regular sight-seeing all strangers go to the Grand Theater, or play house of the Donu Quai Yuen, where melodrama and tragedy alternately excite the audience to shouts of laughter and rounds of applause. The performance begins at 5 o'clock in the evening and lasts until midnight, and the historical plays often run for a week before the one drama is completed. The actors are all brought over from the old country at salaries ranging from \$2,000 to \$6,000 a year. At times troupes of jugglers and acrobats have come over for shorter engagements, and occasionally a famous singer or musician. The drama goes on with fine disregard of the unities, and the scenic accessories are so meager that much is left to the imagination. Women never appear on the Chinese stage, and their parts are taken by gifted men, who mince around the stage in the little foot hop and talk in a piping falsetto. The costumes are often of great richness and splendor, and some of the robes of superb brocades and of satin stiff with needlework and gold thread are worthy of places in an art museum. The Eastern visitors go daft over the Chinese theater and want to attend steadily, but to the San Franciscan it is the height of martyrdom to endure the constant accompaniment of the gong, the wooden drum and the one stringed fiddle, on which the orchestra play a wailing sort of tune that half-way resembles "Old Tom Tucker" and "There is a Happy Land." After the theater comes the Hang Fah Low Restaurant, where the plebeians sit below stairs and the gentry ascend two or three tiers of kitchens to the upper floor, where they are seated in gilded alcoves and served with cups of wonderful tea, accompanied by preserved ginger and citron and lychee nuts. Great banquets are given at the Hung Fah Low by the swells and rich merchants of Chinatown, at costs ranging from \$350 to \$200. Invitations on vermilion paper are sent out days beforehand, and when the circle of guests assemble at the round table on the appointed evening incense sticks are burning, the board is decked and a native orchestra is squeaking and hammering away in an alcove. The Chinese are an abstemious race, and the table, when set for one of these great banquets, resembles a dolls' tea party, all viands visible at the first course being just about enough for a schoolboy's lunch. A saucer of ginger, a saucer of cocoanut slices, a pear cut into many sections and ready to fall apart at a tap, a dish of lychee nuts and some queer biscuits filled with chopped meat and decorated exteriorly with parsley leaves, generally occupy the center of the table. A teacup and china spoon and a little tumbler of a glass for holding the fiery rice brandy are set before each guest and after the courses of abalone soup, bird's nests and unspeakable fishes and fowls, the entertainment winds up with a whiff of opium all round in any of the little alcoves that open from the dining hall.

A celebrity among these people is their great doctor, Li Po Tai, who has been in this country nearly thirty years and has a larger income from his profession than any white practitioner in the city. Li Po Tai first had the small pox and then suffered by a gas explosion, and in consequence his appearance is enough to make one's hair stand up with fright. His patients all come to his office when able, and Li Po Tai sits up in a little den of an office overlooking the plaza and feels pulses all day long. He is habited in gorgeous silks and brocades and sits on one side of a long table, blinking through his narrow eyes like the incarnation of all wisdom. The patients are mostly white people, who come to him after a varied round of their own physicians, or at the instigation of some of his resurrected and enthusiastic patients. Li Po Tai rests the patient's elbow on a blue silk cushion and proceeds to feel the right pulse with his three hooked and long clawed fingers. He feels the right pulse to ascertain the condition of the brain, stomach and kidneys, and then grasps the left wrist to find out about the heart, liver and lungs. Although he knows practically nothing of anatomy as our physicians know it, he makes a wonderful diagnosis of a case. He charges \$10 a week for his services, including his medicines, patients either come to his office and drink the tisanes, or take the packages of mysterious stuff home and make their own hot drinks. Li Po Tai has many notions that puzzle and interest his patients. He first treats them to a severe course of antidotes for quinine poison if they confess to ever having taken that deadly drug. He next commands them not to eat shell fish or uncooked fruit, to let alone poultry,

fried meats, eggs, watery vegetables, all liquors and everything sour. For these thirty years Li Po Tai has made his patients drink hot water, and dyspepsia, cancer and tumors are his specialties. Li Po Tai is a shrewd old fellow, who scrapes the \$10 gold pieces into his table drawer by the hatful every day, and his income from his profession is computed at more than \$6,000 a month. Like all the gentlemen of his race, Li Po Tai is fond of a sociable game in his few hours of relaxation, and this, coupled with his spirit of speculation, alone prevents him from outranking some of the great millionaires of the Pacific slope. The crowds of white men and women waiting in his office all day and every day, prove how profound is the faith in his skill, and his patients will hear to no aspersions or derogatory criticism upon this celestial Esculapius.

Chinatown abounds in dozens of odd characters and celebrities, and picturesqueness and dreadful smells mark every foot of this older part of the city that they have converted into a genuine bit of Hong Kong. While opium haunts and gambling dens are strictly against the law, the special policemen will pilot people around to them and treat them to sights that surpass the evils and degradation of any great city. What perversity and morbid curiosity sets the Eastern stranger to prowling in San Francisco slums no one can tell, for certainly no visiting Californians ever ask for special policemen to convoy them around the slums of St. Louis, or of any Eastern city. There are reputable and interesting things to be seen and studied in Chinatown, and for strangeness and picturesqueness it quite surpasses anything on this continent. Adjoining the celestial there is a foreign quarter, where the Latin races lead their own peculiar life, and Spanish, French and Italian ring on the air. There are all sorts of foreign names, signs and sights, and at the funny little Tienda Mexicana there is always a collection of dark and ginger colored senors and senoras eating their peppery tomatos, their tortillas and frizoles, and accompanying them with the true vino and chocolate that only can be had in this one little place outside of Mexico. For these odd things alone San Francisco interests one as no other city can and forever holds a fascination to its brightest visitor.

AN American newspaper correspondent, who has on several occasions shown himself to be possessed of peculiar facilities in Paris, publishes a statement which, if authentic, sheds a new ray of light upon French diplomacy in the far east. He says that in the course of a recent conversation with M. Ferry, he asked that gentleman "what would be the minimum of the Government's demand," when terms of agreement, or disagreement, with China could no longer be postponed. To which, M. Ferry gave this extremely suggestive reply:—"I do not dare tell you, for, if the Chinese knew, it would render them too exacting." Under ordinary circumstances, it would seem that, if the distinguished statesman wished to keep the Chinese in complete ignorance of his designs, he would not have been so confiding with a newspaper writer; but in this particular controversy, the French appear to have acted upon a theory that their Asiatic opponents could not possibly know or hear of anything, no matter how deeply it concerned them, unless it was absolutely forced upon their attention. In no other way can some of the extraordinary announcements put forth by Paris officials be plausibly explained. It is well within the range of credibility that M. Ferry not only made the remark attributed to him, but made it in earnest; and that China has but to maintain a persistent rigidity of upper lip to bring the business to whatever conclusion she likes best. In fact, almost anything can be believed, except that a sanguinary and desperate war is contemplated or desired by either side. Diplomacy can no longer keep up that pretence, at any rate.

THE universal revival of a taste for the *Cha-no Yu* ceremonials seems to have extended even to the precincts of the Palace. We learn that a new tea pavilion has been erected within the enclosure of the Imperial Park at Aoyama, and that the last details of furniture and decoration having been completed, His Majesty the Emperor proposes to hold an inaugural *chaseki*

there on the 21st instant. Lovers of Japanese art will have welcomed with pleasure the evidences of this growing disposition to reverence the canons of old times, but it must be confessed that the consequences are not everything one could desire from an economical point of view. The rage for pictures and utensils by the old masters has become so great that an Indian-ink sketch of the Sung period commands a thousand *yen*, and a cup of the most approved workmanship and authenticity is scarcely less valuable. Considering the fabulous prices paid for antiquities and works of art by European and American connoisseurs, there is; perhaps, nothing to marvel at in the rates now ruling in Japan, but we suspect that the Finance Minister's railway bonds would be more rapidly taken up were it not for the competition of these new attractions.

THE old feudal notion that everything exceptionally fine or beautiful appertains to the ruling classes, still finds expression, from time to time, after a fashion not, perhaps, wholly disinterested. We read in a vernacular newspaper that one Matsu-Saburo, a farmer, residing in the village of Shichinobe, Awamori Prefecture, imported from England, some years ago, a sire whose progeny out of a native mare is just now arriving at maturity. The colt is said to be something quite out of the common. Its height is four feet and a half, its hoofs are like adamant, its skin like velvet, its points perfect, and its countenance indicates the possession of all the equine virtues. Farmer Saburo, concluding that such a splendid steed does not become a person of his humble station, has petitioned the local authorities to move for its transfer to the Imperial stables, and the matter is now receiving due consideration. We trust the worthy husbandman's project will be successful.

THE *N. C. Daily News* publishes the following:—"A remarkable story reaches us from Canton, according to which a servant in the employ of a foreign firm in Hongkong has been arrested by the officers of P'êng Yü-lin, carried before the Admiral at Canton, and decapitated. It seems that the famous pirate of T'ai-chou, Huang Chin-man, recently tendered his allegiance to P'êng, and was appointed by him to cruise about the Cantonese waters in search of smugglers and pirates. Among many junks captured by the ex-pirate were two, on board of which were found six foreigners, said to be Frenchmen, and a quantity of arms and ammunition. The Chinese crews of these junks were taken before Admiral P'êng and questioned, when they stated that the junks were owned and the men employed by the compradore of Soey-che (Arnhold, Karberg & Co.) at Hongkong. Orders were at once issued for the arrest of the compradore, whose name is Chên; but when the officers arrived at the hong they found that Chên was away, upon which they arrested the second compradore and brought him before P'êng Yü-lin. The facts elicited from the prisoner corroborated the story told by the crews of the junks, but showed that he himself had no ownership in the boats. Nevertheless the unfortunate man was condemned to death, and decapitated on the spot. The deceased was formerly in the employ of Messrs. Russell & Co. at Shanghai. The senior compradore, Chên, is stated to be still at large; but all his family are under arrest as hostages. The charge against

him is one of high treason, in abetting the enemies of China. We are not prepared to vouch for the truth of this story, but it comes to us from a fairly reliable Chinese source."—Our contemporary rightly dubs the above a "remarkable story;" from inquiries we have made, we are able to say that it is a pure romance, with but the faintest, if any, foundation. The man said to have been decapitated is still alive and at large in Canton. A good many tales equally devoid of truth are just now current among the natives at Canton.—*Daily Press*.

No small degree of mystery seems to attend the movements of the Korean Commissioners, or Envoys, who recently visited the United States. Various reports have appeared in the American newspapers, to the effect that the cost of the expedition had been miscalculated, and that the visitors, not to put too fine a point upon it, were excessively "hard up." There has been no indication of unkindness or discourtesy in these allusions, but the alleged fact has been recorded, together with other current news. It has been distinctly stated that efforts have been made by the Koreans, or on their behalf, to raise considerable sums of money; but these assertions have been generally followed by prompt denials. The latest authoritative intelligence concerning the party is the unexpected announcement that they left New York on the 1st of December in the steamship *Trenton*; the United States Government having undertaken to convey them home in a national vessel. They will come by way of the Suez Canal, and the *Trenton* will stop at Marseilles for two months, to enable them to look at Paris and London. This is a partial repetition of the plan pursued when the first Japanese delegation to Western shores visited America. The Shōgun's representatives were carried from Yokohama to Panama in the *Powhatan*, and from Aspinwall to Washington in the *Roanoke*; and were brought back, we believe, in another ship. In their case, however, no lack of funds was apparent. They spent money profusely, and made lavish presents wherever they went. They availed themselves of the means of transportation offered them, partly because of their ignorance of all foreign matters, but chiefly because there was no other way for them to travel with comfort and propriety. Very possibly the Koreans sail in the *Trenton* because they, likewise, find that course the most becoming and convenient. The suggestion of impecuniosity may be the idlest of rumors.

MR. GLADSTONE'S prerogative of conferring complimentary dignities is subject to occasional embarrassments, if we may credit the stories now circulating in London, respecting the grant of a baronetcy to the Premier's physician and friend, Dr. Andrew Clark. The lack of perfect harmony between the First Lord of the Treasury and his Royal Mistress is too old a story to require reticent treatment, and it appears to be pretty well authenticated that Her Majesty exhibited, for a time, a strenuous opposition to the bestowal of this particular distinction. The Queen's ostensible objection was that no precedent existed for creating a medical baronet, unless the recipient of the favour had acted as a resident Court physician; but the fact is generally admitted that Her Majesty dislikes to surrender the theory that she is the actual, as well as the nominal, fountain of all honours to be enjoyed by her subjects. Lord Beaconsfield's

tact, in affairs of this kind, was perhaps preferable to the present Prime Minister's matter-of-fact procedure. The late Conservative chieftain always obtained what he wanted, yet never allowed it to appear, at least to his Sovereign, that he was anything more than an instrument for the exercise of the Royal bounty. In the case of Dr. Clark, Mr. Gladstone insisted on carrying his point, and, of course, no impediment could stand in the way of his positively expressed determination; but the relations between himself and the Throne are not likely to be improved by the incident, and the purveyors of personal literature have found opportunity of circulating gossip to an amount, and of a quality, not altogether agreeable to contemplate.

Questions concerning the adjustment of a dignity of much higher grade than that of Dr. Clark's are said to perplex the Ministry at this moment, although in this instance no objection on the part of the Sovereign is expected to arise. That the Marquis of Lorne should receive some appropriate acknowledgment of his service as Viceroy of the Canadian Dominion, is fairly within the established order of things, and it is also obvious that the possession of some definite rank in his own person would lessen the still existing anomaly of a Princess wedded to a commoner;—for a commoner Lord Lorne is, in spite of his prospects as elder son of the Duke of Argyll. But there are difficulties which the devotees of Conservatism and the guardians of the laws of precedence confess themselves unable to solve. To make a baron of the ex-Viceroy would be an insufficient elevation for the occasion, and yet to give him any higher rank in the British peerage would be to assure him a social and official superiority over his father. For all his greatness and power when his "foot is on his native heath," the Duke, sitting in the House of Lords, is a mere baron. In the highlands his name is Argyll, but at Westminster it is only Sundridge. Of all the noblemen who hold the title of duke in any part of Britain, His Grace of Argyll is the most poorly endowed as a peer of the United Kingdom. No other Scottish duke falls below the grade of earl in the House of Lords. The Marquis (by courtesy) of Lorne might be dignified by a high Scotch title without interfering with his father's precedence, but his labours as Canadian Viceroy were of national significance, and could not be aptly rewarded by the bestowal of a sectional rank. Looking at the puzzle from a great distance, it appears that the awkwardness might be overcome by converting the present dukedom into a dukedom of Great Britain, and giving to the son a minor, though sufficiently exalted, position in the same peerage. It is true that the existing order of ducal precedence might be in some measure confused by this arrangement,—and Their Graces of Great Britain are understood to be tenacious of privileges,—but the Scotch dukes rank, we believe (according to the date of their patents) above all excepting those of English creation prior to the Duke of Portland; and under any circumstances the just claim of the House of Argyll to a loftier grade in the Lords than that of baron, could not well be disputed. It would be difficult for any of his six Scotch equals, one of whom has three dukedoms centred in his individual person, to show a more valid right to the highest degree of the peerage, from a historic, political, or social

point of view. On his own account, too, the Duke merits consideration from a Ministry led by Mr. Gladstone, or from any Liberal Ministry, for that matter. Some inquiry has been raised as to the colour of Lord Lorne's politics,—on what ground, we are unable to discover. He certainly sat for Argyllshire, in the House of Commons, as a Liberal, and it need not be taken for granted that his Vice-regal experience has turned him into a Conservative. But, granting the possibility of so thorough a change, the addition of a single vote to the heavy Opposition majority in the Lords could not be a matter of much concern; besides which, the circumstances of the case are such as to allow no weight to party considerations. It is more than possible, therefore, that the late Viceroy, who is now Marquis by tacit consent, may presently become an earl, or better, by legal investiture, and start an independent line of his own. But even then, the most important consequence of his Canadian career may probably be the advancement of the head of the Campbells to a titular station which—as such things go—has long been due to this eminent family, and the reasons for withholding which are not easy to understand.

THAT strange social scandal which has so stirred the curiosity of Parisian upper circles, is entering upon its final phase. On the 28th of November, the Deputy for Marseilles and his wife appeared before the Ninth Chamber of the Seine Tribunal to prosecute an agent of secret-police, by name Morin, for conspiracy and defamation of character. Morin was supposed to be an agent of the former Countess Osmont, now Madame Lenormand, a lady whose foible was to convict her husband of inconstancy, and who, for this purpose, employed the secret police to collect evidence against him. M. Lenormand may be a Lothario, or he may be a Hippolytus, but unfortunately for the elucidation of this uncertainty, his accusers selected a virtuous lady as the pretended object of his some-time gallantry, and the immediate consequences were flourishings of revolvers, slappings of faces, and other amenities which attracted some attention. Cited before the Tribunal and questioned by the President, Morin declared that he had frequently gone with M. Clerget, the director of the agency to which he belonged, to seek information from the inmates of a house inhabited by the family of Mlle. Royannez, now the wife of the Deputy for Marseilles, M. Clovis-Hugues. "The director," said Morin, "generally conducted the enquiries himself. One day Mme. Corbillon, door-keeper of the house where the Royannez family live, told Clerget, in my presence, that Mlle. Royannez' relations with M. Lenormand had been of a questionable character. That they used to exchange amorous glances, and that, one day, she, the door-keeper, had surprised them in one another's arms on the stairs. She added that M. Lenormand used generally to visit Mademoiselle by climbing in through a window. As for me," concluded Morin, "I only repeated what I heard. The whole story came from Mme. Corbillon." The next witness was a journalist. He, too, had interviewed the door-keeper, and learned from her that she held Mme. Clovis-Hugues in the highest esteem, and had never uttered a word of aspersion against her. Mme. Corbillon herself was now called. She was an indignant witness, and delivered herself as follows:—"I received a visit from M.

Clerget, who asked me questions about all the inmates of the house in the *rue de la Pompe*. He spoke specially of Mlle. Royannez, and said that she had formerly been the mistress of M. Lenormand. I protested. M. Clerget declared he had his facts from M. Lenormand, who was a friend of his. 'If M. Lenormand told you such a story,' I replied, 'he is an imbecile, for the whole thing is an infamy.' Next came up for examination a shopman. He said that Morin gave him a dinner, one day, and then took him to M. Clerget, who said:—"We want you to help us. There is a foolish old woman, jealous of her husband, and anxious to be separated from him. To further her plans we want you to come and tell the Commissioner of Police that you have seen M. Lenormand kiss Mlle. Royannez. In exchange for this evidence I will give you 50 francs." The witness then went on to explain that, not venturing to refuse directly, he pretended to be drunk, and so obtained his *congé*. A gardener gave evidence to the effect that M. Lenormand had promised him money if he would declare before a magistrate that he had seen M. Lenormand and Mlle. Royannez exchange glances from the gardens of their respective houses. The man pointed out that the wall between the gardens was too high for this amusement, but M. Lenormand replied, "you can say they stood on ladders;" at which the other burst out laughing and the ex-Countess went off in a pet. M. Lenormand himself was called, finally. His evidence was short but of an impressive character. Asked whether he had ever had relations with Mlle. Royannez, he replied, in a loud, distinct voice:—"I have never in my life seen Mlle. Royannez until to-day." It need scarcely be added that the case was sent up for trial, and that Paris is very indignant about the existence of such social abuses in the centre of civilization and refinement.

ONE of the symptoms of industrial activity in modern times is the development of disputes between workmen and employers. Italy, discovering this, is about to establish a "council of Prud'hommes" after the examples of France, Germany, England, and Austria. In France such a council, the members of which are elected by a combined vote of masters and men, has existed since 1806; in Germany, since 1809; in England, since 1865; and in Austria, since 1869. Troubles about wages, hours of labour, and similar matters, though from time immemorial they have led to terrible disturbances of the public peace, are obviously subjects beyond the intelligent cognizance of common law. Their consideration by a mixed tribunal of employers and employed is at once a rational and effective device. In proof of its efficiency we may quote the case of France, where, during a space of ten years, no less than 184,514 trade disputes were settled by the *conseil des prud'hommes*. In Italy, the draft of a law providing for a similar council has just been submitted to Parliament. The details of the proposal are that the college of Prud'hommes shall consist of from 12 to 16 members, elected half by employers and half by employed. The president of the Council and the Vice-President are to be nominated by the Minister of Justice, and chosen from a list of six candidates drawn up by the civil tribunal. The college will include a bureau of conciliation and a tribunal of arbiters. The bureau of conciliation is to act as a Court of First Instance. Like the tribunal of arbiters, its functions will be to

adjudicate upon questions about salary; about the price of labour, executed or in course of execution; about hours of labour, special contracts, faulty work, indemnities, and so forth. The judgments of the tribunal of arbiters are to be without appeal up to awards of 150 francs. For election purposes two lists of voters, one of employers, the other of employed, will be prepared by a parochial junta; and the persons borne upon these lists will elect their representatives. The qualifications for voting will be an age of twenty-five or upwards, and the previous exercise of some industry or art during a period of at least five years. Any expenses incurred, in excess of the income of the college, will be borne by the parishes concerned. Workmen serving in the college, will be entitled, during session, to receive compensation equal to the amount of their ordinary pay. How many vexations might be removed from the course of trade in Japan, if a mixed college of foreign and Japanese merchants could be formed on lines similar to those mapped out by the Italian Minister!

THE *Kankiyo Jumbo*, a Korean journal, published fortnightly in Seoul, has the following:—Since March of last year (1882), more than fifty Korean youths have been sent to Japan to be educated. Most of them are staying at the *Kei-o-gi-jiku*, where they receive the benefit of an Occidental education in common with six or seven hundred Japanese students. A special building has been assigned to the Korean students, and every care taken to ensure their well-being. Some of them are studying foreign languages and political economy, while others devote their attention to sericulture and agricultural sciences. Not a few have graduated from this establishment and joined the Imperial Military College for officers (*Rikugun-shikan-gakko*).

THERE is, in Japanese cities, a class of tradesmen called *Keidzukai*, whose business may be succinctly described by saying that they deal in whatever they can get. These individuals have been somewhat harshly designated receivers of stolen goods, but the epithet does them an injustice in so far that they sometimes indulge in the luxury of legitimate commerce also. The latter fact makes it a little difficult to bring the *Keidzukai* within the sphere of any legislation framed wholly to suit dishonest traffic, and it would appear that the authorities have hitherto been somewhat chary of meting out to them the treatment their courses merit. Recently, however, there have been enacted a series of regulations (*Kobutsu-shō-tori-shimari-jōrei*), the gist of which is that the *Keidzukai* are obliged to keep the police *au courant* of all their transactions, and that whatever purchases they conclude without notifying the stations in their ward, are regarded as illicit transactions. As might have been expected, these provisions, even in prospect, prove exceedingly inconvenient from the *Keidzukai's* point of view: so much so, indeed, that in the two wards of Shiba and Kanda alone, upwards of twenty flourishing followers of the receiver's profession have been obliged to put up the shutters, while of the thirty thousand persons hitherto similarly engaged, it is expected that twelve or thirteen thousand will try some other trade. It is intolerable that in these hard times official meddling should have the effect of cramping industries already nearly paralyzed. This is a matter which might well be taken up by philanthropic journalists. Indeed, we recommend the

unfortunate *Keidzukai* to carry their complaints to Yokohama. Having regard to the sympathy and support which the profession of bath-house girl with *et ceteras* received from certain official and unofficial members of the foreign community last summer, the receivers of stolen goods, if they stated their case deftly, might, not extravagantly, hope to find themselves championed by a couple of newspapers and, perhaps, a Consul-General.

A FINE, full-fledged example of the unblushing development of the feminine intellect of Boston, Massachusetts, is given by one of the priestesses of that cult, in a description of young Robert Browning's work as a sculptor in Paris, and of the intensely realistic methods by which he attains his results. The artist has recently illustrated, in clay, the legend of Dryope beloved by Apollo, and has chosen the moment when the god, transformed into a Python, envelops the Princess in his complicated folds. The fair Bostonian who tells the readers of a leading American newspaper all about it, intensifies her narrative with a minuteness of detail which leaves little opportunity for the imagination to go astray. From her portrayal of the scene, we are led to infer that Apollo made a reptile of himself, because the shape afforded more unrestrained facilities for hugging than that of any creature known to natural history, not excepting the bear. A snake can embrace all the way from his head to his tail,—which not even a swan can do;—which proves the superiority of Apollo's intelligence to that of Jupiter, in this species of adaptive transformation. This, however, is not directly set forth by the lady correspondent. What she does say, respecting the ecstatic realization of the myth, is told in language which strives more ingeniously to preserve a delicate balance than ever Blondin strove to keep himself from tumbling into the Niagara rapids. Whether the balance is preserved, after all, we will not presume to decide; but here is the description:—

The girl stands there, proud and graceful in her nude beauty, while round her the Python coils, rearing his head almost to the level of her lips. Does she feel his divinity, and tremble at the knowledge of his power? Her head is slightly thrown back—her proud eyes still refuse him, but her full lips seem almost ready to be won. In one moment more you can see she will have surrendered, heart and soul. It is a most happily chosen instant. All terror has been charmed away by dawning love; yet maiden pride still holds the beautiful form erect, still shines from the not quite consenting eyes.

After getting safely ashore at the conclusion of this passage (to keep up the tight-rope figure), we might suppose the fair correspondent content with her achievement, and willing to rest without risking another repetition of a next-to-impossible feat. But she undauntedly essays the still more perilous flight of delineating the sculptor's processes, and presenting a view of the model—or models, for the snake must be counted as one—during the progress of the work. In this performance she might be rivalled in style by Théophile Gautier or Ernest Feydeau, but in courage by nobody, excepting perhaps Mr. Mallock. Her readers are informed exactly how she "saw the model, with the great live snake coiling around her." It appears that a genuine Python had been obtained from the Antwerp Museum of Natural History, and that Adèle, the model, "was very fond of the serpent." At first she was afraid "to pose, thus snake-embraced," but she gradually conceived a singular affection for the monster, "and no longer shrank from his strange embrace." The Boston lady

appears in some manner to have shared the abnormal fascination, for she writes seriously of the huge, "moist, unpleasant" creeping thing as "a creature of noble mind and gentle nature." "His embrace," she avers, "might easily have been fatal, for he was ten feet long and very large. But he never so much as tightened his coils uncomfortably round the model, during the weary hours and days in which she stood with him entwined about her." Why "weary?"—one is tempted to inquire. After reading the eulogies lavished upon the creature, are we to believe that any extent of enwrapped communion with him could have been wearisome? Hardly to Adèle, we imagine, inasmuch as, when the snake died, as snakes are known to die from excess of emotion,— "she burst into tears; for during their close association she had grown to love him as if he had been a human friend." The gentle historian of this curious episode seems to have mourned, also; for, lifting up her voice, she cries, "Alas for art, this good and kindly snake is dead!" It is almost incredible that so maudlin and prurient a rhapsody should be thus unfolded by an authoress,—a poetess, we believe,—of dainty and immaculate Boston, in the columns of a journal which conspicuously advertises that "its tone is pure," and that "it refuses to print demoralizing details which many other papers resort to." But such is the fact. The writer signs her name, quite unabashed. One detail, alone, of the publication appears not wholly discordant. It is dated from Paris. Journalists of the tougher sex are mostly aware that literature of this description is often to be encountered in that capital, and that amazing groupings, not dissimilar to that described, are visible to those who choose to seek for them; but they are not usually associated with high art, and, even in that least fastidious of communities, a veil of discretion would be drawn by men, not to say women, of letters, over such incidents of studio experience as are disclosed with unbridled freedom by the American correspondent. This, however, is putting it mildly. Memory is ransacked vainly, to find in modern literature a narrative parallel, in its various conditions, to the tale of Adèle and the snake whom she loved, or, in the products of healthy imagination, a picture like that of the nude model knotted, girdled, and enlived by a "good and kindly" ten-foot reptile, "very large," and "of noble mind and gentle nature as befitted his high descent." Descent from what, or whom? Since the original historic Python lured, by his wiles, the mother of mankind from the paths of feminine propriety, it is doubtful if any of his tribe has exercised such unwholesome power of captivation as the original of Mr. Robert Barrett Browning's metamorphosed Apollo.

A GREAT reputation covers a multitude of blunders, but it is a question if *The Times* does not strain the confidence of the public a little too severely by the carelessness in editing which has of late distinguished it, and which would bring worse than ridicule upon a journal less solidly planted. In adjacent columns of a recent issue, we find a remarkable announcement of the defeat of General Butler, the present Governor of Pennsylvania, and a bewildering description, in the mixed rhetoric of M. de Blowitz, Paris correspondent, of Sarah Bernhardt's acting in the "scene where Lady Macbeth, starting in terror from her sleep,

confesses her crime." There are probably not many readers of *The Times* who do not know of which State General Butler was Governor; and few readers of Shakespeare who are unaware that Lady Macbeth does not start from her sleep at all, in the scene referred to. Certain lapses of the mighty Thunderer have been explained on the theory that Mr. Chenery "does not care for politics." Are we to suppose that his indifference extends also to literature?

ON the 1st of last month the U.S. corvette *Trenton*, 10 guns, sailed from New York for the Asiatic station, where this vessel is to take the place of the *Richmond* as flagship. The *Trenton* has on board the Korean Embassy to the United States, and will convey those interesting strangers, to their own country by way of the Suez Canal. It is also stated that the vessel will touch at Gibraltar, Marseilles, Naples, and Port Said, and at such other points as the Koreans may desire. She will make a rather lengthened stay at Marseilles while the members of the Embassy visit London and Paris. The following is a list of the *Trenton's* officers, as published in a recent issue of the *Army and Navy Journal*:—Captain R. L. Phythian; Lieut-Commander R. B. Bradford; Lieuts. A. Walker, W. T. Swinburne, A. G. Berry, H. W. Schaefer, C. G. Calkins; Junior Lieutenants M. L. Wood and Fredk. W. Coffin; Ensigns Geo. C. Foulk, C. A. Gove, A. Gleaves, C. N. Atwater, and J. H. L. Holcombe; Ensigns (junior grade) E. H. Tillman and F. W. Bowdon; Naval Cadets H. H. Balthis, J. H. Gignilliat, R. L. Lerch, H. C. Pettit, S. Z. Mitchell, S. W. Armistead, Geo. W. Street, A. P. Legare, T. S. O'Leary, C. P. Eaton, C. W. Dyson, W. T. Gray, T. V. Toney, W. J. Wilson, R. T. Frazier, W. C. Herbert, George M. von Schrader; Medical Inspector E. S. Bogert; Passed Assist.-Surgeon N. McP. Ferebee; Assist.-Surgeon H. B. Scott; Paymaster G. A. Lyon; Chief Engineer Jos. Trille; Passed Assist.-Engineers J. L. D. Borthwick and H. T. Cleaver; Assist.-Engineers E. R. Freeman; Chaplain Wesley O. Holway; Captain of Marines Henry A. Bartlett; 2nd Lieut. of Marines L. Karmany.

THE *World* has the following on the newly appointed Admiral of the China station:—Vice-Admiral Dowell is the right man just now as Commander-in-Chief in Chinese waters. As a midshipman, he earned the China medal and clasp, and after distinguishing himself at the siege of Sebastopol, he was at the capture of Canton in 1857. His wounds and services secured promotion for him, but he was again entitling himself to official honours seven years later in the Straits of Shimonoseki. It is not necessary, however, to mention his other honourable experiences, or even to recall to mind the part he took in the Egyptian War. He is a man of ripe knowledge, a firm and courageous officer, a representative whom no diplomatist could readily outwit. He always has the confidence of those serving under him; and with a native talent for smoothing away difficulties, he bears the official reputation of being able to avert misunderstandings that are not intentional, and, on the other hand, of being equal professionally and personally to all emergencies. He will certainly want all his wits about him; for even with a war between China and France possible, and with fanatical attacks upon European residents in different ports of that empire

probable, he will have at his command only a miscellaneous lot of small craft, nearly all of an obsolete type.

A HOME paper says that a recent prosecution in a New York police-court has disclosed an extraordinary story of gambling on board the Cunard steamer *Servia*, and Henry Rice has been compelled to refund to Robert Sullivan a sum of 2,780 dols., of which Sullivan charged Rice with having cheated him. The other passengers say it is merely a quarrel between the two over the division of their winnings from twenty others, who lost various sums, averaging 200 dols. each. One passenger lost 1,500 dols.; two Englishmen lost 500 dols. each. One passenger landed in a penniless condition. An American, returning from Oxford, assisted by others, forcibly compelled the restitution of the money that had been won from a young man coming from India. The play was generally high, and frequently the loss of hundreds of dollars depended on the toss of a coin. Money was also lost at card playing.

M^DM^E. ADELINA PATTI has been communicating a few personal reminiscences to the *Figaro*, from which it appears that the life of a prima donna (or prim^a donna as the *Morning Post* called it the other day) is far from being the spoilt existence that one would take it to be. People may not believe it, but the position is one which for dangers surpasses that of the Czar of Russia. They are caused by her rivals, she thinks, but they go beyond the limits of permissible rivalry. "Once during a performance of *Linda*," she says, "I received a number of bouquets, the last of which was composed very oddly. One of the flowers fell out of it on to the stage, making a regular thud. It consisted of an enormous ball of lead, which, if it had been more firmly tied to the bouquet, must have struck my head. As it was, the bouquet hit my shoulder." On another occasion the curtain fell on M^dm^e. Patti's head and she was saved only by the fashion then prevailing of rolling up her hair high upon her head; but it was not a mere accident. She has had matches put into the water she drinks, and has even received poisoned gloves with a request to let the maker call them by her name. After this revelation no one can wonder that she gets £1,000 a night occasionally.

SCOTCHMEN will be more than ever convinced that no good thing can come out of any place south of the Tweed by the results of the genealogical researches which M. de Lesseps has just made known. Like so many other Frenchmen, he is really, it seems, a Scotchman. In Scotland there were many Lasseps and Lessels, Lesseps and Lassels, while in France there were none of his name except himself and his own family. One of his direct ancestors was with James II. at St. German, and it was at that time that his family settled in France. The discovery of his Scotch origin seems to have made a great impression on M. de Lesseps, for he referred to the matter at considerable length twice over during his visit to Newcastle: and, indeed, some of the details are highly interesting from the point of view of hereditary genius. M. de Lesseps is proud of being a diplomatist; and the conduct of one of his ancestors who was ordered to arrest Henry IV. of France, but who, instead of arresting the King, forewarned him of his danger, may perhaps be taken to show

that diplomacy runs in the family. So, again, although M. de Lesseps modestly disclaims being himself in any sort an engineer, it is interesting to know that one of his ancestors followed a technical profession, and that, according to vestry records still preserved, the Cathedral of Edinburgh was built by an architect named Lesseps.—*Pall Mall Budget*.

It is beginning to dawn on people's minds that King Alphonso is a person to be reckoned with, that he has character. Were that not the case, the Crown Prince would not now be in Spain. The speech which the young King has just delivered at the opening of the winter session of the Academy of Jurisprudence is calculated to strengthen that impression. Not only did its delivery greatly affect the hearers, but even in the reading it has, despite the necessary platitude of expression, an air of firmness and of purpose not common in the formal utterances of Kings. The past six months have been a time of great trial for the King of Spain, and he has come out of them with credit. Whether for good or evil, he must be taken account of as a very vital factor in Spanish and even in European politics.

THE Durban correspondent of *The Times* says:—Mr. Fynn, the late Resident with Cetewayo, is now in Maritzburg, conferring with Sir Henry Bulwer. I hear from Zululand that much distress prevails there. Hundreds of the people are living in the bush, under crags, and little cultivation is going on. The uncertainty produces, at present, a paralysis of industrial confidence, and may lead to further bloodshed hereafter. Usibepu's intentions are quite satisfactory; but he may have some difficulty in restraining his hot-blooded advisers. Cetewayo is said to be sulking. All the existing troubles are attributable to the intrigues of outside agitators with Undabuko and others, who were playing their own game, irrespective of Cetewayo.

BARNUM's agent, Mr. Gayford, has met with no success in attempting to engage the world-renowned hairy family of Mandalay. The family consists of a mother—Madame Maphoon—her son and daughter. Their features are like those of the ordinary Burmese type, but their faces are entirely covered with a growth of fine, flocculent hair, several inches in length. There is nothing at all repulsive in their appearance. On the whole, they seem strongly to resemble the celebrated Russian family which were exhibited throughout Europe a few years ago, under the felicitous sobriquet of *Pudelmenschen*.

WE have already had occasion to note the wide spread of incendiarism in the metropolis. A veritable *petroleuse* was arrested a day or so ago in the guise of an elderly female armed with a bottle of kerosene oil, sundry rags, and other inflammable material. Hardly a day passes without the arrest of persons suspected of incendiarism.

JOURNALISM is well represented in Hongkong at present; war-correspondents abound. Amongst other well-known writers, we note Messrs. Colquhoun and Scott, correspondents of the *London Times*; Mr. Ross Raymond, of the *Daily News*; Mr. Cameron, of the *Standard*; and Colonel Gilbert, of the *New York Herald*.

ACCORDING to the *Jiyu Shimbun*, the Naval Department is about to build two steel cruisers,

the lines for one of which have already been laid down. The vessel will be 70 mètres in length, with a width of 10.3 mètres, and a depth of 4.15 mètres. She will carry four 15-centimètre guns and one 12-centimètre, beside five fish torpedoes. The twin screw condensing engines are to be of exceptional power, capable of attaining a speed of sixteen knots.

It is reported that the German Government is about to send an Ambassador Extraordinary to China, in order to bring German influence to bear on the Peking Government, with a view to the preservation of peace between France and China.

THE following proclamation was addressed to the French troops by Admiral Courbet after the capture of Sontai:—

Soldiers and marines!
The forts of Phu-sa and the citadel of Sontai will henceforth be celebrated through your bravery. You have fought; you have conquered a redoubtable enemy. You have shown once more to the whole world that France can always depend on her children. Be proud of your successes. They assure the pacification of Tonquin.

MR. TONG KING-SING arrived in Hongkong by the French mail steamer *Oxus* on the 15th inst. on his way back to Shanghai. According to the *London and China Express*, he was summoned back to China by wire, and his western travels were thereby curtailed. He passed through London, only remaining twenty-four hours, on his way from South America.

WE are informed that the P. & O. steamship *Khiva* left Hongkong on Thursday, the 24th inst., at noon, for this port, *via* Nagasaki and Hiogo. The English mails of 14th December are coming up in the *Benalder*, which vessel left Hongkong on the 23rd instant.

THE *Fiji Shimpo* advertises a considerable increase in the size of its sheet, the circulation having largely multiplied.

It is reported that a series of lectures are shortly to be delivered by Mr. Fukuzawa and his colleagues at Mita. They will commence to-day (26th inst.) at 1 p.m.

WE hear that a well-known firm has obtained permission from the Korean Government to prospect for mines in the interior of that country. Gold and silver are not included in the permit.

It is stated that the usual exhibition of antiquities at Nara will be opened this year on March the 3rd and kept open till May the 28th.

WE regret to have to record the death of another old resident, Captain B. Trask, a native of Salem, Mass., who died at sea, on board the British ship *Ben Nevis*, whilst piloting that vessel from this port to Nagasaki.

THE *Nagasaki Express* of the 19th inst., says that telegraphic communication was effected with Corea yesterday for the first time, but believes the line is not yet in proper working order.

THE American bark *Jennie Harkness* sailed this morning for Takao and Taiwan, where she will load sugar for the United States and Canada.

THE Pacific Mail steamship *City of Tokio*, for this port, left San Francisco on the 24th instant.

RAILWAY CONSTRUCTION IN JAPAN.

REFERRING, in a recent issue, to the subject of railway construction in Japan, we said that, according to the *American Railroad Manual* for 1883, the average cost of the lines laid in the United States during 1880, 1881, and 1882, after due deductions had been made on account of watered stock, was about thirty-five thousand dollars per mile; and we then proceeded to contrast this with the corresponding figures in Japan's case, on the assumption that rumour was correct in estimating the cost of the Tokiyo-Takasaki line at seventy thousand *yen* per mile. Since then, we have obtained exact figures, showing both the originally estimated cost and the actual outlay up to the present time, and it gives us pleasure to find that the results are incomparably more satisfactory than we had supposed.

The detailed estimates, prepared in July 1881, for 81½ miles of single line from Tokiyo to Mayebashi, with stations and rolling stock, contemplated a total expenditure of 3,490,941 *yen*, of which 1,320,750 were silver. At the rate of exchange then ruling, this meant that each mile of road would cost thirty three thousand dollars, approximately. According to the independent opinion of foreign experts, these figures were below the mark. It was thought that if the cost of construction did not exceed forty thousand dollars per mile, the result might be considered an economical success. Circumstances, however, appear to have proved exceptionally favourable. Not only did the appreciation of *Kinsatsu* greatly facilitate the purchase of credits abroad, but the condition of the European markets was such that material was obtained at a price nearly a third less, on the whole, than the original estimate. Owing to these causes, and by the practice of a rigid economy in all the details, the figures representing the actual expenditure, up to the 31st of December, 1883, are unexpectedly small. They are as follow:—

Amount expended in Japan up to December 31st.....	<i>Yen</i> 1,089,061
Amount expended in Europe up to October 31st	\$ 685,669
Cash remitted but still unexpended	\$ 140,564
Total.....	<i>Yen</i> 1,915,294

It is, of course, impossible to convert the paper money into silver with any degree of accuracy, as the rate of exchange varied so largely from time to time. For our present purpose, however, we shall err on the right side by neglecting the difference between silver and paper altogether. It will then be seen that, up to the close of last year, the total expenditure per mile, had not exceeded \$23,500. In this calculation we have taken the length of the road as 81½ miles, for though only 56½ miles are actually open to traffic, a great deal of work has been done on the remaining sections, while permanent way material

has been imported, and is actually in Japan, for 100 miles. It is, indeed, premature to speak, as yet, of the cost of the line, seeing that no part can be described as complete. Enough, however, has been done to justify a tolerably confident estimate that the ultimate expenditure will not exceed thirty thousand dollars a mile.

The directors and shareholders of the *Nihon Tetsudo-gwaisha* deserve to be sincerely congratulated on this result. Railway construction in Japan is still in its early youth, and the progress of the line from Tokiyo to Mayebashi has been watched with special interest, because it is the first undertaking of the sort in which private enterprise has had a share, and because, further, it has been, from beginning to end, independent of foreign assistance. Similar work has been done in the south by Japanese engineers, but their association with European experts, though practically insignificant, has always been sufficient to mar the idea of complete independence. In the case of the Tokiyo-Mayebashi road, however, from the preliminary survey to the final opening, the Japanese have managed every detail without the smallest recourse to foreign aid, and, as might have been expected, there were, at the outset, many critics who predicted a correspondingly complete failure. Happily the issue disposes finally of these apprehensions. For our own part, several years' intimate observation of Japanese ability to assimilate scientific knowledge precluded any fear that the engineering difficulties of railway construction would prove a serious stumbling-block. But we did doubt the possibility, under existing conditions, of carrying out any large public works in this country on thoroughly economical principles. There was, first, the fatal absence of skilled contractors, possessing sufficient capital to undertake work on a large scale, as well as sufficient practical experience to qualify them for the particular species of work under consideration; and there was, next, the habit, not yet altogether eradicated, of overloading every business with costly officialdom. It would not have much surprised us, therefore, to learn that the expenditure on the Tokiyo-Mayebashi line had considerably exceeded the estimates; and, indeed, as we mentioned in a recent issue, such a rumour was at one time prevalent. But the figures quoted above—figures, we may observe, which can be absolutely relied on—show conclusively that the Japanese can manage the construction of their railways not less economically than efficiently.

It is just to note, at the same time, that the line from Tokiyo to Mayebashi runs through a flat country presenting a minimum of engineering difficulties. Its cost ought, therefore, to have been correspondingly small, and cannot be taken as an accurate basis for future estimates. The outlay on account of land, again, is a comparatively petty item in Japan. Thus, under this

heading, we find that the total expenditure on the line in question (81½ miles) is set down as 117,320 *yen*, namely 97,040 *yen* for the purchase of land for lines and stations, including compensation for crops, removal of trees, &c., and 20,280 *yen* for removing houses and other buildings. On the other hand, the large rivers which the Tokiyo-Mayebashi road crosses necessitate a disproportionately heavy outlay on account of bridges. Against this item alone we have a sum of 826,905 *yen*, including 226,625 silver *yen*. The *American Railroad Manual* shows that 27,019 miles of line constructed in the United States during 1880, 1881, and 1882, cost, altogether, \$2,023,646,842, or an average of \$75,000 per mile. One half of this nominal expenditure is said, however, to represent watered stock, so that the actual cost may be placed somewhere in the neighbourhood of \$40,000 per mile; whereas in Japan, judging by what has been already accomplished, \$35,000 would seem to be a liberal estimate. The Commissioner of Railways, Mr. INOUE MASARU, has just reason to be proud of these results.

A STORM IN A TEACUP.

MR. WILLIAM G. HOWELL has addressed the following letter to the *London and China Express*:—

SIR,—A letter on the subject of the Japanese Treaty Revision, signed by "Six Japanese," appeared in your issue of the 22nd Nov., and in it I find the following:—

Will it be credited that, in a memorial presented by a somewhat similar body in London to Earl Granville a year or so back, one of the suggestions (the italics are mine) in connection with the revision of our treaty, was that English clerks in Japan should be adequately provided with ready-made clothing duty free, and with cheap cigars?

The memorial referred to was a report on the Japanese proposals for a revised treaty between Great Britain and Japan, drawn up by a committee of merchants in London interested in the Japan trade, and appeared in your columns on Oct. 1, 1881. The passage in it pointed at in the above quotation is as follows, and occurs towards the end of the report, after all really important matters have been carefully and exhaustively dealt with:—

Groups VIII., *Wines and Liquors* and X., *Tobacco*, are reasonable articles of taxation; but as they would chiefly fall upon the foreign residents, 10 per cent. may be considered a sufficient charge. *Clothing and apparel* are also mainly for foreign use, and can only yield a trifling revenue. If worth taxing at all, 5 per cent. should be a sufficient duty to place upon them.

The memorial itself was very full and exhaustive, very carefully drawn up, and contained many practical and excellent suggestions in regard to the revision of every section of the treaty, which were at least well worthy of the consideration of the Japanese Government. Unhappily, as I still think, these suggestions were introduced by, or interspersed with, reflections and charges which did not commend themselves to my sense of justice to the Japanese, and I took occasion to address you on the subject, pointing out what seemed to me at once the merits and the defects of the memorial. But anything more calculated than the above quotation to alienate friendly advocates I have never encountered. I have no knowledge of the six gentlemen who have appended their names to the letter in question; but I venture to assure them that they have greatly discredited themselves by this flagrant misrepresentation of facts, and can only reinstate themselves in the position of antagonists worthy to cross swords with men of honour, by an immediate and ample retraction of it.—I am, &c., W. G. HOWELL.

London, Nov. 24.

We readily agree that the paragraph, extracted from the letter of the six Japanese, betrays a want of accuracy and a

disposition to place the facts of the case in an unjustly repellant light. But Mr. HOWELL'S censure has considerably more sound than substance. To accuse these six Japanese of "a flagrant misrepresentation of facts," disqualifying them "to cross swords with men of honour," may produce a striking effect, as a phraseological feat, but assumes, on closer examination, a somewhat farcical appearance. For after all, in what respect is it false to describe the London Merchants' recommendation as motivated by a desire to provide foreigners in Japan "with ready-made clothing duty free, and with cheap cigars?" We waive the consideration of the word "clerks," since we presume that Mr. HOWELL is not disposed to rest his case on a question of verbal definitions. The London Merchants, while confessing that wines, liquors, and tobacco are "reasonable articles of taxation," think that ten per cent. "may be considered a sufficient charge." Why? Because "they" (doubtless the Merchants refer to the taxes) "would fall chiefly upon the foreign residents." They further think that, with regard to clothing and apparel, "if worth taxing at all, 5 per cent. should be a sufficient duty to place upon them." Why, again? Because "they are mainly for foreign use." Now, as there are two sides to every question, let us try to look at this matter from a Japanese, as well as a foreign, point of view. And first, it may be readily admitted that, speaking generally, there should be no distinction made, so far as taxation is concerned, between foreign and Japanese traders in Japan. It is true that, at present, strangers residing in Yokohama pay from forty to fifty per cent. less taxes than their Japanese fellow-residents. But this seeming anomaly may be partially defended on the ground that, in a country where aliens do not enjoy the same privileges of trade and travel as natives, and where a part of the machinery for the former's government is provided without any expense to the latter, some difference should exist between the amounts of their respective contributions to the funds of the State. No such principle applies, however, or can properly be applied, to indirect taxes levied in the form of duties. Where these are concerned, foreigners do not claim any privilege that is not equally extended to Japanese. This much admitted, it follows that in fixing tariff rates, their incidence ought to be considered not less than their amount. To take an extreme case. Pianos are articles scarcely, if at all, used outside the foreign settlements. Would any Japanese think it fair that a heavy import duty should be imposed upon these instruments? Such a course would be an obvious violation of the principle postulated at the outset, since its effect would be to levy upon foreigners a tax to which Japanese are not liable. The authors of the London Merchants' memorial evidently thought that a similar consideration applies

to the case of imported clothing, liquors, and tobacco. These articles, they say, are used chiefly by the foreign community, and ought, therefore, to be subjected to a duty less heavy than that usually imposed upon such staples. That this contention is, in some respects, reasonable, few, we apprehend, will be disposed to deny. But unfortunately it proceeds upon a false premise. Foreign consumption of foreign liquors and clothing in Japan is a bagatelle compared with Japanese consumption. There are, roughly speaking, 2,500 foreign residents in this country, and for every one of them that drinks imported liquor and wears imported garments, there are probably thirty or forty Japanese who affect the same luxuries. These Japanese, too, are precisely the classes that can afford to pay taxes and whose purses prudent financiers would seek to reach. Thus the London Merchants' plea, honestly urged in defence of what seems a fair cause, assumes, on closer inspection, a very doubtful complexion. We cannot, with any show of reason, ask the Government of Japan to modify the duties upon eminently dutiable articles, the consumption of which is daily increasing throughout the country, merely because they happen to be used in proportionally greater quantities by foreigners than by Japanese. There is another point also that increases the difficulty of discriminating in foreigners' favour. Japanese manufactures are beginning to compete, little by little, with foreign, so that any limits set to the duties levied on the latter, must necessarily apply to the case of the former also. It is a matter of fact that the Japanese Government was recently constrained to exempt from the operation of the new tobacco tax cigars and cigarettes made in Japan, because the imposition of the tax upon the native manufactures alone would have virtually conferred a monopoly on imported articles. It is plain, therefore, that the position taken by the London Merchants is open to many objections, and certainly the fashion of their argument is singularly unhappy. To a casual reader it would seem as though the mere fact of an article being destined chiefly for foreign use was sufficient, in the opinion of the memorialists, to place it in an exceptional category for purposes of taxation. We cannot be surprised that the Japanese interpreted the memorial in this sense, more especially when we remember that the document was otherwise disfigured by reflections and charges of a mischievous and discreditable nature. What really does surprise us is that a writer like Mr. HOWELL, who spent many years in Japan and who may be supposed to know something of this country's foreign relations, should pass by all the vital questions discussed by the correspondents of the *London and China Express*, and confine himself to firing noisy broadsides of blank ammunition at this one little bit

of injudicious cynicism. Such a course, if pursued by any one else, might be easily construed into an attempt to divert attention from the true issues, and to bring unmerited discredit on the whole argument of the Japanese by exaggerating an irrelevant indiscretion. As for the "immediate and ample retraction," which alone can restore the six unfortunate gentlemen to "the position of antagonists worthy to cross swords with men of honour," its terms would be likely to cause their composers some perplexity. "We said," one can fancy them explaining, "that the clause referring to clothes and tobacco embodied one of the chief suggestions in the memorial. This was a serious prevarication. The adjective 'chief' ought to have been omitted. We also spoke of 'ready-made clothing.' This was an unpardonable generalization. To be worthy of crossing swords with honourable men, we should have known that the terms 'clothing' and 'apparel' may be improperly applied to cloths and linen as well as to coats and shirts. We further spoke of 'English clerks in Japan' as the persons for whom certain tariff concessions were claimed. This was a 'flagrant misrepresentation of facts.' We ought to have written 'partners, principals, and clerks.' Altogether we have 'greatly discredited ourselves' by a flippant attempt to be satirical, and we humbly confess that you have shown your thorough appreciation of the position by choosing to censure our momentary indiscretion rather than to consider questions which concern the well-being of our nation and the reputation of yours." Would this method of retraction be a sufficiently prompt and ample prelude to the recrossing of honourable swords, or would it be necessary that some more pop-guns of sounding sentiment should be discharged at the heads of the six Japanese? It is sometimes both pleasant and profitable to spend brief intervals in the regions of romance, but the revision of the treaties, and the painful position in which both Japanese and foreigners are placed by the present dead-lock, are eminently practical matters, not to be adjusted, or in any way advanced by Mr. HOWELL'S dithyrambic capers, however delicately cut. That gentleman might have usefully promoted discussion had he considered the serious questions advanced by the correspondents of the *London and China Express*, instead of wasting his powder on a paragraph which, after all, contains only one really objectionable word.

THE SITUATION IN EGYPT.

It becomes difficult to understand the attitude of HER MAJESTY'S Government towards Egypt. Mr. GLADSTONE'S aversion to engage directly in a struggle with the strange wave of religious fanaticism now surging towards lower Egypt is intelligible enough, when we remember that every step England takes in that direction

lengthens the distance she will have to retrace, and multiplies the dangers she will leave behind her, in the day of her final withdrawal from the banks of the Nile, should that day ever come. But, on the other hand, to leave the Soudan to its fate, would be to abandon the fruits and prospects of all the anti-slave policy forced upon Turkey and Egypt by Great Britain during the past twenty-five years, and to destroy the brave work of such men as Sir SAMUEL BAKER and General GORDON. It is hard to imagine England sitting with hands folded in quite contentment while, in a country within easy reach of her highway to India, troops of unfortunate human beings, robbed from their homes, are perpetually driven like cattle into life-long servitude. This is one of those gigantic brutalities that civilization must sooner or later rouse herself to crush, and when, remembering how, in olden times, whole continents poured forth their chivalry to rescue the sepulchre of a prophet, buried a thousand years before, from its profane guardians, one observes the profound apathy with which this world of the nineteenth century, our own little island excepted, used to regard the unspeakable barbarities practiced upon thousands of men, women, and children in the valley of the Nile and the robber regions of Darfour, one recognises the truth of the old saying that the moods of men are more various than their manners. There are, doubtless, persons to whose hard practicality arguments of this sort do not appeal, and who will probably find a stronger warrant for extending British protection over the Soudan in the fact, communicated to *The Times* by Prince IBRAHIM HILMY, that the only two Nilometers available by Egypt are at Khartoum and Berber. But in every case England's reasons to check MOHAMED-AHMED'S progress assume the character of an obligation, and however reluctant Mr. GLADSTONE may be to have his hand forced by circumstances, it is not likely that he will prove himself the one statesman in history strong enough to despise them. At the outset, he seems to have been little moved by the insistence of the KHEDIVE. Egypt might deal with the Soudan herself. All that England meant to do, with Turkey's co-operation, was to keep the ring. The ships of the QUEEN and SULTAN would sail up and down the Red Sea, and prevent the tide of Islamism from spreading to Arabian shores. The KHEDIVE'S answer to this programme of good-natured neutrality was remarkably shrewd. He had at command the services of one Englishman of note, who might be trusted not to refuse any task involving peril and hardship, and whom England would be little pleased to see treading in the footsteps of General HICKS. The task of crushing the MAHDI was entrusted to VALENTINE BAKER, and under his orders was placed a force scarcely sufficient to garrison Suakim. Even this might not have moved the GLADSTONE Cabinet. VALENTINE BAKER had gone out into the wilderness. His doings and his fate did not necessarily concern HER MAJESTY'S Government. But the KHEDIVE had another practical argument to advance. He appointed ZEBHER PASHA as BAKER'S colleague. The significance of this measure does not appear to have been fully appreciated yet. ZEBHER, in the days when he was virtually ruler of the Soudan, distinguished himself by nothing more than by his support of the slave trade. A writer in *The Times* says that, in 1869,

ZEBHER RAHAMA'S "*seribas* were slave depôts, and the line of them across the desert marked the track" of this brutal traffic. Then followed, in 1877, his visit to Cairo, with the intention of persuading the KHEDIVE to let him found a kingdom of his own in Darfour and the Bahr Gazelle—a project which failed through the direct intervention of GORDON PASHA—and then, the insurrection of ZEBHER'S followers under his son, SULEIMAN, who was defeated, captured and shot by the forces under General GORDON'S direction. The KHEDIVE, by sending ZEBHER to the Soudan at this juncture, tells England, in so many words, that since she declines to help him, he must help himself as best he can, that is to say, by having recourse to the assistance of a man who was proved a rebel, and sentenced to death, four years ago, and who will go to the Soudan with the object of recovering his old position as a slave-dealing potentate. Whether or no this roused the London Cabinet, the telegraph does not say, but it does tell us that General GORDON has consented to assume the command in the Soudan, stipulating, however, that his responsibility shall be *vis-à-vis* his own Government only. Now it is quite impossible that General GORDON and ZEBHER PASHA can work together. ZEBHER hates GORDON, with all the bitter hatred an Oriental may be supposed to feel for an European who baulked his pet projects, defeated him in the field, and caused the execution of his son. If GORDON is really going to the Soudan, ZEBHER must stay at Cairo, and yet, among Egyptians, ZEBHER is probably the only man who can hope to make head against the MAHDI. GORDON'S condition, again, if it means anything at all, means that he is to carry on the campaign absolutely after his own fashion and without reference to any superior authority save that of his own Government. Such a proviso is worthy of the stern old soldier, who recently told a prominent Chinese statesman that he could never consent to serve China in conjunction with a man whose breach of faith in former years had for ever marred his title to be trusted. So far, then, as the position has been explained to us by the telegraph, MOHAMED-AHMED is about to be confronted by two leaders, an Englishman and an Egyptian, of whom the latter is an implacable enemy of the former, his superior, while the former is to conduct the campaign without responsibility to any Government save that of England, who has declared, through her present Ministers, that she will have no active share in Egypt's trouble with the fanatical rebels of the Soudan. This is why we say that it is difficult to understand clearly the attitude of Great Britain in this business, or the programme Mr. GLADSTONE and his colleagues have mapped out for themselves.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Asiatic Society of Japan was held at the Theological Hall, 17, Tsukiji, on Wednesday, January 23rd, the Vice-President for Tokiyo in the chair.

The Minutes of the last Tokiyo Meeting, having been published in both the daily and weekly editions of the *Japan Mail*, were taken as read.

The TREASURER intimated that, in consequence of the reprinting of those parts of the Transactions which had become scarce, several completed sets had already been sold.

The Rev. J. SUMMERS then read his paper "On Chinese Lexicography, with proposals for a new Arrangement of the Characters of that Language." The paper opened with a brief discussion, partly historical, of the main features of the written language, such as the nature and origin of the characters employed, and the more important modifications in the manner of writing them. In this connection some specimens of the ancient "tad-pole" style of writing were shown. The difficulties in arranging and classifying the numerous characters were then noted, and the various plans which had been adopted by lexicographers criticised. Thus to classify by the sound, as was done by Dr. Wells Williams, required in the first place a knowledge of the phonetic value of the character, which phonetic value further was by no means fixed, but varied in different localities. The common method of arranging by the number of strokes in the primitive was obviously unscientific. Dr. Norris, of the Asiatic Society of London, had elaborated a system which had never been published and in which the arrangement was based upon the character of the *principal* stroke, as it appeared to him. The choice of the principal stroke was of course quite arbitrary, and was the more objectionable in Dr. Norris's plan, as he was himself unacquainted with the true manner of writing the character. Dr. Rassellief's method was also somewhat arbitrary, although in certain particulars it approximated to the author's plan. This plan was then described. A kind of alphabet was first formed of the six elementary strokes which make up any character—the dot, the horizontal stroke, the vertical stroke, the sweep, the hook, and the crook. The character was classified by the order in which these elementary strokes succeeded each other. This required a knowledge of the proper way to write a given character—a knowledge, however, which could be easily acquired, as the correct order of writing the strokes depended upon a few very simple rules, and was, except in a few special cases, rigorously followed by all Chinese writers. Thus a character could be spelt out in terms of these six fundamental strokes exactly as a word in a European language is; and its position in the dictionary similarly located. In the spelling out of a character, the primitive was to be used, not the radical or radicals which might be present. A knowledge of these radicals was assumed on the part of the student. Each radical, however, would be found in its proper place as determined by the order of its component elementary strokes. If a character was composed of several radicals, it would be found tabulated under the lowest one to the right. In conclusion, the author claimed for his method the advantage that it would greatly save time as compared with other methods; and that besides it would generally be found that words of a like signification came together.

A very animated discussion followed, largely interspersed with questions upon special points which had not appeared sufficiently clear during the reading of the paper.

The Rev. Mr. GRING doubted if, after all, the system would be of such superiority as its author thought, as it also seemed to require the learning by heart of the 214 radicals.

The CHAIRMAN, in criticism of certain remarks of Mr. Gring's, pointed out that a dictionary was valuable because it contained the uncommon words, and that in any process of abridgment the ordinary words which everyone knew should be the first to be sacrificed. He felt it would be premature to enter into any detailed criticism of the plan which the Rev. Mr. Summers had laid before them. The best test would be the practical test; and he would reserve his judgment until the new dictionary was published and in his hands.

The thanks of the Society were then conveyed by the CHAIRMAN to the author for his very interesting paper, and the meeting was adjourned.

YOKOHAMA GENERAL CEMETERY.

A meeting was held on Tuesday afternoon in the Chamber of Commerce Rooms for receiving the accounts and for the election of a Committee, at which the following gentlemen were present:—Messrs. Russell Robertson (in the Chair), B. Gillett (Hon. Sec.), J. Brooke, R. Dross, H. Grauert, F. Grösser, E. Berger, J. P. Mollison, A. J. Wilkin, T. Walsh, H. Barlow, and Rev. E. C. Irwine.

THE YOKOHAMA GENERAL CEMETERY.

IN ACCOUNT WITH B. GILLETT, HON. TREASURER, FOR THE YEAR
ENDING 31ST DECEMBER, 1883.

Dr.		
To Superintendent's Salary 12 months	\$480.00	
To Labor Account 12 months	347.54	
		\$827.54
To Repairs	51.14	
To Tools, &c.	16.01	
To Sundries—Lime; Cement; Drain-pipes, &c..	9.67	
		76.82
To Books, Stationery, Advertisements, &c.		16.50
To Medical Attendance, Dr. Eldridge on 2 cases of accident to Cemetery Coolies		18.00
To Loss in Exchange04
		938.90
To amount at Hongkong and Shanghai Bank, 31st December, 1883, at call	502.00	
To balance in the hands of Treasurer 31st De- cember, 1883	88.48	590.48
		\$1,529.38
Cr.		
By Balance brought down from previous account 31st December, 1883		446.38
By Interment fees 12 months	665.00	
By Fees for erecting Stones, Enclosures of Graves, &c.	418.00	
		\$1,083.00
		\$1,529.38
January 1, 1884. By balance brought down		\$ 590.48

DEPENDENCY.

Interment fees, since paid and passed to the
credit of new account \$ 50.00 || E. & O. E. | B. GILLETT, Hon. Treasurer. |

I have examined this account with the vouchers relating
thereto, and find it correct.

HENRY BARLOW.

Yokohama, 1st January, 1884.

INTERMENTS IN THE YOKOHAMA GENERAL CEMETERY FOR THE
YEAR ENDING 31ST DECEMBER, 1883.

British	22	Swiss	3
American	14	German	5
French	6	Dutch	1
Total	50		
1882.	50	1881.	32
1880.	71	1879.	54
1878.	69		

The CHAIRMAN, after reading the report of the Committee and the accounts, observed that, this meeting presented a marked difference to most others held in Yokohama, as there would be no appeal to the pockets of those present, the only business before the meeting being of a formal nature. He would like, however, to remark that at the meeting last year when the question of the new cemetery was broached, he was not posted in the matter and knew very little about it, but that morning, he had an interview with the Kenrei, who had admitted that the delay in finishing the new Cemetery rested with the Central Government in Tokiyo. They had not yet decided upon what terms the ground should be handed over to foreigners. At the last meeting the question had been raised as to the necessity of closing the present Cemetery, and objections had been made as to the distance from the Settlement at which the new one was placed. The Kenrei, who certainly had a voice in the matter, had the question of closing the old Cemetery brought to his notice on account of the health of the Japanese living in Honmura. This had been repeatedly urged upon him by the Board of Health; nevertheless, it could not be closed in a day, and as the Consuls have to be consulted in the matter, the Committee might rest assured that sufficient notice would be given.

Mr. MOLLISON asked who was to pay for the laying out of the new Cemetery.

The CHAIRMAN said that the present one was granted to foreigners under the convention. He had not brought the question up in his conversation with the Kenrei, but he thought that if the Kenrei closed the old one he might pay part of the outlay; still it might be urged that he had given the ground and made the road to it.

Mr. WILKIN remarked that if it was in the interests of the health of the Japanese that the old cemetery was to be closed, it was rather like straining at a gnat and swallowing a camel, for Honmura was in a filthy state.

The Rev. E. C. IRWINE said that if the Cemetery had to be moved for the health of Honmura, he thought that it would be better to move Honmura for the general health of foreigners.

The members of the old Committee were then asked to submit themselves to re-election, and the following gentlemen expressed their willingness to serve again, namely:—Messrs. T. Walsh, A. J. Wilkin, H. Grauert, and B. Gillett.

Mr. Blakeway having resigned, Mr. J. M. des Pallières was proposed in his place.

Mr. BROOKE proposed the election of the Committee as above.

Mr. MOLLISON seconded.

Carried unanimously.

The Rev. E. C. IRWINE proposed a vote of thanks to the Hon. Treasurer for his attention and for being able to show so good a balance.

This was seconded by Mr. BARLOW, and carried unanimously.

This concluded the business, and the meeting adjourned.

NOTIFICATION NO. 7 OF THE FI-
NANCE DEPARTMENT.

It is herewith notified that, in accordance with the Public Loan Bonds' Regulations for the construction of the Nakasendo Railway, issued by Notification No. 47, in December of the 16th year of Meiji (1883), bonds to the amount of five million yen will shortly be issued, subject to the following special articles:—

REGULATIONS FOR THE ISSUE OF THE NAKASENDO
RAILWAY BONDS.

Art. I.—The Finance Department will regulate the form and issue of the Public Loan Bonds.

Art. II.—The price of the bonds shall be 90 yen for a face value of 100 yen.

Art. III.—Persons desirous of buying bonds will apply to the Nippon Bank, its branch offices or agencies, up to the 20th of February next, stating the amount of bonds they require and giving their names and addresses.

N.B.—The Agencies will be advertised by the Nippon Bank.

Art. IV.—Applicants for bonds will deposit 10 yen as a security on every 100 yen worth of bonds, at the office where they have made application.

Art. V.—After payment of the securities, the Nippon Bank, its branch offices or agencies, will give the applicants receipts for the amounts. These receipts may not be sold or purchased.

Art. VI.—The Finance Department will announce, through the Nippon Bank, the whole amount of the bonds to be granted to applicants up to the 30th of next March. The amount of the securities paid in will be deducted from the value of the bonds, and the remaining sum paid by two monthly instalments of 50 per cent. on the whole amount. The first payment will end on the 30th of April, and the second on the 15th of next June. The second instalment may be paid simultaneously with the first.

Art. VII.—The two instalments having been paid at the Nippon Bank, its branch offices or agencies, a provisional certificate will be granted in exchange for the receipts given for the securities and other payments. These provisional certificates shall not be made the basis of business transactions, but they may be hypothecated with the Government or Nippon Bank.

Art. VIII.—The bonds will be issued through

the Nippon Bank in exchange for the provisional certificates.

Art. IX.—In case the instalments are not paid when due, as set out in Article VI., the security, and the first instalment if paid, will not be refunded to the applicants.

Art. X.—Should the receipt for security or the provisional certificate be lost, the owners of the missing documents will at once report the matter to the office where they have been obtained, stating the number of the certificates, and giving their names and addresses.

Art. XI.—The circumstances attending the loss of the documents must be testified by the owners to the Nippon Bank, its branches offices or agencies; new certificates will be granted upon the testimony of two persons who shall confirm the loss. The missing documents will thereupon be advertised in the newspapers and declared null and void.

Art. XII.—The interest on the security and the amount paid for bonds will be seven per cent. per annum. On sums paid on or before the 15th of the month, the interest of half a month will be allowed; on those paid on the 16th of the month and after, the interest will be reckoned from the first of the following month.

Art. XIII.—The interest on the security and sums paid for bonds, not exceeding half the year's amount of the coupons, shall be paid when the bonds are exchanged for the provisional certificates.

MATSUKATA MASAYOSHI,

Minister of Finance.

January 23rd, 1884.

NOTIFICATION NO. 3^B OF THE HOME
DEPARTMENT.

ADDRESSED TO THE POLICE FORCE IN ALL CITIES
AND PREFECTURES (TOKIYO EXCEPTED).

Attention is herewith called to Notification No. 71B of the 15th year of Meiji (1882), issued by the Home Department, to the effect that the police are forbidden to draw swords except in urgent cases; and that they are further required to observe the following rules:—

N.B.—In case of wounds being inflicted on occasions other than those enumerated in Article I, even though through accident, the police will be prosecuted by law.

RULES REGARDING THE USE OF SWORDS.

Art. I.—Swords may not be drawn except under the following circumstances:—

- 1.—When there is no means to protect the safety and property of the people except by armed interference, weapons having been employed with murderous intent.
- 2.—When the offending parties are armed with deadly weapons, and other means of defence are unavailable.
- 3.—When criminals and escaped convicts resist capture with murderous weapons, and the police making the arrest are unable to carry out the law without using theirs words.

Art. II.—Even though swords should have been drawn in accordance with these regulations, the police are required to make no use of them should the offenders finally yield peaceably.

Art. III.—Swords having been drawn in accordance with these regulations, care must be taken to avoid wounding any party or parties not concerned in the affair.

Art. IV.—Whenever it has been found necessary to make use of swords, the police must at once report the circumstance to the Chief of the Office to which they belong, even though no wounds may have been inflicted.

YAMAGATA ARIAKIRA, Home Minister.

January 21st, 1884.

TRANSLATIONS FROM NATIVE JOURNALS.

REGULATIONS FOR THE PUNISHMENT OF GAMBLERS.

(Translated from the *Hochi Shimbun*.)

Fine clothes and good food can only be obtained by those who work hard, and there are many who so strive to obtain them. But when men can procure these mundane luxuries without exertion by gambling, it is no wonder that the vice cannot be suppressed. Idle young men bred in cities and country towns, who are not taught any trade or profession, and whose only desire is to indulge in a life of pleasure and debauchery, on seeing how gamblers live, are apt to form an exaggerated idea of the pleasures of such a life, and to cast in their lot with them. The Government, knowing this tendency has made the law more stringent than before. There are two reasons why they cannot hope that the present laws will effectually stop the evil. First, the provincial police have to employ men who are acquainted with the people of the district and who, having been gamblers themselves, know where to find the offenders. As the proverb says, "snakes know where snakes live." But as a rule, these men receive bribes and let the offenders evade justice. In this way the police are prevented from carrying out the law; for if they do not employ these spies they cannot catch the gamblers, and if they do employ them the above abuse is certain to occur. Secondly, men of high station, who are surfeited with the common pleasures of life, take to gambling as a new excitement, and access to the houses in which they carry it on is most difficult. One cannot make a law which shall be stringent to one class of men and lenient to another. To make a law operative, it must be based on the equality of all men. Of late the police system and supervision have been considerably improved. We cannot decide by the two examples given above whether the law is imperfect or not; but to prevent young men from being drawn into the toils of the gamblers, exceptional vigilance is required. On the 26th of last December, we argued the question in these columns, and brought it to the attention of the Government. The Government, being acquainted with the circumstances, quickly responded to our appeal for a reform by issuing in the beginning of the year Notification No. 1, in which the old rules were revised and four new ones added. Our readers will have this Notification still in mind, and we would have commented on it before, but matters of a more pressing nature have delayed us. A careful perusal of the Notification shows that the principal change made in the old law is a transfer of the gambling offences from the executive to the administrative sections of the Code. The new laws set a limit to the penalties, which, however, are more severe than they were previously. Article 4 says that Superintendents of Police, Governors, and Prefects, are at liberty to enact such measures as will enable them to enforce the law, with the sanction of the Home Minister.

Upon this point depends the importance of the alterations. Gambling is prevalent in all districts, though there is a difference in the degree to which it is carried on and in its pernicious effects on the people. In the Eastern provinces it flourishes far more than in the Western, and Kotsuke, especially, enjoys an unenviable notoriety. Each band of gamblers have their own customs by which they regulate their meeting and dispersing. Therefore, to arrest them, it is necessary to exercise great vigilance both directly and indirectly. Article 3 says that any house may be entered at any moment for the purpose of arresting gamblers. This is necessary because the offenders use every means in their power to evade the detectives, and carry on their pastime in houses which are difficult of access to any but

themselves. Unless the police are invested with power to enter any dwelling where they have a suspicion that gambling is being carried on, there will be no chance of catching the offenders. To deal with a crime which is so easy of concealment, and of which it is so difficult to adduce sufficient evidence to ensure conviction, it is necessary that the police should be granted this exceptional power. This being the case, the strict enforcement of the new rules should remove the abuse. Nevertheless, it must be borne in mind that the transfer of the act from the executive to the administrative involves the loss of personal liberty. To allow the police to enter private dwellings is against the principles of freedom. From a purely logical point of view, the Notification in question is not a pleasing one. The safety of personal freedom is secured by the executive power being independent of the administrative and overruling it. Personal freedom and safety depend on the inviolability of private dwellings. The reason the Government, which pays the utmost regard to personal rights and freedom, sanctioned the measure, and that we journalists, who have no end in view but the liberty of the people, approve of it, is because it is the outcome of necessity. On this account the Government inserted the word "temporary" in the rules, that is, they will not remain long in force. We earnestly hope that the Government will be enabled to rescind them shortly. Law in itself is inactive, and the power to put it into force rests with the functionaries. The scope of the penalties are as stated above, but the enforcement of them is left in the hands of the local officers. This being the case, we are unable to foresee what steps the provincial officers may take in carrying out their duties. These details will have a most important bearing upon the Notification, and by them it will be made either stringent or lenient, beneficial or injurious. Thus great responsibility will rest with the provincial officers. There is nothing more productive of injury than a law whose scope is unrestricted. The more clearly defined a law is, the less liable it is to err and the more easily it is amended. Although a law whose scope is undefined is easy of application, yet there is the danger of it being perverted from the original intention of its compiler. The details of the measure in question have no defined limits, but are to be fixed by the provincial officers as they deem fit. So far so good. But the plan is not entirely free from the danger that personal liberty may be infringed. What a grave responsibility rests on the provincial officers! But knowing that they are politicians of considerable skill and experience, we believe they will avoid all pitfalls. Moreover, the Home Minister has the power to veto their enactments, so that we are convinced that no abuse will arise from the Notification in question.

THE DRIFT OF NATIONAL SETTLEMENT.

(Translated from the *Hochi Shimbun*.)

We cordially sympathize with our readers in welcoming the New Year, the 17th year of Meiji, more especially as the interval to elapse between the present and the establishment of a constitutional government is now but one of five years.

Let us, for a little while, review the history of the past year, its vicissitudes and experiences. In order to fully appreciate the status of society, one must, first of all, take its essential elements into consideration, since merely incidental events cannot constitute a criterion. For instance, certain social conditions, of an ultimately progressive tendency, not unfrequently fail to convey the idea of immediate improvement, and often wane and wax in their beneficent influence before achieving final success. Hence, those who strive to achieve greatness take no note of a momentary retrogression except to resolve to advance ten steps where they have lost one. In fine, the upward and pro-

gressive tendency will gain the ascendancy. The incidental events and superficialities of every-day life may impose upon the vulgar and uneducated, but should in no wise affect enlightened minds, or persuade them to imitate those who, influenced by the petty events of the moment, modify their policy as it is alternately attended by success or failure. Having thus distinguished between the essential elements of society and the trivial incidents of the moment; we shall proceed to examine the drift of national sentiment.

There probably never was a period, even in the remotest prehistoric times, though we have no historical data or tradition to prove this, in which the people did not evince an interest in the affairs of the nation, though there have been decided fluctuations in the intensity of the interest evinced. During the old feudal times, however, it was only the *shizoku* who took part in the nation's affairs. They numbered but little above four hundred thousand, and even though their vassals be added to this number, they did not exceed two millions. In point of fact, this empire was the outcome of but two million of souls—the nobility, and their retainers. But in the course of time, and in accordance with the laws of destiny, the feudal system was abolished and prefectures established in its place; the result being that the *shizoku* had to forego their hereditary emoluments, and that the people began to participate in the control of the national interests. A new world of thought and action was called into existence, although the participation of the people remained restricted as before, not more than two million having a voice in the government—a fact which was greatly deplored by men of enlightened minds. But on the other hand, the *shizoku* were compelled to resort to trade and commercial pursuits in order to earn their daily bread. No longer could they give heed to the national politics, the control of which was monopolized by Government officials numbering not more than one hundred thousand.

Matters stood thus in the 11th and 12th years of Meiji (1879-80). Since then the political spirit has taken firm hold upon the populace, especially as the new doctrines expounded by political pioneers at the beginning of our era developed into form and power, and exerted the greatest influence amongst the young and energetic spirits of the people. Everyone might henceforth take part in political affairs, be he trader, farmer, or what not, so long as he could devote time and money to the purpose. The rapid growth of an universal interest in national politics found speedy outlet in the form of a petition to the Government to establish a National Assembly, and to permit the formation of political societies. The maximum activity in the political arena was exhibited during the 15th year of Meiji (1882), and large numbers of political societies sprung up throughout the empire. Foremost among these were young, or still youthful, men, who were guided by the advice given by their cautious elders. Last year, however, the seeming decrease of political activity gave rise to grave apprehensions. Yet these were but surface indications, for political zeal has, if not actually increased, certainly not diminished; and politicians have shown a more earnest and better spirit than ever before.

Public lectures, social gatherings, and the like are among the chief indications of political activity. In Europe and America, where politics enter so largely into the every-day life of the people, public lectures and social gatherings, unless of unusual importance, are not made a subject for remarks; but in Japan, such events form the standard by which political activity must be judged, especially as the people are only just awakening to a sense of its importance. In this manner, the past year was less notable for the spread of political zeal than was the year before. Is this owing to any actual decrease of the value of politics in the eyes of the people of Japan? Certainly not. The case is analogous to the light emitted by an incandescent object where each fresh outburst of glowing flames is followed by an increase of fiery vigour.

One of the most notable facts of last year is that politicians have shown the most unwearied fidelity in the pursuit of their ideals, although their zeal has occasionally been momentarily damped. The tendency to change, which was so noticeable among the politicians of the early part of our era, has given place to a spirit of conservatism, to the decided betterment of political sentiment.

Turning our gaze from the political to the social condition of the empire, we find much upon which we may congratulate ourselves. At the time of the Restoration, the institutions, manners, and customs of the olden time were summarily dispensed with, leaving the people in a state of chaotic confusion. Etiquette, morals and every social restriction entered upon a period of laxity. Yet the public keenly felt the want of social law and order, and, as the years rolled by, a desirable restoration was partly effected. Although there is not a little discrepancy between the manner in which social order is maintained at present and in the days gone by, yet the necessity for preserving the integrity of the social status has suffered no change. This was notably the case in the 7th and 8th year of Meiji (1874-75), while great progress marked the past year. Availing themselves of the want of speedy social amelioration, the adherents of the system of ancient learning attempted to revive the manners and customs of olden times, but without avail.

With regard to trade and commerce, we have to note that the public has suffered severely from the stagnation of all manners of industries and business. Rice fell to 4.50 *yen*, while silver ranged from 105 to 106 with corresponding cheapness of all sorts of commodities. This was, to a certain extent, in favour of the poorer classes; but whatever advantage they may have reaped was more than counterbalanced by the distress of the agriculturists, who were unable to purchase more than the bare necessities. Hence great loss was entailed upon manufactures and industries. Brewers suspended their trade, and petty manufacturers were ruined wholesale. The people looked eagerly to the Government for some remedy to ease the national distress.

Among the principal events immediately effecting the people, was the dispersion, by order of the Government, of the general meeting of all provincial assemblies. More political gatherings were forcibly stopped last year than ever before. Although the meeting in question was dispersed, the members of the various provincial assemblies remained in constant communication with each other; a fact of great importance to the meeting itself. Shortly after this event, Mr. Itagaki returned from his European tour. It was generally expected that his return to the political arena would be productive of a beneficial change; however, he has returned to his native place without anything notable having occurred. The Liberals assailed the Liberal-Conservatives, and threw all sorts of opprobrious epithets into their teeth. This hasty proceeding brought great discredit upon the Liberal faction, while it materially obstructed the progress of politics.

With regard to Government administration as bearing upon external intercourse, nothing of note took place. The condition of the country in this respect remained as satisfactory as heretofore. Relations with Korea have become somewhat complicated in the last two years. The opium question and the unfortunate Nagasaki episode aroused considerable interest in political circles, but the most experienced diplomatists apprehended no difficulty in a pacific solution of the matter. We still await its settlement. The restoration of the Shimonoseki indemnity by the United States was of no little credit to the people of America, and is a kindness which will never be forgotten by Japan and its people. The public anxiously awaits the necessary appropriation of the refunded indemnity. Sir Harry Parkes was transferred to China after prolonged service in this country. H.I.M. Ministers were likewise transferred from one post to another. H.E. Ito's return from Europe gave rise to considerable speculation with regard to a probable change of the administration, but no alteration of importance has occurred. As regards the treaty revision, nothing of a definite character has transpired. Its stands evidently on a similar footing to that of foreign trade.

For the matter of education, the study of ethics has considerably increased. Confucianism and the doctrines of Mencius enjoy great popularity among certain classes. A strong tendency towards the German system of education has been noticeable. The English system, upon which our modern education is based, has so strong a hold upon the public that it is questionable whether the German system will ever exert a greater influence. National education is of the first importance, and demands the serious attention of those who are responsible for its progress. The Government has wisely engaged a foreign adviser to superintend educational matters. The riot at the university

was thought at first to be of grave import, and many promising students were expelled.¹ And certainly the new Conscription Regulations will materially obstruct the advance of education.

The commercial policy pursued by the Government during the past year has no features of immediate importance. It is a subject which demands the immediate attention of the authorities, as trade has come to a complete standstill. The issue of the Public Loan Bonds may, however, be due to a prospect of better times in the near future. Various notifications have been issued with respect to commerce and agriculture. Many of these were framed for the purpose of promoting the interests of the Nippon Bank and the *Kiyodo Unyu Kwaisha*.

The modification of the regulations concerning provincial assemblies, and the establishment of the Toyama Prefecture, are noteworthy events in the record of provincial administration. Local expenditures have been skillfully curtailed. No serious misunderstandings have arisen between the local administration and assemblies, with the one exception of the Toyama Prefecture. In consequence of the depreciation of all commodities, a surplus has been produced in the local budgets, which may be appropriated to defraying the possible deficiencies in this year's taxes. The industries fostered under the auspices of local administrations have completely failed.

The military organization is undergoing a thorough revision, to its great improvement. The appropriations for the Army and Navy have been largely increased. New war vessels have either been purchased or are being constructed. Military service has been made compulsory, and it is to be hoped that our national well-being will profit thereby.

The prisons flourish rather too rankly just at present, owing to the increase of convicts in consequence of hard times. The Fukushima affair gave rise to great excitement throughout the empire; but the decision of the judges only echoed the popular verdict. We sincerely regret the occurrence of such a deplorable affair.

The death of H.E. Iwakura produced great changes in official circles. He was one of the best and wisest of our Ministers, whom the nation justly regarded as a pillar of the State.

The revision and alteration of the Press Laws have materially increased the burdens of the journalistic world. The issue of the *Official Gazette* (*Kwanpo*) has offered renewed facilities to journalistic enterprise.

The successful completion of the Tokiyo-Kumagai Railway has given considerable impetus to undertakings of a similar nature; and this fact, combined with the increased convenience of transport, has encouraged the Government to draw up plans for the construction of a railway between Tokiyo and Saikiyo (Kiyoto). A wonderful regeneration of the interior will be its certain result.

No ministerial changes of great importance have taken place. Among other associations, that of the traders' and manufacturers' has been fairly successful.

THE SECOND WEEK OF PRAYER.

JANUARY 13TH-20TH, 1884.

The Second Week of Prayer exceeded the first in point of interest on the part of those present, although the meetings were not nearly as largely attended as those of the first week. This was particularly the case with the attendance at the Foreign Meetings though the spirit of devotion perceptibly increased to the close. The sudden death of a well known citizen occurring under circumstances of special regret, added to the solemnity of the closing meetings of the Week. The Native Meetings opened with a 9 a.m. and a 7 p.m. service held in the Union Church on Monday, the 14th inst. These services, which lasted above two hours each, were largely attended and a remarkable spirit of prayer and of faith was manifested. The Pastor, Rev. Inagaki Akira, preached a suitable Sermon on John 5:25, "The hour is coming, and now is, when the dead shall hear the voice of the Son of God: and they that hear shall live." The Sermon was an earnest and instructive presentation of the truth that the word of Christ alone infused with the Spirit of God can speak dead sinners to life. This was typified in Christ's breathing upon his disciples and saying, "Receive ye the Holy Ghost." The Sermon was followed by a meeting of another hour, filled with stirring addresses and earnest tender prayers. It seemed nearer akin to Pentecost than any previous meeting seen in Japan. The bright beautiful sunlight streaming in through the great East stained-glass window; the well filled seats of well-dressed males and females—of the latter, three Girl's schools were largely represented; the solemn hymns of praise; and above all, the thought of the many hundreds of their fellow Christian country-

men being assembled at the same hour all over the land on this first day of this Special Week of Prayer, and all seeking the renewal and enlargement of the revival of the past year, made all naturally feel that the day was one to be made memorable to Japan. The results of the morning meeting were not what many anticipated, particularly those who expected the Lord to show them great and mighty things that they had not yet known. The evening meeting proved more truly a blessing; the fervent prayers offered at the 5 p.m. Foreign Meeting for a special blessing upon the Pastors of the four Native Churches of this place were signally answered in their joy, and fervor, and zeal. After nearly all had withdrawn a few united in a thanksgiving that God had not disappointed his children's expectations. The Tuesday night meeting at the Ten-an-do Church, the Wednesday night meeting at the Woman's Union School, 212, Bluff; the Thursday night meeting at the Sumiyoshi-cho Church; the Friday night meeting at the Baptist Mission School; and the Saturday night meeting at the Ferris Seminary for Young Ladies, 178, Bluff, were all most interesting meetings. The addresses of the leaders, and the subjects discussed and prayers offered were all of a very instructive and profitable character. More earnest and edifying meetings it has scarcely been anyone's privilege to attend in this or any other land. A perfect unity of heart and an intensity of desire seemed to characterize all present. At one of the meetings a Pastor spoke of the conviction that some one had expressed that we should have a ten-fold greater blessing this year than we had last. He spoke of what that meant by reviewing the blessings of the past year, and alluding to those already experienced the beginning of this year. At the beginning of last year four persons began earnestly to pray for God's Spirit to be poured out upon themselves and others. Soon spiritual sleepers were aroused; backsliders were reclaimed; a great Spirit of unity arose between Christians of every name, and also between the foreign and native teachers. Then a readiness to suffer loss for Christ; the increased observance of the Sabbath, and of the study of the scripture; the many hundred of believers added to the Churches, 166 in Yokohama alone; the great advance towards full support of the native pastors, and self-support on part of nearly all native Churches; a new Christian Weekly; the increase of Christian literature; the devotion of time, money, and of believers' own persons to the Lord—all this had been enjoyed, and we were now to look for and confidently expect a ten-fold blessing. Very special prayer was made for the Spirit of God to be poured out on the Great Union meeting to be held at the *Meiji K'wai-do*, Tokiyo, on Thursday, at 2 p.m., January 17th. This prayer was signally answered both as regards the weather, the numbers assembled and the really great results of the meeting. The day proved most favorable, notwithstanding the appearance of a storm in the air, which fell the following night in snow to the depth of several inches. The meeting began promptly at 2 p.m. and lasted three hours, or to 5 p.m. The ground floor of the Hall was well filled: except a tier of seats in front of the platform every seat was occupied, and there were enough persons standing in the side aisles to have filled the vacant seats. Rev. Dr. Verbeck and Rev. H. Kozaki occupied the platform. Leading pastors and officers in the Churches of Tokiyo, with a considerable number of missionary gentlemen and ladies were observed in the audience. The girls of several schools with their lady teachers filled up the entire section of the Hall by the side of the organ brought there for the occasion. Another section was occupied by married or aged females. The remaining three sections of the Hall were occupied by men of middle age, the working force of the Tokiyo Churches. A spirit of solemnity seemed to rest upon the entire audience, unlike upon any other gathering we had ever observed in so public a place. The services were introduced by the Chairman Rev. Dr. Verbeck giving out the Hymn in Japanese:—"All people that on earth do dwell, Sing to the Lord with cheerful voice," which, sung to the tune of Old Hundred, was rendered with great effect. The Chairman then read impressively the 8th Chapter of Romans from the Japanese New Testament, which was followed with prayer by the Rev. H. Kozaki. Addressing God, as the God of Abraham, of Isaac, and of Jacob—the God of the Covenant, he thanked the Divine Majesty of Heaven and of Earth for our assembling together to-day, and for the Spiritual blessings, especially in the better comprehension of Spiritual truth, vouchsafed unto his children in Japan the past year. He then besought God for an enlarged outpouring of His Holy Spirit upon all preachers and Christian workers; upon Our Country; upon Our Rulers; and upon all the Churches in Tokiyo. He followed his prayer with a short address setting forth the object of to-day's meeting, viz., to seek the outpouring of God's Spirit upon all Japan. We

were encouraged to do this in view of the great blessing bestowed in the past year, and we should pray that it might be ten-fold greater this year. The past Week of Prayer had been attended with much blessing, but we could not feel satisfied therewith, and hence this Second Week of Prayer, and the Union Meeting of to-day. All which seemed to be of God's guidance, since very little consultation had been, or could have been held about it. The importance of the object of the Meeting, he said, could not be exaggerated. Without the help of God the Kingdom of Christ cannot be advanced among men—learning, wealth, political power were not enough. The Spirit of God now, as at the first, was the only agent who could quicken dead souls into life. No other helper was sufficient for the great task of converting the thirty-six millions of our people to Christ.

During the delivery of this address an alarm of fire in the vicinity, produced a little delay, but no disturbance, of the proceedings. The Chairman announced the locality of the fire, and suggested that anyone anxious for their own or others property should quietly withdraw, but that no apprehension was felt for the safety of the building wherein we were assembled. At this point several persons were disposed to go to the doors and windows to look, but the aged Minister Okuno arose and offered a prayer that God would stay the fire, spare the people the loss of their homes, and save the meeting from disturbance. This prayer had the effect of quieting apparently all hearts. The Chairman, nevertheless, appointed a Committee to go to the scene of the fire and report to the meeting, which they soon did; that while they were there, a cry arose, "the wind has changed!" and so there was no longer apprehension to be felt for the place where we were assembled. This report was followed by thanksgiving and a further prayer on the part of Rev. Okuno that God would speedily stay the fire for the people's sake. Not long after, a door-keeper announced the fire to be at an end. During the interval of these announcements prayer had been asked especially for a number of young men once professors of the Christian faith, preparing or prepared for the work of the Ministry, but who had turned aside and seemed in danger of losing their faith altogether, and also for a Christian professor, a Chinese scholar, who, report said, had joined some new sect of Buddhists. Two prayers followed these requests, one of which was made by the Rev. Inagaki of Yokohama. In remarks he thanked God for the freedom from alarm manifested at a meeting for prayer at Yokohama that day week, during a severe earthquake; and now again in the presence of fire in the Capital where fires are so terrible in their ravages. He also alluded to the remarks of the native Chairman of a ten-fold blessing to be expected the present year. He spoke of the removal of distrust from foreign and native brethren's hearts, of their unity and sympathy in work, of the great increase in Church membership and zeal on the part of former laborers, and that new laborers were coming forward. Notably among the latter was a judge in one of the provincial Courts, who had been several years past a zealous Christian, but with the New Year resolved upon a new consecration of himself to Christian work, and intends resigning his judicial functions to give himself entirely to Missionary work. He spoke also of the tidings from Sendai of the unity manifested in the meeting together of of the Churches there, and also of the Churches at Nagoya and other points in the interior, and of the greatly increased zeal and unity in the Churches of Tokiyo and of Yokohama, and in their good results. One of the latter, he mentioned, was of a young man, a weak believer, who had been shunning the military draft, now offering himself up and being willing to join the army, and seek to serve God there and anywhere as a Christian ought to do. The Japanese version of the Hymns, sung to the same tunes as in English, "Sweet hour of prayer," and "Nearer my God to thee," had been interspersed between addresses and prayers. Several prayers were offered by pastors of various Churches in Tokiyo, followed by a lad's confession in prayer of his great sinfulness. After this followed a prayer by an elder in one of the United Churches of Christ, in Tokiyo, that moved all hearts with its importunity and spirituality. The petitioner entreated most reverently and lovingly and earnestly for the outpouring of God's Holy Spirit upon all before we left that place. It was in such an earnest, effective strain that all seemed moved to the depth of their souls in its humble entreaties, and felt that prayer must stop where we had received so manifest a blessing. The Chairman called upon several persons to lead in prayer, who represented different Churches and denominations. Rev. Mr. Correll prefaced his prayer with some remarks on the prophecy in Isaiah of "beating their swords into plough shares, and their spears into pruning-hooks," being strikingly exemplified in the use made of this

Hall built but a few years ago to oppose Christianity now filled with Christian worshippers seeking the conversion of all Japan. The application of this text to the circumstances of the place in which we were met, sent a perceptible smile of approval of its appositeness to many countenances. He was followed in remarks by another calling attention to its further appositeness to the scene of confusion witnessed in this Hall the last time Christian services were held here—the interruption on the part of a class of hearers of the preaching service held under the auspices of the Biennial Synod of the United Japanese Church of Christ held there Nov. 20, 1883, and what was witnessed here to-day. Also to the further contrast this assembly of several hundred or a thousand persons assembled in the Meiji Kwaido, in the Capital of the Empire, presented to the score of persons assembled in a little school room in Yokohama, twelve years ago, during the first Japanese observance of the Week of Prayer when the windows of heaven were first opened, and the Spirit of God was first poured out upon Japan. Nor was this all: to-day in all parts of Japan from Sapporo in the North, to Kagoshima in the South; and from Sendai in the East, to Kanazawa in the West; thousands of Christians were assembled supplicating this one great blessing for Japan. We should have faith to believe these prayers were to be specially answered, and that the Saviour's instructions to Paul were applicable to us to-day, "Fear not, Paul, for I have much people in this City"; and that this should prove true not only of the Capital where we were now assembled but of the whole empire of Japan. After singing the hymn—"Wash me, and I shall be whiter than snow," Mr. Tsuda arose and very feelingly addressed the audience. He thanked God for His great grace to Japan, and then traced some of the providential dealings in not only bringing the Gospel to Japan, but bringing it in at the right time. If God's Kingdom had come sooner how would it have been received while the *Daimio* were in power, and had absolute control of the lives of their subjects? They could, and would, have persecuted believers in the Lord Jesus Christ. But now, how changed! The Government has been consolidated, and extends to all classes of the people; is in no wise opposed to Christianity; while the Buddhist and Shinto priests have lost their power and the patronage of the Government to a very great extent. Then the course of studies in the schools is helpful to Christianity. This was just the time for Missionaries and the dissemination of the Gospel. Then the gracious baptism of the Spirit received last year will mark the year, *Meiji Jiu-roku-nen*, 1883, in the future Church History of Japan as the year when the Church first received the Holy Ghost in any considerable measure. As we think of the blessings already received, our hearts overflow with thanksgiving to God. Our people also, high and low, are all anxiously inquiring for the Gospel. He then recounted some conversations he had with a gentleman in a position to know of the interest felt in the spread of Christianity on the part of some of the leaders in thought and in political affairs in Japan. One of these had expressed his astonishment, and apparent grief, that Protestant Christianity had not spread faster and had not made more converts. "Why are there not more?" he asked, "And why are they not more rapidly made?" The speaker also alluded to the prophecy of some one made last year, that in 16 years more Japan would be a Christian country; and now, also, that this year will be crowned with a ten-fold blessing above the year that is past. All this, he thought, was most probable, yet many would doubtless fall away and lose their faith. What we all needed was to have our bodies of sin destroyed; we all needed spiritual bodies, *i.e.* bodies filled with the Spirit of God. The old man should be crucified, and all evil removed—entirely given to Christ to destroy, and so have sin killed; and the grace of the Holy Ghost to come in and dwell in us as in a temple. Let us, then, in this most important time in all Japan's history, have our sins removed and have new hearts given us wherewith to serve God efficiently and acceptably. This address he followed in a humble prayer imploring the grace and strength we all so much need.

Other native brethren spoke of the need of Christ's prayer for the Unity and brotherly love of the disciples being fulfilled; also of the fulfilment of the promise in Is. 65:24, "And it shall come to pass that before they call I will answer; and while they are yet speaking I will hear." And yet, continued the speaker, the necessity and privilege of calling upon God continues, and it is the duty of all, especially of evangelists, to give themselves to the ministry of the word and to prayer. These remarks followed by prayers, led the Rev. Mr. Kozaki to call the attention of the meeting to the request first made for prayer for such as had turned back from the ministry and had lost faith; and he also re-

quested special prayer to be made for our esteemed and beloved Sovereign, His Majesty the Emperor of Japan, that he might become a worshipper of the true God, and lead his people into a knowledge of the Divine will; and that God would raise up zealous and intrepid Evangelists—men full of faith and of the Holy Ghost—like Paul, and like Luther, to save the millions of our people. For this nothing could take the Holy Spirit's place. Learning could not, eloquence could not, nor could anything else. It was the same power that was required now as at the first animated the early Christian Church and made it such a power in the earth. This address brought tears of hearty response to many eyes, and was followed by several earnest prayers for the objects suggested. As the hour for closing, 5 p.m., had arrived, the assembly was asked to unite in the Lord's Prayer, led by the Chairman. This was followed by singing the Doxology, "Praise God from whom all blessings flow," after which, the Chairman, Rev. Dr. Verbeck, pronounced the Benediction, and this truly remarkable meeting was brought to a close. No one present could doubt that God himself had been in that assembly, in the name and person of His Son, through the presiding, controlling, and sanctifying influences of the Holy Spirit, and all in answer to prayer.

The remaining meetings of this Second Week of Prayer at Yokohama were very interesting, and a number of important subjects were brought forward in the addresses of the leaders, and in the prayers of those present. Notably among these were prayers, with strong cryings and tears, not only, for kindred, but for certain sections of the country less accessible or hopeful for Missionary or Christian work than others. Kiushiu and the province of Mito were especially mentioned. Several items of encouragement were brought to knowledge in connection with these places. Special prayer was also offered for Yokohama, so exalted, like Capernaum, in privileges, and like it so in danger of destruction from want of improvement of the same.

The Services at the Union Church, both native and foreign, on the 20th inst., were of a very interesting character, and were more largely attended than ordinary Sabbath Services have ever before been known to be at that place, and as no special efforts had been put forth to increase the congregations it would appear to have been the result of prayer offered the past two weeks.

A SKETCH OF THE FISHERIES OF JAPAN.

BY NARINORI OKOSHI

(Member of the Japanese Consulate in London.)

At the Conference on Tuesday, October 23rd, 1883, at the International Fisheries Exhibition, Mr. Sonoda Kokichi occupied the Chair. He said it gives me much pleasure to introduce to you Mr. Okoshi, our lecturer, on this occasion. Before he proceeds to read his Paper, you will, perhaps allow me to make a few remarks. It was my intention to lay before you an official Paper in connection with the fishing industries of Japan. But I regret that, owing to the absence of any statistical information from my government on the subject, I have not been able to do so. My friend Mr. Okoshi, however, kindly undertook the task of preparing a Paper, which he will have the honour to read to you presently. But I must mention that, being left without such desirable information as I have stated, he has met with no small amount of difficulties. He has had to gather information from various semi-official sources, while he is not professionally connected with fishing industries. If you observe, therefore, any short-comings in his treatment of the present subject, I desire you to attribute them to the circumstances under which he has had to labour. If you find, on the other hand, anything interesting or valuable in his Paper, it would be a source of great satisfaction to him as well as to myself.

The lecturer said—It would be perhaps too audacious on my part to attempt to speak on this subject, which I have never made the particular object of my study, and with which I have never been connected, especially before such a select audience as this, and after many interesting Papers have been read by eminent specialists at this Conference. But at the same time, it would be a matter of great regret to lose this opportunity kindly afforded me, without showing you what deep interest Japan takes in this question, and what extensive fisheries she possesses. I am sorry to say, however, that for want of deeper knowledge, and of the materials which I could not obtain in London, I am not enabled to give you ample information upon Japanese fisheries, which embrace such a large field of investigation and require a

great deal of experience. No doubt many things will be left to be desired, and this I hope you will excuse. I shall try, nevertheless, to give you a general idea of our fisheries.

The geographical situation of Japan with respect to the continent of Asia is very similar to that of Great Britain to Europe. Our Empire consists of the mainland, Kiushiu, Shikoku, its northern provinces of Hokkaido or Yeso, the Kurile Islands, Okinawa, better known as Loo-choo, and the Bonnin archipelago in the south; it embraces an almost tropical zone of 24 degrees of latitude, and a glacial zone of 51 degrees. This peculiar situation of our country affords us most extensive fishing-grounds, and its variety of climate produces in the Japanese sea almost every sort of fish imaginable; while in the interior, which is traversed by many rivers and brooks, and interspersed with lakes, fresh-water fish is also abundantly found. Either on account of our geographical position, or from some other cause, the chief food of our people has been, and is still, fish, which in Japan is eaten as meat is in this country. Although the use of flesh-food was introduced by foreign intercourse, yet it has not, and I think will not, take entirely the place of fish; far from such being the case, only the better class of people can afford to live on meat. Hence it appears to me that there is a great difference in this respect between the people of Japan and those of this country; the difference is, that in Japan even the poorer class of people can live on fish, while fish is chiefly a luxury for the better class of the English community. Therefore it is needless to say that Japan takes a great interest in this question of fisheries, though it is a matter of regret that our section in the Exhibition is not so largely and well represented as might be desired.

I.—SEA-PRODUCE.

Our fishing-ground is estimated to contain over seven millions of cho, i.e. about eighteen millions of acres: compared to the cultivated land of about eleven millions of acres there is a difference of about seven millions of acres in favour of the sea; supposing one acre of land produces one ton of corn, a fishing-ground of the same extent should produce seventeen times as much, if it be properly worked. If such be really the case, Japan should produce tens of millions of tons of fish. Indeed, our fishing-ground not only produces fish, properly so-called, crustaceans and molluscs, but it also abounds in salt, also several kinds of sea-weeds, which are largely taken by our fishermen and consumed most extensively in Japan. According to the returns from the Imperial Statistical Bureau for 1879, the quantity of our sea-products was as follows:—

	KIN. ¹
Salt fish	13,297,054
Dried fish	4,713,868
Salted Sardines	31,752,119
Total	49,763,041

Hence it must be about fifty millions of pounds' weight. Salt was produced in that year to the amount of 4,848,199 koku,² being about twenty-seven million bushels.

The above statistics are exclusive of the products of Yeso and the Loo-choo Islands. The following table shows the quantity of sea-products of Yeso for the year 1878:—

	KOKU.	FISH.
Salmon	69,149	Each contain- ing 6,000 fish } = 41,489,400
Masu (Spring Salmon)	12,471	12,000 " } = 14,965,200
Cod fish	11,296	6,000 " } = 6,810,600
Herrings	515,481	
Sardines	180,171	63,265,200
Sea-weeds	60,615	
Bêche de mer	12,293	
Total	861,476	

While I was writing this Paper, a most interesting statement, showing the statistics of our sea-produce by diagrams and map, was received by the Japanese Consulate from our Department of Commerce and Agriculture.

From this document, which has been specially prepared for the National Fisheries Exhibition held in Tokio this year, it appears that Japan and Yeso, excluding other dependencies, produced in 1881:—

	KIN.
Salt	910,331,833
Dried fish	4,550,422
Salt fish	80,501,944
Dried Sardines	194,657,489
Dried Sea-ear	976,684
Dried Shrimps	3,373,999
Cuttle-fish	2,458,586
Bêche de mer	522,066
Colle Végétale	1,699,058

Exclusive of salt and sea-weed, the total quantity amounts in round numbers to two hundred and eighty seven millions. It must be borne in mind

that in this enormous amount of sea-produce, fish which is consumed fresh, and also fresh-water fish, are not included. As to the latter kind of fish, as well as those used for manure, their quantity must be enormous, considering fish is more eaten when fresh than in any other state. It seems difficult everywhere to obtain accurate statistics of fish consumed fresh; and there appears no return for it in Japan. If it could be ascertained, we should find that the quantity of fish we consume yearly is something fabulous. Take, for the sake of argument, the town of Tokio, containing about one million of souls, what will be the daily consumption of fish? Supposing, for instance, that one-half of its inhabitants being too poor to buy fish (although this might not be the case), lives on rice and vegetables only, and the other half lives upon fish and rice; supposing, again, each consumes half a pound of fresh fish every day, the daily consumption of fish in Tokio alone would be 25,000 lbs. We may infer from this what an enormous quantity of fish is supplied by the Japanese seas and rivers in a year to feed thirty-six millions of people. The total value of our sea-products is estimated at about thirty millions of yen.

At first sight this vastness of our fish-products seems too astounding, and it might be doubted whether the above statement might not be an imaginary conclusion; but when we find what is the real fishing power of Japan, this doubt will vanish away at once.

II.—FISHING POWER.

We find in the official return³ that the number of our fishermen (I presume that those who are employed in fishing, not being *bond fide* fishermen, also women and boys are included therein) is stated to be 1,530,795; fishing boats, 187,220; nets, 436,999. These 1,530,795 fishermen are distributed among 341,479 families, about five people on an average forming one family.

The number of British fishermen is estimated to be—

England	42,000
Scotland	48,000
Ireland	24,000
Total	114,000

EXPORT OF SEA-PRODUCTS TO FOREIGN COUNTRIES FOR THE YEAR 1880.

To	CUTTLEFISH.	SEAWEED.	DRIED SEA-EAR.	COLLE VÉGÉTALE.	BÊCHE DE MER.	SHELLS OF SEA-EAR.	OTHER ARTICLES.	TOTAL.
	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.
China	647,761	696,735	261,799	286,838	234,015	5,608	207,423	2,340,179
England	—	—	—	2,575	—	99,464	3,238	105,277
France	—	—	—	910	—	2,525	5,760	9,195
America U.S.	621	6	957	578	—	6,723	1,669	10,554
India	5	—	3	856	—	—	—	864
Russia	—	1	—	—	—	—	749	750
Germany	—	—	—	—	—	—	12	12
Denmark	—	—	—	—	—	—	15	15
Australia	—	—	—	—	—	—	120	120
Holland	—	—	—	—	—	—	10	10
Italy	—	—	—	—	—	500	730	1,230
West Indies	—	—	—	—	—	—	33	33
Other Countries ..	—	—	—	—	—	—	19,958	19,964
Total	648,387	696,748	262,759	291,757	234,015	114,820	239,717	2,488,203

It will be seen from the above table that we exported to the value of 2,488,203 yen, and from this amount 2,349,199 yen were to meet the demand of China alone.

The following table shows our imports of sea-products from other countries for the same year:

	TORTOISE SHELLS.	CORALS.	OTHER ARTICLES.	TOTAL.
China	6,479	626	35,805	44,910
England	6,855	—	5,863	12,718
France	412	—	1,318	1,730
America, U.S.	157	—	853	1,010
India	75,050	100	12,054	87,814
Russia	—	—	2,410	2,410
Germany	875	—	1,613	2,488
Australia	243	—	—	243
Holland	1,299	—	—	1,299
Italy	—	124,797	124	124,921
West Indies	30,480	—	600	31,080
Other Countries ..	13	—	3,695	3,708
Total	122,564	126,822	64,945	314,331

It must be pointed out that we require very little importation of foreign sea-products. From the above table it will be seen that tortoise-shell and coral form the largest amount of the imports, and naturally enough the former is largely imported from India, and the latter from Italy. These two articles are used in Japan chiefly for ladies' hair ornaments.

Let us see what was the state of our exports to China alone, in the following six principal sea-products for the last three years:—

and the tonnage of fish caught in British water at 550,000, each fisherman catching about five tons of fish every year. Now, supposing one-third of 1,500,000 be *bond fide* fishermen, and each catches the same amount of fish as a British fisherman, they would catch 2,500,000 tons. I am sorry I am not enabled to state the economical condition of fishermen and the capital employed for fisheries in general, nor could I state the tonnage of the 187,220 fishing boats, without misleading the reader by rough calculation. However, the majority of those boats are Japanese junks, strongly built and not of very large dimensions, carrying from 5 to 12 persons; but some must be sailing boats of European build. This enormous amount of fish, shell-fish and sea-weeds captured by an army of fishermen, is for the most part consumed at home, but some is exported abroad.

III.—JAPANESE FOREIGN TRADE IN SEA-PRODUCE.

Our sea-products occupy one of the most important classes of our exports, and there is a prospect of great increase. The following figures show a remarkable development of this branch of industry.

EXTRACT FROM OUR IMPERIAL CUSTOMS RETURN.

Dried fish, sea-weeds, shells and fish oil, 14 different articles in all, exported to foreign countries.

QUANTITIES.	DECLARED VALUE.
1871.—19,547,000 Cty.	1,133,000 Yen.
1876.—28,668,000 Cty.	1,626,000 Yen.
Increase, 9,121,000 Cty.	Increase, 493,000 Yen.
1881.—40,007,000 Cty.	2,415,000 Yen.
Increase, 11,339,000 Cty.	Increase, 789,000 Yen.

It must be remarked that from 1871 to 1875, during 5 years, our exports in sea-products have increased about 46 per cent.; and from 1876 to 1881 during 5 years, 39 per cent. in quantity; and from 1871 to 1881, during 10 years, they have more than doubled, both in quantity and value.

	1880.	QUANTITY. CTY.	VALUE. YEN.
Dried Sea-ear	1,069,667	—	261,799
Dried Cuttle-fish	3,913,788	—	674,761

IV.—FISH AND SHELL-FISH OF DIFFERENT KINDS FROM THOSE USUALLY EATEN IN ENGLAND.

Differences of the Japanese seas, and also differences of climate, may produce fish and shell-fish which are not seen in the English market, but which are consumed in Japan. Some perhaps may be caught in British seas, but are not used for eating purposes, as the taste and customs of the people are different. Again, the fish most

¹ One kin is equal to English lb. 1.33377.

² One koku is equal to about 5 bushels and half.

³ This statement, extracted from official returns, is found in the Keizai Zasshi (Japanese Economist) of June 9th, 1883.

recherché in Japan is not so in this country. The most common and largely consumed fish, called Maguro or tunny-fish, varying in size from 3 feet to 7 or 8 feet in length, is not seen in this country. Whether the British sea does not produce it, or it is not caught by fishermen, I do not know, but this fish is largely caught and consumed in my country. Although, I think, Octopus, Cuttle-fish, Sea-eels, and Bêche-de-mer may be found in British waters, they are not eaten in this country.

On the contrary, eating Cuttle-fish may be looked upon with horror by the people of London, while in Japan they are readily eaten. This point has been referred to by Mr. Henry Lee in his most elaborate paper entitled 'Sea Monsters Unmasked,' with illustrations of a Japanese fishmonger's shop, where a large cuttle-fish hangs down, with its feet touching the ground; in every Japanese fish shop indeed, this ugly looking animal is exhibited, his head hanging on a hook. Its size varies according to its species and locality, but a very large one is never eaten; it is generally eaten when from one foot to three feet in length in its normal state, that is to say, when it is uncooked, because once boiled, it shrinks to half its length, and gets stouter and its skin becomes of a dark-red colour. Cuttle-fish is eaten fresh, dried, or salted, but is generally consumed fresh. Again, sea-eel and bêche de mer are largely consumed fresh, but a great amount of them is dried and used for exportation to China, and the shells of sea-eel are now exported to Europe for the manufacture of buttons and other purposes. There are many varieties of shell-fish, families of molluscs, including oysters, lobsters, crabs, &c., which are eaten.

Among sea fish, the most esteemed in Japan are sea breams (*Chrysophrys major*), turbot and sole, and the family of tunny-fish called Katsuo, but smaller in size, varying from one to four feet in length. This last-named fish is most extensively taken, and consumed either fresh or dried. It is mostly caught in Shikoku; when dried, it may be kept for several years; it is this fish which is denominated in the statistics referred to before as dried fish (*Katsubushi*), the quantity of which amounts to about five millions of catties every year.

As to fresh-water fish, carp, eels, sly-silurus (*Namazu*), and Ayu of the smelt family are most *recherché*; while the consumption of eels which are caught either in the sea or in fresh water—fresh-water eels being preferred—must be something enormous, as in Tokio there are thousands of restaurants called Iel-houses, where this fish is principally served. Herrings and salmon are chiefly fished in Yezo, and dried or smoked on the spot, as the difficulty of transport to the capital prevents their being sent there fresh; hence, fresh salmon is very seldom seen in the market of Tokio. Sardines reach the capital fresh, and are consumed largely in that state; but not only are they sent dried, but they are also greatly used for manure.

As to the quantity of whales caught in Japanese waters, I am unable to give a statement, for want of information; not only is oil extracted from this fish, but its bones are used for different purposes; and it is also eaten in Japan when dried, although in small quantities, its taste rather resembling meat than fish.

Glue and wax, as exhibited in our Court in the Fisheries Exhibition, are also made from the skin and intestines of different fish, through chemical process. Besides all these and other kinds of fish, different sorts of sea-weeds are very largely consumed as eatables in Japan.

It will be of peculiar interest to know that there exists in our country a sea-fish called Fugu, belonging to the order of *Tetrodon*, which is generally known to be very poisonous. In some localities the sale of this fish is strictly prohibited but there are different kinds, some of which are said not to be poisonous. As this fish is of peculiarly pleasant taste, the lower class of people are often tempted to eat it. There is a proverb which says:—"Fugu wa Kui tashi Inochi wa oshishi" ("Great is the temptation to eat Fugu, but greater is the dread of losing life"). This shows how agreeable its taste is, and how poisonous it is to those who eat it.

V.—MODE OF FISHING.

Fish are caught either by nets, lines or other gear, according to their nature and kind. Nets are a little different, according to the localities where fishing is pursued. I shall endeavour to give some idea of the cod-fish, bream, mackerel fishing, and that of some other fish.

Nets are seldom used for catching cod; it is generally caught with lines. This fishery principally flourishes in the Northern sea, beginning from the 37th degree of latitude, therefore mostly on the coasts of the Island of Yezo, where generally five fishermen in a boat take with them 50 or 60 stout lines made with hemp each line being from 160 to 200 yards long. To each line about 50 branch lines are attached at the interval of every 5 feet,

and at the end of these, hooks are fixed: Lead is attached to both ends the lines, and 3 buoys are fixed to it. Sardines or herrings, fresh or salted, are used for bait. The cod-fishing season, though it varies according to localities, lasts generally from December to March. The time for fishing is generally from 6 a.m. to 3 p.m., but this varies, of course, according to weather and tide. In the north the average quantity of one day's fishing is about 460 cod-fish per boat. In the Eastern sea the mode is a little different; it is conducted by 3 or 4 men in a boat, and the average fish caught is no more than 70 or 80 a day. Northern fishermen appear to be more skilful, in spite of rough and often stormy seas. I must not omit to mention that cuttle-fish is generally used for a bait for cod-fish in the Eastern fisheries.

Sea-bream is generally caught by trawl-nets, but line-fishing is nevertheless employed to some extent. The line for sea-bream is generally 2,000 yards in length, and at the distance of every 2 yards a branch line, 4 yards long, is attached with a hook at the end. It is thrown into the sea at sun-rise, with crabs or other molluscs for bait, and every 2 or 3 hours it is taken out.

As to the mackerel-fishing, it is pursued at night; a number of boats sail in the evening and anchor where it is likely mackerel would flock. The fishermen also attract them by the use of torches, and catch them by hand-lines, using for bait sardines, or some other small fresh fish.

The mode of catching the octopus is very curious. A long cord of several miles in length is laid at the bottom of the sea, and branch lines, one or two yards long, are attached at intervals of 2 yards; at the end of each line, old shells, or bamboo cut in the form of pots, are hung down. The octopus is generally attached to rocks or some other objects, in order to protect its soft head; so that it finds these pots a very comfortable home, and gets inside and holds them strongly with its feet. Generally the cords are left for 6 or 7 days, and then they are taken up with potsfull of octopus, which, being of a very timid nature, stick closely in them, believing that they are in the safest place. In this manner the small kind of this fish is caught on the south and east coasts of Japan.

Tunny fish, and katsuo of the same family, are taken by rod and line. The boats for catching the latter kind of fish are generally strongly built, and manned by 8 or 10 men. When attracted by fresh sardines thrown into the sea by fishermen, they flock in great quantities, and then they are caught with artificial fish as bait. It is said that this fish is so easily and extensively caught, that young fishermen even forget that the boat would sink from being overlaid with several tons of fish; there is therefore one old patron on board. When he thinks enough has been taken, he gives the order to his younger fellows to stop. Whale-fishing is performed with harpoons by numerous fishermen in several boats, pursuing the animal several miles off the coast. This mode of taking them seems to be general in the Japanese sea; but in Kagoshima, they pursue it into the bay, and then capture it with nets.

I am enabled to give the above statement concerning octopus and katsuo fishing, owing to the information kindly furnished me by Mr. K. Nabeshima, a student in London, who not only lived among the fisherfolk of Hizen, but is also himself a great fisherman.

As to the practice of throwing nets, which are known in Japan by the name of *To-Ami* and which, are very largely used either in sea or fresh-water fishing, I leave it to be explained by a most elaborately prepared note kindly furnished by Mr. K. Nabeshima, and which will be found in the Appendix. It may be worth mentioning that there exists in the eastern and southern coasts of Japan a class of women-divers, whose calling is to catch sea-weeds and shell-fish, especially sea-eel. Those who are familiar with Japanese pictures cannot help being struck with those representing beautiful women with red bathing-dresses, some diving into the rough sea and others coming out from the water, holding some shell-fish in their hands. But the women-divers actually engaged may not have such a mermaid-like beauty as represented in the pictures. However, their bravery and skill are very well known in Japan.

Those who have travelled in the interior, especially in Tokaido, may no doubt have remarked these divers; it is sometimes very amusing and refreshing after a fatiguing journey, to pass a couple of hours at the place where we alight on the sea-coast, looking at the divers, who will catch you shell-fish if you give them some recompense. At first, travellers are very much struck with the skill of these divers, who, according to the reward promised, bring shell-fish of different sizes. But they may discover afterwards that the divers had collected different sizes of shell-fish beforehand, and know very well what kind of these to choose, according to the amount of reward they should

receive. Though this is only for the pleasure of curious travellers, not the real calling of the professional divers, still this fact shows to what a large extent this diving class of fisheries is carried on in Japan.

As to the fresh-water fishing, rod and line, nets and different kinds of implements are used. Fresh-water fish culture has existed from olden times, and especially that of carp; fresh-water bream, oysters, and gold-fish have also been extensively cultivated. It was only some years ago that the special attention of the government, as well as that of private individuals, was directed to the importance of salmon culture, and that of some other fish; and new scientific methods have been applied to it, and appear to be very successful.

In order to show what pleasure we take in fishing, it will be as well to mention the existence of private fishing ponds, besides river fishery in Tokio. In the suburbs of the capital some private individuals cultivate different kinds of fish in their ponds, and sometimes each pond contains fish differing either in nature or size. Any one is permitted to fish in one of these ponds, on paying entrance fees for the hour or day. I am informed that in some places ponds are classified according to the amount and quality of fish they contain; the entrance fee differs according to this classification. Therefore any one who, however skilful he may be in fishing, hopes by paying a small fee to catch many big fish in one of these ponds is greatly mistaken, because in the inferior ponds only small and worthless fish are kept.

As to the hooks and nets, I may point out that our hooks, both small and large, have a very sharp barb (though some have not, according to the fish to be caught); it is difficult to ascertain when it was invented, but at any rate this would prove our skill in fishing industry to have existed from ancient times. Lines and nets which are made of hemp, or other strong coarse material (and sometimes of silk), are generally varnished with the juice extracted from unripe persimons (fruit called *kaki*), in order to give them strength, and the power of resisting water; English nets are usually tanned. It would be very interesting if, after a careful examination, this stuff should also be made use of in this country for preserving nets and lines; and on the other hand, if the persimon fruit were condensed by some chemical process, Japan could supply it easily for the use of the British fisheries, and a mutual advantage might be derived from the transaction.

Fish preserved in tin are principally prepared in Hokkaido (Yezo); some specimens, such as oiled sardines, preserved oysters and tunny-fish, are exhibited in our Court. This branch of industry, being introduced only a few years ago, may require some improvement in preparation, in order to be more in accordance with European taste; with such improvements Japan may be able to meet a demand for these articles from abroad.

VI.—FISH COOKERY.

Cookery of fish is almost an art in Japan; the way of cooking is manifold. It may be divided roughly into several classes:—1. Raw fish, which is subdivided into two; the first mode is raw fish, properly so-called, that is to say, the flesh of the fish is cut in thin slices and arranged on the plate very neatly in the form of waves, sometimes without taking the skin off the fish, according to its kind, and it is served with sauce (*shoyu*), mashed raw turnips, horse-radish, and generally some fresh vegetables cut in small pieces and seaweed. In the second mode it is called *Arai* (washed), because the flesh being cut in small slices, is washed with fresh water till it shrinks and gets harder. Sometimes two or three different sorts of different colours are arranged on the same plate, and divided into red and white, which gives them a beautiful appearance. 2. Grilled. 3. Stewed. 4. Grilled with sauce. 5. Grilled first and stewed afterwards. 6. Mashed and boiled, prepared like sausages, which has a different name, according to its divers forms and manner of preparation. The inferior kind is made of shark's flesh and that of some other fish; the most *recherché* is made with bream and lobster.

This general classification may be again subdivided into several modes; it may even be said that there are as many varieties of fish cooking as there are different kinds of fish; and it may seem almost inconceivable to the English mind, how neatly, prettily, and with what genius and excellent taste this branch of cookery is conducted in our country. Any one who has been present at a Japanese dinner cannot fail to be struck with the good arrangement with which the different kinds of dishes are prepared; a dozen dishes, almost all made of fish, are differently cooked and arranged with vegetables and accessories. Sometimes we are puzzled to guess with what sort of fish the dishes are prepared; and this shows by what ingenious

hands they have been composed. The dish most in vogue is composed of eels grilled with sauce. In England eels are cut in small pieces, and generally stewed or fried; but in Japan they are, while alive, cut into two along the back, but leaving the skin attached, and the bones are taken away, so as to leave skin and flesh, when they are prepared. With what quickness, skill and dexterity this part of their preparation is executed in the eel-houses is almost inconceivable. The man who does this work does no other part of the cooking; another man prepares them with bamboo skewers for being grilled; a third man does the next part of the work, and so forth; there is a real division of labour.

We must not omit to mention that a great quantity of fish and all kinds of molluscs are used for soup, and very often eaten with vinegar and some greens and sea-weeds. The most essential element of our cookery of either fish or vegetables is the sauce known here under the name of Japanese shoya, properly called *shoyu* which is extracted from beans and koji; hard dried fish is also greatly used. This dried fish is cut into small slices and used for the preparation of sauce, or put over shell-fish soured in vinegar. This gives such a flavour to the fresh fish and vegetables that its use becomes almost indispensable to our cookery.

It must not be supposed that fresh fish can be obtained, and consumed with equal facility in every part of Japan; some tracts being very mountainous, the inhabitants of this region in the remote part of the interior are far from seaports, and generally are a class of peasant farmers, who live on rice or other cereals and vegetables only, being deprived, through the difficulty of transport, of the means of procuring fresh fish. It is true there are railways, but only a few lines connect three chief towns with a few seaports. Fish transport is generally effected by water, and then by carts or men-carriers. In spite of these difficulties of transport, a large amount of fish is consumed generally, because in my opinion, (1) the Japanese seas abound in fish, (2) our fisher folks are very skilful in the fishing industry, (3) the process of drying and salting fish is well conducted, (4) the fish cooking art is so developed that those who can, depend upon fish only. This last case must not be overlooked, because a great demand for fish (besides its cheapness) depends on the taste and liking of the people. In England, fish is often boiled simply, which takes away the best part of its flavour, and with whatever well-prepared sauce it may be taken, it is not so delicious as when prepared otherwise. England, having inexhaustible sea-fishing ground, with 114,000 active British fishermen, and above all with good transport, is more advantageously placed than Japan, yet the consumption of fish is comparatively small. The chief cause of this (putting aside the dearth of fish and other causes) seems to me, the way of cooking, which it is so desirable to have improved so as to increase the demand of fish consumers, and it would be worth while to try to study the Japanese fish-cooking art, in order to adopt it in this country.

As to the case of Japan, a great many improvements in fish-culture, industry, and for the easier transport of fish may be required. When the great line of railway from the capital to the north, which is in the course of construction by a Japanese Company, is completed, it will, I am sure, give more facility for the transport of the sea-products of Yezo, and increase its fishing industry in no small degree. In conclusion, the best means to improve national fish-industry is by the way of exchanging different views and information through the channel afforded by the International Fisheries Exhibition, which will doubtless be for the benefit of every party interested in this branch of national and international wealth.

DISCUSSION.

Mr. WILMOT (Commissioner for Canada) moved a vote of thanks to Mr. Okoshi, for the very lucid and interesting Paper he had read, and which he was sure, when printed and circulated, would prove of very great benefit. It taught him, who lived at the antipodes almost of Japan, that they there had their ideas in regard to preserving, cooking, and utilising fish quite beyond the conception of Canada, or even England. The multitude of fish which were taken in the Japanese waters appeared to be very great, the population was very great, and consequently they wished to utilise fish in every way. He was somewhat amused to hear that they consumed the devil-fish, or cuttle-fish, which he was sure the people in this country or Canada would not think of touching. It was evident, however, that it was an article of food, and showed him that almost every description of animal extant in the waters was intended for the food of man, and it was only on account of prejudice that some kinds were not eaten. He had no doubt the time would come when it would be used elsewhere, especially after it was shown in this Paper

that it was a useful food. Another thing which struck him was that the females in Japan engaged in fishing operations; in this country when they went to the bathing ground in their bright-coloured dresses, it was more for the purpose of becoming fishers of men. If the Japanese custom were introduced here, no doubt many more fish would be taken.

Mr. J. B. BLOOMFIELD seconded the vote of thanks. He said that he, unfortunately, was an Irishman, and as such had a very doleful tale to tell when he came to think of the difference of civilisation between Japan and Ireland. This Paper said that in Japan the most was made already of one of the greatest gifts God had ever given to man, the great harvest of the sea, which took very little trouble on the part of either rulers or people to make the most of; but in his unfortunate country they had at present over 2,500 miles of unfished coast; and about 527,000 acres of inland waters which did not contribute, except the salmonidæ, a five-pound note in value to the national food. It appeared that the Japanese were so determined to get the fish, that they took the female sex into partnership in their efforts; but in Ireland many poor women during a great portion of last winter had to obtain sustenance for themselves and families from a kind of seaweed called *dilix*, which they found upon the rocks. He trusted that this glorious Exhibition, which had, by the friction of intellect, struck that spark which swept away many prejudices, would in the end bring all things to one common level of humanity throughout the world, and would then bring to his poor country some of the knowledge and some of the good results which must happen if only the present state of things in Japan was fairly considered. Many years ago, when he was in the Chinese seas, at the time England was guarded by wooden walls, it happened that a seventy-four ship was greatly infested with rats, and a grand rat-catching business took place, the rats were thrown overboard; but there was not a small boat within reach that did not cast off their anchors, and in a very short time the rats were devoured. Thousands of these Chinamen were now scattered all over the earth, so many were coming to some places that the law was stopping them. At that time he had never seen the Japanese; but in a very short time afterwards they saw that there was a necessity for them to learn of Western Europe, and at the same time it turned out that they had conferred great benefits upon Europe in their turn. The vote of thanks was carried unanimously, and briefly acknowledged by Mr. OKOSHI.

Mr. STUART LANE then moved a vote of thanks to the Chairman. He himself had had great personal relations with Japan, which made the country familiar and interesting to him, and he could assure them all that the more they studied it the more they would learn to admire it. There was great similarity between Japan and Great Britain, both countries being nearly in the same latitude, and having about the same acreage and population, and each country might learn a great deal from the other. The pleasure they had all experienced in listening to the lecturer must be one greatly enhanced by the fact of the meeting being presided over by a Japanese; probably it was the first time such a thing had happened, but he was sure it would not be the last, for when once the Japanese took a thing in hand they never left it until they made it successful. He had had the honour of knowing both the Chairman and the lecturer for some considerable time, but he might say that when he met the latter, four or five years ago, on his arrival from Japan, he could not speak one word of English.

Mr. BEADON seconded the vote of thanks, which was carried unanimously.

The CHAIRMAN, in responding said they were all aware that Japan had adopted many branches of Western civilisation in addition to her own, which had existed for centuries, and that she had made of recent years very great progress. Since the present Government came to power it had been their earnest desire to promote, amongst other things, friendship with foreign nations, and with this object they had accredited their ambassadors and other diplomatic representatives to the various courts of the world; and when there was any undertaking of an international character, such as the present Exhibition, whether in Europe or in America, they never failed to take an active part in it. It was a source of great satisfaction to them that the courtesy and respect they had thus shown to foreign nations had been cordially reciprocated, and that they had received assurances of friendship in return; but there was one serious obstacle which had tended to check this friendship—he alluded to the great delay which had taken place in the negotiations for a revision of the treaties proposed by Japan some years ago. Those treaties were concluded between Japan and the foreign countries some twenty-five or thirty years ago under considerable external pressure, and when the Japanese negotia-

tors were totally ignorant of the commercial and other usages of Western countries. Treaties concluded under such circumstances naturally lacked that equitable character which was at all times so essential in any arrangement entered into between friendly powers. Japan in 1883 was very different to what she was thirty years ago, and the experience of thirty years amply showed that it was absolutely necessary to introduce certain modifications in the existing treaty arrangements. Those he was addressing might not attach much importance to this question, as it concerned a country so far distant, and no one not so thoroughly acquainted as he was with the general condition of Japan could properly estimate the serious difficulty occasioned by this disastrous delay in connection with the national finances and the attitude of the people towards foreigners. He sincerely hoped that the good feelings of the Western powers would induce them to recognise not only the necessity, but also the advantage of speedily bringing about a satisfactory conclusion of this question. In conclusion, he must say he regretted that Japan had not been able to take a more lively part in this Exhibition, but it so happened that they had a National Fisheries Exhibition in Japan this year, and naturally the Government had to give considerable attention and assistance to that, which had prevented their sending a larger quantity of specimens to England. Japan, as a great fish-eating country, had naturally done her utmost to develop the fishing industry, and he should not be exaggerating when he said that it had attained such an extent that 36,000,000 of people were to-day more or less dependent on fish as food; and had it not been for the coincident Exhibition held in Tokio, she would have been represented in the same grand manner as she had on previous occasions of a similar international character. At all events Japan had readily come forward to take part in this Exhibition, and had thus fulfilled her international obligations, at the same time showing her usual courtesy and respect to the British Government and British public.

APPENDIX A.

"93, TALBOT ROAD, BAYSWATER, W.,
"20th August, 1883.

"DEAR SIR,—In accordance with your request, I have much pleasure in furnishing you with a few notes on 'To-ami' (throwing-net), embracing a description of its mode of use, and an account of its construction. I also enclose herein a short Paper on 'Ahyu' and 'Namako,' fish which are much esteemed in our country. I beg to express the hope that these communications may be, in some way, serviceable to your purpose.—I am, Sir, Yours faithfully, K. NABESHIMA."

Among the many kinds of fishing appliances in Japan, the one called "To-ami" is probably the most novel to Europeans, and at the same time, the most interesting to the Japanese.

"To-ami," as above translated, is a throwing-net, and its structure may be thus described.

The net and size of its mesh varies in magnitude, according to the size and nature of the fish to be caught, and the locality where it may be used. Its length varies from 5 to 7 yards, and it is conical in shape, becoming larger and larger from the apex downwards to the foot; where, when fully extended, it measures from 7 to 9 yards in diameter.

To the top of this cone-shaped net is tied a "hand rope," about 6 or 8 yards, having at the other end a loop.

At the foot of the net is attached all round the extremity, a strong "foot-rope," or "ground-rope," to which numerous metal weights, as sinkers, of peculiar shape, named "iwa," are fastened.

These sinkers are made of a mixture of lead and tin. In shape they resemble the handle of an ordinary travelling trunk, having a hole at each end, through which the "foot-rope" is passed at intervals equal to their own length, generally from 2½ to 3 inches.

The edge of the foot of the net is then doubled or folded inwards upon itself—on the side opposite to that of the rope tied to the apex of the cone—to the extent of about one-tenth of the length, and is then fastened to the meshes all round, at intervals of from 20 to 30 meshes, according to the size of the net.

The effect of this is to make a kind of continuous sack or bag termed "Tana" all round the inside of the net. The *modus operandi* may be described as follows:—

The fisherman standing up in the bow of his boat first makes a running knot with the loop, which he secures round his left wrist.

With his right hand he then coils the rope into his left, until the upper portion of the net is drawn into his grasp, leaving about a yard or more hanging down. He then passes a part of the latter over the left elbow, maintaining it there by keeping his arm at right angles to his side, and so allowing the net to swing in a pendent form.

Then, gathering into the grasp of the right hand about half of the remainder, he swings the whole to and for, to give it impetus, and dexterously throws it some 8 or 10 yards in front of his boat, in such a manner that it is extended into a complete circle when it falls into the water, where it quickly sinks in its regular cone like shape to the bottom.

After it has remained there a few seconds, the line is pulled gently in different directions, so that the weighted portions trail along the ground and approach each other, until the net is gradually and finally closed (great care being observed that no outlet of escape is afforded between the ground and the sinkers). The fish which may be enveloped in the toils endeavour to escape, and as openings of the "Tana" appear to them to be loopholes for this purpose, they eagerly enter them, and are effectually confined. The net is then drawn up slowly from the ground, until it hangs perpendicularly: and as the sinkers now almost cling together, all egress from the sack is thoroughly barred. The fisherman gradually hauls it up, and as the "Tana" begins to approach the surface, he rapidly but gently swings it with its piscine contents into the boat.

The method of constructing this net presents some difficulty, as it must be cone-shaped. The knot which unites the meshes is not the "hitch-knot," which is prevalent in Europe, but the "reef-knot," which is particularly suited to nets of this description.

The process of netting is generally commenced from the lower part, or the "foot" of the net. The number of meshes in the first row varies from about four hundred to seven or eight hundred, and the size of each mesh varies inversely to its number. The greater the size of mesh, the less its number, and *vice versa*. For instance, to construct the "To-ami" for catching mullet, suppose the number of meshes in the first row to be 400, and the size of each mesh to be $1\frac{1}{2}$ inch square (using a flat spool of $1\frac{1}{2}$ inch in width); well then, this row of 400 meshes must be continued successively 25 times; the 26th row must be lessened by 16 meshes, by attaching two meshes together at the intervals of every 25 meshes in that row.

Now there will remain 384 meshes, which, being netted again successively 15 times, must again be decreased by 19, by attaching 2 meshes together as before, at the intervals of every 20 meshes in that row. This process will be best shown in the following scheme.

THE SCHEME OF CALCULATION.

Part.	Number of Meshes.	Decrease of Meshes.	Number of Rows.	Size of Flat Spool.	Feet.	Inches.
1	400	16	25	$1\frac{1}{2}$	3	$1\frac{1}{2}$
2	384	19	15	$1\frac{1}{2}$	1	$10\frac{1}{2}$
3	365	18	10	$1\frac{1}{2}$	1	3
4	347	17	10	$1\frac{1}{2}$	1	3
5	330	16	8	$1\frac{1}{2}$	1	0
6	314	17	8	$1\frac{1}{2}$	1	0
7	297	16	8	$1\frac{1}{2}$	1	0
8	281	15	8	$1\frac{1}{2}$	1	0
9	266	16	7	$1\frac{1}{2}$	—	$10\frac{1}{2}$
10	250	17	6	$1\frac{1}{2}$	—	9
11	233	16	6	$1\frac{1}{2}$	—	9
12	217	16	6	$1\frac{1}{2}$	—	9

Nets in Japan are dipped in shibu (the juice of unripe persimon fruit). In my humble opinion they are by this process rendered, for several reasons, far superior to those which in Europe are subjected to that of tanning. For instance, the treatment with shibu produces a greater amount of stiffness in nets and prevents their tendency to swell when in the water, thereby ensuring a great rapidity of sinking. Moreover, as a preservative from decay and the bad effect of salt-water, this treatment is invaluable.

"AHYU."

The fish called "Ahyu" possesses some very peculiar characteristics. It varies in size from about 6 to 12 inches, and inhabits fresh and rapid streams, having a nature like that of the salmon in making its way up to the highest sources of the rivers in the spring, and betaking itself in the autumn to the estuaries to spawn. Strange to say, the parent fish, after depositing its ova, disappears, most probably dying. Hence it is sometimes called the "one-year-fish." When taken from the water, it does not at all emit a fish-like odour, but a smell remarkably resembling that of the cucumber. It is not tenacious of life when taken out of water; indeed, the slightest handling is immediately fatal to it. Its flesh is held in the highest estimation, and is considered the most delicately flavoured of all river fish. Its scales are

almost invisible, and the body resembles the European smelt. Its lips are somewhat thick, being either golden or silver in hue, those of the former colour being most esteemed. It rapidly deteriorates in flavour, and cannot be conveyed far in a fresh and proper state. Hence it is somewhat expensive.

Three modes of taking "Ahyu" are in vogue, which we may thus specify:

Firstly: the "To-ami" or "Throwing-net" (as above described) is most successfully practised.

Secondly: cormorants are used. This plan is too well known to need any explanation.

Thirdly: the fish are captured in a species of trap, termed "Yana," during the autumn, when they are migrating downwards in large numbers to the estuaries for spawning. This method will need some elucidation.

At a convenient place the river is dammed by two structures composed of fascines and stones, running from the banks at opposite points towards the middle, at an obtuse angle down the stream, without meeting, but leaving a space of 4 to 5 yards, through which the current is forced to run at a high speed. In this narrow passage is fixed a contrivance composed of a large number of bamboos, not bound together quite closely, but connected so as to fill this narrow space, diagonally tilted downward towards the stream in such a manner that, while it receives the rapid fall of water, it, at the same time, detains the fish, the water escaping through the interstices between the bamboos, which, however, are not large enough to allow the fish to pass through. In this manner enormous quantities are caught during the season.

"NAMAKO."—(BÊCHE DE MER).

Namako, in the French language termed "Bêche de mer," somewhat resembles in shape the half of a melon cut lengthwise. It is styled in the reports of the Japanese Customs "Kinko"—the name given to it when dried—and is exported to some

foreign countries. Its colour is greenish-gray, dotted with raised spots of light yellow, which colour also pervades underneath, where it attaches itself to the rocks or stones. It is eyeless, and boneless, its digestive organs being very small. It is found on various parts of the coasts, and is much sought for as an article of food. Its usual size, when quiescent and not extended, is 6 to 12 inches in length, its general breadth being about 2 to 4 inches. It is capable of elongating and contracting itself at pleasure. To ensure the capture of "Namako," calm weather and clear water are essential, so that the fisherman, as he slowly and quietly paddles here and there, may discern the object of his search at the bottom. Armed with a long bamboo rod from 18 to 24 feet long, which is tipped at the extremity with an iron-barbed spear-head, he leans over the gunwale of his boat, closely peering and prying down into the clear water with keen and practised eye. When he discovers the fish, he proceeds forthwith to spear and secure it. To assist his power of vision, he adopts a peculiar expedient. He has, in the boat, a tiny vessel containing oil, from which he takes, from time to time, a small quantity, and drops it on the surface of the sea. This arrangement enables him to see the bottom so clearly, that he has little difficulty in spying down with success, even when the water is somewhat deep. The fish is generally eaten uncooked, cut into thin slices, with vinegar. In a dry and prepared state it is conveyed into the interior or is exported.

This fish has an excessively strong antipathy to rice-straw, so much so that the fish actually dissolves into a liquid if it should come in close proximity to it, just as a piece of ice melts under the influence of the sun. Sometimes disagreeable effects are produced by too free an indulgence in partaking of "Namako," and to counteract these symptoms the liquor in which some rice-straw has been boiled proves an effectual antidote.

APPENDIX B.

TABLE SHOWING THE AMOUNT OF SEA-PRODUCE OF EACH PROVINCE OF THE JAPANESE EMPIRE FOR THE YEAR 1881.

N.B.—In case of three provinces of Yezo, viz.: Hakodate, Sapporo, and Nemuro, dried fish means Herrings, and under the head of Dried Sardines, Dried Herrings are included—a Catty or Kin is equal to 1.32377 lbs. English.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

Hongkong, January 19th.

The steamship *Hwai-yuen* has been lost at a place called Yuesan, on December 29th, together with over 200 Chinese and six or seven Europeans and fifty thousand dollars in specie. The vessel struck and sank so rapidly that only two lifeboats could be got out; one of these capsized. Only five Chinese were saved.

London, January 19th.

"CHINESE" GORDON FOR THE SOUDAN.

Major-General Charles George Gordon, C.B., has started for Egypt on a special mission, which he has accepted on the condition that he shall only be responsible to the British Government.

London, January 22nd.

AFFAIRS IN EGYPT.

Baker Pasha has held successful parleys with the Sheiks around Suakin, and several of them have come in.

London, January 23rd.

AFFAIRS IN MADAGASCAR.

At the coronation of the Queen of Madagascar, the Premier most explicitly declared that they would not yield an inch of territory to the French.

MORE REINFORCEMENTS FOR TONQUIN.

Further reinforcements are to start immediately for Tonquin.

[FROM THE "HONGKONG DAILY PRESS."]

Cairo, 13th January.

MINISTERIAL APPOINTMENTS IN EGYPT.

Colonel Moncrieff has been appointed Under Secretary to the Egyptian Minister of Public Works, replacing a Frenchman who held the appointment before.

[FROM THE "SAIGON INDEPENDANT."]

Paris, 8th January.

THE CAMBODIA CONVENTION.

The Cambodia Convention has been ratified by the President of the Republic.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Shanghai, }
Nagasaki, & } per M. B. Co. Thursday, Jan. 31st.
Kobe }
From Hongkong, per P. & O. Co. Friday, Feb. 1st.*
From America ... per P. M. Co. Monday, Feb. 11th.†
From America ... per P. M. Co. Thursday, Feb. 14th.‡

* *Khiwa* left Hongkong on January 24th. The *Benalder* (with English mail) left Hongkong on January 23rd. † *City of Rio de Janeiro* left San Francisco via Honolulu on January 15th. ‡ *City of Tokio* left San Francisco on January 24th.

THE NEXT MAIL LEAVES

For Shanghai, }
Kobe, and } per M. B. Co. Wednesday, Jan. 30th.
Nagasaki }
For Europe, via }
Hongkong ... per M. M. Co. Saturday, Feb. 2nd.
For America ... per O. & O. Co. Sunday, Feb. 3rd.
For Europe, via }
Hongkong ... per P. & O. Co. Saturday, Feb. 9th.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

SUNDAY CHURCH SERVICES.

Christ Church : 11 a.m. and 5.30 p.m.
Union Church : 11 a.m. and 8 p.m.
Roman Catholic Church : 8 and 9.30 a.m.
English Church, No. 12, Sakaicho, Shiba, Tokiyo : 11 a.m.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, JANUARY 18TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 20.5 miles per hour on Thursday at 11 p.m.
The highest reading of the barometer for the week was 30.333 inches on Tuesday at 9.27 p.m., and the lowest was 29.801 inches on Friday at 2 p.m.
The highest temperature for the week was 58.0 on Thursday, and the lowest was 23.3 on Monday. The maximum and the minimum for the corresponding week of last year were 56.0 and 22.0 respectively.
The total amount of snow (melted) for the week was 0.135 inches, against 0.106 inches for the corresponding week of last year.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 7.30, 8.45, 9.30, 10.15, and 11.30 a.m., and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 7.30, 8.45, 10.00, 10.45, and 11.30 a.m., and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-SHINMACHI RAILWAY.

The Trains leave UYENO at 7 and 11.30 a.m. and 4 p.m., and SHINMACHI at 7 and 11.30 a.m. and 4 p.m.

The Fares are:—Special-class (Separate Compartment), yen 2.65; First-class, yen 1.58; Third-class, sen 79.

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.50 and 10.30 a.m., and 12.15, 2.30, and 4 p.m.; and leave Yokosuka at 7.15 and 9 a.m., and 12 m. and 1.45 and 4.00 p.m.

TIME-GUN.

A time-gun is fired every Saturday from one of the Messageries Maritimes steamers at Noon.

NOTES FROM JAPANESE PAPERS.

General Oyama will give a farewell banquet, at the *Rokumei-kwan*, to his colleagues and foreigners of distinction, on the 28th instant, prior to his departure for Europe.

Mr. Koike, Chief Paymaster of the Army; Majors Shimidzu, Kosaka, Murai, and Yabuki; and Lieutenant-Majors Nojima, Ichichi, and Harata, have been ordered to accompany General Oyama. They will leave for Europe about the middle of February next.

The law students of the Judicial Department who were about to graduate numbered one hundred at the outset. Owing to various causes, this number has decreased to thirty. Four of them, having developed a talent for legal science, will be sent to Europe in order to complete their education. 2,129 cases were tried during the course of last year at the *Koso Saibansho* (Court of Appeal). Twenty-one of these cases are still pending.

A quay is to be built in Shinagawa Bay, close to the second battery. The cost is estimated at 35,000 yen.

The *Osaka Mainichi Shimbun* will shortly reappear upon the journalistic stage, the plant and machinery having been put in thorough order.

General Oyama and suite will spend one year in Europe. The expenses are estimated at 30,000 yen.

The Government intends completing the Naka-sendo Railway within the space of four years.

The monthly meeting of the *Dai Nippon Shiritsu Yei-seikwai* (Private Sanitary Association of Japan) will take place at the Meiji Kwaido on the 26th inst.

A Chinese pedlar was arrested at Kanagawa for swindling a countryman. He was handed over to the Chinese Consulate for punishment.—*Mainichi Shimbun*.

There are twenty-one thousand and two head of cattle in the Riukiu Islands. They are in excellent condition and yield rich milk. Many are employed for agricultural purposes. Prices range from 18 yen to 22 yen. The number of cows butchered annually averages 586, and meat costs about 13 sen per pound. The horses number 12,574, the majority being employed by farmers and husbandmen. Their prices range from 20 to 30 yen, but good, useful hacks fetch 50 to 200 yen. The goats number 33,405, their meat bringing 15 sen per pound. Besides these, there are 61,614 swine; about 20,000 are slaughtered annually, pork costing about 7 sen per pound.—*Fiji Shimpō*.

Mr. Mori, Minister to Great Britain, will return to Japan *via* Germany.

The nobility have forwarded a memorial to the authorities urging the construction of a national constitution on the basis of that of Great Britain.

An international botanical exhibition will be held in Russia. H.E. Hanabusa has communicated with the Government with regard to sending a special commission thither.

An American resident in Tsukiji subscribed 50 yen in aid of the sufferers from the fire at Kobiki-cho.—*Hochi Shimbun*.

The Sulphuric Acid Manufactory at Mita, Seishu, is doing a thriving business, having extended its exportations to Germany, China, and other foreign countries. The shareholders held a general meeting last week, in order to consider the establishment of branch offices and the further extension of the trade.—*Choya Shimbun*.

It is reported that some wealthy merchants in Washington, U.S.A., intend opening an international dendrological exhibition in that city, and will invite foreign Governments to exhibit. The Japanese Government is said to have already been asked to contribute.—*Fiyu Shimbun*.

Kamtchatka, Russian steamer, 701, Ingman, 25th January,—Kobe, General.—Mitsu Bishi M. S.S. Co.

Tsusai Maru, Japanese steamer, 432, Toyama, 25th January,—Miyako, General.—Unsosha.

Kairio Maru, Japanese steamer, 370, Amano, 26th January,—Yokkaichi, General.—Handasha.

Kashgar, British steamer, 1,515, W. J. Webber, 26th January,—Hongkong via Kobe and Nagasaki, Mails and General.—P. & O. S. N. Co.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Hiogo Maru*, from Kobe:—Messrs. Klemnoff and Popp in cabin; and 66 Japanese in steerage.

Per Japanese steamer *Okame Maru*, from Handa:—1 Japanese.

Per Japanese steamer *Onoura Maru*, from Handa:—30 Japanese.

Per Japanese steamer *Yechigo Maru*, from Hakodate via Hachinohe:—General Nagayama and suite, and Mr. Sonoda in cabin; and 15 Japanese in steerage.

Per German steamer *Ingo*, from Nagasaki:—1 Japanese.

Per Japanese steamer *Seikai Maru*, from Toba:—10 Japanese.

Per Japanese steamer *Shidzuoka Maru*, from Shimidzu:—30 Japanese.

Per Japanese steamer *Ise Maru*, from Kobe:—4 Japanese in cabin; and 20 Japanese in steerage.

Per French steamer *Volga*, from Hongkong:—Mrs. Retz and 2 children, Miss Shrock, Messrs. Richter, De la Hault, Lazareth de Hülfe, Haraki Heizayemon, and Chinn Yuen in cabin.

Per Japanese steamer *Seirio Maru*, from Yokkaichi:—80 Japanese.

Per Japanese steamer *Kairio Maru*, from Handa:—14 Japanese.

Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—Lieutenant Field, U.S.N., Master Hachisuka, Captain Creighton, Messrs. M. Fitzgerald, E. M. Sang, H. MacGregor, Ishiwaru, Kurosaki, Kitabatake, Nose, Horiguchi, Arakawa, Hamada, Imai, Miyagi, Yamakawa, Yonechi, Betsugaku, and Ogata in cabin; and 1 European, 1 Chinese, and 147 Japanese in steerage.

Per Russian steamer *Kamtchatka*, from Kobe:—6 Japanese.

Per Japanese steamer *Shima Maru*, from Yokkaichi:—13 Japanese.

Per Japanese steamer *Takasago Maru*, from Hakodate via Oginohama:—Mr. Henderson and 10 Japanese in cabin; and 94 Japanese in steerage.

Per Japanese steamer *Toyoshima Maru*, from Hachinohe:—4 Japanese.

Per Japanese steamer *Kowyeki Maru*, from Yokkaichi:—14 Japanese.

Per Japanese steamer *Niigata Maru*, from Kobe:—Mr. Klien and 2 Japanese in cabin; and 62 Japanese in steerage.

Per Japanese steamer *Owari Maru*, from Kobe:—Captain Fletcher in cabin; and 25 Japanese in steerage.

Per Japanese steamer *Saiko Maru*, from Shimidzu:—2 Japanese.

Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—94 Japanese in steerage.

DEPARTED.

Per British steamer *Arabic*, for San Francisco:—Mrs. J. Doyle and 3 children, Messrs. Jos. L. Mayer and T. Sameshima in cabin; and 4 Europeans and 84 Chinese in steerage. For New York:—Mr. John Middleton in cabin.

Per Japanese steamer *Hiogo Maru*, for Hakodate via Oginohama:—Messrs. Sakuragi and Midou in cabin; and 42 Japanese in steerage.

Per Japanese steamer *Tsuruga Maru*, for Hakodate:—5 Japanese in steerage.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and ports:—Miss Nakagawa, Colonel Kuroda, Colonel Ota, Colonel Makino, Messrs. E. Pope, Ichanger H. Kothari, M. Willett, R. Kirby, R. S. Schwabe, W. Yooman, E. Batabus, Sato, Watanabe, Niiyama, Gotsugi, Ayanokoji (2), Y. Hasegawa, Kawasaki, Nakaya, K. Watanabe, and Nagasaki in cabin.

Per Japanese steamer *Seirio Maru*, for Yokkaichi:—35 Japanese in steerage.

Per Japanese steamer *Tamaura Maru*, for Oginohama:—9 Japanese in steerage.

Per Japanese steamer *Kamtchatka*, for Kobe:—8 Japanese in steerage.

Per British steamer *Kashgar*, for Hongkong via Kobe and Nagasaki:—Mr. Deryke and servant, Messrs. R. Mankin, W. Smith, L. Deistel, U.S.N., Sharffe, Frank, O. A. Kleinwort, and H. MacGregor in cabin; and 7 U.S. seamen, 12 Japanese, and 1 Chinese in steerage.

CARGOES.

Per British steamer *Arabic*, for San Francisco:—

Per French steamer *Volga*, from Hongkong:—4,162 packages.

Per British steamer *Kashgar*, for Hongkong via Kobe and Nagasaki:—Silk, for London, 73 bales; for France, 194 bales; for Italy, 29 bales; Total, 296 bales.

REPORTS.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker, reports leaving Kobe on the 18th January, at 5.10 p.m. with fresh west wind and clear weather to Vries Islands; thence to port brisk north gale and occasional squalls. Passage 31½ hours. On the 19th January, passed the French Mail steamer *Volga*, 80 miles from Yokohama steering east.

LATEST COMMERCIAL.

IMPORTS.

The depressed feeling that prevailed in the Market for a considerable time prior to the end of last year, seems now to have passed away, and business has assumed a much more cheerful aspect in all branches of the trade; this, coupled with the advance in home prices of manufactures, has enabled holders to realize better prices for most articles.

COTTON YARN has, during the past fortnight, been steadily improving in demand; fair sales of 16/24s have been made at advancing prices, and quotations are fully 50 cents per picul higher; 28/32s, though to a less extent, are also higher, but 38/42s and 2-fold Yarns have not been affected. Bombays have been sold to a rather large extent, and prices for certain spinnings have advanced \$1 per picul.

GREY GOODS.—Transactions have been limited, but prices are firmer for all makes.

FANCY GOODS.—There has been a continued steady demand at full prices, and fair sales have been reported of Mousselines de Laine, Italians, Turkey Reds, and Velvets.

COTTON YARNS.

	PER PICUL.
Nos. 16 to 24, Common to Medium	\$25.00 to 28.00
Nos. 16 to 24, Good to Best	28.75 to 29.75

Flat Bars, ¾ inch	2.80 to 2.90
Round and square up to ½ inch	2.80 to 2.90
Nailrod, assorted	2.35 to 2.60
Nailrod, small size	2.85 to 3.15

KEROSENE.

Business has improved in this staple during the past week, sales having amounted to 50,000 cases, and deliveries to 28,000 cases. Prices have advanced, and holders are firm for still higher rates. We quote:—

	PER CASE.
Devoe	\$1.77
Comet	1.72
Stella	1.65

SUGAR.

But a small business doing in Sugar, and no alterations can be made in quotations. No revival in the trade can be looked for till after the Chinese New Year, by which time some of the new crop of Formosas will have probably come to hand.

	PER PICUL.
White, No. 1	\$8.00 to 8.35
White, No. 2	6.75 to 7.00
White, No. 3	6.30 to 6.50
White, No. 4	5.80 to 6.00
White, No. 5	4.60 to 4.75
Brown Formosa	3.90 to 4.00

EXPORTS.

RAW SILK.

Our last was issued on the 17th instant, since which date we have had but a small business in this article, the recorded Settlements being not more than 250 piculs. Arrivals have again been small, some withdrawals from the Market have been shipped direct and the total Stock is in consequence reduced to 3,350 piculs as against 4,400 on the 31st December. Prices generally are unchanged: for *Hank* sorts they are strong, while

Filatures and *Kakedas* are rather more freely offered than they were a week ago. Telegraphic news from the States has slightly improved, and the Lyons Market would seem to be comparatively strong. *Hanks* occupy the first place in the scale of transactions. *Filatures* and *Re-reels* come next.

The M.M. steamer *Menzaleh*, which left this port on the morning of the 19th instant, carried 673 bales; of which, 18 were entered for England and 655 for the Continent of Europe. Japanese shippers being credited with 135 bales, or about one-fifth of the total quantity. The O. and O. steamer *Arabic*, which sailed at daylight on the 20th, took 221 bales (of which 40 were on native account) for the United States Markets. These shipments bring the total Export up to 25,518 bales, against 19,373 last year, and 11,348 at same date in 1882.

Hanks.—These have again been in favor, and have been enquired for at full rates, especially during the last few days. Prices, though nominally unchanged, are firm, and may even be said to show a turn against buyers. Among the recorded business we observe purchases of Good to Best *Shinshu* at \$500, with lower qualities at \$490, \$482½, and \$475. Some fairly large parcels of *Hachoji* have also changed hands at \$455.

Filatures.—No: very much doing in these, and principally for Europe. Good silks of even thread and fine size hold their own at from \$620 to \$600 according to grade. For the New York Market but little has been done, the prices realised being about on a par with recent quotations. Stock reduced to 800 piculs; of which about 120 are of the famed "Tokosha" *Filature*, and held for a fancy price.

Re-reels.—These have again been in some request, and some business has been done at rather irregular prices. The parcel "Fan" chop, mentioned in our last, is reported sold at \$597½, while a large lot of "Fan rejections"—refused by one hong at \$535—was at once weighed up by another buyer at \$540. In *Maibashi* "Turtle" chop is noted at \$590, with *Bushu* at \$570, and Common *Foshu* \$550.

Kakeda.—Dealers offer this class more freely, but do not speak of lower prices. There have been no purchases made by foreigners here during the week, but the "Direct shipments" comprise a few bales. We leave quotations unchanged—all more or less nominal in the absence of business.

Oshu.—Business recorded equals about 70 piculs, *Sendai* being done at \$495, and *Hamatsuki* at \$450. Stock reduced to 350 piculs.

Taysam sorts.—Nothing done, position unchanged.

QUOTATIONS.

	SEASON 1883-84.	1882-83.	1881-82.
	BALERS.	BALERS.	BALERS.
France and Italy	15,683	10,236	5,664
America	7,335	6,154	3,425
England	2,500	2,983	2,259
Total	25,518	19,373	11,348

WASTE SILK.

We have again to report more doing in this article, with Settlements reaching 500 piculs for the seven days. The business done has run chiefly on *Kibiso* and *Noshi*, the one lot of mixed *Cocoons* remaining on the Market has been taken into godown at a price not yet fixed, and *Mawata* has been neglected. Arrivals have been light, and Stocks show a marked diminution. Prices may be quoted without change, but at closing there is a slight tendency to ease in sympathy with a weakness in the native currency.

Pierced Cocoons.—The balance of the Stock on this Market has been sent into a foreign hong, but the quality is reported to be poor, and the price will doubtless be fixed accordingly.

Noshi-ito.—Settlements reach 150 piculs, on a basis of \$130 for Good *Filature* kinds. For a parcel *Tomiyoka* \$150 has been refused, and for the present there seems no prospect of the offer being

repeated. *Oshu*, a parcel of Medium, done at \$100 to \$120. *Shinshu* at \$110. *Foshu* \$87 to \$84, according to quality. Stock somewhat reduced, but holders seem disposed to be current.

Kibiso.—Fully half the Settlements for the week have been in this class, and all descriptions have shared in the demand from *Shinshu Filature* down to *Neri*. Prices may be quoted a shade off from the highest point, a few bales "Tokosha" having been done at \$120, against \$123 paid a week ago. Among other transactions we observe *Oshu* at \$80. *Foshu* at \$40, \$37, \$35, \$30, and \$20. *Neri* has been dealt in at \$13½ to \$12½ for Medium *Shinshu* and *Mino* kinds.

Mawata.—Nothing done; a few small arrivals give an increased Stock of 150 piculs.

QUOTATIONS.

Pierced Cocoons—Medium to Fair	Nom. \$90 to 100
Noshi-ito—Filature, Best	155
Noshi-ito—Filature, Good	135

Sendai & Hamatsuki	350	Mawata	150
Taysam Kinds	100		
Total piculs	3,350	Total piculs	900

TEA.

The improvement noticed in our last Market Report has been well maintained during the past week, and buyers encouraged by telegraphic advices of a rather better feeling on the New York Market have operated pretty generally for all grades of Tea on offer. The total Settlements to report by this opportunity amount to 1,700 piculs, but still the total Settlements for the season to date show a decrease of 6,984 piculs in comparison with the preceding year. Prices have been somewhat irregular, an advance of quite one dollar per picul over previous quotations must be noted. The following are the various grades of Tea purchased during the interval:—Common 55, Good Common 325, Medium 845, Good Medium 345, Fine and Finest 25 piculs. Receipts have been comparatively small, and Stocks are now reduced to about 1,300 piculs, against 2,900 piculs at the corresponding date in 1883. The cargo of the O. & O. steamship *Arabic*, despatched on the 20th instant, took 320,105 lbs. Tea, and comprise as follows:—For New York, 170,203 lbs.; for Chicago, 42,332 lbs.; for California, 31,379 lbs.; and for Canada, 76,191 lbs.

QUOTATIONS.

Common	\$11 & under
Good Common	13 to 15
Medium	17 to 19
Good Medium	21 & up/ds

EXCHANGE.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S
PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL-PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S
GOLD MEDAL EAU DE COLOGNE

is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S
OLD BROWN WINDSOR SOAP,

celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR, a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE, and other Specialties and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

ESTABLISHED 1799.

Dec. 29th, 1883.

KEATING'S POWDER.
KEATING'S POWDER.
KEATING'S POWDER.
KEATING'S POWDER.

KILLS BUGS,
FLEAS,
MOTHS,
BEETLES,

THIS POWDER is quite HARMLESS to ANIMAL LIFE, but is unrivalled in destroying FLEAS, BUGS, COCK-ROACHES, BEETLES, MOTHS IN FURS, and every other species of insect. Sportsmen will find this invaluable for destroying fleas in their dogs, as also ladies for their pet dogs.

THIS ARTICLE has found so GREAT a SALE that it has tempted others to vend a so-called article in imitation. The PUBLIC are CAUTIONED that the tins of the genuine powder bear the autograph of THOMAS KEATING. Sold in Tins only.

KEATING'S WORM TABLETS.
KEATING'S WORM TABLETS.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEBRUARY 2ND, 1884.

DEATH.

At 83, Main-street, Yokohama, on the 28th instant, ALICE WILBY, eldest beloved daughter of George and Martha Hodges, aged 16.

At 258, Bluff, HERBERT JOHN, second son and sixth child of Arthur Thomas and Emma Jane Watson, aged 5½ years.

SUMMARY OF NEWS.

A TOLERABLY heavy snow-fall took place at Kiyoto on the 20th ultimo.

THE loss of a steamer, the *Kono-hana Maru*, off the island of Genkai, is reported. The fate of her crew is not yet ascertained.

THE hull, sails, stores, &c., of the barque *Sattara* have been sold by auction, realizing a total of \$3,085.

AT midnight on Saturday, 25th inst., the house occupied by Ludwig and Co.'s banto in Koto-bukicho was destroyed by fire.

ON the night of the 1st instant a fire occurred in the village of Shirota, in the south-western suburb of Tokiyo. Four houses were destroyed.

A NAVAL DOCKYARD has been established at Ono-ga-hama, Kobe, and placed under the Control of the Marine Bureau.

THE railway bonds, of which an issue to the extent of five million *yên* was recently announced by the Finance Minister, have been taken up by

Japanese banks and capitalists with the exception of about six hundred thousand *yên*.

A CENSUS recently taken gives the number of houses in the Japanese settlement of Yokohama as 21,164, and the number of inhabitants as 54,479.

THE Government has decided to send the *Amaki Kan* and the *Fuso Kan* to China to protect Japanese merchantmen in the event of war between France and China.

THE accounts of the Ladies Charity Ball have been published. They show that the affair was singularly successful, the net balance available for charitable purposes being \$1,318.71.

AGRICULTURAL disturbances are reported from Fukushima prefecture. No loss of life or destruction of property had taken place up to the date of latest advices. The malcontents seem to be influenced by a vague idea that agitation must procure some royal remedy for poverty and distress.

SEVENTY-NINE Japanese living in the Foreign Settlement, Yokohama, without having complied with the regulations as to obtaining permission, have been arrested and punished by the Local Authorities.

A GENERAL MEETING of the Union Steam Navigation Company (*Kiyodo Unyu Kwaisha*) was held in the Meiji Kwaido on the 28th instant. A dividend of 9 per cent. on the paid up capital is said to have been declared, and a sum of sixty-five thousand *yên* was carried to the reserve fund.

MR. JOHN WALTER, hitherto manager of the Hongkong and Shanghai Bank, left this Settlement on Wednesday, the 30th ultimo, for Shanghai. Few residents of Yokohama have won such well deserved popularity, both in a business and private capacity, as Mr. Walter, and it would be difficult to say whether the bank he represented or the community was more indebted to him.

JUDGMENT was delivered on the morning of Thursday, the 31st instant, at the Swiss Consular General Court, in the case of Messrs. Ludwig and Trüb, charged with embezzlement and obtaining money fraudulently from the Hongkong and Shanghai Bank. The Court decided that the charge of embezzlement was not sustained, but found the prisoners guilty of obtaining money under false pretences and sentenced them to six months' imprisonment.

THE finding of the Criminal Court, Nagasaki, in the case of the detective charged with stabbing and killing a Chinaman, was pronounced on the 24th ultimo. It was proved that the story told by the Chinese witnesses at the inquest was incorrect. The deceased met his death, not in the house where his friend was arrested, but in the street, during a violent attempt to rescue the Chinese opium smokers whom the police were escorting. The Court nevertheless found that the circumstances did

not justify the use of weapons, and the detective was sentenced to five years' major confinement.

AN interesting case, illustrating the conscientious working of the Japanese Criminal Tribunals, was brought to a conclusion a few days ago in Tokiyo. A girl charged with incendiarism was arrested last October, but released the next day, there being no sufficient evidence. Subsequently fresh evidence was procured, and she was re-arrested, when she confessed her guilt. On appearing before the Higher Criminal Court for sentence, she stated that her previous confession had been made through fear, and after a careful sifting of the evidence, she was finally acquitted.

THE Annual Meeting of the Yokohama Amateur Rowing Club was held on Thursday, the 31st instant, at Windsor House. The receipts from subscriptions showed a falling off of about \$330, as compared with last year, and the debt to the Treasurer amounted to \$760.50. On the whole, however, the affairs of the Club were considered to be in a satisfactory condition. The captaincy was resigned by Mr. H. Litchfield, who had held it for many years and whose services were enthusiastically acknowledged. Mr. G. Hamilton was elected in his place.

THE Annual Meeting of pew-renters and others interested in Christ Church was held on Monday, the 28th instant, in the Chamber of Commerce Rooms. The financial condition of the church was shown to be more favorable than had been anticipated, but there was still a deficit of \$425. A resolution was passed that the engagement with the Chaplain should continue indefinitely, subject to six months' notice on either side, provided no such notice should be given before the 1st of July next.

IN China the question of peace or war between France and the Middle Kingdom is considered to be fast approaching a definite answer. The first steps towards the assault of Bac-ninh will probably be taken within the course of a fortnight, and a well-informed section of public opinion is apparently tending to the belief that China has gone too far to draw back, even supposing she ever had any such intention. A line of telegraph is in course of erection from Canton to Kwangsi and Yunnan; preparations for the defence of the Pearl River are on foot; the foreign Consuls at Canton have been officially notified of an intention to build a permanent barrier in the direct channel of the stream, and the formation of volunteer corps is in active progress.

WEEKLY NOTES.

AN interesting trial of guns against masonry took place in the bay on Thursday. The primary object of the trial was to determine the resistance of granite and concrete walls to heavy artillery, with reference to the construction of coast-defence forts. The target principally experimented on had a total thickness of 6.60 metres. It was

faced with granite to a thickness of two metres, and had a retaining wall behind of half a metre. The space between the granite and the retaining wall was filled with concrete. The solid blocks, forming the granite facing, were arranged in a double tier above and below, so that the thickness of the granite in the middle of the target was little more than half the thickness of the upper and lower portions. The front dimensions of the target were 7.10 metres by 3 metres. The artillery engaged in the trial was of two natures, viz., breech-loading Krupp guns of 24 centimetres calibre; and 10-inch breechloading Armstrongs. The former were fired from H.I.J.M.S. *Fuso-Kan*, and the latter from H.I.J.M.S. *Tsukushi-Kan*. The Krupp gun was not of the newest pattern. It had a length of only 22 calibres. The weight of the shell was 160 kilogrammes (352 lbs. 12 oz.); the charge, 35 kil. (77 lbs. approximately), and the initial velocity 470 metres. The weight of the Armstrong shell was 400 lbs.; the charge 180 lbs. and the initial velocity 576 metres. The practice with the Krupp gun was excellent. The first shell struck the centre of the target, and pierced the granite to a depth of 1 metre. The second shell lodged in the same hole, and penetrated to a further depth of 1.20 metres. The latter effect would probably have been less had the concrete been better set. The remaining four rounds fired from this gun did not present any features of special interest. The practice with the Armstrong gun was most unfortunate. Of the six shells fired, not one struck the target, a result which, considering the dimensions of the target and the range (800 metres), seems difficult to explain. Two points, indeed, must be noted. First, that the advantage was with the larger vessel, the *Fuso-Kan*, in point of steadiness of platform; and secondly, that the detachment by which the Armstrong gun was manned was comparatively inexperienced. Still the failure to strike a target 22 x 10 feet at a distance of less than 900 yards, once in six rounds, is an event which will go far, we fear, to decide the relative merits of the English and German guns in Japanese eyes. We refer, of course, to the general public. Experienced artillerymen know that the varying conditions of such a trial divest its results of anything like a conclusive character. Complaints, well founded we believe, were formerly preferred against the quality of the Armstrong shells supplied to the Japanese navy. But that there rests with the Krupp gun an advantage, in point of accurate shooting, so marked as the record of last Thursday's practice would seem to imply, is a conclusion it would be manifestly unjust to admit. We need scarcely remind the naval and military authorities of this country that before pledging themselves to any faith in such a matter, experiments conducted in a really scientific manner and under conditions of perfect equality as between the two guns, are indispensable.

THERE appears to be a difference of opinion in Shanghai with regard to the falling off in the silk crop during the past four seasons. Some persons, among whom are the Chinese themselves, attribute it to climatic influences; while others hold that it has been caused by the disease *La Pebrine*, which formerly proved so fatal to the worms of France and Italy. The supporters of the former theory advance, in proof of their assertion, the facts that the eggs sent from China to Italy last season, gave there a most satisfac-

tory result, and that the proportion between best cocoons and inferior sorts has been the same as usual this season. On the other side, it is contended that "the question of the progress of disease in silkworms is too important to be settled by the out-turn of a few shipments in Europe," or by local observations which lack the support of scientific investigation. The method adopted in China to prevent the weakly eggs from hatching is to subject them to baths of salt and water, or lime and water, an operation which the healthy sorts alone are supposed to survive. In Europe the plan pursued is more troublesome, but, at the same time, more thorough. The seed is put under the microscope, when the healthy eggs can be immediately separated from those containing the corpuscle of disease. In France, of late years, much success has attended the device of establishing grainage establishments separate from those devoted to purposes of sericulture. On the whole, science has so far helped Europe to guard against the risks which hitherto attended this industry, that competition will be impossible for China unless she adopts similar precautions.

THE *Yeiiri Shimbun*—doubtful authority, it must be premised—says that General Kuroda, formerly chief of the colonization Bureau and now Imperial Councillor (*Naikaku Kōmon*), has presented a memorial in which he takes the line that the proposed increase in the standing army is an erroneous policy. The General thinks that the funds which will thus be absorbed, ought to be devoted to the construction of railways, and he bases his argument, not on any hypothesis of the country's immunity from danger, but on the principle that the efficiency of troops depends, in a great measure, on their rapidity of movement, and that if the Government possessed the means of transporting its soldiers, with the least possible delay, to any given point of the Empire, there would be no danger in effecting a corresponding diminution of their numbers. This suggestion, whether or no it has been made, seems more specious than practical. At all events, we fear that it will have little influence on the counsels of the Government.

THE nature of the resistance which the French are likely to encounter, should it be their fate to conduct naval operations on the coast-board of Kwantung, may be gathered from the proclamations of Admiral Pêng Yü-lin, recently published in the columns of the *North China Herald*. The Admiral finds, he says, on investigation, that among the population of several cities which he enumerates are numbers of fishermen, who, being able to "gather like the wind and water," can easily assemble to the extent of "a hundred and odd thousand," and who, being skilled "to form ambuscades in the water a whole day, may be able to perform marvellous deeds." Fishing in Kwantung must be something out of the common if it requires the formation of ambuscades for whole days in the water. But let that pass. Admiral Pêng is an eminently practical man, and it may be presumed that he understands what he is talking about. His idea of the important points to be observed in forming "naval corps of volunteers" is very succinct and simple. Anyone who captures or blows up an enemy's ship is to be rewarded; anyone who behaves treacherously is to be decapitated immediately. Should the French declare war, and "fight in

earnest," they will be "acting contrary to Treaty," the Admiral thinks, and must consequently be stoutly resisted. Having set forth these principles, and further informed the people of Kwantung that, so, far as the funds for these military preparations are concerned, they must find them as best they can, Pêng, together with Chang, President of the Board of War, and Yü, the Futai, appear to have lapsed into a mathematical mood; for they proceed to inform the rustics, who "are accustomed by nature to winds and tides, and are able to remain for days in the water," that "as volunteer brigades of fishermen are to volunteer brigades of villagers, so are battles on the water to battles on the land." This is, doubtless, a most inspiring statement, well calculated to excite the "heaven-born instinct" to which the Admiral and his colleagues appeal on behalf of the Emperor's throne and the homes of the people. But remembering how the unfortunate Annamites were shot down like rabbits as they gathered up their flowing garments and tried to dodge the French bullets at Hué, one cannot think that Admiral Pêng's fishermen, for all their skill in gathering like the wind and forming ambuscades for whole days in the water, will succeed in slaying many invaders or blowing up many gunboats.

THE *North China Herald* comments at some length on the fact that the position of Doyen of the Consular Body at Shanghai is not accessible by the English Consul. A Consul-General takes precedence of a Consul, and as there are several Consul-Generals, it results that the post of honour is always occupied by some one of them, to the exclusion of the official representing a nation whose annual trade with China amounts to more than 80 per cent. of that country's total foreign commerce. There can be little doubt that this is not as it ought to be, though some set-off is to be found in the fact that the actual Government of the Settlement is mainly in English hands. But it is not at all likely that Her Majesty's Government will change the title of the Consul at Shanghai for any such reason. The duties of a Consular Doyen, as distinguished from those of a simple Consul, are purely matters of convenience and arrangement. The easiest exit from the difficulty is that taken by the Consular Board in Yokohama, where a Chairman is selected without special reference to his rank. The point made by our Shanghai contemporary is only one of several interesting issues that depend upon the diversity of foreign interests in the Orient. None among them is more noteworthy than Great Britain's attitude with regard to the most-favoured-nation clause in her treaty with Japan. She insists upon making that clause unconditional, though it would be exceedingly difficult to discover any principle of logic or right justifying such a contention. It is much as though A. were to force upon B. an agreement, according to the provisions of which B. would be bound, in the event of his selling any portion of his property to C., to hand over an equal portion to A., gratis. An unconditional favoured-nation clause means, that whatever privilege Japan may grant to another Power, conditionally or unconditionally, she must grant unconditionally to Great Britain. Of course England would never consent to make such a clause reciprocal. Neither would she, or any other Western country, agree to be bound by it herself for a moment. Yet England's position in this matter

is difficult. Were she to permit the insertion of a conditional favoured-nation clause in her treaty with Japan, she would be, in a certain sense, at the mercy of Powers whose interests here are not a fraction of her own. Some one of the small European States might consent to the abolition of extritoriality, for example, in return for the removal of all restrictions on trade or travel so far as its subjects were concerned. English residents would thus be placed at a serious disadvantage, unless they too subscribed to the same terms in consideration of enjoying the same privileges. Great Britain does not propose that they shall ever be placed at such a disadvantage. She reserves to herself the right of determining what price she shall pay for the extension of any particular privilege. Nobody else is to have a voice in the matter. If another Power agrees to purchase a concession, England is to have that concession without purchasing it. That is the length and breadth of the matter, and, as we have already said, a more improper proceeding from a moral standpoint could not well be conceived. But charity begins at home. The world is not ruled at all by logic, and very little by right. So long as different Powers have different interests in Japan, the Power having the greatest interests will guard itself against possible injury by means to which, fortunately for themselves, other Powers need not resort. Probably most Englishmen feel sorry, from time to time, that their Government should be obliged to pursue such questionable courses. But what they have not yet discovered is that any other Government behaves better under similar circumstances. Not a very solid satisfaction that, to be sure, but still a satisfaction after its kind.

NOTES.

It is not quite clear why the "Diary of Richard Cocks, Cape-Merchant in the English Factory in Japan," should have been re-edited and reprinted under the auspices of the Hakluyt Society. The edition which the public already possessed seemed to answer all purposes sufficiently. It appears, however, that, for some unstated reason, the Diary has again made its appearance, for we find the London *Spectator* of November 24th, 1883, reviewing the book and telling us that it has been edited by Mr. G. M. Thompson, under date 1883. The reviewer in the *Spectator* sets out by a curious mistake, which effectually demonstrates his complete ignorance of the Japanese language. The worthy Cape-Merchant—"Cape," by the way, does not refer to a variety of wine, or to the South of Africa, but simply means head, or principal—never forgot, when returning from a journey, to bring back presents for his friends. To these gifts he applies the term "Nifon catangi," evidently an orthographical corruption of *Nihon Katagi*, which would be an orthodox method of designating a keep-sake. The writer in the *Spectator*, however, re-models "catange" into "katachi," and says that "Nifon catage" means *more Japonico*. He might as well speak of English customs as English shapes. Such a form of speech could never have been used by any Japanese. For the rest, he seems to have conceived a very just estimate of the lesson taught by Richard Cocks' published experiences; namely, that the foreigners who visited Japan in the seventeenth century were not precisely the sort of persons to win Oriental confidence and re-

spect. Of the Japanese merchants and artisans with whom he came in contact and with whom he lived on good terms, Cocks speaks somewhat unfavourably. They were a fickle, "brabbling," treacherous folk, he says, not over fond of paying their debts. But it soon transpires that Cocks could not think well of any folks except Protestant Englishmen, and not always of them. Even Will Adams, whose reputation for manly honesty will always survive in Japan, did not escape the suspicions of the Cape-Merchant. Cocks neither liked nor trusted Adams, and thought that he failed to utilize his opportunities to the best advantage in his countrymen's favour. In a word, the head of the Factory could not understand that a man might be a friend of the Japanese without being false to his own countrymen, a difficulty which still perplexes some vulgar minds. As for the Spaniards and Portuguese, he hated them with a sound unvarying hatred, and greeted with delight every symptom of their decaying influence at the Japanese Court. The Portuguese may not have been altogether so bad as they were painted, but certainly there is not much to be said in their favour. The Vice-Provincial, Father Cuello, himself admitted to Hideyoshi (Taiko), that, under the influence of holy zeal, the disciples of the missionaries destroyed the temples of the false Japanese gods and persecuted the priests; and Charlevoix, in his eulogy on François Civan, "King of Bungo," says that he overthrew no less than three thousand temples and houses of the Buddhists. The Taiko may not have relished this method of propagandism. It was entirely new to Japan, where, before the advent of Christianity, religious persecutions were unknown, and where Nobunaga, the Taiko's former chief, when prayed by the persecuted Buddhists to expel the Jesuits, answered that the strangers should be left in peace, since thirty-six sects might well be tolerated where thirty-five already existed. Father Cuello further admitted that the Portuguese traders were in the habit of carrying Japanese subjects as slaves to India, but avowed that this traffic in human flesh was in opposition to the missionaries' wishes. There were not wanting, therefore, grave counts of indictment against the Portuguese, and it is a noteworthy fact that the Taiko, who, while pronouncing an edict of banishment against European priests, took care to tell foreign traders that they were at liberty to remain in the country and pursue their usual avocations—it is a noteworthy fact that this Taiko, in reply to a remonstrance of the Viceroy of Goa, explained that "the priests from Europe had traversed the country accompanied by large bands of disorderly persons, to the destruction of peace and good order and in violation of the law"; that "they had endeavoured to seduce his subjects from their allegiance," and that "they made no secret of their design to effect the conquest of the country, as had been the case in the Philippines." The Taiko pertinently asked the Viceroy's envoy what he should do if the Buddhist priests were to visit Portugal and behave in a similar manner. European Governments might be puzzled to answer a question of like import were it propounded now concerning certain phases of Japan's foreign intercourse. The Portuguese, however, as we have said, had other enemies besides themselves. Honestly or dishonestly, the Dutch charged them with designs which no Government could condone. In 1837, the former laid before the Japanese authorities a correspondence, alleged to have been carried on

with Portugal, purporting to incite that power to send a military force to Japan, ostensibly for the purpose of aiding the native Christians, but really for the conquest of the Kingdom. This correspondence is pronounced a forgery by Charlevoix, but collateral evidence of its authenticity was produced at the time. Whether forged or genuine, it convinced the Japanese, and was the proximate cause of the promulgation of an edict closing the country to all Westerns except the Dutch. The true circumstances of this concluding episode are too often lost sight of. Cocks had left Japan fourteen years before it happened. Had he still been at Hirado, Englishmen might have been included in the exception, as they were, for the most part, allied with the Dutch against the Spaniards and Portuguese. A notable instance of the way this alliance worked was furnished by the case of a Japanese junk which the *Elizabeth* captured. There were two "padres," Zuniga and Flores, on board, and Cocks and his Dutch colleague, by means of forged letters, obtained the condemnation of these men, as Catholic missionaries. The "padres" were burned, the Japanese crew beheaded, and the junk was adjudged, as a prize, to its captors. "One can hardly wonder," says the writer in the *Spectator*, "at the Japanese massing all foreigners together under the title of Southern or Western barbarians. The conduct of the Dutch and English sailors was an equal reproach to either nation; they were eternally drinking and brawling with each other or the natives." People who care to know the import, to Japanese ears, of the term "Bataren" (padre),—the term by which all foreigners were designated in Japan previous to 1869—should read the correspondence of Will Adams, the history of Kämpfer, the writings of Charlevoix, and the Diary of Richard Cocks.

In the three hours' professional walking championship match at Lillie Bridge, J. W. Raby lowered the existing records at all distances from nine to fifteen miles. There were only three competitors—Raby, W. Franks, and H. Thatcher. Raby went off with the lead, which he maintained to the finish. Seven miles were covered in 52 min. 1½ sec., and eight miles in 59 min. 36 sec. Franks and Thatcher were a minute and a half and nearly five minutes behind respectively. Raby then, walking in splendid form, covered the next three miles in 7 min. 14 sec., 14 min. 45 sec., 50 min. 34 sec. over the hour respectively. Thatcher then retired, Franks being four minutes behind Raby. The latter completed his fifteenth mile in 1 hr. 55 min. 56 sec., all the above times being bests on record. The pace then fell off, and in the result the total distance covered was only 21 miles 290 yards. Thatcher had previously walked 22 miles in 2½ min. less than three hours. Franks finished 292 yards behind Raby. Raby first came into notice as an amateur in 1881, when in the seven miles amateur championship race he easily defeated the American, Merrill, in 54 min. 48 1-5 sec.

MR. GLADSTONE, it appears, includes among his numerous vocations that of a dealer in timber. We are not aware whether he entered voluntarily into the business, but all events an insight to it has been offered to the public. He was applied to by a Lambeth working-man who wanted to make some tables and chairs out of trees felled by the Premier. Mr. Gladstone replied that he would make known the subject of the Lambeth

workman's request to his son, "as he regulates matters of the nature referred to." About a month afterwards—a most unbusinesslike delay, we should imagine—Mr. W. H. Gladstone wrote to the workman in these terms:—"In reference to your letter, I beg to ask you how many feet you require. We have a beech of about sixteen feet available, but I fear the carriage to London would be heavy." The offer was accepted, but the beech turned out to be eighteen feet long, so that the stock-book of the firm has evidently not been very carefully kept. It is understood that, in the letter in which Mr. Gladstone handed over the conduct of the transaction to his son, he expressed some desponding sentiments with regard to this branch of the family business. Gladstonian timber has not been in great demand lately, the last transaction having taken place in Leeds in 1880.—*Whitehall Review*.

THE San Francisco *Alta* reviews a recent speech by General Butler on "American commerce and the carrying trade." The speaker called attention to a fact which must be very gratifying to Americans, namely that, while the shipping of the United States has gradually disappeared from the seas, American foreign commerce has rapidly increased. In 1860, when U.S. shipping was comparatively at the highest point, the export of agricultural products was \$108,605,713, or about \$3.60 each for thirty millions of people. In 1882 exports of the same products had reached the amount of \$619,269,449 or \$12.40 for each of fifty millions of people. The Republic now pays, \$60,000,000 a year for freight on exports and imports combined, but the General's theory is that it pays this because it can find employment more lucrative. The gallant speaker continues in the following comforting, if not congratulatory, strain:—"It is desirable certainly, to have ships to serve if for nothing else than a school for seamen, but from a purely industrial point of view it is a point in our favor that we can find more profitable occupation than carrying our own products to market. England now does the largest business in carrying products of any nation in the world. Does any one imagine that her fitness for this kind of business is especial and peculiar to herself? On the seas the American and the British compete on even terms. We throw aside in that contest our superiority in agricultural resources. The English cannot raise cotton, and, as they need a good deal of this staple, they buy it of us, and in part payment carry our products to market. She would raise cotton instead of carrying products to market if she had the land. . . . The American farmer has an advantage in cheap lands over his English competitor, but at sea they are on equal terms. Consequently the American does that which pays him best, and the Englishman does what he can. Of course it is flattering to an Englishman's pride to see the flag of his country in every port and on every sea. It looks as if the commerce of England had outstripped competition when ten English vessels are seen for one of any other nation. But in many cases the English are simply performing the duty of carriers for goods other nations produce. The profit does not generally lie so much in carrying goods as in producing them. This may not be the case when the carrier can establish a monopoly and charge his own price, but it is so when competition is free and close, as in the ocean carrying trade. We do not need to concern

ourselves greatly over the fact that England's necessities compel her to do a portion of our work while we find more profitable employment. We shall secure our portion of the carrying trade when through over-production or other cause we cannot find work that pays us better." General Butler omits to mention that the best means of reestablishing American shipping would be the abolition of protection duties upon ships and ship-building material. If England were selfish she would desist from counselling America to abandon her protective policy. Meanwhile "carrying" is not a bad business; as the fortunes made by the firm of Chaplin and Horne, for instance, and the dividends paid by carefully managed canal, steamer, and railway lines abundantly prove.

A BRUSSELS correspondent of a London paper wires on the 16th December:—A great fire has almost entirely destroyed the Houses of Parliament, or Palais de la Nation. At half-past 4 p.m., during the sitting, a thick smoke entered the hall. At the appearance of the fire an alarm was given by the journalists. The sitting was immediately concluded, in order that the members of the Chamber of Representatives might go safely away. Soon after the fire increased rapidly. All the firemen of Brussels hastened to the spot, but so great was the intensity of the fire that they could hardly cope with it. All the buildings seemed in flames. The famous library, full of rare books and important documents, is consumed. It was not until ten o'clock that the fire was practically mastered. The Chamber of Representatives, with all its outlying buildings, is a mass of ruins, but the fears at first entertained that the Departments of Foreign Affairs and Education had been greatly damaged proved to have been exaggerated, the buildings named having suffered little from the flames.

A FRENCH journal says that every soldier of the Republic sent to Tonquin costs the country 3,000 francs, so that to despatch an army of ten thousand men thither means an expenditure of thirty millions. This is an extraordinarily low estimate. One cannot help wondering how England would set to work if she were required to carry on a campaign involving the services of ten thousand men in China, and to keep her expenditure within a million and a quarter sterling.

THE ultimate destination of many articles in common use is often surrounded with mystery; but most people flatter themselves that they at least know the final goal of rags. It may surprise some to learn that in China cotton goods when reduced to rags, after a severe and lengthened course of wear and tear, are in great request for the soles of Chinese shoes, and this final bourne is kept steadily in view when new cloth is being purchased by the poorer classes. One important consequence to this country is that the trade in English cottons has remained stagnant, because the Chinese find that the native cloth is much more adapted for this purpose, besides being cheaper, stouter, and stronger. One of our Consuls declares that the poor complain of this deficiency, and that our cotton goods will not stand Chinese washing, that they wear out too quickly (in two years), that the thread of which they are composed is weak and will not endure frequent patching, and that they are hard, brittle, and stiff. The requisites demanded seem onerous, but if Eng-

lish manufacturers can meet them, the trade would inevitably increase.

A WORKING mason died last week at Chantenay, near Paris, who contributed almost as much, though in an indirect way, to the making of modern European history as Prince Bismarck himself. Jean-Michel Badinguet, the individual in question, was employed on some repairs at the fort of Ham when Prince Louis Napoleon was a prisoner there. He facilitated the Prince's escape by lending him his cap, blouse, canvas "pantalon," and his short black pipe. Thus disguised, and carrying a board on his shoulders, the future Emperor made his way out of Ham, unchallenged by a single one of the warders or sentries whom he had to pass. Badinguet was not so fortunate. He was arrested and kept for some time in prison. After the *coup d'état* he came to Paris, and the Emperor allowed him an annuity of 1,200 francs out of his privy purse. Napoleon III., as is well known, received the *sobriquet* of Badinguet, and the original bearer of the name prudently dropped it, as it was anything but popular with the class with which he associated. He assumed the surname of Rudot, by which alone he was subsequently known; and it was only at his death that his identity was discovered.—*St. James's Budget*.

A LETTER from Fusan, Korea, says:—Business is at a standstill, to the great distress of the Japanese residents. Several cases of suicide have been reported, as well as the desertion of infants. If no material change for the better takes place without loss of time, there is no telling what fearful consequences may ensue. The Japanese Consul is doing his utmost to suppress gambling houses and brothels. The proposal for the establishment of a mixed settlement of European and Japanese has given rise to vehement discussion. Many are in favour of the plan, as the value of houses will considerably increase if all foreigners live in a common settlement, much to the satisfaction of house-holders who are struggling with financial embarrassments. Another proposal, to assign a certain portion of the settlement to Europeans alone, has been seriously considered by the residents. Some suggest that the European settlement shall be in the eastern, others in the western, part of the town.—*Mainichi Shimbun*.

THE system of selling bad champagne under good corks and good labels, of which we spoke lately as being common in Paris, is only one out of numerous frauds of the sort of which the French public have to complain. An evening paper states that there is a large sale of artificial sardines, made from coarse fish, and disguised under a coating of gelatine and colouring matter. Snails, one would think, are too cheap to invite fraud, yet artificial snails are made out of the lights of the calf, and with artistic seasoning taste exactly like the genuine article. Some of the American falsifications are, if possible, still more ingenious. Every one has heard of the fortunes that have been made by the sale of wooden nutmegs and coffee-berries. The latest thing in this way which we have seen noticed is the manufacture of artificial eggs. The yolk is compounded with phosphorous, the glare with albumen, and the shell is made with lime. As far as taste and appearance go, the imitation is said to be perfect. They only differ in one respect from genuine eggs—they are of no use for hatching purposes.—*St. James's Budget*.

At a recent *séance* of the Biological Society of Paris, the members had the pleasure of examining what is called "a precious Japanese scroll," delineating certain results of anatomical research in bygone times. Japanese scrolls do not always delineate subjects that might properly furnish a theme for scientific discussion, but the scroll in question seems to have interested the learned French biologists to an unusual degree. There was evidently some difficulty in deciphering the writing, and, judging from the very guarded encomiums passed upon the pictures, they, too, were occasionally puzzling even to expert eyes. Fortunately, however, an erudite member of the Japanese colony in Paris came to the assistance of the biologists, who were thus enabled to pass an entertaining afternoon. The scroll was more than thirty feet long. An idea of the graphic ability it displayed can be formed by those who have examined the anatomical plates in a Japanese encyclopædia, where, as a concession, perhaps, to conciseness, the two lungs of the human body are merged into a single organ, and the breath, entering by the larynx and the trachea, goes to the heart as well as to the unified lung, both alike constituting the terminus of the trachea. These biological vagaries have long ceased, however, to find believers outside the lower strata of Japanese society. Contact with Holland taught educated men a different lesson, but practical acquaintance with the details of the *corpus vile* were difficult of access, on account of a violent prejudice which existed against dissection. The same prejudice once obtained in the Occident. There the first persons whom history credits with having secretly dissected dead bodies are two doctors, who visited the courts of Seleucus and the Ptolemies. Two thousand years afterwards, Japanese surgeons turned their attention in the same direction. In 1795, a doctor living in Osaka, asked to have the body of a criminal handed over to him for purposes of dissection. This enlightened innovator was called Miyasaki. He was given the body of a man, aged thirty years, who had suffered capital punishment. It was not a very perfect corpse. The sword of the practiced executioner, after shearing through the muscular neck of the victim, had inflicted an enormous wound on the left thigh. Doctor Miyasaki, however, made the most of these mutilated remains. He divided them according to his lights, and made pictures of them under various aspects, devoting much attention to the navel, which he seems to have thought a peculiarly interesting object of study. His sketches look strange to-day, but he was undoubtedly a man before his time. Had his successors imitated his example, Japan's anatomical knowledge would have been in a much more forward condition than it was when the present Government began to found schools of medicine and surgery.

THE *Hochi Shimbun* has the following interesting paragraph:—The Japanese Commissioner to the Netherlands Exhibition at Amsterdam, and two exhibitors, Messrs. H. Muramatsu and S. Takagi, have received decorations of the third class from the King. The three gentlemen gave a most sumptuous banquet at the largest hotel in Amsterdam to their foreign colleagues. Two hundred and thirty persons responded to their invitation. Mr. Sakurada made an excellent speech, congratulating the Exhibition on its success, and was loudly applauded by his auditors.

A lottery concluded the entertainment, each guest receiving some article of value, the first prizes being worth from \$100 to \$200. The guests were delighted with this novel proceeding, and dispersed well pleased with their entertainment.

In 1865 the Italian laws relating to capital punishment were modified to such an extent that the infliction of the death penalty was virtually abolished. Statistics recently published with reference to this change, give the following figures:—

YEAR.	NUMBER SENTENCED TO DEATH.	NUMBER EXECUTED.
1866.....	81	0
1867.....	75	7
1868.....	72	7
1869.....	111	4
1870.....	102	1
1871.....	122	2
1872.....	41	2
1873.....	73	5
1874.....	87	3

During the succeeding year, though sentence of death was frequently passed, it was not carried out in a single instance, so that, since 1874, there has been no case of capital punishment in Italy.

An Italian writer, referring to these figures, says that they furnish an interesting comment on the progress of civilization. He takes his readers back to the seventeenth century, and shows them the *Place Navone* on a market day. Here and there may be observed the stages of mountebanks, magicians, dentists, and vendors of relics. At one end of the square a Jesuit, cross in hand, summons the people to repent. At the other, on a platform, three men are seated, tied to their seats, and having suspended from their necks a placard with their names and the nature of their crimes. The crowd surges forward to see the punishment inflicted, and the flogging of the criminals is just about to commence when suddenly the executioner cries, "halt!" and a trumpet sounds. At the other side of the square a grand cortège has just appeared. Alvise Tiepolo, Ambassador of the Most Serene Republic of Venice, is on his way to carry the compliments of the Doge Mocenigo to the College of Cardinals. The condemned men cry out for mercy, and at a sign from the Ambassador the executioner bows humbly. The men are pardoned. Such acts of grace were common. A Cardinal, meeting a man condemned to death, could cause him to be reprieved. It was thus that a haberdasher called Cencio, condemned to be hung, was already dangling at the end of the rope, and the executioner was about to jump on his shoulders, when a Cardinal, passing by, ordered the rope to be cut. Cencio was saved, but his neck never recovered its shape, and to the day of his natural death he was nicknamed *Storto*. By way of contrast to these instances of leniency, the case is mentioned of Mattio Triano, a *valet de chambre* who assassinated his master, an apostolic prelate. Triano was executed on the 3rd of July, 1703. When he mounted the scaffold, he could not stand, and it was necessary to prop him up while his wig was taken off and his eyes bandaged. Then the executioner felled him to the ground with a tremendous blow of a club, buried a knife in his throat, cut him open, and having decapitated him with the same knife, took out his heart and entrails, which were fastened to the side of the scaffold. After this his body was cut up, and the pieces hung upon hooks round the scaffold. In those times it was not an uncommon thing to see a churchman executed for some fault that would scarcely involve any penalty whatsoever to-day. Thus

the Abbé Rivarola was beheaded, in 1688, for having written satires and defamed dignitaries of the church. It was on this occasion that the executioner, whose ignorance of his craft resulted in the chopper of the guillotine entering the condemned man's shoulder, proceeded to saw off the Abbé's head with a big knife. The people were so horrified by this spectacle that they invaded the scaffold, and a terrible fight ensued between them and the sbirros who tried to protect the executioner. The next day the latter was publicly flogged and afterwards exiled. On the 5th February, 1720, the Abbé Volpini was beheaded for having published, in a journal of Vienna, some comments considered defamatory of Clement the Eleventh's private habits; and on the 27th January, 1800, Gennari was hung, drawn, and burned for sacrilege. What an immense interval seems to separate the times when these things happened from the world of to-day!

THERE is a rumour current among the tittle-tattlers of vernacular journalism that a certain foreign resident of Kobe proposes shortly to establish a line of steamers between Yokohama and Kobe. It is the intention of this bold speculator to run the Mitsu Bishi and Union Navigation Companies out of the field forthwith, by carrying freight and passengers at rates properly proportioned to the recent fall in the price of commodities. The manner in which this problem presented itself a few months ago to the mind of the Japanese working man was, that while in 1881 he could buy a passage to Kobe with about two-thirds of a *koku* of rice, in 1883 he had to pay more than a *koku* to be carried the same distance. This was an apparent hardship, and intellects untutored in political economy could not be expected to discover, that since the expenses of a steamship company consist mainly of fixed payments, its charges can not be very sensitive to such changes as the value of Japanese paper money has experienced during the past two years. Last Autumn, however, the Mitsu Bishi Company reduced their charges for steerage passengers more than twenty per cent., so that a ticket from Yokohama to Kobe, instead of costing seven *yen*, can now be purchased for five and a half. Possibly the competition of the Union Steamship Navigation Company had something to do with this reduction, but, at any rate, there is the fact, and one is puzzled to see that any serious grounds of complaint remain, or that demands for further cheapening can be urged with propriety. The foreign *deus ex machina*, who is to set everything right by ruining himself, will probably keep people waiting a long time before he makes his appearance.

A VERNACULAR journal says that there are 465 wrestlers, whom the citizens of Tokiyo support and whose periodical contests in the arena of sand and rice-bags are presided over by thirty-nine umpires. Wrestling in Japan is gradually drifting into the limbo of obsolete amusements, but the day of its final demise is obviously not yet at hand. We learn also, from the same source, that residents in the capital, who like to listen to stories of old times and facetiae of modern invention, are purveyed for by 210 *Koshakushi* and 380 *Hanashika*. The *Koshakushi* differs from the *Hanashika* chiefly in his selection of subjects. Both are gentlemen whose professional paraphernalia are limited to a small wooden table, a fan, and a paper rapper,

wherewith to add sound and substance to the point or peroration of a tale; and both earn their fees by reciting, or improvising, histories of the wars and loves of bygone days, or of the sayings and doings of celebrities still present in the flesh. These men are worthy of a high place among Japanese curiosities, but, unfortunately, their most interesting features are not appreciable by foreigners in general. There are, we are further told, 516 establishments in Tokiyo whose business is to deal in male and female servants, and 1,810 inns, at which, during the course of 1883, there sojourned a total of 307,241 wayfarers. Each inn, therefore, had an average of about 170 patrons, being at the rate of fourteen per month, or one every second day; a state of affairs that is not likely to attract capital and enterprise in the direction of inn-keeping.

THE *Mainichi Shimbun* has the following:—On the night of the 25th inst., three armed thieves, their faces completely masked, forced an entrance into a farm-house at Tobe, Yokohama, and walked off with 10 yen. On leaving the premises, they called out to the inmates, "If you report this to the police before three hours have elapsed, we shall set the house on fire and kill every one of you." Terribly frightened at this alarming threat, the inmates of the farmhouse waited full three hours before reporting the matter to the police. The thieves have not been heard of since.

At midnight on Saturday, a fire broke out at Kotobukicho Sancho-me, in the Japanese town to the South of the Swamp Concession, but it was got under control by the Yokohama Fire Brigade No. 5 Shand and Mason Engine before any other pumps arrived. The house in which the fire originated, the residence of Messrs. Ludwig & Co.'s banto, was completely destroyed, and the adjoining house considerably damaged. Great credit is due to Mr. Morgan, the Superintendent of the Yokohama Fire Brigade hand-pumps, for the promptitude with which he turned out his men and got an engine with its thirty coolies to the scene of the fire. The members of the Volunteer Steam Fire Engine Companies assembled as usual for duty, but as there was no wind the fire was subdued without their assistance.

THE Nagasaki opium episode has terminated in the conviction and punishment of the detective policeman who caused the death of the Chinaman Wai Hin-no. As we explained in a recent article, the Administration, in the exercise of the power vested in it by the new Code of Criminal Procedure, ordered the trial to be conducted with closed doors. The same Code provides, however, that the judgment shall always be delivered in public, and this has accordingly been done. A translation of the indictment and the finding, as published by the *Nichi Nichi Shimbun*, will be found elsewhere. Our readers will see that the story told by the Chinese witnesses at the inquest was, in many important respects, a grave perversion of the truth. Wai Hin-no was not stabbed in the house of a Chinese friend, nor were his remonstrances against the illegal seizure of his money the sole cause of the murderous and unprovoked attack said to have been made on an unarmed lad of nineteen by four armed constables. He formed one of a mob of Chinese who attempted to rescue the opium smokers on their way to the

station. The detective, Mine Susumu, being "beaten and otherwise maltreated" in the act of resisting this attempt, lost control of himself, and snatching a sword from one of his comrades, attacked the crowd of would-be rescuers, killing Wai Hin-no, and wounding three other Chinese. For this he has been sentenced to five years' major confinement, in other words, imprisonment with labour. The sentence seems severe, but if it errs at all, it errs on the right side. A policeman's first duty is to keep his temper. If he gives way to passion, and makes unnecessary use of murderous weapons, he ceases to be a guardian, and becomes a disturber, of the peace. The crime is aggravated in the case of the Nagasaki detective by the fact that he did not carry a sword himself, and was consequently obliged to seize the weapon of a comrade before committing the assault. Great excuse is to be found in the rough treatment he had received at the hands of the mob, but, on the whole, public opinion will doubtless endorse the justice of his punishment. The conclusion of this affair suggests a humiliating comment on the intemperate and inaccurate utterances its early stages evoked from a section of the foreign local press.

* * *

By way of sequel to the Nagasaki episode, and as showing how opium smokers are treated in the United States, the following telegram, dated New York, November 25th, is interesting:—

Last night the police raided an opium joint at 97, Crosby-street, and arrested the Chinese proprietor and twenty-six inmates, including a few women, who were either smoking or waiting their turn to secure a pipe of the drug. The men were evidently merchants of some standing, but all gave false names. The women were—Alice Wilkins, a variety actress; Ethel Carson, a dressmaker; Lizzie Dixon, an actress, and Bella Ellis, of Greenville, N.J., who, with her brother William, came to this city to have a smoke.

RUMOUR says that Tennyson's title is to be Baron Tennyson-D'Eyncourt of Aldworth. Referring to this, we read in the *New York Herald* of December 12th:—

The last section of the title assumed by the Poet Laureate on being "elevated" to the peerage is the name of an ancient Norman family, the D'Eyncourts, from which the Tennysons claim to be descended. The poet's uncle, Charles Tennyson, who was a somewhat noted member of Parliament in his day, in 1835 was made happy by a royal license which permitted him to add D'Eyncourt to his name. The poet has always prided himself on his ancient lineage. Reports as to his ability to support the dignity of a peerage are conflicting. A paragraph was recently published to the effect that his total income is only \$20,000, but as he was reputed to be worth \$1,000,000 a few years ago his income ought to be double the first named figures. In person he looks little enough like a poet. His face is strong and his eyes have a certain brightness, but he is seamed, rather than wrinkled, from forehead to chin; he appears to be puffy; he is partially bald; he stoops and shuffles; dresses ordinarily and carelessly, and has a generally rustic mien. His family consists of his wife and two sons, Hallam and Lionel, the last named having about four years ago assumed the surname of Turner to qualify himself to succeed to the Lincolnshire estate of his uncle, the Rev. Charles Turner, which is worth over \$5,000 a year. This brother of the poet, in his turn, had assumed the name of Turner on succeeding to the property, which had come into the family through his grandmother. The poet, who is now seventy-three years of age, has passed most of his life since his marriage at Farringford, on the Isle of Wight. About fifteen years ago he built himself a second residence, in a picturesque valley in Surrey, where he passes a part of each year for the sake of inland air and scenery. This residence is known as Aldworth, and its name is to be incorporated in the Laureate's title.

Of course those persons who profess to despise titles and other nominal distinctions, indulge in a great deal of unkind criticism at the Laureate's expense. *Truth* makes a compromise, for while admitting that Tennyson himself may properly receive the personal recognition and admiration of his countrymen, it ridicules, as an exquisite absurdity, the idea that his son and son's son

should be made a legislator. The *Pall Mall Gazette*, on the other hand, goes the whole length of ridicule and contempt, and publishes a bitter parody ending with the following verses:—

Alfred, Alfred Vere De Vere,
If time be heavy on your hands,
Are there no toilers in our streets
Nor any poor in all these lands?
Oh! teach the weak to strive and hope,
Or teach the great to help the low;
Pray Heaven for a noble heart,
And let the foolish title go.

THE wife of a gentleman who sells dried bonito in Shiba, Tokiyo, has presented her husband with three lusty children, two boys and a girl. The lady who performed this inconveniently prolific feat ought to have known better, being thirty-five years of age. Such, at any rate, is said to have been the opinion of her husband, who thought the event sufficiently unlucky to justify him in calling the boys Tortoise (*Kame*) and Stork (*Tsuru*), and the girl Plum (*Ume*). Say what one may, it is a comfortable thing to carry one's religious faith into the events of every-day life. People who cross themselves, and invoke the "Blessed Virgin," or the "Holy St. Peter" when anything shocking is presented to their senses, have a manifest advantage over people who employ no such reassuring formula. A Japanese, indeed, at seasons of mental perturbation, does not draw figures on his face or utter the name of some buried saint. His, or rather her, habit,—for such performances are almost confined to women—is to ejaculate "Stork and Tortoise" (*Tsuru-Kame*) whenever any words of ill-omen are spoken within hearing. It has not been explained precisely what species of divine sympathy this exclamation is supposed to enlist. We only know that among animate things the stork and tortoise, among inanimate, the plum, bamboo, and pine, are regarded as types of longevity. The stork-and-tortoise device seems, therefore, a little far-fetched, but there are occasions when a Japanese treats his deities in an honest, straight-forward way that deserves admiration. Watch him sneeze, for example. He immediately ejaculates "beast," and touches the tips of his shoulders with his left hand. At first sight the impression conveyed is that the prospect of catching cold, with all its evil contingencies, has betrayed him into a rashly frank estimate of his own character. But the fact is that the individual apostrophized as "beast" is, not the sneezer, but the causer of the sneeze; in other words, the god of catarrhs and influenzas. The Japanese does not pretend to conciliate that unpleasant deity. He opens hostilities with him at once, and so vigorous is the moral attitude of certain old-fashioned country folks that they go for the god with a broom-stick whenever he makes his presence plain in a snuffle or a cough. A Western, under similar circumstances, invokes a blessing on the sneezer's head. Which of the two customs is the more logical we cannot pretend to determine.

THE Hoihow correspondent of the *Hongkong Daily Press*, writing on the 18th inst., says:—"It will no doubt interest your readers to hear that five Chinese gunboats and the China Merchants' Steam Navigation Co.'s steamer *Fu-shun* arrived here the other day with about 2,500 troops from Canton. The Chinese here seem to have the notion that Hainan will be taken by the French at the end of this month. The populace is in consequence a little excited, and the soldiery also do not make a very peaceable impression. However, up to the present time

no complaint can be made against them, and we are told that the largest portion of the troops will leave to-morrow for other places on the coast. The rumour that the French have been driven out of Sontay is also circulating in this port."

IN the event of a war between France and China, the British Channel, or at any rate the Baltic, may become the scene of a naval encounter between a French squadron and the Chinese vessels of war which have just been completed in the Vulcan Company's yard at Stettin. A very fine ironclad, the *Chen Yuen*, has recently been completely armoured in the dockyard, and is now ready for a commission which may prove a very eventful one. As at present arranged, she is to leave Stettin for China in the course of December, when she will be accompanied by four torpedo-boats, which have also been constructed for the Chinese Government. The meeting of this valuable addition to the already formidable navy of China with a French flotilla might form one of the opening scenes of the coming war, and would be additionally interesting if it could be arranged within sight of our own shores—say on a fine Saturday afternoon off Brighton, or within view of the visitors to Dover, Folkestone, or Eastbourne.—*Whitehall Review*.

THERE must be a certain intellectual luxury in frightening oneself out of one's wits, and the *Spectator* has abandoned itself entirely to the temptation. Last week it foresaw that the Mahdi's victory would arrest the French advance on Tonkin, and make Frenchmen fight for their lives from Tripoli to Morocco. Now, it imagines the Mahdi swimming across the Red Sea—at least it does not tell us how he is to cross without swimming—to Mecca, and then all India will explode like a dynamite bomb, and it will cost us £20,000,000 and 10,000 lives to put the pieces together again. This is very entertaining, no doubt; it makes the flesh creep and the hair stand on end, but all the while we are never really frightened, for every one knows it is so delightfully absurd. The Mahdi, according to a Constantinople telegram, has only 2,000 robbers as the nucleus of his forces; the rest of his warriors are savage tribes, who rally round any one to defeat an invader, and he is about as likely to explode India as he is to capture Windsor Castle. But then that only makes him all the more excellent a bogey for people who like to work themselves up into a terrible fright.—*Pall Mall Budget*.

CONSIDERABLE interest is created in London by the friendly rivalry between two American illustrated magazines, and the new enterprise set on foot by MacMillan & Co. The struggle for fame and profit is pursued with energy and spirit, and under more equal conditions than might appear at the first glance,—the cheapness of the latest applicant for public favor being relied upon as an off-set to the superiority in size and variety of the New York monthlies. The methods by which *Harper* and *The Century* were brought to their present high popularity in England would form a significant chapter in the history of periodical literature. Ten years ago, the first determined attempt to introduce *The Century*, then called *Scribner's Magazine*, to English notice, was made by the proprietors of that publication, who discerned an opportunity of occupying and holding a field where the powerful competition of *Harper* was unknown. They

saw the advantage of obtaining the support of two great communities, at a time when the addition of a few thousands to their subscription list was a matter of importance to them. The home circulation of *Harper* was at that date so enormous that the expediency of using any exertion to extend it, in another country, was not apparent. In 1873, then, a consignment of two thousand *Scribners* was sent to Frederick Warne & Co., at the owners' risk, and on terms allowing small chances of remuneration. The experiment was continued for a year, without much prospect of success. In fact, the monthly sales did not average one thousand copies, and the supply was therefore reduced by one half. In the second year, however, the merits of the magazine, and its exceptional quality as regards illustrations, began to be recognized, and the sales increased to an extent which induced Messrs. Warne & Co. to take the English business into their own hands, where it has remained ever since. In 1876, the importation rose to two thousand copies. In 1878, three thousand were required, and the increase thenceforth was rapid until 1880, when eleven thousand were sold. The undertaking having been up to that period tentative, the full American price had never been charged in London, but it was now changed from a shilling to one and fourpence. This, indeed, was a penny and a half less than the sum demanded of the retail purchaser in New York, and a halfpenny less than the cost of each number at yearly subscription. The addition to the price had no injurious effect upon the sale, which is said to average, at the present time, twenty-five thousand copies. It was not until the latter part of 1880 that Harper and Brothers entered the English market, where their success was immediate and vast. Their first consignment was an edition of thirteen thousand, and in 1881 more than thirty thousand were called for. The price was fixed at a shilling, and has always remained the same. A circumstance which we do not see mentioned in any account of the introduction of this magazine into England, is that the plan was strongly urged, and its benefits represented, a little before it was carried into operation, by Charles Reade—always a hearty ally of the American publishers. The London agents are Sampson Low & Co., and it is understood that nearly fifty thousand copies are distributed by them each month. The superior circulation of *Harper* to the *The Century* may probably be attributed to more than one cause. In the first place, the former is sold for three-quarters of the price of the latter. In the second place, *Harper* is modified and slightly altered for the English public, the distinctive American features of the editorial departments being omitted, and their place filled by new matter prepared in London by Mr. John Lillie. It is difficult to believe, however, that English readers can gain by anything substituted for Mr. Curtis's matchless "Easy Chair" essays. *The Century* is circulated abroad in precisely the same form as that presented to its home purchasers. It is certain that neither magazine has reason to regret the experiment of appealing to a new circle of supporters. Their success has had a marked effect upon British periodical literature. The prices of certain monthlies have been reduced one half, and a new candidate for favour has been started by MacMillan & Co., intended to satisfy the same tastes as the New York publications. It is finely illustrated, and well supplied with reading matter; and its price is

only sixpence. But it has only seventy-two pages, while its foreign competitors have each one hundred and sixty. The rivalry cannot fail to be advantageous to the reading world both in England and America. *The Century* and *Harper* have reached a degree of excellence which perhaps neither would have attained without the stimulus of the other; and unless the London publishers are willing to see the magazine market usurped by Americans, they must exhibit corresponding energy and enterprise.

A GREAT quantity of human hair has been recently exported to France and England from Russia; and, the suspicions of the police authorities of the province of Pskov having been aroused, a priest named Seraphin was a fortnight ago arrested on a charge of fraud. It was then discovered that this man last year founded a religious sect, every member of which on joining it had to sacrifice his or her hair as a symbol of obedience to the superior. Seraphin has a brother, a fashionable hair-dresser in St. Petersburg; and to this man the priest consigned the locks of the faithful. Seraphin is now in gaol; the new sect of the Seraphinovski has met with untimely extinction; and the shorn sheep are consoling themselves as best they may upon the money obtained from a sale of the effects of their too ingenious pastor.

MR. COMMISSIONER OSBORN, *The Times* correspondent at Durban, states that the chiefs had met in the Reserve at Ekowe, over 1,000 persons being present. The leading spokesman, Swiceelewele, ascribed all the agitation and bloodshed to the action of white men from outside, and expressed bewilderment at seeing Cetewayo brought among them to foment further discord. John Dunn concurred in these remarks, and predicted war in the Reserve if a settlement were deferred. One tribe there was, he said, already preparing for war. Other chiefs followed in the same strain. Mr. Osborn said, amid applause, that he understood they clamoured for the removal of Cetewayo from the Reserve. That question was then being considered by the Queen's Government. He commended the chiefs' frank statement of grievances, but urged the people to till the ground and sow the crops.

THE second part of Mr. Audsley's work on the Ornamental Arts of Japan has appeared almost simultaneously with the long promised *Art Japonais*, by M. Louis Gonse, editor of the *Gazette des Beaux Arts*. We have already spoken unfavorably of the first part of the former work, and the second is, if possible, more disappointing. The author has probably devoted some time to the study of his subject, but the impression his writing conveys is one of remarkable ignorance. This last product of his labour, elaborate, costly, and luxurious in all its details, contains not one word of solid information, if we except the contents of Mr. J. Quinn's essay on lacquer manufacture, which is reproduced with commendable fidelity. For the rest, the truest description applicable to Mr. Audsley's effort is that it is a scrap-book, filled with a number of very ill chosen specimens of modern Japanese art. The originals of the pictures are evidently badly conceived and crudely executed. Indeed, the author himself is cognizant of this, for he tells us, on more than one occasion, that the paintings he copies are the productions of "ordinary artists," and not the best examples of

Japanese skill. He might have added with truth that, from first to last, his book does not contain a representative specimen of good Japanese art. Under these circumstances, it may well be asked what special qualifications he possesses to justify him in undertaking the task he has set himself. If the efforts of the Japanese masters were inaccessible by him, why has he devoted so much time and money to the preparation and publication of an album the contents of which stand in about the same relation to Japanese art proper, as a lath-and-plaster national school-house in Tokiyo to the choicest examples of classic architecture? Any person of ordinary intelligence might have gone from one friend's collection to another, and selecting now a picture, now an embroidery, and again a lacquered panel, caused these things to be engraved, or chromo-lithographed, and then bound together, adding such descriptions as the details of the drawing or the information of occasional essayists supplied. This is what Mr. Audsley has done. Sometimes, like a writer of doggerel who borrows his ideas from his rhymes, he appears to have reproduced a picture for no better reason than that some accident had familiarized him with the subject. On no other supposition can we explain the fact that selections from a scroll representing the tortures of the Inferno find a prominent place in the first section of his work. These pictures have not one redeeming feature. In point of execution they are inferior to the illustrations in a third-rate book of fairy tales—indeed, a portion of the last in the series might have been copied from the doings of the Genius of the Lamp, as depicted in cheap editions of the *Arabian Nights*—while, artistically regarded, they are execrable. But it happened that a writer in the *Theological Magazine* had given to the world some details of the Buddhist Hades, and so Mr. Audsley copies this scroll with all its sanguinary, absurdly drawn, details, and appends a description three times as long as that accompanying any other plate in his book. In the collection of a Parisian firm he found some good specimens of metal work, in the shape of knife handles. Twenty-four of these are depicted in Plate VII., without any attempt to explain the subjects, or any reference to the names of the artists. And, will it be credited, Mr. Audsley here makes it plain that, while undertaking to write about Japanese metal work, he knows nothing of that beautiful composition *Shakudo*. He speaks of it as “an intensely black metal, probably platina or steel, so treated as to present a jet black surface”! This is an excellent example of his airy ignorance. His album may perhaps help to popularize the present spurious phase of Japanese art industry, but as a contribution to sound knowledge the value of the first two parts is absolutely nothing.

* * *

The work of M. Louis Gonse sets out by declaring that “Japanese art, by which we understand, the antique art, the art of the good epochs, is completely unknown by the public:” that “the origin and the history of the art of Nippon are still a sealed book;” and that “the works which occupy themselves with the subject contain nothing but vague indications, and hazardous assertions.” We have seen how true this is of Mr. Audsley's effort. Let us now see whether it applies also to that of M. Louis Gonse. That gentleman seems to have relied, mainly, if not altogether, on the assistance of a Japanese, Mr. Tadamasha (?) Hayashii, by whose

coöperation he has been enabled to decipher marks, and to draw upon written records, which, however, he speaks of as few, confused, and vague. His project, as announced by himself, is “to determine the general lines of the art's history, to establish its chronology upon bases as exact as possible; to place in relief the artists who have left a trace in their works, and, in the case of the greatest, the most renowned, to present the essential facts and dates of their biographies.” This is a wide programme, and when we observe that, in carrying it out, the only special advantage possessed by M. Gonse, apart from his own artistic education, is the aid of a most obliging and clever translator,” who, however, has never made the subject a particular study, we feel more than doubtful of the result. The book itself, though published last October, is not yet to hand, but judging from the specimen prospectus, the illustrations are executed with the utmost skill, and their subjects well chosen. It is a bad presage that Hokusai should be spoken of as “the most original and extraordinary artist Japan has ever produced, but also the most wrapped in obscurity.” We never knew that there was anything obscure about Hokusai, and as to his being “the Rembrandt of the Far East,” that, with all due deference to M. Louis Gonse, is mere bathos. *L'Art Japonais* will probably prove almost as disappointing as Mr. Audsley's work in point of trustworthy information. But, then, it will be marked by the incomparable taste and graceful fancy which French authors generally bring to bear upon such a subject.

“ATLAS,” in the *World*, says:—All who wish to see what the art of Japan really is—what it is *not*—our own shops must have shown pretty clearly by this time—should go to the Japanese Fine Art Gallery, at 14, Grafton Street. A prettier or more genuine collection has rarely, I should imagine, been seen in London. Ivory carvings, bronzes, lacquered and enamel work, trays, cabinets—no one who has got his ideas from the flimsy trash so long current among us has any notion what such things are till he goes to this little gallery, and, to use our critics' favourite phrase, “sees the object as it really is.” The collection has also other advantages. It is not so large as to fatigue the visitor; he is charged nothing for admission; and he is not pestered to buy things.

For the first time in the history of the British army one of its subalterns is in the position of owning the first favourite for the Derby. The owner is Sir John Willoughby, Bart., lieutenant in the Royal Horse Guards, and the animal, that magnificent Adelaide filly with which all good judges fell in love at the Newmarket July meeting. As winner of the “July” and the Dewhurst Plate, she has secured, as a two-year-old, close upon 3,000*l.* in stakes, and has apparently the brightest of futures before her. In common with our contemporaries, we have our own particular “Mahdi” on this paper, and shall decline to allow him to meddle with predictions as to the future of this aforesaid filly, whose career will be so closely watched by plungers in general and the Household Cavalry in particular.—*Whitehall Review*.

THE *Ceylon Observer* says:—Sir Walter Medhurst, the son of a well known China Missionary, and himself long in the Consular Service in China, went out about a year ago to urge

Chinese immigration into North Borneo. He has now finally said farewell to China and goes “home” in the *Peshawur*. The reason why the Chinese do not crowd Colombo as they have done Singapore, Penang, and Batavia, is to him and to us an insoluble problem. Our idea is they cannot compete with the tambies as pedlars, or with the Sinhalese and Tamils as cultivators of vegetables. Sir Walter is now convinced that the Chinese are of little good for purely tropical agriculture. They are first-rate vegetable gardeners, but they cannot tackle forest, which is very heavy in North Borneo. Mr. Dent's Company should, through Mr. Gibbon, get the services of some of our Sinhalese. They could, we should think, be had for the axeing!

SECOND-RATE novelists are no longer tolerated by modern reviewers. Biting sarcasm is the mildest punishment of unfortunate novel writers who are caught tripping, and woe betide the unlucky wight who misquotes foreign tongues, or attempts any of that ponderous humor which was, a century ago, so frequently to be found in works of fiction. “A Bartered Honour,” by R. H. Sherard, has just undergone the operation of a scathing review at the hands of the London press, and all we wonder at is that no news has as yet reached us of the sudden demise of the author. “Dear Herbert, I am a d—d cad,” telegraphed Charles Hawberk, the hero of this curious novel, to his friend Herbert Lovell; and that is exactly what he was, and so, more or less, are all the characters in Mr. Sherard's story. It is called “A Bartered Honour,” but why this title was chosen it is difficult, after a most careful perusal, to decide. Nobody in the book gives any signs of possessing any honour to barter, unless it be the hero, who from believing himself a nobody's child, comes to find himself an earl and heir to a goodly income, which he wishes to waive his right to, merely, as far as the reader can gather, because an imbecile old woman declares to him that she once loved his father! Again, Mr. Sherard's idea of how a man under certain circumstances should behave, may be conveyed by the following, which the hero gives vent to when the family lawyer greets him for the first time as “my lord.” Although he was at the moment in a room at the Grosvenor Hotel “he threw up the window, and shouted down the street:—‘I am the Earl of Brookshire, and ye are fools and knaves. I have now the right to scorn and disdain ye, and insult, and ignore, and condemn ye.’”

IN the U.S. Consular Court yesterday, two colored men named R. C. Ellis and Frank Howard were charged with assaulting Mrs. Weightman, stabbing her in the thigh, and doing damage to property of the value of \$25.00. She stated that the prisoner Howard had followed her to the U.S. Consulate and slapped her in the face; afterwards in her house he stabbed her. The other prisoner, Ellis, only broke in the door and windows. Howard acknowledged that under great provocation he slapped her face. He denied all knowledge of the stabbing and throwing of stones. Ellis said he was walking home from the Seaman's Reading room when he saw Weightman threaten Howard with a hatchet, and Mrs. Weightman struck him first with a champagne bottle and afterwards with a soda-water bottle. He (Ellis) did not touch the door or break the windows. The prisoners called three witnesses for the defence, who swore that

the prosecutor was intoxicated and assaulted the prisoner Howard, and that the prisoner Ellis did not do anything. E. Valentine said that he saw Howard slap Mr. Weightman in the face; he did not hear any of the conversation. R. McCance, deputy marshal, said he saw Mrs. Weightman at the Consulate a little after 5 o'clock. She wanted him to arrest Howard who was with her, but he told her to take him to the Police Station. She used very abusive language to Howard, who wanted \$2.00 from her. He walked to the gate with them, she still calling the prisoner bad names, and when they got to the gate he shut it and walked in again. He did not see the slapping. He thought she was under the influence of liquor. His Honour acquitted the prisoner Ellis, and said as he was disposed to think that Howard was liable to be troublesome he should lock him up for 3 days.

At H.B.M. Court yesterday, before Judge Hannen, a case was heard in which Tanaka Fukutaro sued the proprietors of the *Japan Gazette* for a month's wages, \$25. After some discussion between the Bench and Mr. Litchfield, who represented the defendants in the case, relative to a counter claim by them, which claim was ultimately abandoned, it was proved by several witnesses that the plaintiff had neglected his own work, prevented other men in the employ from doing their work, and had gone to the office drunk and created a disturbance there. After this evidence had been given, Mr. Litchfield rose to address the Court, but His Honour said there was no necessity for his doing so. His Honour was satisfied that the plaintiff had been drunk and disobedient, and he would therefore make no order upon the defendants for the claim.

THE *Hongkong Daily Press* of the 25th ult., says:—The steamer *Greyhound*, from Hoihow, arrived at this port yesterday afternoon, and brings intelligence that the attitude of the Chinese there towards foreigners has been particularly hostile since the arrival of the troops sent down from Canton to guard against a possible French invasion. Europeans are constantly insulted and menaced by the Chinese, and one gentleman was recently mobbed and stoned, while another gentleman has been put in such terror for his life that he has abandoned his house and fled to a more secure position, leaving his effects behind him.

THERE is a millionaire now in New York who has a habit which probably the daughters of some of our wealthy English merchants will think might very well be imitated on this side of the Atlantic. This American millionaire is exceedingly fond, like most of his countrymen who make much money, of diamonds, and he has bought so many in his time that he has come to be regarded as one of the diamond amateurs in the United States. But his chief pleasure in buying diamonds is that he may give them to his daughters, though his manner of making the gift is a little peculiar. When he has made any especially happy selection of diamonds, he gets all his daughters, married or single, about him, takes the diamonds in his hand, and counts "One, two, three," tosses the precious stones into the air, and as they fall the daughters scramble for them, on the good old principle of "the quickest gets the most." The girls like this scramble.

THE *Pall Mall Budget* of November 30th, writing on Irving's visit to America, says:—Mr.

Irving's season at New York closed on Saturday evening. He appeared in the first act of "Richard III." and "The Belle's Stratagem." He then recited "Eugene Aram." The theatre was densely crowded with an audience which manifested its enthusiasm by almost continuous applause. Mr. Irving and Miss Terry were called forward no less than fifteen times during the evening. A beautiful laurel wreath was presented to Mr. Irving. The total receipts for Mr. Irving's performances for the month were 75,687 dols., which are 13,874 dols. above Mrs. Langtry's, and 23,253 dols. below those of Mdme. Bernhardt. Bitter complaints are made about the purchase of the seats wholesale by speculators. It is believed that the first audience paid 17,000 dols., although only 3,000 dols. was received at the box-office. There has been some discussion on the subject between Mr. Irving and Mr. Abbey, with the result that Mr. Irving intends to be his own manager next season. Mr. Henry Irving began an engagement in the Chestnut-street Opera House, at Philadelphia, on Monday night, in "Louis XI."

GREAT quantities of volcanic scorix have been cast by the waves upon the ocean beach in Los Angeles county. Whether this flotsam was the product of the late eruption in the Arctic regions, or whether it was first belched out of the earth during the Javan disturbance and after being carried up the eastern coast of Asia by the Kuro Siwo, was floated down by the ocean current that washes our coast, of course no man can say. It is one of the mysteries of nature. But this much is known: That the Java eruption threw vast quantities of scorix into the sea, for navigators who were in the vicinity soon after, have reported meeting the material floating on the waves in such quantities as to considerably impede the passage of their ships.—*Alta*.

REFERRING to the new opera by Gilbert and Sullivan, shortly to be produced by Mr. D'Oyley Carte, the *Whitehall Review* says:—The management of the Savoy Theatre has done a very wise thing in engaging Miss Lillian Russell to play the lead in the new comic opera which it has now in rehearsal. When Miss Lillian Russell first appeared in England we unhesitatingly pronounced her to be both a finished vocalist and a cultured actress. We feel sure that these qualifications will appear in full force during her engagement at the Savoy. The character she is to take is that of the Princess in the new work of that name. It is the leading soprano part, and requires to be treated with more than ordinary dramatic and vocal skill. Some of the music, we understand, has been especially composed by Sir Arthur Sullivan to suit Miss Lillian Russell. Arrangements had been entered into with Mr. Alexander Henderson for Miss Russell to create the part of Nell Gwynne—and right well she would have interpreted so romantic a character—but the engagement to the Savoy Theatre has superseded this. The salary to be paid to Miss Lillian Russell is the largest that has yet been paid in London to any comic-opera artist.

"I HAVE," says a correspondent of *St. James's Budget*, "now for many years followed a practice, in regard to such bonds and other securities payable to bearer as I possess, which practically insures me against loss either by fire or fraud. It is simply to cut off all the coupons

attached to the bond. These I deposit at my bank for safe custody and collection. The bond itself I keep in my safe at home. It is obvious that unless both bank and private house be burned the same night, I am safe against fire, for with either bond or coupons in my possession I could doubtless make good my claim to a reissue of the missing portion from the Government or company concerned. And the same may be said of theft. If the bank is robbed, I retain my bond; if my house is robbed, I retain my coupons, and no thief could find a buyer for either portion without the other. I wonder that this simple plan is not more widely adopted. It was recommended to me more than twelve years ago by Judge Longfield, of Dublin, and I have followed it ever since."

SAMPSON FOX, the great English manufacturer, who also owns works at Essen, Prussia, and proposes to establish another branch at Philadelphia, tells an interviewer that before long steamships will be built which will make the trip across the Atlantic in four days. Steamers which can do this will, he expressively remarks, "be all engines and passengers," making no pretence of carrying freight. In ocean travelling, as well as land travelling, economy and, to some extent, safety must be sacrificed when speed is made the prime object.—*Alta*.

THE fire at Homoko, which we referred to on Saturday, broke out at a quarter-past eight o'clock on Friday night at the further end of Homoko, near the ladies' bathing place, but was confined to the compound in which it commenced by the exertions of the villagers assisted by volunteers from the "Relief" steam Fire Engine Company who brought with them the Yokohama Fire Brigade Engine from the station at 130, Bluff.

WE reproduced a report from the *Fiji Shimpo* yesterday to the effect that some sixty sailors had deserted from the *Tsukuba-Kan*. This report has been officially contradicted by the *Kampo* (*Government Gazette*).

WE read in a vernacular paper that His Majesty the Mikado intends to promote Mr. Yanagihara, the President of the Decoration Bureau, to be Second Minister of State in place of the late H.E. Iwakura.

THE *Fiyu Shimbun* reports that Mr. Takei, Chief Secretary of the Agricultural and Commercial Department, has been appointed commissioner to the International Forestry Exhibition, which will shortly be held in London.

THE condition of the anchorage with regard to foreign sailing bottoms is such as has never before been seen by the oldest foreign resident. There is at present not a single sailing ship in the harbour from American or European ports, the sailing vessels consisting of the otter-hunting fleet of schooners belonging to the port.

THE wreck of the British bark *Sattara*, submitted to the hammer yesterday by Messrs. Cope & Co., realised the following sums:—The hull of the vessel, purchased by Messrs. Kildoyle and Robertson, was knocked down for \$1,750; sails, \$610; sundry stores in godown, \$135; gunny bags \$590. The last three lots were bought by Mr. J. J. Gray.

DIRECT TRADE.

THE Agricultural and Commercial Department under its present chief, General SAIGO, displays a commendable activity in its endeavours to promote improved agricultural and manufacturing methods throughout the country. Next year the public is promised an exhibition, at Uyeno, of everything pertaining to the production and preparation of silk, and already steps have been taken to convey information of the fact to the chief producing districts, as well as to make preparations for forwarding exhibits. It is also announced that the officials charged with this business are to take the opportunity of observing the methods practiced in the different provinces, and to report upon any points that may appear worthy of comment or in need of correction. Messrs. GRIFFIN & Co., in their exhaustive circular, recently published, say that "beyond question the production of raw silk in Japan is capable of much greater extension," and the figures they quote show that the elasticity of the trade is exhibiting itself in a very marked manner. Looking back at the returns for the past eight years, it appears that, omitting the altogether exceptional seasons 1876 and 1877, the export of silk may be said to have doubled in 1883. Even including those two seasons, the statement will not be far astray, for whereas the average export for the second half of each year, up to 1882 inclusive, was only 14,300 bales approximately, the export for the same period of 1883 was 23,704 bales. It will probably be right, however, to regard 1883, also, as an exceptional season. In 1876, when the semi-annual export reached 18,434 bales, the origin of the stimulus was to be sought in circumstances outside Japan; but we need not go beyond the country to find the cause of the increased activity in 1883. Of the 23,704 bales exported, no less than 5,654 were shipped directly by Japanese, against 2,006 similarly shipped in 1882. Referring to these so called "direct shipments," the circular from which we quote speaks of an "alarmist view that Japanese have determined to do their own business without foreigners' intervention." There is nothing in any sense novel about this idea. Beyond question the Japanese want to do as much of their business as possible without foreign aid. But after all, the object of doing business is to make money, and, up to the present, direct shipments have not been found sufficiently profitable to encourage a general departure from old fashioned grooves. On the other hand, it will be urged that direct trade was on trial long before 1883, and that its large increase in that year must be regarded as an evidence that the people have reconciled themselves to its risks and difficulties. We do not, however, share this view. During 1883, Japanese shippers enjoyed peculiar financial facilities. They obtained advances on easy terms, not only as regards rates

of interest and so forth, but also in respect to the manner of meeting their obligations and effecting their sales. We pointed out, in the spring of last year, that this would probably be the case. Apart from a foreign loan, the only plan within Japan's reach to accumulate a specie reserve against her fiat notes was to exchange her paper for silver at home or abroad. To carry out the exchange at home, would have been to reproduce those rapid fluctuations which had already proved so fatal to trade, as well as to incur the almost certain danger of inducing fresh depreciation. She chose, therefore, and we cannot but think that she chose wisely, to effect the exchange abroad; or in other words, to send her paper to Europe and America in the form of commodities. The result is shown in the above figures, and we may say that, so long as this policy is thought necessary, direct shipments will be abnormally stimulated. That they will receive, at the same time, a permanent stimulus, seems likely enough, for beyond question something of the experience gained under these exceptional conditions will remain and be utilized. To those, however, who discern alarming features in this prospect, it may be well to point out that, in point of fact, the policy here referred to can not be justly charged with having diverted any appreciable portion of the silk trade from foreign hands. If the direct shipments be subtracted from the total export during the latter half of 1883, it will be found that the number of bales shipped by foreign merchants was 18,050, that is to say, only 400 bales less than the number shipped during the corresponding period of that very exceptional year, 1876, and about 4,000 bales in excess of the average for the past seven years. Thus the effect of the financial operations to which, in our opinion, much of the direct export in 1883 is referable, has been largely to increase the bulk of the silk trade, and one consequence of this development has been to swell the specie balance in the Treasury vaults, and thus to give stability and quality to the fiat currency. We are aware that many side issues present themselves for discussion in this context, but the broad facts do not seem to leave much room for uncertainty.

A POLICY INCORRECTLY ATTRIBUTED TO THE JAPANESE GOVERNMENT.

A CORRESPONDENT, whose letter will be found elsewhere, addresses us on the subject of the policy attributed to the Japanese Government by a local contemporary. Briefly, that policy is described as a return to the strict letter of the treaties, should it be found impossible to obtain their revision in a liberal sense. The effect of the change would be three-fold, according to the article from which our correspondent quotes. First, travel in the interior would

no longer be permitted; secondly, the propagation of Christianity would be interdicted; and thirdly, the bodies of foreigners dying outside the treaty limits might not be interred in Japanese cemeteries. "Englishman" is perhaps right when he says that the open attribution of such intentions to the Japanese Government ought not to pass unnoticed. There are, however, some mischiefs which the gentlest treatment cannot fail to aggravate; and, as a rule, to trust the correction of manifest misstatements to public intelligence seems wiser than by contradiction to provoke fresh exhibitions of national prejudice. The question which has to be solved sooner or later, and upon whose solution depend the development of Japan's foreign trade as well as the prosperity of the foreign residents, is whether this country shall be completely opened to Western intercourse, or whether that intercourse shall continue to be circumscribed by the narrow limits appointed twenty-eight years ago. There ought to be no difficulty in discussing such a problem dispassionately and amicably. Both sides are equally concerned in coming to an understanding, and both sides ought to be equally anxious not to misinterpret each other's motives, or to drift away into angry and irrelevant polemics.

As for the policy attributed to the Japanese Government, we are uncertain whether to regard it with amusement or surprise. The notion that the present Cabinet of Japan would "express its determination" to interdict the propagation of Christianity under any circumstances whatsoever, is scarcely less ludicrous than the pretence that, unless the treaties are made terminable, sepulture in Japanese cemeteries will be denied to foreigners. A great deal of credulity is needed to believe that these assertions are serious. Their very sequence betrays their absurdity. For, in the first place, all exit beyond treaty limits is to be stopped: in the second, sepulture outside treaty limits is to be forbidden; and in the third, missionaries found outside treaty limits "without passports" are to be arrested. We fail to comprehend how missionaries are to be arrested for not having passports when the issue of all passports is stopped; or how foreigners strictly confined within treaty limits, are to die outside them. We have no difficulty, however, in conceiving that there may be persons who, reading the words quoted by our correspondent, and not pausing to discover their manifest contradictions, will hastily accredit the Japanese with a spirit of grotesque pettifoggery, and conclude that the Government's liberal attitude towards Christianity is the outcome, not of earnest conviction, but of crafty policy. These are cruel aspersions, calculated to bring grave discredit on Japan and to deprive her of all title to foreign confidence. It is very conceivable that, in time, there may be aroused among a small section of the Japanese public some reflection of the

bitterly hostile spirit displayed towards this country by writers in the English local press. But such a sentiment will never extend to the intelligent and influential classes of the nation. Were utterances similar to those quoted by "Englishman" published in France of the French, or in Germany of the Germans, by an English journal, however insignificant, some indignation would surely be aroused. We cannot suppose that a corresponding effect is absolutely nil in Japan; and just to that extent it is correct to say that a feeling of anger against foreign illiberality exists. But the progress of the nation is happily independent of these petty influences. No Government could set itself to oppose that progress and live. As for the present Government, however strongly its influence and aid may ultimately be thrown into the scale on Christianity's behalf, they will never be found in the other side of the balance.

That the outlook would be hopeless if the facts were such as those referred to by our correspondent, admits of little doubt. But they are not so. The Japanese Government—we speak after inquiry and with authority—has never expressed itself, directly or indirectly, in the sense implied. The course ascribed to it is too obviously absurd to justify detailed denial. We may remind our readers that what the Government seeks to accomplish is the complete removal of all restrictions upon foreign trade and travel. Its object is to increase, not to curtail, the privileges conferred by the present treaties. Reasonable men will ask themselves whether a declared wish to throw the whole country open can be reconciled with a feeling of "antipathy to foreigners lurking under cover of a simulated friendship." By those only who know that they have laboured to produce such a feeling can its existence be credible.

KINSATSU AND COMMERCE.

I.

IT has hitherto been our custom at the beginning of a year to comment briefly on the leading events of the previous twelve months. This season, however, we have broken through the habit, not because 1883 was, in any sense, uneventful, but because we are unwilling to perpetuate the memory of an era which proved so disastrous to the pockets of this community. In the spring of 1881, we called down upon our heads many expressions of derisive dissent by declaring that the import trade of Japan had seen its best days, and that in the immediate future the tendency would be towards contraction rather than expansion. Our forecast, however, was based on a very easily deciphered series of facts, and its justice has been amply established by the event. We could wish that it had been otherwise, but wishing will not mend matters, and the only consolation we can find, at the opening of 1884, is that the causes which of late years tended to paralyse Japan's trade have probably passed their climax. It is scarcely necessary to remark

that at the head and front of those causes stands a fluctuating medium of exchange. The experiences of other countries in connection with fiat notes have been reproduced, phase by phase, in Japan. Here, as elsewhere, an inflated volume of circulating media imparted a temporary impulse and a fictitious air of prosperity to industry and trade, and here, as elsewhere, the reaction has been painfully apparent in every branch of enterprise. Of the processes by which these results have been brought about, and of the devices employed by the Government to contract the bulk of its paper issues, as well as to collect a specie reserve, with a view to ultimate resumption, it is unnecessary to speak now. Probably by this time the foreign community has ceased to suspect that the recent steady appreciation of *Kinsatsu*, and corresponding depreciation of commodities, are entirely due to some necromantic method of "bulling and bearing" contrivable only by Japanese financiers. The Government, by its vacillating and tentative schemes in former years, forfeited the confidence of the public, and has little reason to complain of the scanty credit even its sound and honest proceedings subsequently received. There are still, indeed, many persons who hold that currency contraction has been carried on with unwise rapidity; and, judging by events, the criticism appears just. But the most that can be truly said on the subject is, that Japan has fared no better than England and America fared under similar circumstances. Her sufferings have been the counterpart of theirs, with only this difference, that she has borne them more quietly. Had it been possible for her financiers to foresee that a moderate contraction of the bulk of their fiat paper, supplemented by the accumulation of a comparatively small specie reserve, would produce such marked effects as the past two years have witnessed, they ought certainly to have exercised greater deliberation. But finance is an exceedingly delicate affair. If but a fraction of what has been written on the subject in Yokohama were true, the extreme sensitiveness which *Kinsatsu* have shown was the last thing to be looked for. There was a time, not so long ago either, when scarcely a day passed without some censure, direct or indirect, being publicly levelled at the Government, because it took no steps to contract its excessive issues or to provide for a return to specie payments. Measures were then advocated whose one aim was to drive the currency up to par in the shortest possible period, and all the resources of a not too circumspect vocabulary were employed to assail the reputation of financiers who neglected to follow these various counsels. True, amid the outcry, one or two voices were raised on behalf of moderation, but the general clamour was for speedy and decisive action, and arithmetical calculations were published to show that,

by raising a foreign loan and devoting it to resumption, the Government might bring about an appreciation of twenty or thirty per cent. in the value of its fiat notes, and increase the purchasing power of its own revenue by nearly as many millions, in a few months. The formulators of these schemes did not consider, or perhaps were not in a position to understand, the consequences of the course they advocated. They forgot that every sensible appreciation of *Kinsatsu* signified a corresponding addition to the obligations of the debtor classes and to the burthen of fixed payments; neither did they observe the lesson taught by the experience of all countries similarly situated, namely, that the unsound commercial conditions brought about by the fluctuations of an inflated currency are as nothing compared with the paralysis which industry and trade suffer at a time of rapid currency appreciation. The Government, however, did not allow itself to be committed to any heroic action. Two simple courses were accessible, and these it set itself to follow steadily. The first was to contract the bulk of its fiat notes; the second, to accumulate a specie reserve. Included in the former was the withdrawal of note-issuing privileges from the national banks—a withdrawal which followed in the ordinary course of events, the bank's issues having reached their legal limit—as well as the elaboration of a scheme for the gradual redemption of the notes already issued; and, included in the latter was entire abstention from spasmodic efforts to "bull" *Kinsatsu* by throwing quantities of specie on the market at uncertain intervals. To these measures the currency has responded with remarkable rapidity. In 1882, its average depreciation was about thirty per cent.; in 1883, only thirteen. But in the meanwhile all the various evils of contraction have been inflicted on a trade already feeble, and we may truly say that, so far as the foreign community is concerned, a worse year than 1883 never visited Japan. All that can be hoped is that the currency has done the utmost mischief of which it was capable. It is now brought within measurable distance of resumption, and there is no apparent reason to anticipate any recurrence of disastrous fluctuations. The cost of labour has not yet fully adjusted itself to the altered value of the circulating medium, and during the current year many complaints will probably be heard in connection with this process, but the revival of trade and industry can only be a question of time, and it will be a revival far sounder, though of smaller dimensions, than the unreal stimulus imparted by inflation in the past.

II.

THERE is, it must be confessed, a certain air of mockery about the words, the revival of trade and industry, when used in Yokohama. A revival of any sort implies the existence of previous vitality,

and certainly Japan's foreign trade, comparatively speaking, has long been in a moribund condition. The source from which its development must eventually come is not far to seek, but for the moment we desire to speak less of this wider prospect, than of the circumstances which are immediately before our eyes in Yokohama. The subject is a little hackneyed, perhaps, yet, to our thinking, its interest increases year by year, since year by year the root of the mischief becomes more apparent. Each period of twelve months, struggled through with difficulty and consigned to the limbo of an unattractive past, finds the foreign community more painfully sensible of the pressure of the iron band that cramps its energies and sets narrow limits to its opportunities. It would be difficult to conceive a body of intelligent, enterprising men more cruelly circumstanced than the residents of Yokohama. Imagine the case of a stranger establishing himself on the outskirts of a city, the ways and the language of whose inhabitants are virtually unknown to him. Imagine, further, that his object in coming there is to make a livelihood by selling his own goods to the people of the city and buying theirs for export, but that in conducting these transactions he is forbidden to go beyond the bounds of his compound. Imagine, again, that he is a person of exclusive and haughty habits, who lives in a style altogether above the fashion of the country, and who declines to submit to any laws not of his own making and administration. Imagine, yet again, that he has the reputation of being an exceedingly shrewd, crafty individual, thoroughly versed in all the intricacies of his trade—a trade, for the rest, comparatively strange to the people of the country—and that, in order to obtain redress for any wrong suffered at his hands, it is necessary to have recourse to tribunals presided over by his own nationals, not to be approached except at great expense after compliance with unfamiliar technicalities, and administering laws so delicate and complicated as to be intelligible only by specialists. Imagine all these conditions, and then say what must be their inevitable outcome. Would there not gradually gravitate to the neighbourhood of this isolated stranger a number of natives of the adventurer class, ready to take every possible advantage of him, and not over-scrupulous of the methods they employed to balance his superior attainments and experience? Would not these men, little by little, combine to form a cordon about him, with the double object of preventing competition from their own side, and of compelling his compliance with whatever terms they agreed to offer? Would not each year that passed render their position more impregnable, through their recognized familiarity with the stranger's ways, and through their prescriptive right to a monopoly of transactions with him? All these

things have happened in Yokohama. For every practical purpose the settlement is as much isolated from Japan and the Japanese as though it were an island fortress, accessible only by one gate, the keys of which are in the keeping of men whose worldly prosperity depends upon preventing any communication between the garrison and the outer world. It is easy to understand how intolerably irksome such a position must ultimately become for the prisoners in the fortress, and how they must chafe to escape from their confinement. But the wonder is that, being practical men, they content themselves with empty complaints. They inveigh against guilds and monopolies fatal to the development of trade: against a band of agents who are delegated by the monopolists to manipulate the market, and to keep all legitimate competition at arm's length: against an everlasting repetition of tricky expedients by means of which the settlement is virtually blockaded and every operation of commerce subserved to the monopolists' interests. But what possible purpose can be served by these complaints? Is it to be supposed for a moment that the Government can interfere to correct a state of affairs which is the perfectly natural outcome of the situation? Men talk loosely of "treaties and conventions, entitling foreigners to perfect freedom of intercourse with the whole body of the Japanese people," but no such treaties or conventions exist. Foreigners possess no right of intercourse, whether social or commercial, with Japanese outside the treaty limits. It is their position under the treaties which renders them an easy prey for combinations and associations, and we unhesitatingly assert that there is no country in the world where similar advantage would not be taken of similar disabilities. There may be some consolation in ventilating vague charges against the Government of Japan. It is an old and time-honoured propensity, that of laying everything upon official shoulders. But there is, fortunately, little chance that the Government will be persuaded to meddle with matters which do not concern it, and which could only be aggravated by its interference. Familiar and frequent as are these complaints about guilds, monopolies, *saitori*, and so forth, we have never heard a practical suggestion as to the course the Government is required to adopt for their abolition. True, a great many sounding denunciations have been hurled at the Machigaisho, as if that substantial building were, in some occult fashion, responsible for everything that happens within sight of its clock-tower. But suppose the Machigaisho were levelled to the ground to-morrow, would its fall break up the corporation (*Chokwai*) which uses it as a place of meeting, and which just as law-abiding an association as the Yokohama Chamber of Commerce? Or

supposing the corporation were dissolved by an arbitrary and illegal exercise of power, would merchants come flocking from the interior to deal directly with foreigners of whom they know nothing, except that they are men not to be unwarily approached, and prone to invoke official aid in every inconvenient conjuncture? It is marvellous, indeed, to hear such unpractical vapouring indulged in by persons in other respects eminently practical. The plain truth is that the present condition of affairs is the unavoidable result of the partial intercourse permitted by the treaties. To speak of the Government's illiberality is unjust. The Government would open the whole country to-morrow, were foreigners willing to consent to the only arrangement under which the mixed residence of aliens and natives is possible. But foreigners will not consent. Their present condition, with all its disadvantages, is preferred by them to complete and unrestricted intercourse. Their position is almost analogous with that assumed twenty-five years ago by the leading members of the *Foi* faction in Japan, who, while admitting the material advantages their country might reap from an extended commerce, were yet resolved to perpetuate her isolation because they distrusted everything not Japanese. Having regard to all this, it must be confessed that to speak of the revival of industry and commerce is little more than a figure of speech. There can be no revival of commerce or industry worthy of the name until the blockade of the open ports is raised; and that can never be so long as the present treaties render a commerce of investment more profitable than any other to the Japanese that carry it on. These facts were never more emphasized than by the unprecedented depression of 1883, and their importance will constitute our excuse for recurring to them here.

POLITICAL PARTIES IN THE UNITED STATES.

A CURIOUS incident of the political situation in the United States is the election of Mr. CARLISLE, as Democratic Speaker of the House of Representatives, appears to be received with more satisfaction by the Republicans than by their opponents. Not, of course, that the former would not prefer a presiding officer of their own party, if they could have one; but, being in a minority in that branch of the national legislature, they recognize a particular advantage in the choice of Mr. CARLISLE over his friendly competitors. There can hardly be a doubt that the success of the Virginia politician places the Democrats in an awkward dilemma. One of the professed principles of their body is Free Trade; but, while theoretically advocated by such of

the leaders as are free from commercial trammels, this doctrine is openly opposed by all whom the question touches in a business or in a political sense. No Democrat in a manufacturing State ventures to lift his voice in favor of a direct application of Free Trade measures. Thus, Mr. RANDALL of Pennsylvania, who has already been Speaker, and who was Mr. CARLISLE'S principal rival in the recent contest, is a Democrat, body and soul, but at the same time is a thorough Protectionist. Mr. CARLISLE, belonging to a section where manufacturing industries are not active, and having personally no reason for refusing to proclaim Free Trade to the fullest extent, has always advocated the abolition of customs duties, except for purposes of revenue. His election would therefore appear to be a distinct triumph for the anti-Protectionists; and so it is, to some extent. But it is necessary to consider that the Democratic Protectionists are very much in earnest and full of activity in their cause,—believing with the Republicans, wrongly or rightly, that their own and the nation's prosperity depends upon the maintenance of a high tariff; while the Free Traders, with a few notable exceptions, are either ignorant upon all economic subjects, or are apathetic in bringing them forward. The party is thus dangerously divided against itself, and to such an extent that the practical leaders are strongly averse to any agitation of the topic. The consequence is that Mr. CARLISLE, though nominated and carried to victory under the flag of Free Trade, has been persuaded by his sagacious elders to quietly furl the emblem, and keep it packed away out of sight. His first speech after election contained an unconditional surrender of the position he has hitherto constantly occupied. He said, in effect, that while adhering to the abstract principle he has ever supported, he is convinced that the interests of the Republic would be imperilled by any immediate change in the tariff. The necessity which dictated this avowal was a choice of evils. The Democrats plainly see that they cannot face the country on a Free Trade platform, and Mr. CARLISLE is instructed to declare himself contented with the existing state of affairs. But his renunciation of faith is an afflicting confession of weakness. It means that his associates cannot stand by the only vital policy which they have proclaimed distinctively as their own. The gratification of the Republicans at Mr. CARLISLE'S election may, therefore, be easily understood. If Mr. RANDALL had been called to the Speakership, no expression of opinion as to the tariff would have been needed. That gentleman has already held the same office, and his sentiments are well known. But Mr. CARLISLE came forward as the exponent of a different order of things. In his new official capacity, it was inevitable that he should say something on the theme which has so long engaged his

energy and so often kindled his eloquence. What he might say was a matter of minor consequence. However framed, his utterance must be beneficial to his adversaries and embarrassing to his friends. In fact, a directly opposite development was expected by the Republicans. It was generally supposed, among them, that he would boldly assert his favorite doctrine, and steer himself and his companions, hereafter, by a straight Free Trade course. This would have suited the Republicans almost equally well, for they do not believe that the mass of the Democrats can be rallied, for the presidential struggle of this year, in support of a professed non-tariff policy, and are convinced that if Mr. CARLISLE had led off in this direction, a "split" would have been inevitable. But that the hitherto unswerving representative of a great political cause should drop it and virtually discredit it at the most successful moment of his life, under pressure of the conviction that his party must otherwise fail in the coming struggle, was almost beyond their hope. As the matter stands now, the Republicans are firm and unbroken on the tariff question,—which has always been the strong feature of their policy,—the malcontents, if any, being kept out of sight and hearing. The Democrats, on the other hand, see the only sound plank of their platform thrown aside by the man whom they have just raised to a high position solely on account of his life long devotion to that very "plank." They might have found some plausible excuse for dropping their rallying cry, if Mr. RANDALL or anybody of less pronounced convictions than Mr. CARLISLE, had been made Speaker; but they rashly gathered all their strength to put the Free Trade champion into the most powerful office, next to the Presidency, attainable by an American citizen, and having got him there, they find they have made a blunder which nothing can repair, and which can be only partially expiated by requiring their standard-bearer to forswear himself, renounce the aims of his whole career, and confess the impracticability of executing any of the projects for the furtherance of which he was elected. It is difficult to conceive of a more awkward, not to say irretrievable, predicament.

If the Democrats were guided by intelligence and principle, it might perhaps be really irretrievable. The party might shrink from carrying through a contest without a definite plan, and with no purpose of combined action except that of obtaining power for the sake of the spoils. But the legion of the democracy,—that portion which controls elections in certain powerful States,—is the refuse of the American people. It follows the instructions of its immediate masters with blind, unquestioning obedience. It will vote as it is ordered, without wasting thought on sentiment or morality,—of which shallow vanities, indeed, it has no comprehension whatever.

The leaders, therefore, have little fear of desertion or insubordination on the part of their followers, no matter what folly or indiscretion may be committed. But they do not feel themselves powerful enough to carry the great November election without reinforcements from the Republican ranks. To secure these, is the eager desire of all sensible Democrats. Such hopes as they cherish have hitherto been based upon Republican dissensions, rather than upon any enticements they are themselves able to offer. No doubt the Republican organization has been demoralized by its long period of unchecked rule. Its misdeeds became so flagrant, a year ago, that hundreds of thousands of mature Republicans in several States were impelled to vote the Democratic ticket, as a warning to their foolhardy chiefs. That temporary success was too much for Democratic sobriety,—supposing such a quality to exist. The Republicans, in vast numbers, had done a thing which no "square" Democrat would dream of doing;—they had rejected party dictation, because of the discreditable conduct of the party managers. It was certainly a great Democratic opportunity. A little prudence and moderation, a little care in concealing greed for plunder, might have secured to them, for a year or two at least, some of the advantages which fortune had thrown in their way. But they could not hide the cloven hoof. They lost their heads before the recurrence of the next ensuing local elections, and so recklessly betrayed themselves that a large proportion of the errant Republicans returned forthwith to their old allegiance. Governor CLEVELAND of New York, who, though a Democrat, owed his elevation to the Republican defection referred to, and who took a judicious view of the circumstances, wisely warned his followers what was in store for them. He told them, in so many words, that the party which behaved most respectably until November, 1884, would win the presidential fight. The Republicans took the lesson deeply to heart, and have certainly put their best foot foremost ever since. The Democrats have acted like a gambler who, having won a great stake through the inadvertence of his adversary, risks it all on the same defective cards, playing the same ruinous game, and totally unconscious that he is now confronted by a skill born of experience and by a stronger hand than he can possibly get out of the pack. It is not to be supposed that the higher Democratic authorities are unaware of their false position, nor that they would not bring order out of the chaos beneath them, if they could; but in dealing with the voting multitude they are obliged to rely upon and cooperate with a set of the most brutish and brainless beings that nature ever forced into premature development from a gorilla ancestry. Without the Kellys of the democracy, the Tildens or the Bayards can do nothing; and it is the Kellys who persistently bring

ridicule upon the "reform" pretences, and disgrace upon every semblance of decency or dignity which the more clear-headed elders contrive to patch up. The Republican leaders may have as keen an eye to power and profit as their antagonists, but they are willing to study the temper of the nation and be controlled by it. If they make mistakes, they at least endeavor to atone for them. If they find that political reforms are demanded, they at least take practical steps in that direction. The Democrats, never.

Three quarters of a year must pass, however, before the test can be applied, and events may occur in that interval which will change the prospect in many particulars. There is absolutely no indication, thus far on either side, as to who the nominees will be. It does not seem probable that the selection of candidates will count for much in the campaign. No name excites enthusiasm, or carries particular weight. The Republicans will trust largely to their platform; the Democrats, chiefly to party discipline, and considerably to internal distrust and dissatisfaction among their enemies. The Republicans will declare a continued confidence in protection to native industries; the Democrats, will presumably, have nothing to say about the tariff, beyond offering a possible plea for modified revenue reform. On behalf of reform in general their protestations will be loud and lofty. The fighting will be hard on both sides, and altogether fair on neither. If the election is not disfigured by more unsavoury incidents than the average of its recent predecessors, reputable Americans will have cause to congratulate themselves. But the outlook, in this respect, is far from reassuring.

TRUE PROTECTION.

"True Protectionist," whose letter will be found in our correspondence columns, propounds an interesting problem and discusses it skilfully. But, to our thinking, he might almost as well have signed himself "Free-trader," for it is quite plain that the leading principles of free-trade receive complete recognition at his hands. The particular case he adduces is, as he justly observes, of a somewhat exceptional nature. A tax levied upon the public at large for the purpose of fostering an industry to which neither its prosecutors nor their circumstances are specially adapted, presents, economically, an appearance very different from that of a tax similarly levied with the object of developing natural sources of wealth, which would otherwise lie dormant. But this difference is more apparent than real. It ceases to exist when we remember that all commodities are originally obtained from the earth, and that industry, whether it be exercised in the form of mining, husbandry, or manufacture, has for its ultimate aim the production of commodities. Economic principles might, therefore, be equally violated whether the workers of a lithographic-stone quarry or the promoters of a cotton-spinning factory be protected at

public expense. If, by imposing protective duties, the prices of lithographic stone and cotton hose be permanently raised for American consumers in order that American producers may work a quarry or run a mill, then it would be better for America to leave her lithographic stone in the bowels of the earth and let her cotton go elsewhere to be spun. Our correspondent recognizes this when he says, that if the cost of producing an article in America were just so high as to permit its sale, with a reasonable profit, at precisely the same rate as that paid for the same article imported, then the "true protectionist" would advocate no duty whatever. We have here the whole principle of free trade, namely, that the consumer should always be at liberty to buy in the cheapest market.

"True Protectionist," however, does not stop there. He propounds an alternative case, which somewhat resembles an excursion into the domain of protection, as the term is generally understood. If the home producer's skill and experience are not yet sufficient to compete successfully with foreign operators, then "True Protectionist" would impose "a temporary nominal tax" until competition becomes possible on equal terms. His measure is purely one of education, and we confess that in this respect he seems to us to tread the *via media* which the riders of both free trade and protectionist hobbies over-step in their zeal. Every civilized nation consents to be taxed for the education of its people. The Governments of England and America alike devote large sums every year to this purpose. Now what, after all, is the purpose of education? Is it not the development of faculties which enable their possessor to occupy a higher place in the social scale, and to compete successfully with the industrial intelligence of his fellows? How, then, can we logically pretend, that though the public funds may be wisely and properly devoted to foster theoretical ability, they can not be devoted to foster practical ability, except at the expense of sound economy? There is something in these two propositions that appears very difficult to reconcile. Take the case of a country which has hitherto remained secluded from the rest of the world, and whose inhabitants, with few wants and fewer aspirations, have never been spared to develop the resources nature has placed within their reach. Such a country, on being admitted to the comity of nations, becomes conscious of a thousand new needs, and, aiming at a higher scale of living, aims, also, at greater industrial activity. Let us suppose, then, to fix our ideas, that among its sources of wealth are deposits of coal and iron, not more accessible, naturally, than those of England; while, also, among its new requirements these two products occupy an important place. Everybody will agree that the Government of such a country ought to lose no time in establishing a school of mines where the people might acquire practical skill sufficient to enable them to extract the metal and the mineral with the same facility as English experts. Such a school would not be regarded as part of a system of protection, though unquestionably it would be an institution maintained at the public expense, for the purpose of developing a particular industrial ability. Now let us go a step farther, and suppose that, as the result of these wise educational measures, it becomes possible

as to compete successfully with the imported articles, but that the process of manufacturing the iron into useful forms is still beyond native ability. The Government, it will be at once said, ought to have foreseen this contingency, and combined with the school of mines a school of practical mechanics. Very true. The *raison d'être* of this latter institution is just as solid as that of the former. Nevertheless, the public is still further taxed with the object of developing a particular industrial ability. Let us advance yet another step, and suppose that the men trained in these colleges are subsequently employed at foundries and workshops established by native capitalists. It were obviously hopeless to expect that the articles they manufacture will be, from the outset, as economical and attractive as goods imported from the hands of workmen skilled, by long experience, in every device of their trade. The native manufactures, therefore, must either be sold at a loss, driven out of the market, or protected until they can compete on equal terms with the foreign. Here, however, the free trader interposes his veto. He is willing to tax everybody for the theoretical education of industrial ability, but that the public should continue its assistance until the results of its initial expenditure are practically realized, he denounces as an economical blunder. The two propositions look strange, side by side, nor have they ever been satisfactorily reconciled by any writer. It seems extravagant to suggest that Dick should be obliged to pay a high price for his coats in order that Tom may become proficient in tailoring; but it seems equally extravagant to deny that a society of persons may be acting wisely when they consent to a temporary outlay for the purpose of developing industrial abilities destined to confer permanent profit on themselves, as well as to increase the producing power of the world, and therefore to contribute to its welfare. The grand difficulty is to define the legitimate limits of public co-operation; to determine at what point of its development an industry may be left to take care of itself. So insolvable is this problem, and so serious are the abuses consequent upon the failure to solve it, that we cannot wonder at the preference many of our greatest thinkers avow for free trade. The risks of even such a modified form of protection as our correspondent advocates, are not to be lightly encountered. Nevertheless, as a point of logic, we cannot question the soundness of his general proposition, though we dissent from some of his corollaries. It has come to be a habit with Englishmen to treat as an intellectual inferior everyone that declines to follow them to the extreme of their free trade principles, but the wisdom of the world has never yet developed an economical system applicable in its entirety to all sorts and conditions of men.

NOTIFICATION NO. 126 OF THE NAVAL DEPARTMENT.

It is hereby notified that a Naval Dockyard has been established at Ono-ga-hama, Kobe, and placed under the control of the Marine Bureau.

KAWAMURA SUMIYOSHI,
Minister of Marine.

January 25th, 1884.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

TRUE PROTECTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You have recently copied an article from a San Francisco newspaper, which professes to state the position of the "true protectionist" with respect to the discovery in California of a new quarry of lithographic stone. As a rule, the "true protectionist" is never better contented than when the average free trader emerges from his chaos of generalities, and attempts to argue, as in the present instance, upon particular facts. With your permission, I will endeavour to show how the "true protectionist" really would and does regard a development of mineral wealth like the deposit in question, and to demonstrate, by a few of the simplest axioms in economic science, the fallacy of the California journalist's assumptions.

I will assume that the several details recited by him are trustworthy;—that a bed of lithographic stone has been found in his State, identical in quality with the famous product of Solenhofen, in Bavaria, which latter yields annually 13,000 cubic yards, at a cost of \$1,000,000, and upon which the owners obtain a profit of 900 per cent.; and that the new American quarry promises to be extensive, and easily worked. Upon the basis of these items it is alleged that, instead of welcoming the prospect of a reduction in the cost of an article hitherto sold by monopolists at extortionate rates, "your true protectionist" thinks only of "how the owner of the new quarry may be given a local monopoly and enabled to charge more for its goods than the Bavarian monopoly, which makes 900 per cent. profit." Upon this premise, the writer builds a ponderous fabric of free trade sophistry, the character of which can easily be imagined by all who are familiar with that species of dissertation. The briefest reference to any recognized work on Protection would, however, prove the falseness of the premise. "True protection" has no more to do with monopolies than it has with "stock-watering" or with "corners" in railway shares. Its purpose is to assist in promoting domestic industries and, as a natural consequence, to encourage native labour. In this case of the stone quarry, the "true protectionist's" first study would be to ascertain the relative cost of production of the American and the European articles. The American might be higher, it might be lower, than the other. Let us suppose, for the sake of illustration, that it would prove to be just so high as to enable the proprietors to sell their wares, with a reasonable profit, at precisely the same rates now demanded by the Bavarian exporters to the United States. Under these conditions, the "true protectionist" would either advocate no duty whatever, or propose the imposition of a temporary nominal tax, until such time as the home producers should gain equal skill and facility with the foreign operators. Let us furthermore suppose that the United States have hitherto consumed annually, \$4,000,000, worth of the Bavarian stone. With the appearance of the domestic article, at an identical, or possibly a somewhat reduced, price, the imported ware would be driven out of the market. As to the profits of the California owners, the "true protectionist" would not concern himself. He would contemplate only two important results: first that the \$4,000,000 previously sent out of the country, in payment for a foreign ware, would remain and continue to circulate at home; and next, that a large body of American labourers and artisans would begin to be actively occupied in the production and preparation of an article upon which a similar body of Bavarian mechanics had until then been employed, at American expense.

It might be suggested that the Bavarians could

easily afford to make a great reduction in their prices to American purchasers, having their immense profit of 900 per cent. to fall back upon. But in taking that step, they would be obliged to reckon upon a similar reduction everywhere; because, if they undertook to retain the old scale in Europe their stone would inevitably be re-exported from America, and sold in direct opposition to their own presumed monopoly. It would of course be open to them to try the expedient, long familiar to free-traders, of underselling the Americans on American ground in the hope of crushing out the infant industry, and afterward returning to their original high prices. In such event, it would be the duty of the "true protectionist" to examine the question with a view to future probabilities; to calculate whether in process of time the American stone could be produced at a sufficiently low cost to warrant additional fostering by the Government. In this investigation it would be necessary to consider not alone the actual market price to be ultimately attained. If the Americans could eventually undersell the Europeans, so much the better; but that would not be the sole point of inquiry, by any means. There would still remain the necessity of considering whether the country at large would gain or lose by the continuance of the American product, even if it could never be supplied to buyers at so low a rate as that fixed by the European exporters. The fact that the nation might gain, materially, notwithstanding the burden of an extra charge upon individual purchasers, is one to which free-traders seem determined to blind themselves forever; and to show that it is a fact, I ask attention to a single plain demonstration. Suppose, first, that \$4,000,000 worth of lithographic stone now imported into the United States from Bavaria could be supplied at the same price by American producers, the latter being encouraged by a protective tariff, to develop their quarry. "What is the use of such encouragement?" say the free traders; "we shall only have a lot of cumbersome legislation for the benefit of a band of monopolist conspirators, and the American people, to say the least, will be, as they were before, having to pay just the same for their lithographic stone." Let us look into this, say I, as a "true protectionist." At present, \$4,000,000 leaves the country forever, and goes to Bavaria, for which we obtain in return \$4,000,000 worth of valuable, but perishable, stone. But if the American product is stimulated, we keep our \$4,000,000 to circulate and breed among our own people, and also call into existence \$4,000,000 worth of stone which otherwise would not have been added to the world's working stock. Can any one doubt which is the more advantageous course for America? Now, suppose that the needed quantity of stone would cost \$5,000,000 if supplied by the Californians, and that the purchasers were allowed to take their choice. They naturally buy from Bavaria, paying \$4,000,000. The country then gains \$1,000,000 on one side of the transaction, and gets the stone; but it permanently loses the \$4,000,000, and also the power of creating, as it were, the vast store of new material, not to speak of the privilege of expending, in the support of native workmen, so many millions which have gone to the support of European laborers. The calculation may be varied and extended; and I do not understand how any candid man can dispute that America must gain by fostering the new industry,—unless it be proved that the difficulties of development are too great to allow a hope that the stone can ever be offered as cheap, or nearly as cheap, as the Bavarian article. "Keep the business in the family," is the maxim of those great accumulators of wealth whose name stands at the head of European finance. Nobody, I presume, will deny the benefits of commercial exchange, soundly conducted, to both parties interested. When American and European merchants deal with one another, both reap a profit; part of it goes to one country, part to the other. But if the dealers

on each side are Americans,—if the exchange is between Americans in the West and Americans in the Eastern States,—will anybody, in that event, stultify himself by disputing that *all* the profit and benefit cling to America? No one, I imagine, who has thought it worth while to study and make himself familiar with the teachings of the man whom Englishmen recognize as the founder and master of economic philosophy. On this point Adam Smith, who first formulated many of the maxims upon which "true protectionists" rely, is peculiarly emphatic. "A capital," he says, "employed in the home trade will sometimes make twelve operations, or be sent out" (not out of the country, be it understood) "and returned twelve times, before a capital employed in the foreign trade of consumption has made one. If the capitals are equal, therefore, the one will give four and twenty times more encouragement and support to the industry of the country than the other."

The case of this lithographic stone discovery does not afford the fairest opportunity for the illustration of economic theories, the product being so exceptional and extraordinary. Only two quarries are said to exist in the world, and no legislation, under such circumstances, could entirely check the evils of monopoly. For a thorough application of the laws of social science, less abnormal conditions are required. There are few mineral deposits of which it can be said that only a single specimen exists in an entire country, and that the whole world (so far as known) contains but two. As a general rule, the multiplicity of identical and competing industries keeps prices at a reasonable figure; but when nature has created a monopoly, it is hard fighting against her. Since, however, the free trade writer in San Francisco finds, in the recent discovery, nothing but omens and portents of protectionist evils, I need not hesitate to use it as an exemplification, necessarily limited, of the good results of Protection, even when applied to unpromising subjects. Under its influence, if the quarry can be worked without immoderate or extravagant cost, America will receive the benefits above described. Bavaria will suffer, it is true, but I am discussing the question from the standpoint of American interests. It is obvious that the system of free trade, which the little European kingdom has greatly enjoyed while she alone was supplying the world with lithographic stone, will play the mischief with her prospects if the American article can be more cheaply produced than her own; for in that case America would rapidly fill the principal European markets, and nothing could keep the San Francisco export out of Bavaria's proper territory even, but the immediate imposition of a protective duty on this very product. She might be prevented from taking this step by the preponderating power of Germany, but the injustice of such a prevention is rightly characterized by Adam Smith, who says that "to prohibit a people from making all they can of every part of their own produce, or from employing their stock and industry in the way that they judge most advantageous to themselves, is a manifest violation of the most sacred rights of mankind."

Nothing can be more absurd than the attempts of guerrilla free traders in the United States to saddle the protective theory with the responsibility of evils growing out of selfish monopolies. True protection aims precisely at the extirpation of those evils. There is not an honest protectionist alive who would not repudiate the notion of propping a doubtful enterprise by legislative action. But that legitimate enterprises may thus be fostered, to the indisputable advantage of the community, we have overwhelming evidence, not only in the vast industrial development of the United States under twenty years of protection, but in the commercial supremacy which in Great Britain reached its culminating point two or three decades ago, by virtue of the most rigid and uncompromising system of protection ever practised by a nation. The consequences of a partial abandonment of that

system (partial, I say, because England never has and never can entirely abandon it) are shown in the fact that numerous foreign wares are already sold more cheaply in English markets than their domestic equivalents, the home manufactures being thus threatened with destruction; in the unprecedented excess of imports over exports during the past few years, and in the general anxiety which has replaced the haughty confidence once characteristic of British trade. To attain a commercial eminence equal to that enjoyed by England a score of years since, and not to sacrifice it at the moment of triumph in the pursuit of an illusion which never can be realized until civilization has advanced far beyond its present crude condition, is, in America, the broad purpose and the high ambition of every

TRUE PROTECTIONIST.

Tokio, January 20th, 1884.

AN AUTHORITATIVE STATEMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There appeared recently in the columns of one of your local contemporaries an article which has created much astonishment among readers of the local press. The writer sets out by saying that he possesses "sources of information which are beyond all question reliable," and from these sources he proceeds to describe the policy contemplated by the Japanese Government should its efforts to obtain more liberal treaties prove unsuccessful. The Government, he says, has "expressed its determination to probably bring to an end three privileges at present enjoyed by foreigners" but not provided for in the treaties. These privileges are (1) Travel in the interior beyond treaty limits, (2) The preaching of the Christian Gospel, and (3) Sepulture in Japanese Cemeteries in cases where a foreigner dies outside the treaty limits. Your contemporary paints the withdrawal of these privileges in very dark colours. Referring to the second, he says:—"The native heathen shall be suffered to remain in ignorance of the teachings of Christianity, and any Missionary who shall dare to travel beyond treaty limits to spread the gospel, will be liable to be arrested like any ordinary malefactor, and be brought in police custody to any of the nearest treaty ports, and prosecuted for being found beyond treaty limits, without being in possession of a passport"; and of the third he speaks thus:—"But these convincing exhibitions of Japanese friendliness are not to end even with life, for in cases where death supervenes, the body of the foreign outcast shall be denied sepulture in a Japanese cemetery, if the authorities choose so to order." Finally, the inference he draws from the policy of the Japanese is, we are told, as follows:—"So, then, it appears that under cover of a simulated friendship, there still lurks concealed that antipathy to foreigners which from the days of Decima to our own time, has, like the smouldering fires lingering in the ashes of a volcano, never in reality, been extinct. Policy, may perhaps for a time have suggested concealment, and lack of power and timidity have alike contributed to that end, but it is only the ignorant or the superficial, that could possibly have fallen into the error of believing otherwise."

I cannot for a moment permit myself to suppose that an English journal would publish such statements as the above without the very highest authority. I refrain from commenting on the tone of the language in which they are set forth, further than to say that it is calculated to excite the strongest feelings of race antipathy. Most unfortunately for the interests of foreigners and Japanese alike, there is constantly imported into newspaper discussions on treaty revision a spirit of recrimination and asperity which obscures the real issue and carries the question quite beyond the domain of reason. It is not my wish to say one word which might exacerbate that spirit, but I do think that such utterances as those I have quoted ought not to pass unnoticed. If it be true that the Japanese Government has "expressed a determination" to pursue the plan described by your contemporary, I fear the outlook is very hopeless.

Yours, &c., ENGLISHMAN.
Tokio, 25th January, 1884.

CHRIST CHURCH.

The annual meeting of pew-renters and others interested in Christ Church was held yesterday afternoon (by kind permission) in the Chamber of Commerce Rooms, No. 60. The following gentlemen were present:—Messrs. Russell Robertson (in the Chair), Bryan Durant (Hon. Treasurer), H. Litchfield, J. Rickett, E. J. Moss, T. Thomas, F. A. Cope, A. J. Wilkin, C. H. Dallas, F. W. Eastlake, W. B. Walter, Fraser, Brearley, Mollison, and Dr. E. Wheeler.

REPORT AND ACCOUNTS.

Yokohama, January 24th 1884.

The Committee of the British Episcopal Church Establishment at Yokohama beg to submit their accounts and report for the year ended December 31st, 1883. The accounts show an actual balance due the Treasurer on that date of \$320.32, with the dependency to debit of \$160.00, a financial condition much less gloomy than was anticipated a few months back. The entries on the credit side show two small items for pew-rents dating back from 1881 and 1882, and there is still for pew-rents in arrear a dependency to credit of \$130.00. A very distinct promise has been given that a large proportion of this outstanding amount will shortly be paid. The pew-rents in 1883 amounted to \$2,118.50, a falling off as compared with 1882, when the receipts under this heading were \$2,366.25. The donations, however, attain to a good figure, and it is indeed owing to the liberality with which appeals have been met that the Church finances present at the moment that comparatively fair prospect they do, nor should mention be omitted of the Christmas Day collection of \$251.00 as helping material to reduce the balance due the Treasurer. A glance at the debit side will show that the heaviest disbursement has been an item of \$640 for repairs, but it is hoped unless something very unforeseen should happen that no further outlay to any great extent for repairs is likely to be incurred for the next two years. The total disbursements amount to \$4,106.02, of which sum, in addition to the item for repairs already mentioned, an amount of \$626.20 is for balance due the treasurer at the close of 1882. There is a dependency to debit of \$100, due for organ tuning and \$60 being six months' interest due on loan. The Committee are anxious to submit to the subscribers the question of the tenure of the Chaplaincy as affecting the present incumbent. By an arrangement between the Committee and the Rev. Mr. Irwine the position is that from next month that gentleman's services are terminable by three months notice on either side, but it is felt that such an arrangement, while perhaps to be justified by the outlook of finances at the time it was made, is one that the Committee is of opinion in justice to our Chaplain should no longer be binding, and your sanction is therefore requested to what was proposed at a recent meeting of the Committee, namely, that so far as the current year is concerned Mr. Irwine's position should be one of certainty. Your Committee desire in closing this brief report especially to record their grateful sense of the services of Mr. Griffin, and to express their sincere thanks to all who have assisted in the work of the choir throughout the year under review.

E. & O. E.	(Signed) E. WHITTALL,

Treasurer, Christ Church.

Yokohama, 31st December, 1883.

The CHAIRMAN opened the meeting by reading the Report of the Committee and the Accounts. He went on to say that he did not wish to gloss over matters, it had been brought to his notice a few minutes before the meeting had assembled that there was an unpaid account which would materially alter the balance-sheet. This was for the

repairs to the organ. The repairs were made when he was absent from Yokohama, but he had been given to understand that there had been a subscription list started to defray this expense. Through this means \$200.00 had been raised, but this amount did not cover the whole of the outlay. They had to thank Mr. Kiel for his numerous kindnesses in this matter, and also for reducing his account for tuning from \$100 to \$80, wishing the balance to be considered as a donation to the Church. There was still an amount of \$125.00 owing under this head, which did not appear in the accounts.

Mr. MOLLISON proposed, and Mr. RICKETT seconded, that the report and accounts be passed, which was carried unanimously.

In answer to Mr. RICKETT, the CHAIRMAN stated that the Rev. Mr. Irwine had tendered his resignation, principally on the ground, he believed, that the financial position of the Church was so bad. He had interviewed Mr. Irwine on the subject, who wanted a formal answer from the Committee. The Committee had discussed the matter carefully, and had offered the Rev. Irwine another year's tenure of office. He asked the meeting to confirm the action of the Committee in this matter.

Mr. RICKETT said that at the meeting last year Mr. Thomas had brought forward a proposition touching this subject.

After reference to the minutes it was found that the proposition had not been published, one gentleman remarking that he remembered the occasion and that the reporters were requested not to publish the discussion.

In answer to some further questions, the CHAIRMAN said that the Chaplain's engagement ended in January, 1882, after which it had been guaranteed for one year more, but there had been no formal agreement. His present position was that there was an agreement of three months' notice on either side.

Mr. WILKIN wished the minutes of the last annual meeting to be read.

These minutes showed that the Chaplain's agreement had been extended for one year, at the expiration of which term a three months' notice was to be given by either party.

The CHAIRMAN wished to know whether the pew-renters would confirm the action of the committee in guaranteeing the stipend for one year.

Mr. DALLAS said he thought that this was an unsatisfactory arrangement, as the question would be brought up year after year. He thought it was undignified, and that it left the Chaplain in a state of uncertainty which ought to be avoided. The better plan would be to appoint the Chaplain on a six months' notice.

Mr. THOMAS said that by the action of the Committee he would be secure for 12 months, and before the time expired they would no doubt be enabled to inform him whether there were funds sufficient to enable them to retain his services or not.

The CHAIRMAN thought the year to year principle was the best.

After some further conversation, Mr. DALLAS formally proposed:—"That to obviate the recurrence of discussions as to the Chaplain's tenure of office, and to make his position as permanent as possible, it is moved that the engagement with the Reverend E. Champneys Irwine continue indefinitely, subject to six months' notice on either side, provided that no such notice be given before the 1st of July next."

Mr. BREARLEY said there was no danger of the Chaplain having to go through lack of funds. He thought they were strong enough to bear the burden of the Church. The public were always generous when a crisis came and such a question ought never to have been discussed. Funds were sure to be forthcoming, and if the deficit for the present year were calculated, or even for two years to come, they could find guarantors for the amount.

Mr. WALTER said he thought it would be better to have an indefinite six months' agreement with the CHAPLAIN, as with a one year's engagement the time gradually dwindles down and sufficient notice might not be given. He should, therefore, second Mr. Dallas's amendment.

This was put to the meeting and carried by 10 to 2.

Mr. BREARLEY suggested that the gentlemen who pledged themselves as guarantors of the amount due to the Treasurer at the last meeting should pay up, and that the Hon. Secretary prepare a budget for the current year showing the probable deficit, as he had no doubt they could easily get the amount guaranteed.

Mr. FRASER said the guarantors had not gone round to solicit people to join them, as the late Treasurer was very sanguine as to the state of the finances, but Mr. Durant had kindly furnished him with a statement of the accounts and they were going round shortly.

Mr. WALTER said he was of the opinion that the

guarantee system was not a good one, although it had been adopted in this instance. He would suggest to the Committee, who would no doubt talk over matters with the Chaplain, that he might in some way associate himself more closely with his parishioners. In many places in England where the parochial work was heavier than here, the clergyman added to his income by taking an interest in educational matters. There were plenty of youths growing up in the Settlement who required instruction, and by taking them in hand it would bring the Chaplain into closer relationship with the community and perhaps open their pockets. He had no doubt but that Mr. Irwine would acquiesce in the idea.

Mr. BREARLEY proposed that the guarantee list be so supplemented as to cover the deficit for 1884. This proposition, not finding a seconder, fell to the ground.

Mr. FRASER proposed that the following gentlemen be asked to act on the Committee, the term of office of the old Committee having expired, and at the same time would propose a vote of thanks to the retiring members, especially Mr. E. Whittall. He then proposed Messrs. Russell Robertson, M. Kirkwood, A. J. Wilkin, B. Durant, J. Melhuish, and Dr. E. Wheeler, as the Committee for the ensuing year.

Mr. THOMAS seconded the motion, which was carried unanimously.

This ending the business before the meeting, which was then adjourned.

CRIMINAL COURT, NAGASAKI.

January 14th, 1884.—Before Mr. Justice NISHIOKA.

(Translated from the *Nichi Nichi Shimbun*.)

The judicial inquiry into the circumstances attending the death of a Chinaman named Wai Hin-no, killed in an opium affray, was concluded on the 24th inst., the accused constable being sentenced to five years' major confinement. The following is a report of the case:—

On opening the Court at 9.45 a.m., His Honour Judge Nishioka made the usual inquiries as to the age, birth-place, &c. of the accused, Mine Susumu.

The prisoner replied that he was a *heimin* of the Kumamoto Prefecture, aged thirty-five years and nine months; and that he was registered at No. 43, U'eki-cho, Yamamoto-gori, Kumamoto.

His Honour thereupon called the following persons as witnesses:—a fellow constable of the accused, named Okazaki Kenjiro; two Chinamen, one Chang Tak-shin and another; Murakami Sokaku, and two others. They were ordered to wait outside the court room.

His Honour, upon resuming his enquiry, asked: Have you ever been punished by law?

Prisoner—No.

His Honour—How many members are there in your family?

Prisoner—Six, not including myself.

His Honour hereupon ordered the indictment to be read, which was as follows:—Mine Susumu, the defendant, a *heimin*, registered under No. 43, U'eki-cho, Yamamoto-gori, Higo, Kumamoto Prefecture, detective and special constable, attached to the Shinchi Police Station in the Prefecture of Nagasaki, aged thirty-five years and nine months. On the 15th of September, 16th year of Meiji (1883), the accused, while patrolling the district under the supervision of the Shinchi Station, being on special duty as detective, found two Chinese smoking opium, and reported the matter to Inatsugu Masa-ashi, Assistant Police Inspector and Chief officer of the Shinchi Station. Acting upon the instructions of his superior, the accused, accompanied by the other constables, proceeded to the *Seitaigo* (a Chinese firm) in the foreign Settlement, and arrested the opium smokers. On the way to the station at Shinchi, a crowd of Chinese assailed the constables in charge of the two prisoners, and attempted to rescue them. The accused assisted his comrades in driving back the crowd, and was beaten and otherwise maltreated by the would-be rescuers. Provoked at this, he

snatched the sword of Okazaki Kenjiro, one of the constables, charged the crowd, and inflicted two severe wounds, on one Wai Hinno, on the left breast and on the back, these wounds resulting in his death. He also wounded another Chinaman in the left arm, disabling him for upwards of twenty days. Another Chinese—was wounded on the lower jaw, and still another man had the little finger of his left hand badly hurt, both being disabled for twenty days in consequence. The evidence adduced in the preliminary examination is:—1.—The statements of Matsugu Masaashi, Chief of the Police Station and Assistant Police Inspector, Yeguchi Minekichi, Yamanaka Kumajiro, Miyatsu Gohachi, Okazaki Kenjiro, Shigematsu Saburo, and Ogawa Shojiro. 2.—Statements of Murakami Sokaku, Kuroda Riujiro, Sakuragi Zenkichi, Yokose Miyataro, and Sonota Ushijiro. 3.—Medical certificates from Kofumi Yokijiro, surgeon of the Nagasaki Hospital. 4.—Sword of Okazaki Kenjiro used by the defendant.

The express provisions of the law respecting this, are:—

Art. 209 of the Criminal Code.—Voluntary blows, wounds, or assaults, which have occasioned death, shall be punished by major confinement.

Art. 301.—If the violence has only occasioned illness or incapacity for labour for the space of twenty days or upward, the penalty shall be imprisonment with hard labour of from one to three years.

The imprisonment shall be from one month to one year, if the illness or incapacity for work has lasted less than twenty days.

Art. 100 (Clause 1).—When an individual is declared guilty, in the same suit, of several offences for which he has not yet been condemned, the most severe penalty alone shall be inflicted.

Art. 309.—Murder, voluntary blows, wounds, or violence, are excusable when they have taken place in a fit of passion, directly provoked by serious violence against the person of the offender, &c.

Art. 313.—In the cases set out in the preceding articles, the penalties incurred for murder, blows, or wounds according to the distinctions made in the preceding sections, shall be lowered from two to three degrees.

Art. 67.—The ordinary criminal penalties are lowered in the following order:—1. Death. 2. Penal servitude for life. 3. Penal servitude for a time. 4. Major confinement. 5. Minor confinement.

Art. 69.—When the penalties of minor confinement or of minor detention be lowered one or more degrees, the tribunals shall pronounce, as the first degree of abatement, imprisonment with hard labour in the case of confinement, and simple imprisonment in the case of detention, during from two to five years.

Art. 70.—In all cases in which correctional imprisonment and correctional fines shall be gradually lowered or raised, the calculation shall be made in the proportion of a quarter to one degree greater or less on the minimum and maximum of each of the two penalties such as they are fixed by law.

The following is the Finding of the Court:—

In the case of Mine Susumu, who was tried on the 22nd of December, 1883, the Court finds that on the 15th of September, 1883, he found, while on duty as special detective, two Chinese smoking opium in a room about the size of three mats on the premises of the Seitai Company. He reported the matter to the police station, and, according to the instruction of Inatsugu, Assistant Police Inspector and Chief of the Station, proceeded to the place, accompanied by Yeguchi Hidekichi and three other officers, to arrest the smokers. On arriving upon the spot, the party found them still smoking opium and tried to take them into custody after seizing the smoking apparatus. The smokers resisted capture; while a crowd of Chinese assailed the officers to rescue the prisoners. The defendant, Mine Susumu, was wounded by the mob; whereupon he snatched the sword belonging to Okazaki Kenjiro and charged at the assailants, wounding five of them. One of them, Wai Hinno died on the spot. Therefore, the defendant is liable to Articles 301 and 299 of the Penal Code, and ought to be punished according to Article 100, having the penalty lowered by two or three degrees according to the provisions of Articles 309 and 313.

KONO TSURIN,

Commissary, Nagasaki Criminal Court.

To Nishioka Yumei, President of the Nagasaki High Criminal Court.

December 27th, 1883.

January 24th, 1884.

In the case before the Nagasaki Criminal Court regarding the prosecution of Mine Susumu, a detective of the Shinchi police station, for causing

the death of a Chinaman named Wai Hinno, the following final judgment was delivered:—

JUDGMENT.

The Defendant, Mine Susumu, aged thirty-five years and nine months, *heimin* (commoner) is a detective of the Shinchi police station, Nagasaki, and registered under No. 43 U'eki-cho, Yamamoto-gori, Higo, Kumamoto Prefecture.

The Court, in considering upon the finding at the preliminary investigation, held at the Court of First Instance Nagasaki in which the defendant was charged with assault and wounding, decides as follows:—The Court read the affidavits taken at the Court of Kono Tsurin, Commissary, and of the following witnesses:—Inatsugu Masaashi, Yamanaka Kumajiro, Miyatsu Gohachi, Yeguchi Minekichi, Ogawa Shojiro, Murakami Sokaku, Kuroda Kinjiro, Sakuragi Zenkichi, Sonoda Ushichiro, Kofumi Yokichiro, a surgeon of the Nagasaki Hospital, Matsuwo Shime, and Dr. Renwick; and the depositions of Chintoku-sho, Chintoku-gioku, Chin-tenso, Lin-ritetsu, Koko-tei and Waiho-tei; also reports of investigations made upon the premises (a Chinese house, where the affray is alleged to have taken place); a report also of the Chinese constable Kiokichi; the medical reports of Dr. Renwick and the Nagasaki Hospital; and received the statements of Yamamiya Kenjiro, Shigematsu Saburo, Yokose Tomitaro, a Chinese Shukuchoboku, in defence of the accused, and heard the speech of the Counsel, and finally examined the sword produced. At 7.30 p.m. on the 15th of September, 16th year of Meiji (1883), when the defendant was patrolling the district under the supervision of his station as special detective, he found two Chinese smoking opium at the house of one Chintoku-sho, No. 24 Shinchi, Foreign settlement, Nagasaki. He reported the matter to his superior Assistant Police Inspector Inatsugu Masaashi, who ordered him, with Yeguchi Minekichi and three other constables, to arrest the smokers.

The accused conducted his fellow constables to the place, arrested the Chinese, and seized the smoking apparatus. On the way to the station, the prisoners resisted the constables. The day was the *Akidzuki Matsuri* (Autumnal Moon Festival) and there was a large crowd of Chinese strolling through the streets who came to the assistance of the prisoners. Then ensued an affray in which the accused was maltreated. He snatched the sword belonging to Yamamiya Kenjiro and wounded Wai Hinno in his left breast and back, which wounds resulted in his death. He also wounded another Chinese, Chin-tenso, in the left arm, disabling him for upwards of twenty days. Another Chinese, Kokotei, was wounded on the lower jaw, and another man, Jiuri-tetsu, had the little finger of his left hand badly hurt, both being disabled for twenty days in consequence. The accused and his counsel insisted that the police performed their legitimate duty in arresting the opium smokers and that, as the accused's life was in peril owing to the violence of the Chinese, he drew the sword in self-defence. Although the police were fulfilling their legitimate instructions in arresting the opium-smokers, there is no evidence to prove that the Chinese so imperilled the lives of the constables as to justify the accused in drawing a sword. The Chinese had no other intention than to rescue their countrymen, and there is no reason why they should have assailed the accused in such a manner as to endanger his life; especially as he was not in charge of the prisoners. Therefore, the Court cannot admit that the accused had reason to draw a weapon in self defence. According to the medical certificate of the Nagasaki Hospital, the statements of Murakami Sokaku, and the fact that the prisoners were rescued, it is proved that the wounds on the accused were not intentionally inflicted. The accused, acting under the impression that his life was in danger, as the rescuers far outnumbered the police, and provoked by the ill-treatment he received, drew the sword. Owing to the foregoing reasons, the accused is sentenced to major confinement for five years, having the penalty lowered by two degrees according to Articles 299 and 309. The sword will be returned to its owner according to Article 44; and the defendant will pay the costs and expenses according to Article 45.

The above sentence is pronounced in presence of the Commissary Kono Tsurin.

Court of Major Crime, Nagasaki.

NISHIOKA YUMEI, Presiding Judge.

TAKENO BINKO, Judge.

MATSUSHITA NAWOZANE, Judge.

MIYAGUCHI TEI, Clerk.

YOROGI SHIGENORI, Clerk.

January 24th, 1883.

RACING NOTES.

The subscription griffin movement inaugurated by the Kiyodo Keiba Kwaisha (Union Race Club) for the forthcoming meeting at Toyama, is, from all I can gather, likely to be a great success, and will probably give a fillip to racing in Japan such as the sport has never before received. The racing will extend over three days, and the fixture has been made for Saturday, Sunday, and Monday, the 26th, 27th, and 28th of April. I have been favoured with a perusal of the programme, which will shortly be ready for publication, and the Committee are certainly to be congratulated upon the liberal bill of fare therein displayed, no less than *yen* 1,800 having been set apart in six races for the subscription griffins alone, the first race on the opening day, the Criterion Stakes, being a prize of *yen* 500, including money for the placed horses. The terms upon which the griffins can be obtained place ownership easily within the reach of all sufficiently interested in the sport, as not only may one owner take several ponies, but several owners may jointly run one animal; added to this, the Committee offer to recommend, to those who may not be possessed of training facilities, trustworthy and reputable persons to take charge of animals and prepare them for the post. The griffins will be drawn for by lottery shortly after the closing of the list, which is fixed for the 15th of February, and the ponies, costing not more than *yen* 60 each, will be selected from a mob of 300 now being collected in the Oku-wo and Nambu districts. None will be taken less than 13.2 in height, their ages will be between five and seven years, and all will have passed a veterinary examination. The ponies will be paid for when the drawing takes place, and the compulsory entries, amounting in the total to *yen* 90, will have to be paid at the same time; but, should forfeit be declared one week before the races, half the entrance money will be returned. The number of ponies already subscribed for by Japanese and foreign members of the Union Race Club is over twenty, and the first batch of griffins, about forty, have already come to hand. When the entire mob shall have arrived, they will be "powed," and Colonel Matsumura and Mr. Okochi will pick about 50 of the most promising and send them to the Kudan Racecourse, after which a Committee, consisting of three Japanese and three foreign members of the Club, will make the final selection of the number that have been subscribed for. The griffins that have arrived are in rather poor condition, and, as a matter of course, don't look much like flyers with their shaggy coats and hairy heels; but, although the time between the drawing and the racing is none too long, a good deal can be done between the physic and the first saddling bell. In nearly all the races where griffins meet the old ponies, the former have a 7lb. allowance, and it is just on the cards, looking to the large number of subscription ponies likely to see the post, that one or two may be found to hold their own at even weights with the victors at Toyama and Negishi.

With seven races on each day's card, the programme is a most attractive one. On the first day there are races worth *yen* 500 and *yen* 200, besides valuable presentation prizes, the Diplomatic Cup, the Princes' Cup, the War Office Cup, and the Foreign Office Cup. The second day opens with the Nursery Stakes, *yen* 300, and includes a presentation prize by the merchants of Tokio, the Noblemen's Cup, and a cup presented by the Mitsu Bishi Company. But the most interesting item in the second day's programme is the Ladies' Purse, the first event of the kind ever introduced into the race meetings of the Capital. I hear that, independently of the sentiment attached to winning a Ladies' Purse, he will be a lucky horseman who carries off this trophy and will find himself much richer at the finish than at the start, as the Japanese ladies who are getting up the prize are piling up the doubloons at an astonishing rate. The Ladies' Purse is the fourth race on the second day, half-a-mile, gentlemen riders. The third day's sport will include four handicaps, and of the five principal races one is for *yen* 400, three for *yen* 250 each, and one for *yen* 200. I understand that some alteration in the top end of the course is contemplated, and that great attention will be paid to the track in the interval between this and the meeting. Given fine weather and good going, the best race meeting ever held at Toyama may be confidently looked forward to.

CHIRON.

IN THE CONSULATE-GENERAL FOR SWITZERLAND.

MONDAY, 28th January, 1884.—Before A. WOLFF Esq., Consul-General; and C. ZIEGLER, F. ABEGG, T. SCHLATTER, and F. STRÄHLER, Assessors.

ALLEGED EXTENSIVE FRAUDS.

Hermann Ludwig and Rudolf Trüb were brought up at the Swiss Consular Court yesterday, charged with having fraudulently obtained advances from the Hongkong and Shanghai Bank to the amount of \$193,438.19 against fictitious certificates of deposits of silk and waste silk; and further that they, without the knowledge and consent of the Bank, unlawfully disposed of goods which they held on the Bank's account.

Mr. Kirkwood appeared for the Bank.

The charge was read over to the prisoners, who stated that they had a defence, but wished to make it after the witnesses had been heard.

Mr. Walter, late Manager of the Hongkong and Shanghai Bank at this port, sworn, stated that on the evening of the 15th inst., about six o'clock, he received a letter from Mr. Ludwig asking him to call. He did so, and saw both Mr. Ludwig and Mr. Trüb. Mr. Ludwig then said that he had a very unpleasant communication to make. He (Mr. Walter) asked the nature of it. Mr. Ludwig then told him that the godown orders on which the Bank had advanced money to his firm were to a great extent fraudulent. He then asked what amount of property there was which was represented by the godown orders. Mr. Ludwig replied that there was very little security at all, and said he hoped the Bank would have mercy on them, that they had a first-rate business and good friends in Europe, and that if the Bank would only give them time it would get off without loss. Witness told him that the Bank would never condone an offence of the kind, they would rather lose the whole amount. In the course of the conversation, he asked Mr. Trüb, whom he had always looked upon him as an honest man, if he knew anything of these frauds. Trüb replied that he had been cognizant of them all through, and was equally guilty with Mr. Ludwig. He then requested Mr. Trüb to go to the office and bring him any securities of value they had there in the shape of documents. He came to his (Mr. Walter's) house, No. 119 Bluff, at a little after nine o'clock, and handed him some books, also some Japanese documents and title-deeds, which he said represented claims upon Japanese amounting to \$80,000. On the following day, the 16th instant, he made a formal demand on Ludwig & Co. for the amount of their indebtedness to the Bank. They sent the Bank a letter saying they were unable to pay, but handed over all their possessions to the Bank. In the course of the forenoon of the 16th Messrs. Trüb and Orth came to No. 62. Mr. Trüb was then shown his godown orders, and said, in reply to a question from Mr. Morris, that there was nothing to represent them, and that the whole thing was a fraud. The nature of the Bank's business with Ludwig & Co., was that they were allowed to cash cheques for the purchase of silk and waste silk, such cheques being marked silk or waste silk according to the description of the produce bought, on the understanding that they were to hold the silk to the Bank's order and to keep them fully covered at all times. As early as possible after the end of each month they furnished the Bank with godown orders, giving a detailed description of the silk and waste silk hypothecated to the Bank. All of these showed the Bank to be fully, more than fully, covered, the receipt dated 1st November showing silk and waste silk to the value of \$254,500 held to the Bank's order. On the 16th instant, after the disclosures made by Messrs. Ludwig and Trüb, Mr. Broadbent made an examination of Ludwig & Co.'s godown, and found silk and waste silk roughly estimated to be worth only from \$10,000 to \$15,000, a portion of which is claimed by Japanese. Mr. Walter also said that Mr. Ludwig informed him on the 15th inst. that these frauds commenced in 1879, and that as the fraud had been carried on for so many years and business of the kind could not be carried on without confidence, such as the Bank had given Ludwig & Co., the Bank therefore did not recommend the accused to any consideration whatever. Mr. Walter further stated that the documents handed into court were in the handwriting of Messrs. Ludwig and Trüb. He had compared them with others in his possession.

The Court read over Mr. Walter's evidence, which he acknowledged to be correct.

Mr. Ludwig stated that he had never disputed the amount due to the Bank. He objected to the following points in Mr. Walter's evidence. He had not said that the godown orders were fraudulent, but that they were inexact. With regard to the

date when the irregularities first commenced, he had not said that it was in 1879, but said it was either in 1879 or 1880, which he could not say without looking at the books, and that from the amount of the storage receipts for November, \$254,500, the shipments would have to be deducted.

Mr. Trüb said he did not remember having told Mr. Morris that it was a fraud, but said that they would have to bear the consequences of a judicial enquiry.

Mr. Walter said that since the 1st instant, when the amount of indebtedness was \$193,438.19, only about \$10,000 worth of silk had been delivered with the Bank's consent.

In reply to the Court, Mr. Walter said that since 1879 the Bank had never examined the godowns, as they were full of silk which was continually going out and coming in, and only an expert could have checked it. He had every confidence in Ludwig & Co. It was Mr. Ludwig's own statement that the frauds commenced in 1879. The Bank did not hold the godown keys. In the case of advances on tea and silk it was not customary for the Bank to hold the keys, as it would interfere with their customers' business, and they would lose several working hours a day. The Bank only held the storage notes; there were no letters of hypothecation. A storage note is considered the most complete security, as it is made out to the Bank's order. Ludwig and Co. told him that they were doing a commission business only, and were running no risks. He thought he remembered having seen an account showing that they were doing a good business. He had enquired about the firm, and had always heard well of them. He had written to them frequently saying the amount of the advance must be reduced, and that was done. Some time ago the amount was much larger than at present. Mr. Ludwig had repeatedly told him that he did nothing on his own account; it was all on order. The Bank had a right to demand the keys at any time and to take the goods away if they pleased, but if they held the keys Messrs. Ludwig & Co. could only have obtained them at 10 a.m. and would have had to return them at 4 p.m., thus losing several hours every day.

Edward Morris, Manager of the Hongkong Bank, sworn, stated that he was present at an interview between Mr. Walter, Mr. Trüb, and Mr. Orth on the forenoon of the 16th inst. A statement dated 1st January was handed to him, which statement contained a list of certain goods in Messrs. Ludwig & Co.'s godown under lien to the Bank. He asked Mr. Trüb if it was in his handwriting, to which he replied "yes." He then asked him if he knew that the goods were not in the godown when he made out the statement, and Trüb replied "yes." He then told him he had committed a fraud, to which he again replied "yes."

Mr. Trüb objected to Mr. Morris' statement that he replied "yes" to the question of having committed a fraud. What he remembered saying was that they would have to undergo a legal examination.

J. F. Broadbent, accountant, Hongkong and Shanghai Bank, stated that on about the 14th of this month he received an account of the goods held on account of the Bank by Messrs. Ludwig & Co. against their overdraft. He asked Messrs. Ludwig & Co. to let him know how they made it out and by what margin the Bank was covered. He was told that the price of the silk and waste and the money advanced upon it would leave a margin over the Bank's advance of 15 per cent. He afterwards sent a gentleman from the Bank to inspect the godown. That gentleman came back saying he had seen Mr. Trüb, who said he was busy and asked him to come next day. The following day he went himself, and made a list of the goods he found (list handed into Court). He returned to No. 62, and reported in what state he had found the godown. Afterwards Mr. Trüb came to the Bank, and during the interview he was asked how he came to make such a statement when he knew the goods were not in the godown. He replied that that was their great wrong, their great fault, and admitted that it was a fraud.

Mr. Trüb said he did not believe he had said it was a fraud, but admitted saying that the godown receipts were incorrect.

Mr. Broadbent, in answer to the Court, said he had never taken stock or checked the receipts at Messrs. Ludwig & Co.'s. He had been here nearly two years. The reason of the inspection was on account of the change of managership in the bank, and besides he had not felt satisfied with the statements as rendered month by month, and so thought it advisable to check them. The manager had it in his power to order the accountant to check godown receipts, but as a rule the accountant does so as a part of his duty.

The Court then adjourned till 2 p.m.

On resuming, H. Orth, sworn, stated that he was in the employ of Messrs. Ludwig & Co. He had no interest in the business, and was present at an interview between Messrs. Walter, Broadbent, Morriss, and Trüb on the 16th instant. He stood a little apart from them, and did not hear all that was said. He did not remember hearing Mr. Morriss' say to Mr. Trüb "then you have committed fraud in fact." He did not take any part in the conversation, and could not remember what was said.

The prisoners' defence, which was in French, was then read.

The following is a translation:—

M. LE CONSUL GENERAL, Messieurs the JUDGES, Assessors.

1.—In presenting to you in my name, and as much as a friend as the Counsel of Messrs Ludwig and Trüb, the following articles on their behalf, I do not, perhaps, comply with the practice followed by this Consulate; custom, perhaps, would have demanded that they should have conducted their defence themselves.

But I have thought that you would permit me to give them this testimony of sympathy before you, moreover they themselves—if they could as well as myself dispute and refute before you the accusation made against them from a legal standpoint—could not nor would they give due weight, as I can and must as a friend, to their blameless past, their laborious and honourable lives, which is the first reply that I shall make to the accusation of fraud preferred against them. With this I shall commence.

2.—In all matters appertaining to criminal jurisdiction, still more than in civil proceedings, it is of the utmost importance that the judges should know the moral standing of the accused, their past, their habits; be it that the incriminated fact is to be proved thereby, or that, if the fact is known, as in this case, their intentions or their morality are to be considered.

If Messrs. Ludwig and Trüb had been accused of assault and battery, and that the fact itself were disputable, we should ascertain whether they were of violent and impulsive character, whether they were of intemperate habits that might exclude moderation in presence of a contradiction or evil intention: if the fact, on the other hand, were confessed by them, or proved, and they, for their justification, alleged extreme provocation of which they had been the object, or a danger from which they could only escape through violence, their peaceable character, their natural urbanity, would be sufficient to convince us of their innocence.

The matter under our present consideration is an accusation of their having illegally disposed of merchandise which they held on account of others. The case does not rest upon the existence or non-existence of contested commercial facts: the facts themselves, the exterior facts, are known, and the point upon which the matter turns is the intentional character of those facts, is their morality; it is a question, then, of good or bad faith, and it is for this reason that I ask the Court to consider, first of all, the moral standing of Messrs. Ludwig and Trüb up to to-day.

We shall then examine the value of the prosecution from a legal standpoint, and it will be easy for me to demonstrate that neither of the passages of the law quoted against my clients applies to them, and would not be applicable even if their good faith did not exist.

3.—It is, truly, an easy task for me, gentlemen, to thoroughly demonstrate the probity, loyalty, and the motive of the conduct of my clients and friends. You know them as well and better than myself; for a long time they have lived in the midst of you, you have always seen them laborious, orderly, modest, and enjoying universal respect. Before they established a business on their own account in 1878, they had both been employed in old established firms and had acquired the so very difficult knowledge of that beautiful but dangerous commodity "silk." Their reputation for honesty and business capacity was already so well accepted that in the first year of their establishment Messrs. Ludwig and Trüb obtained from the Hongkong and Shanghai Bank a credit of \$30,000, which in the second year was extended to \$100,000. The importance of their business and their commercial honesty were the guarantee of the Bank, as much, and more still, than the receipts of which we shall presently speak.

4.—A first modification, without doubt, more or less necessitated by the general state of business, which was not a happy one, was then introduced into their business by the partners, viz., to obtain orders of real and continued importance they saw themselves obliged to interest themselves to the extent of one-third, and sometimes one-half, in the shipments they made.

A little later, the Japanese having commenced to produce filatures in European style, which met with great success, the house of Ludwig & Co. occupied

itself with this branch of the business on its own account, and this fact forced them to have recourse to a more extended credit, which was granted. If, during the years which followed, Japanese foreign trade had at least remained normal, the merchandise bought with the money loaned by the bank would have been resold with a considerable profit, and the regular returns from Europe would have sufficiently covered the advances made by the bank.

But the house of Ludwig, as well as several others, found itself severely tried. Purchases made in the interior, on which heavy advances had been given, were not delivered, and goods shipped to Europe had been resold at a loss, and so the security of the Bank progressively diminished as the debt increased under these difficulties, and at an interest of 8 per cent.

The bank, during a period of prolonged crisis, could not ignore the situation in which the firm must needs find itself, with the evidence of an increasing debt and the drafts which had been sold to it with a margin up to 20 per cent. on the amounts of the invoices.

5.—Nevertheless, in order to conform to its statutes, the bank demanded, yet only since 1880, a monthly statement of the goods in stock, and its debtors in compliance with this demand rendered such statements. We shall now return to these receipts and their alleged criminal character, for the case rests on this alone.

These gentlemen had to their credit in Japan a sum nearly equal to half their indebtedness to the bank, which, was, moreover, their chief and almost only creditor. A forcible execution would have done away with their only means of action against their debtors, whilst by continuing to deal gently with the latter they were convinced of their ability, in course of time, to return the larger part of the sums due, and to cover, little by little, the deficit in their account with the bank, and, in fact, during the last six months their situation had brilliantly improved.

6.—I have spoken of their successive losses and their outstandings to be recovered. The money owing them and assets amount to \$90,700, and their justified losses to \$118,900 in round numbers. This already exceeds the \$184,00 due to the bank, with which it cannot be said my clients enriched themselves to the detriment of the bank.

The second sum is lost to them without hope of recovery; the first, by right, belongs to the creditors, of whom the bank, so to speak, is the only one. The actual loss of the bank, will then be reduced by the sums to be recovered on the above-mentioned \$90,700. In regard to this we cannot at present specify an amount: the result will depend much upon the manner in which the debtors are proceeded against.

7.—The point on which we wish to lay the utmost stress is that if our clients have caused the bank to lose an important sum, they have not retained anything of it themselves; their discretion, their cleverness, have been gravely at fault, but their hands have remained clean.

8.—We would wish it to be noted that the amount to the credit of the bank does not represent the loss of so much actual capital; for in fact during the five years in which those advances were made, it has, in current account, written to its credit the sum of \$59,500 interest: yes, gentlemen, \$59,500 interest paid. Whatever may be the legitimate profits which the banks have, and necessarily must have, on their capital, one cannot any more in their case than in that of private individuals assimilate the loss of interest with that of capital, and all the less as, in their case, there is necessarily compound interest, that is, interest on interest.

9.—In the preceding articles I have shown what were the beginnings of the affairs of Messrs. Ludwig and Trüb, and how the results have not corresponded with their efforts.

I have also shown that in their operations there has been only one reprehensible fact, that is that in the rendering of inexact receipts they were wanting in sincerity. I say a fact, and yet I myself do not wish to be inaccurate. It is true that there have been many inexact receipts, for they have been made monthly since 1880, but there is a sort of logical connexion between them. Each of these declarations forcibly drew the other after it, that is the logic of the fault, that is the gearing of the wheels. You see, gentlemen of the Court, that I do not fear to qualify the acts of my clients and friends with a certain rudeness. But between the error of him, who, fearing a danger for himself, exposes another to be dragged into it with himself, and the fault of him who would despoil another to enrich himself to that other's detriment, there is an abyss which my friends have never overstepped.

10.—After having thus enumerated the facts, as they have developed themselves, and after having shown that Messrs. Ludwig and Trüb have been

wanting in discretion, in good sense, in sagacity, but not in honesty, I will take up the two chief points of the accusation, and show that neither of them is applicable to my clients and friends. The valuation of their acts from a moral standpoint will have its place, but first of all let us examine them from a legal and judicial point of view.

11.—I begin by saying that the two accusations are incompatible and irreconcilable.

If the facts were of less uniform a nature, less connected a character, if the transactions of Messrs. Ludwig and Trüb with the Hongkong and Shanghai Bank had been of a different nature, one could conceive that the one presented the character of the crime mentioned in Article 246, and the other of that mentioned in Article 263—that there was, on the one hand, a withdrawal and embezzlement of the goods pledged, and, on the other hand, fraud and deceit tending to obtain objects of value to the detriment of another. But the transactions which my clients have had with the bank were only of one description—they made use of an open credit under promise of security, first by establishing such credit and afterwards on different occasions, by promising even (*pro forma*) not to dispose of the security without the Bank's authorisation.

Our opponents might bring this fact under Art. 263 (we shall, however, contest that), but it does not at all enter into Article 246. The law has not provided, nor could it provide twice, for the same crime, especially when different punishments have to be inflicted; it has provided for two very distinct crimes.

The first (Art. 246) is the gravest; it is embezzlement (*Unterschlagung*) of the property of another which previously has been entrusted to one's possession by the proprietor, that is what the French law calls *abus de confiance*, as would be the case with an unfaithful trustee, a lessee of furniture, or a creditor holding security.

The second crime (Article 263) is deceit (*Betrug*) the only one discussible here.

As to the first, it seems that our opponents have not taken the trouble to read the very law which they call into requisition against us.

Indeed, to make it appropriation (*soustraction*) and embezzlement of the property of another, it would have been necessary that the ownership of the silk and silk waste which was in our godowns had devolved upon the Hongkong and Shanghai Bank. Now, those silks successively entering our godowns, to leave them again after examination and classification, were the security of the Hongkong and Shanghai Bank, but they were not its property, they were legally ours, and if they had been stolen it is we, and not bank, who would have had to take action against the thieves; if they had been destroyed from a cause not covered by the fire insurance, the loss would have devolved upon us alone, and we would not have ceased to be the debtors of the bank for its advances; if they had acquired a higher value instead of falling off, as has been the case, we would have had the benefit, just as the depreciation in value has been our loss.

You see, gentlemen (and it is more with regard to our opponents than our Judges that we have insisted upon this), Article 246 of the German Penal Code does not in any manner apply to a debtor who has furnished a pledge, and it will perhaps be difficult, even with a new law, to protect creditors so little covered as they are here.

We have not appropriated moveable objects belonging to the Hongkong Bank; the objects belonged to us. But our opponents renouncing henceforth the assertion of being pledge-creditors are going to bring our receipts, our declarations, against us. In admitting that we have on storage a certain quantity of silk, we have signed a document saying that this storage was on account of the Hongkong Bank, and that it was deliverable only by its order. We will not wrangle over the fact that this part of our obligation was printed. No: this double mention stands alone, it is in large characters, comes last of all, and we have certainly seen it in signing our receipts.

But we have believed, and in very good faith, that the condition of authorisation was a mere form, a style, and for this we had a very good reason. Never during the five years in which we kept an account with the bank, has it reminded us of the observance of this condition, which has never been fulfilled; it did not, then, hold good.

When we gave the bank drafts for shipments of silk it could have let us know that we had failed in our duty in shipping the goods without its authorisation. It has never done so.

This would, nevertheless, have been the case had our shipments seemed to have been made under disadvantageous conditions.

How could we believe in the reality of such an obligation? It was evidently a fictitious and purely nominal one. And even had the obligation been a real one, which could be enforced by the

bank and would be binding upon us, the fact of having failed in it would only render us civilly, and not criminally, responsible, and the Bank would still have had to prove that we sold at rates lower than those which it had sanctioned. But that responsibility would neither change the nature nor the total amount of our debt to it, and especially it could not place us under Art. 246, which does not provide for an offence of such a nature.

Not being guilty of the embezzlement of the property of another, let us see, then, whether we are guilty of fraud or deception (*Betrug*). We have no doubt alleged a fact which we knew to be inexact, that is, the presence in our godowns of a quantity of goods larger than the actual amount. But, have we by so doing, abetted or maintained a criminal course to obtain for ourselves an unlawful advantage?

No! most we emphatically deny that accusation.

We could at the most have caused an ill-founded confidence, a confidence which the future was not to justify: but we have not done that either; at that time our business promised to prosper, we had yet more confidence in ourselves and in the future than the lenders could have had; we had the firm intention of giving the promised pledge, and for a long time we have done so and maintained it at the necessary figure.

It was in the sequel that those receipts did not show the same exactness.

We have already said it is on this that the whole case turns, and we must, without any circumlocution, confess our only wrong.

But is that placing ourselves under provisions of Art. 263? We shall show that such is not the case. It was impossible that the bank was ignorant of our losses; it certainly knew of them, as we have already proved; it evidently closed its eyes to a situation which it hoped, as we did, would more or less promptly and quietly improve and regulate itself. Admitting even that the bank really was in error on the subject of the reality of its security, this error is not provided for by the Penal Law, much less would it come under the civil or commercial law. If the law is to come to the assistance of the victim of an error through a criminal act against him who caused that error, it is necessary that that error should have been unavoidable, and that there were no means of preventing it. That is not the error of the bank, which could easily have avoided it; we are not even in presence of a plausible error (the *probabilis error*), the only one with which juriconsults have ever occupied themselves.

Our opponents finally have no legal grounds on which to base the last clause of their imputation.

It would be necessary that the error which we are accused of having caused and carried out had unlawful gain as its ultimate object. Except that we tried to avoid a threatening loss, to escape the catastrophe which has now come to pass, and not to obtain an unlawful gain, the continued confidence of the bank would not enrich us, but it would above all enable us to repay the bank itself.

If the times had once become and remained prosperous, we, in our turn, would have been able to recover our personal losses, but our immediate and direct purpose was to release ourselves from the obligations to those who now accuse us of having intended to rob them.

We have not tried to appropriate the property of another, but to preserve the credit which the bank had granted us. We also intended preserving the debts due to us, well knowing that a stoppage in our business would be an encouragement to those who are indebted to us, and who were not men of good faith.

Juriconsults would say that "we struggled to avoid a loss, and not to secure a gain." It is a long time, indeed, since the laws and their interpreters established material differences between those "*qui cecidit de damno vitando*" and those "*qui cecidit de lucro vitando*."

We have neither abetted nor maintained a crime, which was certainly impossible with those who, having followed us with their eyes during five years, knew as well as ourselves the losses suffered in these years of crises.

Finally, if our acts have been prejudicial to another, it has not been done in the pursuit of unlawful gain, but in trying to avoid our own ruin.

Mr. Consul General:

Gentlemen of the Court:

I have shown that Art. 263 no longer applies to my unfortunate clients and friends, and neither does Art. 246; consequently my task as Counsel would be finished, and I should only confidently have to await the decision which your sense of equity and your wisdom will dictate to you. But these proceedings will be published abroad on account of the interests which are at stake, and the persons between whom they have arisen.

When you have acquitted my clients and friends,

there must be no question about their honour; and you may, without exceeding your powers, contribute to that end in deciding upon the case, such as it has been put before you, and such as we trust to have established.

In conclusion, I propose giving you the last proofs of the continuation of their good faith, their sincerity, and their honesty. During the five years in which the facts that now occupy us have transpired, Messrs. Ludwig and Trüb have each twice made voyages to Europe and America to superintend the progress of their interests. Mr. Ludwig went last; he has returned, and he has not thought for a single moment of not returning.

If they had had the intention of defrauding their creditor, the Hongkong Bank, would it not have been easy for them not to return to Japan, but to settle in foreign countries and to commission the first-comer to declare the truth. But no! such an idea never entered their heads; their zeal to fulfil their obligations has not relaxed, and during the last six months that hope grew stronger daily.

Even in these last days after they had exposed their true position to the bank, and could not foresee with what rigour it would proceed against them, Messrs. Ludwig and Trüb gave up to the Bank all they possessed, thus having no intention to keep anything for themselves.

Is it not a cruel irony to impute an unlawful gain to those who, to satisfy the bank, stripped themselves of all that belonged to them? Gentlemen, Judges, if I have adhered to demonstrating the absence of all legal basis in the prosecution, it was not that a long demonstration was necessary to you, but it is to our opponents that I addressed myself.

If, on the other hand, I try to make you share my full conviction of the good faith and the honesty that make up for the misfortune of my clients, it is to you especially that I address myself, not that you may reinstate them in your esteem, which you had not withdrawn from them before entering upon the case, but that you may preserve it, to be a consolation to them in their misfortune.

CONCLUSIONS.

On the 1st point, Art. 246:—

May it please the Consular Court:—Whereas the acts imputed to Messrs. Ludwig and Trüb by the manager of the Hongkong and Shanghai Banking Corporation, do not come under the provisions of Art. 246 of the German Penal code, which punishes the embezzlement of the property of another, the security not being the property of the creditor holding security, but only a claim on the guarantee of the goods, remains the property of the debtor.

On the 2nd point, Art. 263:—

Whereas the said acts, although not being blameless from an exact point of view, lose all criminal character from the want of intention to injure on the part of the accused, and from the facilities the Hongkong Bank had to verify, at any moment, the receipts that were furnished to it.

Whereas the bank never having made that verification, the accused must have believed in a tolerance on the part of the bank with regard to the insufficiency of the pledge.

Whereas the bank never reminded the accused of the observance of the condition "not to dispose without its authorisation."

It follows:—

That they have not abetted nor maintained a criminal act against their creditor in order to procure to themselves an unlawful gain—a necessary condition for the application of Article 263.

For those reasons:—

Messrs. Ludwig and Trüb should be acquitted of the accusation brought against them before you. Yokohama, 28th January 1884.

Mr. Walter then said most emphatically that there was no truth in Mr. Ludwig's statement that the persons in the Bank knew of their position, that they were losing money, and that the Bank was not deceived by their monthly statements. The Bank advanced the money on the strength of Messrs. Ludwig & Co.'s statements, having perfect faith in Ludwig & Co., who repeatedly told him that they did not speculate on their own account but that all their business was done on commission. There were other firms who had advances in the same way, but their confidence had never been abused as it had been by Messrs. Ludwig & Co.

Judgment was reserved.

On Thursday morning at 10 o'clock, the following judgment was delivered:—

In the matter of the merchant Herrman Ludwig from Wiedikon, and the merchant Rudolf Trüb from Dübendorf, accused of fraud and embezzlement, a meeting of the Court was held on the 31st January, 1884; the Court being composed of the following gentlemen:—A Wolff, Consul-General; Ch. Ziegler, Merchant; F. Abegg, Merchant; Th. Schlatter, Merchant; Fr. Straehler, Merchant, Judges. A Dumelin, Clerk of the Court.

The accused are found guilty, and sentenced each to six months' imprisonment.

REASONS.

The accused claim that they are not guilty of fraud, having had no intention to commit a wrong; because, further, the Hongkong and Shanghai Bank never had examined the goods in the godowns of the accused, receipts of which had been given, they concluded that the Bank was aware of the insufficient character of these receipts; and, finally, because the Bank never enforced the clause that the "goods should not be sold without the authorisation of the Bank."

Furthermore, the accused claim that they never attempted to abet or maintain a criminal act against their creditors, with the intention of securing to themselves an unlawful advantage.

The force of the term 'fraud' lies in the damage done to the property of another by means of deception with intent of unlawful profit.

By means of the false receipts, the accused abetted and maintained a wrong against the Bank, inventing, as they did, the existence of goods in their godowns which did not at all, or only, in important quantities, exist.

By thus doing intentional wrong to the Bank's right of property (*Vermögensvortheil*), they procured for themselves unlawful profit, and this was the profit they wished for. Whether they intended to cover their indebtedness to the Bank at some future date, or whether they actually intended to do detriment to the Bank, are not questions to be considered.

The illegal condition of their right of property (*Vermögensvortheil*) is due to the fact that they obtained certain objects, the property of the Bank, objects to which they had no claim.

Although the Court admits, and takes into consideration in behalf of the accused, that the Bank could hardly have lost so large a sum had they been more careful in the examination of the receipts, yet this does not by any means prove that the Bank was aware of the insufficiency of the securities given them; and the fact that the Bank during several years never enforced the clause "that the goods should not be disposed of without its authorisation," does not at all free the accused from the observation of this condition. A condition which, was repeated on every monthly receipt, and which was signed every month by the accused.

The accusation of embezzlement is not recognized by the Court, as embezzlement only includes the appropriation of property belonging to another, and the goods certified in the receipts given to the Bank were only pledged to the Bank, but not its property.

This judgment will be forwarded to the high authorities of the Swiss Republic.

A. WOLFF, Consul-General.

Yokohama, 31st January, 1884.

A JAPANESE CHRISTIAN WEDDING

We have been requested by a witness of the Japanese Christian wedding that took place at the Union Church 3 p.m. 29th inst., to give insertion to the following account of the ceremony:—

The bridegroom was a Mr. Kawamura, a teacher of mathematics in the Ferris Seminary for Japanese Young Ladies at this place, and the bride a Miss Tsuji, formerly a pupil of the Graham Seminary for Young Ladies, at No. 42, Tsukiji, Tokyo. The bride's mother, and the bridegroom's brother, the latter a surgeon on board of H.I.M.'s *Fuso Kan*, were present, with numerous guests and friends from Tokyo. Before the arrival of these parties the Church was quite filled with the teachers and pupils of the Ladies' Schools of this place, and other Yokohama guests. Proceedings were commenced by singing a Native Christian Hymn, a Japanese young lady presiding at the organ, on the conclusion of which the bridal party entered the Church from a side door and took their places in front of the native pastor, the Rev. Inagaki Akira, who prefaced the ceremony by announcing the names of the parties to be joined in marriage and calling upon any present who could show cause why they might not be lawfully joined in marriage to do so now, or hereafter for ever keep silence. He then stated that marriage was an holy and an honorable estate instituted in Eden before the fall of man, and was everywhere approved of in Scripture. He also cited at length a quotation from the Chinese Sages to the same effect, then read from Scripture the duties of husband and

wife, and put the usual questions and pronounced them husband and wife. This he followed with a prayer, imploring God's benediction upon the newly married couple, concluding with the Lord's Prayer, in which he was joined by all present. The singing of the Doxology, and the pronouncing of the Benediction concluded the ceremony, on which their numerous friends, and the teachers and pupils of the school, proceeded to extend to them their congratulations. Tea and refreshments were provided for all, and a happy half-hour was spent in the enjoyment and interchange of friendly sentiments. This latter part of the ceremony did much to relieve the feeling of restraint that naturally is felt by newly married parties and their friends. On the withdrawal of the bridal party the invited guests repaired to a native banquet given in honor of the occasion at one of the best places of entertainment in Yokohama. As the long line of jinrikishas moved away, and the happy bands of brightly and beautifully dressed girls returned from the Church, the contributor of the present notice was asked to furnish some report of this pleasant ceremony for the information of those of our foreign residents as seldom witness such events, and practically know little of the leavening influence Christianity is silently but effectively working, socially as well as intellectually and spiritually, in Japan.

CHESS.

FROM THE CHESS PLAYER'S CHRONICLE.
BLACK.

WHITE.

White to play and mate in 3 moves.

The Nippon Railway Company held a General Meeting on the 28th ult. at the Meiji Kwaido, sixty shareholders being present. One of them, Mr. Hoshi, proposed, that shareholders holding less than one hundred shares should form into bodies representing more than one hundred shares, having power of attorney, and thus holding the privilege of voting, etc. This proposal was rejected by a large majority, on the grounds that if the company were not prospering it would be necessary to extend the right of voting, in order to restore confidence, but that so long as the finances were in a flourishing condition such a step was unnecessary.

The impression seems to prevail that, should the Franco-Chinese difficulty be amicably settled, China will reopen the Riukiu question. This, combined with the return of Admiral Venomoto from China, has given rise to a feeling that the relations between China and Japan are unusually strained. The fact of the near departure of the *Amaki Kan*, under Rear-Admiral Matsumura, for China and Annam, has given new force to the rumour.—*Hochi Shimbun*.

Nakasendo Railway Bonds have been taken up by the banks of Tokiyo and Yokohama to the amount of 4,310,000 yen. The two largest banks in Tokiyo have taken one million yen each; the Specie Bank, 500,000; Mitsui Bank, 300,000; Second National Bank, 250,000; Third National Bank and Yasuda Bank, 150,000 each; One Hundredth National Bank 50,000; the rest by private merchants. The remaining bonds, amounting to 690,000 yen will soon be disposed of.—*Fiji Shimbun*.

The silk producers of the Ashikaga and Kiriu districts have applied to the Nippon Railway Company, requesting them to extend the line to Ashikaga, Sano, and Tochigi, instead of running it direct to Utsunomiya via Satta and Furukawa. They have subscribed 540,000 yen amongst themselves, and will contribute this sum to the capital of the Company in case it agrees to their request.—*Nichi Nichi Shimbun*.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, FEBRUARY 2ND, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 25.5 miles per hour on Tuesday at 6½ p.m.

The highest reading of the barometer for the week was 30.326 inches on Friday at 9.27 p.m., and the lowest was 29.949 inches on Tuesday at 11 p.m.

The highest temperature for the week was 54.2 on Monday, and the lowest was 29.1 on Thursday. The maximum and the minimum for the corresponding week of last year were 52.0 and 25.4 respectively.

The total amount of rain for the week was 0.096 inches, against 1.474 inches for the corresponding week of last year.

LATEST COMMERCIAL.

IMPORTS.

During the past week, Chinese holidays have interfered with business generally, few country orders have been received, and dealers have not been visiting the Market regularly.

COTTON YARN.—Prices are very firm, and buyers have reluctantly been compelled to pay a further slight advance. Sales amount to about 1,000 bales, including a reported contract of 500 bales Reverse to arrive during the next six months.

GREY GOODS.—Shirtings have been quiet, but the firmness of holders has enabled them to obtain rather higher prices. T-Cloths have been in fair demand, and fair sales are also reported of Bombay Goods.

FANCIES.—Velvets have again advanced in value in consequence of diminished supply and a fair demand. Turkey Reds have been taken at full rates, and the same may be said of Mousseline de Laine and Italian Cloths. There have also been fair sales of Victoria Lawns and Prints.

COTTON YARNS.

	PER PICUL.

Brown Formosa	3.90 to 4.00

EXPORTS.

RAW SILK.

Our last issue was of the 24th ultimo, since which date a fair business has been done, transac-

tions reaching fully 400 piculs. Arrivals have been scanty, and the Stock is yet further reduced to 3,050 piculs as per table at foot hereof. Prices generally are unchanged, especially for good silks; at the same time a favorable Market for *Kinsatsu* has made some holders more inclined to sell at current rates. Telegraphic news is reported to be again better, and buyers who have been out of the Market for some time past have re-entered on basis of present quotations. The bulk of Settlements noted has been *Filatures*, although *Hanks* and *Oshu* sorts have also had their turn.

The P. & O. steamer *Kashgar*, which sailed at daylight on the 26th January, carried 296 bales; of which total 73 only were entered for England and 223 for Continental ports. These shipments bring the Export for all countries to date up to a grand total of 25,814 bales, against 19,687 last year, and 11,554 at same date in 1882.

Hanks.—This class has been in fair demand at late rates, the enquiry running on best kinds which are well and firmly held. Nothing recorded in the lower grades, whether in *Foshu* or *Bushu* sorts. Among the daily Settlements are reported purchases of *Shinshu* at \$505, \$492½, and \$485, according to quality; with *Shimonita* and *Tomi-yoka* at \$495.

Filatures.—Business in this class has revived, and transactions have been plentiful, reducing the present available Stock to 600 piculs, *Re-reels* included. There has been some demand for the U.S. Markets, and some rather extensive parcels of *Koshu* district (which have hung fire for some time) have found buyers at about \$595. These run 12/14, 13/15 deniers, and really fine size silks have also been taken at \$620 down, according to quality. In true 14/16 but little has been done: a small parcel "Nikoshu" at \$615, with other *Shinshu* kinds at \$605, \$590, and \$580. We note also *Yechu*, at \$590; *Koshu*, \$575; *Hikone*, \$550, with a few bales fil. *Nihonmatsu* at \$635.

Re-reels.—We have nothing to chronicle beyond one or two small purchases in Medium *Bushu* at \$530. None of the recognised chops in *Shinshu* or *Foshu* sorts have been dealt in, but prices remain without quotable change.

Kakeda.—Some little has been done in silk grading about 1½ at \$575 per picul, with a parcel of Common at \$515. Beyond these transactions, there is nothing to note, and Stock remains about the same as last advised.

Oshu.—Considerable purchases of *Hamatsuki* at \$475 for 1 and 2, with \$450 for average 2½. In other kinds no business reported.

Taysam Sorts.—No movement of any description; everything remains *in statu quo*.

QUOTATIONS.

Total	25,814	19,687	11,554

WASTE SILK.

We have but a small business to report in this department, Settlements for the week returned as 150 piculs. Arrivals have been rather more plentiful, the total Stock being now estimated at 1,020 piculs. The enquiry is better for some favorite kinds of Waste, but these are just the sorts which are unrepresented in the Stock-list. The last P. & O. steamer took 151 bales, bringing total Export of Waste and *Cocoons* up to 18,749 piculs, against 16,390 piculs in 1883, and 13,255 piculs in 1882.

Pierced Cocoons.—No transactions during the week, although one small parcel has arrived from

the country, and and is now offered upon the Market.

Noshi-ito.—The business done in this description is equal to about half the total Settlements for the week under review. Desirable kinds are by no means plentiful, and some holders are inclined to be conservative in their ideas. *Oshu*, Good to Best, has been done at \$145, with Good Medium *Foshu* at from \$85 to \$87½. *Filature* sorts enquired for in small lots at former prices.

Kibiso.—Some little business done in these on basis of *Sendai* at \$91, *Yonezawa* \$86, *Foshu* at \$60 for Good, and \$35 for Common. *Shinshu* are wanted, and "Filatures" are scarce and dear. Nothing done in *Neri*, but Stocks are plentiful, and there is some talk of business pending at quotations. Common *Foshu* and *Hachoji* are enquired for at hardening rates.

Mawata.—No transactions, and the position remains unchanged since last week.

Taysam Kinds	100		
Total piculs	3,050	Total piculs	1,020

TEA.

Transactions for the week, ending to the 1st instant, show little change in the extent of business as compared with the previous one. Total Settlements aggregate to about 1,100 piculs, and consist principally of Medium and Good Medium kinds at fully former quotations. Receipts from the country only foot up to 436 piculs during the interval, making a total for the year of about 156,115 piculs, as compared with the previous year 165,145 piculs. It is not expected that future receipts from the country for Yokohama Market will exceed 3,000 piculs, and if this proves to be the case, the total supply for the season will be considerably short of the previous year's. Tea in Stock is roughly estimated at about 800 piculs. The bark *Cross Hill* sailed on the 25th ultimo for New York, via Kobe, took 22,538 lbs. Tea for New York.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S
PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEBRUARY 9TH, 1884.

BIRTH.

At West Park, Knottingley, December 14th, 1883, the wife of J. LEE THOMPSON of a son.

SUMMARY OF NEWS.

SEVERAL daring burglaries have been perpetrated in Tokiyo and Yokohama.

THREE persons have been arrested in Tokiyo on a charge of counterfeiting *Kinsatsu*. They are said to have confessed the crime.

It is stated that the Government contemplates forming a corps of woodrangers for the purpose of enforcing the forestry regulations.

A COURSE of six weekly lectures by well known missionaries is to commence at the Meiji Kwaido, Tokiyo, on the 16th instant. The lectures will be in Japanese.

A JAPANESE scientist, Mr. H. Tanaka, is said to have invented a new species of torpedo, with which experiments will soon be made in the Sumida River.

THE Nagasaki detective who was recently sentenced to five years' major confinement for stabbing a Chinaman during a riot, has appealed against the sentence.

AN ex-corporal of the Japanese army has attempted to revive the old custom of emphasizing a petition by suicide. He chose one of entrances to the Imperial Palace as the scene of his exploit, and was arrested by the guard. It

appears that the corporal is a violent agitator for the immediate establishment of a national assembly.

ANOTHER section of the Tokiyo-Takasaki line has been completed, and will be opened on the 20th instant. Kuragaya in Joshiu, will then be within two hours' ride of Tokiyo.

It is announced that during the absence of General Oyama in Europe, General Saigo will combine the duties of Minister of War with those of his present office.

It is announced that the Government will grant an appropriation of ten thousand *yen* towards the expenses of forwarding exhibits to a projected international exhibition at St. Petersburg.

THE prospect of a good harbour being formed in the Bay of Shinagawa is discussed by the vernacular press, and an opinion is expressed that, when the work is carried out, Yokohama will cease to be an important tradal centre.

NOTIFICATIONS referring to the issue of railway bonds and bonds in exchange for *Kinsatsu* were published, on the 4th and 5th instant, in the English local press, but were discontinued, as the greater part of the former loan had been already taken up by Japanese Capitalists.

A CORRESPONDENT of the *Fiji Shimpō*, writing from Korea, says there is no intention of carrying out the tradal regulations recently concluded by that country with England and Germany. He also states that the Government at Sōul is pecuniarily embarrassed, having spent all the money borrowed last year from China.

It is stated that an Austrian officer has been engaged by the Government of this country in connection with a proposed development of the Japanese cavalry. Little attention has hitherto been bestowed on that arm of the service, as its utility seemed doubtful, having regard to the topography of Japan. A new departure in this respect is now announced.

Two *jinrikisha* coolies were frozen to death at Nihonbashi, in Tokiyo, during the recent snow fall. The men had returned from a run to Shinbashi, and, being alone upon the stand, their condition did not attract attention. They dropped off to sleep and were found dead. Four deaths from cold are also reported from Gifu prefecture.

At the last general meeting of the shareholders of the Tokiyo Rice Exchange a dividend of one *yen* is said to have been declared. The sense of the meeting seemed to be in favour of petitioning the Government for a reduction of the tax, as this is supposed to be the chief cause of the inaction which has come upon this class of enterprise.

A HEAVY fall of snow occurred in Tokiyo and Yokohama on the afternoon and in the night of the 5th instant. In Tokiyo a depth of thirteen inches was measured on the morning of the 6th. The climate this year has been almost a facsimile

of last season's. Both in 1883 and 1884 a long spell of beautiful weather was broken up, in the former year on the 7th, in the latter on the 5th, of February by a snow storm of unusual severity.

A NAGASAKI journal states that a species of gambling saloon has been opened by a foreigner in the main street of that Settlement, and that the place is crowded every day by Japanese and Chinese. The proprietors of the concern recently attempted to carry on a similar establishment in Shanghai, but as their trade was in contravention of the municipal regulations, they were soon obliged to decamp. In the foreign Settlements of Japan, however, exterritoriality, as interpreted by European Powers, permits these abuses to flourish unimpeded.

NOTES.

IN the course of Messrs. Ludwig and Trüb's trial on a charge of obtaining advances from the Hongkong and Shanghai Bank under false pretences, it was stated that they had assets in Japan to a very large amount, but that they could only hope to recover them by dealing gently with their debtors, and that "the result would depend much upon the manner in which those debtors were proceeded against." There is more mystery about this assertion than the simple relation of debtor and creditor seems to demand. It is reported, indeed, though with how much truth we are unable to determine, that a great portion of the assets in question are in the form of money advanced to Japanese agents for the purpose of trading in the interior. Under what other circumstances a foreign silk firm, doing business in Yokohama, should have eighty or ninety thousand dollars owing to it by Japanese, we are at a loss to conceive. In the silk trade, as ordinarily conducted in Japan, the trust is generally on the side of the Japanese. He brings his silk and leaves it in the foreigner's godown, perhaps for a week, perhaps for a fortnight, until the inspection which determines its purchase or rejection is completed. Silk deposited in the godown of Messrs. Ludwig, and Trüb under these very conditions, was actually seized by the Hongkong and Shanghai Bank, and though, doubtless, it was, or will be ultimately, returned to its Japanese owners, the latter were for a time deprived of their property. It is scarcely possible that transactions of this sort should result in a large Japanese indebtedness to a foreign firm. Messrs. Ludwig and Trüb's assets are probably in the hands of native agents, who may or may not regard the incarceration of their principals as a good opportunity to defer the rendering of accounts. This is another illustration of the unfortunate conditions under which foreign trade is conducted in Japan. Merchants are obliged to violate the treaties in order to elude the monopolists that invest the settlements. For certainly to employ Japanese agents outside the treaty limits is to violate treaties which provide that trade shall only be carried on within those limits. As a point of morality this method of whipping the devil round the post is not very

heinous. The foreign merchant takes all the risk, and a very serious risk it is, considering that a Japanese could not be held legally accountable for money entrusted to him under such conditions. But the trouble is that these dodges should be necessary at all. The only redeeming feature of the affair is that, after all, foreign confidence in Japanese honesty must be considerably larger than is generally admitted. There are not many parts of the world where commercial confidence goes the length of trusting round sums to men against whom no legal claim could be established if they chose to default.

We learn with much pleasure that after the course of lectures delivered in the Meiji Kwaïdo last spring by the Rev. C. S. Eby and other gentlemen, the Council of the Evangelical Alliance—in which are representatives from every Protestant Church in Japan—feeling that a right note had been struck, and learning that enquiries, sufficient to form the staple of another course, had come in requested Mr. Eby to make arrangements for a second series of lectures, and undertook to supply the necessary funds. The preliminary steps are now completed, and the course will commence on the 16th instant in the Meiji Kwaïdo, at 3 o'clock p.m. The lectures on this occasion will be delivered in Japanese only, one every seven days for six weeks. Should a demand arise, however, it is in contemplation to print the series subsequently in English. The course will be as follows:—

- 1.—*The Basis of Morality*, by the Rev. Mr. Knox, February 16th.
- 2.—*Pantheism and Christianity*, by the Rev. Dr. Verbeck, February 22nd.
- 3.—*The Insufficiencies of Buddhism*, by the Rev. Dr. Gordon, February 29th.
- 4.—*Confucianism and Christianity*, by the Rev. Mr. Waddell, March 7th.
- 5.—*Christianity, its essentials*, by the Rev. Mr. Eby, March 14th.
- 6.—*Christianity as a Social and Political Factor*, by the Rev. Mr. Eby, March 22nd.

It will be seen, both from the subjects chosen and from the names of the gentlemen who have promised to discuss them, that a most interesting intellectual treat is in store for the people of Tokiyo. There can be no question that this method of familiarizing the better classes of Japanese with the science of Christian morality possesses marked advantages.

A GREAT deal of indignation has been roused, from time to time, among the sporting section of the foreign community, by rumours of contracts made with London firms for the delivery of so many hundreds, or thousands, of pheasant skins, and the consequent wholesale slaughter of birds outside treaty limits, in and out of season. The gentlemen whose names are associated with this peculiar business may be credited with a certain amount of indifference to the wrath of their fellows. They probably think that every way of making money is fair, and it must be confessed that to abstain from slaughtering and exporting pheasants simply because the next generation of foreign residents may suffer from a scarcity of game, would be an exercise of philanthropy not quite consistent with the recognized spirit of commerce. At the same time, it is permitted to wish that the police would exhibit a little more vigilance with regard to these mercenary poachers, and compel them to respect the terms of their licenses, however little they may trouble themselves about their neighbours' privileges. More difficult to deal with is another variety of "*la chasse*," said to be largely indulged in, at present, by Chinese residents of the open ports.

These eminently practical persons go about purchasing throats—or nightingales, as some people call the Japanese *uguisu*—which they ship off to foreign lands in considerable numbers. The price of the beautiful little songster is said to vary from ten cents to five *yen*, and when landed safely at the place of his destination, he is supposed to be worth from fifteen to thirty dollars. But, on the other hand, fifty or sixty per cent. die on the voyage. This sort of trade does not commend itself. Japan has allowed herself to be stripped of her works of art until it has become necessary to go to Europe or the United States to see the efforts of her old masters. Is she also to lose her only really melodious bird? The *uguisu* is comparatively a *rara avis*. Such a sweet-voiced little creature could not possibly be abundant. Did we hear its notes constantly, we should begin to wonder, with Isaak Walton, what sort of music is provided for the saints in heaven, when sinners upon earth can listen to such melody. If the story of the ruthless Chinese pedlars be true, the neighbourhood of the foreign settlements may easily be denuded of *uguisu*, and then the summer mornings will be robbed of half their beauty. It is a villainous prospect, and a little official despotism would come in most usefully.

We wonder whether the difficulty of disposing of ordinary imports in these hard times has induced anybody to traffic in the class of goods that attracted Demosthenes to Cornith. On no other hypothesis can we explain a cartoon in the last number of the *Maru Maru Chimbun*. In the foreground of a landscape, unmistakably intended to represent Yokohama, a huge clam shell is emerging from the sea, and sending out a number of smaller clams, which, on reaching the shore, exert themselves with great success to capture sundry Japanese wayfarers dressed in Western costume. The picture is headed "importation of clams," and in the letter press we read:—"There is talk of an importation of foreign white clams which far surpass the native-bred article. They may possibly be destined for foreign consumption only, but they are very dangerous food, especially when new. Gentlemen of Japan, beware!" Not the least comical point in the cartoon is the phonetic method of spelling "gentlemen." It is written *Zeni-torumen*, which literally signifies "money-grabbers." Is that the Japanese idea of an imported gentleman, we should like to know.

LETTERS received in England from Kobe, says a home paper, state that H.M.S. *Curaçoa* recently encountered a terrific typhoon, which broke over the northern part of China, and she was for some hours entirely at the mercy of wind and waves. She was on her way from Yokohama to Nagasaki, and was sailing under double-reef topsails, when at nine o'clock in the evening the storm suddenly broke upon her with tremendous force and bore her down to an alarming degree. It took two hours to get in the sails, and another hour to get up steam; but wind and sea were so strong that steam was found to be almost useless, and it was with great difficulty the ship could be kept under control. Several boats were carried away one after the other. The mizzen top-gallant-mast went over with a crash, and sails were blown bodily from the yards. The typhoon continued with unabated fury until six o'clock the next morning, and the *Curaçoa's* decks then presented a scene of great disorder; ropes, handspikes,

and other articles were scattered about in all directions, broken and useless. The hatches being battened down, very little water found its way below; but the ship rolled tremendously, and wind and sea continuously bore her down to the gunwale. In making her way to Kobe the *Curaçoa* picked up nine Japanese sailors, who had been wrecked in the storm and were clinging to pieces of wreck.

THE Kana Reform Society is said to be daily growing in strength and influence. Its last meeting, held on the 27th instant in the principal hall of the Imperial Engineering College, was in many respects a remarkable gathering. It was under the Presidency of H.I.H. Prince Arisugawa, who was supported by the President of the Bank of Japan, Mr. Yoshiwara. Their Excellencies Takaki, Matsugata, Sasaki, Mr. Nabeshima, Admiral Nakamuta, and a large number of well known officials and private gentlemen were on the platform. Not the least noteworthy feature of the affair was the presence of many ladies, who seemed to take a keen interest in the proceedings. We have no hesitation in saying that the work upon which this Society is engaged deserves the grateful support of the whole nation. Opinions may differ as to questions of detail, but no thinking man can doubt that until the youths of Japan are relieved from the necessity of devoting years of study to the acquisition of caligraphy, this country cannot hope to compete successfully in the scientific race of the world.

A RESIDENT of Akidzuki, in Chikuzen, is said to have devoted much time and patience to studying the habits of the *uguisu* (nightingale), and to have succeeded in persuading the bird, though caged, to sing with all its usual sweetness. The *uguisu*, like many other *chef d'œuvres* of nature, does not love confinement. It quickly pines away when deprived of liberty, and those reared in captivity seldom develop the rich mellow notes that add so much to the charms of a Japanese spring. Tetsu-saburo, for so the practical naturalist of Chikuzen is called, has overcome these obstacles. He shares his cottage with thirty or forty *uguisu*, so that the whole neighbourhood is said to be constantly delighted by a flood of melody. Among the songsters there is one to which its owner has given the name of *Yama-goshi* (mountain-traverser). Its voice is declared to be inconceivably sweet; so much so, indeed, that its reputation has spread throughout the whole province, and people, not content with coming to listen to its singing, have made many attempts to purchase it from its owner, as much as a thousand *yen* having been offered by more than one visitor. But Tetsu-saburo, refusing all proposals, has taken *Yama-goshi's* cage in his hand, and is now carrying the little melodist by easy stages to Tokiyo, where he proposes to present it to the young Prince Haru, the Emperor's only surviving child.

A REMARKABLE case of hereditary longevity is reported from the village of Kwanshōji, in the Kiyoto district. There is living there a farmer, by name Noritane, who has reached his eighty-seventh year, and who declares that so long as he can remember, he has never taken a dose of medicine. His wife is sixty. She married at sixteen, and had her first son at seventeen, from which time until her 44th year she continued bearing children pretty regularly, until her sons

numbered nine and her daughters twelve. The whole twenty-one are living and in excellent health. They have made Noritane the grand father of 30 children, among whom, also, not one casualty has taken place. Noritane can trace his family back to the Tempio era (730 A.D.), when his first ancestor died at the age of 120. Since then no representative of the family has failed to reach a century, and Noritane himself does not seem likely to alter the record.

M. DE LESSERS has been interviewed by the editor of the *Voltaire*, and, amongst other expressions of opinion, the great engineer is said to have delivered himself as follows with regard to affairs in the Soudan:—"I have never ceased to regard the expedition to the Soudan as a veritable folly. The Ethiopians, under the leadership of the False Prophet, would never have passed, and will never pass, the first cataract. If there is to be an invasion, it will take place little by little, slowly and without attracting attention. The English, who, indeed, stand in no need of advice in this matter, have an immediate interest in abandoning the country. They were guilty of a grave imprudence in going there. To remain there would be a crime against humanity. It would expose to certain death a crowd of brave European soldiers. From the outset, the presence of the *giaours* would only tend to excite the fanaticism of the people, and, consequently, to swell the number of Mohamed-Ahmed's followers. You know the tactics of the Mahdi. He appears, with an immense escort, before towns and villages. The people are alarmed. They follow him through fear; and it is only necessary that this latter sentiment should be converted into enthusiasm. And then, why did the English count on the Egyptian troops? I do not doubt the courage of the Circassians in the service of the Khedive. But the natives, the Fellahs! Their case is different. I should not be astonished if a large number of them were found in the ranks of El Mahdi. Finally, the English had to struggle with the climate, which is terrible. Fifty years ago, when I was Consul at Cairo, Westerns did not venture much into Egypt, and they were right. To-day, however, people have no fear of anything, and their presumption may often cost them dear. If you want to know something about the climate of Southern Egypt and the Soudan, I will tell you a story. I once visited Khartoum with the Viceroy Ismaël. We were escorted by 67 Circassians. At the end of three days, 37 of these unfortunates had perished. Khartoum! why it is a place that can never be permanently held. It is situated at the confluence of the White and Blue Niles. The district about it is low, marshy, pestilential. Fatal fevers, resembling cholera, hold perpetual sway there. Damietta is similarly situated, and is equally a nest of fever and cholera. The cruel experiences of Europeans in Damietta ought to dissuade them from trusting themselves at Khartoum. Such is the situation. It is because I have been painfully moved by the disaster which has befallen a friendly people that I give expression to fears founded on experience."

MUSICAL instruments after European models are among the last things we should have expected Japanese to think of manufacturing. The demand for such articles in this country must be very limited, and many evident difficulties beset the undertaking. We learn, how-

ever, that the attempt has been made with entire success. Some workmen of Awaji, in the prefecture of Hiyogo recently forwarded samples of wind and string instruments to the office of the local officials, and these, having been sent to Tokiyo for inspection, are pronounced in no respect inferior to instruments of foreign make. It is added that they will be used henceforth by the military and naval bands.

THE old custom of bestowing public rewards upon women who have distinguished themselves by the patient practice of feminine virtues, is still observed in Japan. The vernacular press tells of a farmer's wife, who has been thus honoured. O Roku, as she is called, lives in the village of Shimohoya, Saitama Prefecture. Thirty years ago her husband fell sick, and shortly afterwards lost the use of both his eyes. Ever since then he has remained an invalid, unable to contribute anything towards his own support, or that of his aged mother, herself a cripple. The duty of nursing both her husband and her mother-in-law, as well as of providing for their sustenance, consequently devolved upon O Roku alone, and by the exercise of industry that did not flag either by day or by night, she managed to perform the task. At the fall of last year the woman's fame reached the ears of the local officials, and a handsome grant of money with a certificate of commendation were bestowed upon her.

WE read in a vernacular newspaper that the building recently erected within the enclosure of His Excellency Ito's residence, Nagatacho, Tokiyo, is to be used as an office for the conduct of matters connected with the Constitution. The name of the office will be the *Kempō-torishirabe-shikiyoku*, or more briefly, the *Kempō-shikiyoku*. It is said that business has already commenced there, and that the officials concerned are working industriously. There will be need of more than ordinary assiduity to prepare all the preliminaries for constitutional institutions in the space of five years.

THE mines at Ani, in Ugo, are said to be turning out an unusual quantity of ore this winter. The three smelting furnaces, two for iron and one for copper, are constantly at work, and their output is reported to be seven thousand pounds per diem. The consequence is that people are flocking from all quarters to assist the work, and although the snow is piled on the neighbouring country to a depth of seven or eight feet, the mines present a scene of changeless bustle and activity. Living must be tolerably cheap in Ugo. We read that the miners only pay 3.10 *yen* for a *koku* of rice, and that a three-year-old bullock can be bought for 3 *yen*. Such conditions do not often exist in mining districts.

IN the times of the Tokugawa Government there was a company of a thousand men, known as the *Sennin-dōshin*, whose special business was to protect the shrines at Nikkwo against fires. They were all men of exceptional muscle and courage, and many stories are told of their doughty deeds in the good old days. How it has fared with them since the feudal system fell, no record tells, but the vernacular press says that the recent proclamation of the new conscription laws re-awakened their spirit of loyalty, and that three hundred of them have volunteered to join the Colours for life. They must be more than

youngsters by this time, but perhaps their enthusiasm has made them oblivious of the flight of time. At any rate they are represented as desirous of repaying a small fraction of the benefits they have received at their country's hands, and the aspiration does them credit. It is pleasant to find that conscription is not distasteful to everyone.

THE people of Japan sometimes give evidence of very remarkable practicality. A case in point is a meeting of inn-keepers, which took place a short time ago. The meeting was attended by no less than eighteen hundred persons, who came together with the object of arranging a new tariff of charges to suit the altered prices of commodities. During the past two years rice and all the necessities of life have gradually fallen in price, and the inn-keepers throughout the country concluded that the time had come for them to adopt a new scale. After mature discussion the meeting decided that a reduction of twenty per cent. all round would meet the requirements of the case, and a resolution was adopted to that effect. This quiet and resolute way of doing business is very commendable. The inn-keepers, at any rate, do not regard the appreciation of the fiat currency as a bogus affair brought about solely by official legerdemain.

THE Nippon Railway Company was established on the 11th November, 1881, with the full sanction of the Government. The construction of the line, cars, etc., was entrusted to the Railway Bureau of the Public Works Department. The work was commenced in the middle of May, 1882, and completed as far as Kumagaye on the 28th July, 1883; 38 miles of rail laid in fourteen months. The line was thereupon opened for traffic. On the 21st of November, the line was finished as far as Honjo (51½ miles), and by the 27th of the same month as far as Shinmachi (56½ miles). Traffic increased with amazing rapidity, so that in the five months since the opening of the line the receipts amounted to 121,414 *yen* 81.8 *sen*, which, being divided by 157 working days, gives a daily average of 773 *yen* 34.2 *sen*. Sundry other items amounting to 2,733 *yen* 34.3 *sen*, give a grand total of 124,148 *yen* 36.1 *sen*. The expenditures during the same period amounted to 41,200 *yen* 55.9 *sen*, which, being deducted from the income, leaves a net profit of 82,947 *yen* 80.2 *sen*. The annual percentage on the paid-up capital amounts to 12.537 *yen* up to the end of November last. At the outset, the authorities guaranteed a profit of 8 per cent., but as the Company is in such a flourishing condition no further pecuniary assistance is required.

THE *Observer*, in language which implies very little doubt, states that China has made overtures to Japan with the object of inducing the latter to form an offensive and defensive alliance in the event of a war with France. Japan is said to have rejected these overtures, but to have pledged herself, in such an event, not to allow French ships to coal in Japanese ports. The *Observer* may be right so far as the alleged Chinese proposals are concerned, though no intelligence confirmatory of its assertions has been published by any journal in Japan. It is exceedingly difficult to forecast the direction Chinese policy will take in any particular conjuncture, but we may safely say that there is

nothing in her recent relations with this country which could justify such action as that attributed to her by our contemporary. Still less reason is there to suppose that Japan has made a promise at variance with the most recent interpretations of international law. The general principle applying to the entry of belligerent cruisers into neutral harbours, is that they shall only come for purposes identical with those that would bring the merchant vessels of either belligerent there. Phillimore states that coal may, under peculiar circumstances, regard being had to its quantity and destination, become liable to seizure as contraband, and the English regulations of January 31st, 1862, define those circumstances. Thus, it is now recognized that ships-of-war or privateers of either belligerent shall be furnished with only so much coal as may suffice to carry them to the nearest port of their country, or to some nearer destination; and that no coal ought to be again supplied to any such ship-of-war or privateer in the same or any other port under the same jurisdiction, without special permission, until after the expiration of three months from the time of the previous supply. Thus far, we may be sure, Japan will not refuse the hospitality of her ports to the vessels of any belligerent. Her obligations are already defined with sufficient clearness to render superfluous any assurance of the nature she is said to have given, as well as to forbid any deviation from them.

It is stated in an Italian journal that there have been going on for some time, between the Governments of Italy and Japan, negotiations having for their object the despatch of an Italian artillerist to Japan to take charge of a cannon-foundry there, and that the appointment has been conferred on Captain Pompeo Grillo, who is at present attached to the foundry at Genoa. It is added that Captain Grillo will be accompanied by another expert in artillery manufacture. Japan is apparently resolved to be cosmopolitan in her method of employing foreign assistance.

THE opinions of the French press with regard to the vote by which the Chamber, by a majority of 109, declared its confidence in the policy of the Ferry Cabinet in Tonquin, are unusually unanimous. The *Parlement* says that the Chamber has now openly proclaimed that it will not shrink from the task of driving the Chinese out of Tonquin. The *Paix* is of opinion that the vote will tend to facilitate a pacific and honorable solution of the negotiations with China, and that, in that sense, it will be accepted with satisfaction by the great majority of the people. The *République Française* applauds the political spirit, the energy, and the *sang-froid* of the Republican majority. The *Journal des Débats* approves the vote, and says that it is a verdict of indemnity for the past and of *carte blanche* for the future. The *XIX.^e Siècle* says that the Cabinet comes out of the struggle victorious, and with a majority which would not have been so large had the Government's assailants been more careful to hide the fact that their attacks were directed less against the Tonquin expedition than against M. Jules Ferry personally. The *Nationale* thinks that after a vote so explicit, the Government will be at its ease, not only to negotiate authoritatively, but to ask fearlessly for fresh credits when necessary. The Ministers know now that the Tonquin question is for the Chamber a question of national honour and that the majority will not haggle over expenditure. The *Voltaire* declares

that the vote will have the effect not only of exorcising the phantom of a Ministerial crisis, but also of hastening a solution of the Franco-Chinese conflict. The majority will soon reap the benefit of its coolness and resolution. The *Justice* says that what the Chamber has voted is war. The *Vérité* is of the same opinion. The *Intransigant* goes further; it considers the vote simply a crime. The *Figaro*, though not a friend of M. Ferry, feels obliged to confess that the President of the Council is really "a man of governing ability, since he is able to group about him a compact and unshaken majority." This virtual unanimity of opinion must go far to disabuse China's mind of any hopes she may have based upon the probable unwillingness of the French nation to support a Cabinet with an avowedly belligerent policy. A secret conviction that M. Ferry's position depended on his ability to steer clear of an open collision with China, has probably influenced the attitude of Chinese diplomatists more than is generally supposed.

THE *Fiji Shimpō* has received the following intelligence from Korea:—The Japanese students, sent from the General Staff Office to study the Korean language, left Pusan last year for Sōul. They speak the language as fluently as the natives themselves, without any foreign accent. They are under the immediate supervision of Major Isobayashi. Ma Kiēn-tang is suffering from inflammation of the lungs, and has not yet left for China. Five hundred recruits have recently been enrolled, and are to be drilled in the Japanese style. As the stock of arms and accoutrements has fallen short, a further supply has been ordered from a Japanese merchant. The recent Vice-Minister to the United States of America, Kiyoyei-sik, has been speaking lately a great deal about the wealth and power of America. He does not appear, however, to have much had success in his observations, and has become rather conservative. Important political changes will take place after the return of H.E. Min. An office called Ten-ken Kiyoku has been recently established, in order to superintend the minting of small coins. It is believed that, by circulating coins of one *mon* value, the fluctuation in the price of commodities, due to the issue of copper 5 *sen* pieces, will cease. The loan of 200,000 taels, contracted by Mr. von Möllendorff in China, has been entirely used up in the establishment of a Customs' Service. The Foreign Office is financially embarrassed, and the popularity of the above-mentioned gentleman is on the wane. There is evidently something behind all this. Although the Korean Government signed treaties with Great Britain and Germany, there is no intention of these treaties being carried out. Indeed, it is intended to cancel the trade regulations with China, as well as those with Great Britain and Germany. When H.E. Takezoye, Minister to Korea, was proceeding to the palace in order to bid the King farewell, a Chinese soldier ran through the *corlège* just as it reached the palace gate. The man was arrested by the Japanese police. Altogether, the Koreans thoroughly condemn the insulting deportment of the Chinese. Mr. Shimamura, who has taken charge of the Legation, is spoken of in high terms in Korean official circles. His opinion on all sorts of matters is constantly being asked, as he is credited with a great knowledge of European affairs. The Chinese traders in Sōul number

200 already, and are rapidly increasing. They do a thriving business.

VICTOR Hugo has just been singularly reminded of an event that, for his country's sake and his own alike, he would probably be glad to consign to oblivion. The expert, Charavaz, submitted to the poet a catalogue of autographs prepared for publication. Among them were letters relating to the *coup d'état* of 1851, and to the sentence of six months' imprisonment pronounced upon Victor's son Charles for publishing a pamphlet arguing against capital punishment. Writing upon this subject, the Count d'Orsay says:—"I can conceive a President of the Republic becoming brutalized by power. I can conceive Ministers becoming renegades. But what I cannot conceive is that, in this nineteenth century, there should be found jurymen to condemn your son." Among the letters there is, also, one from the well-known representative of the people, Babaud-Larivière, referring to the same event. "What have we come to, then," he writes, "that the infamous barbarism of capital punishment can be thus defended in open court. The conscience of humanity protests against such a disgrace. They might have condemned your son to death, but they would not have legalized this savagery of our penal code. His prosecution, despite its deplorable result, will remain, I am convinced, a striking proof of the necessity of abolishing the scaffold." It is not amiss, perhaps, to be reminded how few years separate us from the time when an inhabitant of one of the most civilized countries in the world could be sentenced to six months' imprisonment for venturing to question the advisability of capital punishment.

WE observe that another armoured frigate was launched at Stettin on December 1st for the Chinese Government, in the presence of members of the Chinese Legation and of a numerous company. The new vessel is a sister ship to the *Ting-Fuen*, which is now lying at Swinemunde. She is 98 mètres long, 18.30 mètres in beam, and is armoured to the water line. Her turrets also are armoured. She will carry four Krupp guns, of 30.5 centimètres, in her turrets, and two 25 centimètre pivot guns amidships. She will also have four torpedo tubes. It is not expected that she will be ready for service before the summer of 1885.

BILLIARD balls made of potatoes are the latest invention of science. The processes of manufacture are, on the whole, simple. Sound, well developed tubercles are chosen, and peeled with the utmost care, pains being taken to remove all discoloured or non-homogeneous parts. The potatoes are then steeped for some time in pure water, afterwards in a solution of sulphuric acid. Subsequently they are boiled in the same acid, with certain precautions known only to the inventor of the process. Thus treated, the potato gradually hardens and loses its permeability. Ultimately it is washed, first in hot, and then in cold, water, when it assumes the appearance of a yellowish white ivory, hard, elastic, evenly grained, easily worked, and possessing all the essential properties of a billiard ball. Needless to say that it is very cheap.

LACQUER, says the *Fiyu Shimbun*, forms one of the most notable and important industries of Japan. That foreigners greatly admire the

ware, is due to the wonderful skill attained by artisans in lacquer during a long period of years. But the superiority of Japanese lacquer has itself been the secret of its success. The lacquer tree was, in ancient times, protected, and its cultivation enforced, by law. Each family of the upper classes was obliged to rear 100 trees, the middle classes 70, and the lower classes 40 trees. The cultivation of lacquer was in this respect similar to that of the mulberry. Since these laws were abolished, the cultivation of lacquer has rapidly declined, as the people soon neglected their former obligations. The trees themselves were left to the mercy of woodcutters, so that they have become exceedingly scarce, while the price of lacquer has enormously increased. It is feared that this goes far towards crippling a once renowned industry.

We have received, from a gentleman signing himself "*Der Stier von Uri*," a letter commenting in very strong terms on two advertisements, the one signed "Helvetia," and the other "P. Kilgour Thompson," which appeared recently in the columns of our local contemporaries. Our correspondent thinks that the explanation offered in the latter advertisement is insufficient to efface the insult contained in the former, and expresses indignation at the attempt that has been made to discredit the justice and integrity of the Swiss Republic. We cannot think that any good purpose would be served by opening a discussion of this nature. There are some things which need no vindication, and among them everybody will agree to place the character of the Swiss Republic. "Helvetia's" joke was neither humorous nor graceful, to our thinking, but his apology was straightforward and unequivocal, and we have yet to learn that it is a habit with Swiss gentlemen to refuse an *amende* honestly and openly offered.

A FRENCH explorer is supposed to have been murdered on the frontier of Cambodia and Laos. M. Bruel, formerly the engineer of the Cambodia Gold Company, was sent by the Government on an exploring expedition. He was to ascend the Cambodia river as far as Bassar, whence he was to attempt to discover the route by which this great inland trading centre is connected with Hué. An important trade is known to be carried on between the two places, and in view of the position France is now taking up in Indo-China it is considered important that all commercial outlets should be known. He was informed that in consequence of the events transpiring in Tonquin he might find on the high plateaux complications which would render the execution of his mission difficult and even dangerous, in which case he was to return without exposing his life. The first part of the voyage was accomplished without any incident of moment happening. On leaving Sombor he received from the mandarin governing the province an escort of fifteen men commanded by a mandarin, which was to accompany him as far as Stungtreng, on the other side of the Siamese-Cambodian frontier. As to what happened after this there is no clear account, but the mandarin in charge of the escort and his men, three of whom were wounded, returned in all haste to Cratieh and reported that M. Bruel had been murdered. Some say that the upper provinces of Cambodia are in a state of insurrection, others that the attack was made by piratical partizans of Sivota,

a pretender to the Cambodian crown, while others accuse the escort of having themselves committed the murder. On the news being received a small force was at once sent to the scene of the tragedy to endeavour to recover the body and punish the attacking party if possible. One of the Saigon papers thinks there is a hope that M. Bruel may be still alive, as the Cambodians who were with him did not see him struck, and by the latest accounts no trace of his body had been found.—*Hongkong Daily Press*.

THE *Pioneer* says that the Home Government are gravely considering the appointment of Lord Ripon's successor. A contemporary's London correspondent told us recently that Mr. Goschen, M.P., was regarded as the coming man. "Great pressure," the *Pioneer* hears, "is being put upon Mr. Goschen to consent, whilst the Court party, of course, would like to saddle India with the Marquis of Lorne." The Allahabad paper adds:—"Lord Dufferin, who was popularly supposed to have the appointment in his pocket, is no longer mentioned in this connection, though there is good reason to believe that it is still an object of his ambition." Lord Ripon's term of office as Governor-General of India does not expire until June 8, 1885, but, says a London paper, it would not be at all surprising if he should leave India at the close of the current year. There is no reason to suppose that Lord Ripon has yet expressed any desire that a successor should be appointed, but it is thought in well-informed quarters that he may desire to forward that request when the autumn session of the Legislative Council is at an end. In that case, it is believed the position would be again offered to Mr. Goschen, together with a peerage. Mr. Goschen has, it is considered, taken a more irreconcilable attitude on the Parliamentary reform question than was expected from him, and with the prospect of, at least, four or five years of a struggle over that question, there is probably, if he remains in Parliament, a long departure from official co-operation with other Liberal statesmen.

THE public has doubtless heard enough of the squabbles of newspapers and newspaper agencies; but the revelations hitherto made have by no means been exhaustive. In the action brought by the Central News against the Press Association, a lively "scene," which was in active rehearsal, was cut short in the nick of time by the sudden collapse of the proceedings. A good deal of evidence was given, but the public may as well be put in possession of the facts, which were that the Reuter's telegram over which the quarrel arose was obtained on behalf of the *Edinburgh Courier* from a London newspaper office; that it was telegraphed from a "proof," and was headed "Reuter's telegram"; that a message to this effect, "This is a Reuter's telegram—you will know what to do with it," was sent to the *Courant*; and that the telegram, which had been wrongfully obtained, was wrongfully appropriated by the *Courant* by being incorporated into the "expanded" telegrams it received from another source. In so far as the *Edinburgh Courier* alleges that it used Reuter's information in innocence and ignorance, its allegation is simply not true. The fact that the news was Reuter's was distinctly made known to the *Edinburgh* editor by his London agent; and the *Edinburgh* editor nevertheless appropriated intelligence which a little reflection would

have shown him must have been improperly obtained. Mr. Lawson, the *Edinburgh* editor in question, has published in his own paper a letter addressed by him to the manager of the Press Association. It does not seem clear whether the letter is intended to be an apology or an explanation; but happily this obscurity spares us the necessity of characterising the letter in any specific manner. It certainly makes a most ungenerous reference to the London agent who so zealously supplemented Mr. Lawson's attenuated supply of foreign news. There is in the first place a suggestion that he was a stranger to the *Edinburgh* editor, and consequently a person for whose acts it would be unwise to assume responsibility. Then Mr. Lawson goes on:—"It is unfortunately true that in a moment of over-anxiety he did make use of one item—the supposed number of persons killed—which he had seen in a Reuter's telegram." He did nothing of the kind—he sent Mr. Lawson the whole telegram, told him it was a "Reuter," and left the treatment of it wholly in Mr. Lawson's hands. It was the *Edinburgh* editor, or his deputy, who "unfortunately, in a moment of over-anxiety," made use of an item that was Reuter's exclusive property. The facts, then, stand thus. The London agent of the *Edinburgh Courier*, when in possession of the telegram, did not deal with it in any way except to send it on to *Edinburgh* precisely as he had received it; and the responsibility of the *Edinburgh* editor began when he found himself in possession of an item of news which he had not paid for, which presumably he did not intend to pay for, to which, therefore, he had no right whatever, but which was nevertheless published in the *Edinburgh Courier* next morning.—*Whitehall Review*.

THE discussion in the Chamber, of December 14th, with regard to the Tongking credits, ended in a vote of confidence in the Ministry, after a remarkable speech had been made by the President of the Ministerial Council. The Chamber expressed its entire concurrence in the plans of the Government, and stated that it was fully believed that the rights and honour of France in Tongking were being energetically upheld. The vote was passed by 308 against 201. M. Jules Ferry asked the Chamber to state most clearly and distinctly whether or not full confidence was placed in the Ministry. He made this demand as much for the sake of the French troops fighting in Tongking as because of the still pending diplomatic relations with China. "To-day as formerly the French troops still find themselves face to face with the Black Flags, Annamese soldiers, and a few Chinese regulars. To-day as formerly, France stands facing China, yet neither in an attitude of peace nor of war." Though the soldiers of the two nations have met in the field, diplomatic relations with China have not been violently interrupted; Marquis Tseng is still in Paris, as is the French Ambassador in Peking, and nothing has yet occurred to disturb a continuation of negotiations. Will the present state of affairs result in an open rupture with China, and the declaration of war? Many persons in France seem to think so, and not a little uneasiness is felt. But as for our wisest politicians, their opinion is that the French Government will not declare war; let once Son-tai and Bac-ninh fall into our hands and the onward march of the troops will be discontinued. All that France desires is to

obtain certain hostages for the tranquil possession of Tongking, in accordance with the treaty of 1874; territory to which, whatever may be urged to the contrary, China has no claim. If the Peking Government thereafter wishes to conclude a treaty markedly in China's favour, France will show a conciliatory spirit, and meet their demands half-way. If not, the troops under Admiral Courbet will still retain possession of the strongholds of Tongking, mindful of the old saying *beati possidentes*. We doubt very much if China intends declaring war even should both fortresses be captured; she knows quite well that her army and navy are incapable of coping successfully with the forces of France: she can hope for nothing in an open war. But as for the present we can do nothing but await the slow development of events. Nevertheless, it may be certainly expected that China will wisely prefer a fair peace to fruitless hostilities; hostilities injurious to herself and to the interests of the nations at large.—*Gazette Diplomatique*.

An Indian paper says that news received from Persia points to a renewed activity, on the part of the Russians, who seem bent upon gaining a thorough knowledge of the country between Merv and Khorasan. A flying column over a thousand strong made up of cavalry, artillery, and infantry, is said to have left the Russian outpost of Baba Durmaz, and to be now exploring the Tejend Valley.

THE NEW CONSCRIPTION REGULATIONS.

SINCE the Autumn of 1882, it has been generally understood that Japan finds herself in view of some contingency demanding increased armaments. What that contingency is, public opinion does not pretend to doubt. The mood which China has displayed towards this country, on more than one occasion, shows plainly enough that peace and good fellowship are not paramount objects with the Cabinet at Peking. One instance alone suffices to establish this fact. In 1880, China had an opportunity of definitely closing the Riukiu account on terms proposed by herself and embodied by her own plenipotentiaries in a Convention which had received Japan's assent. But in the interval between the drafting and the signature of this document, the Middle Kingdom emerged from the shadow of a Russian invasion; and, being no longer under the necessity of circumspection, the Emperor's advisers did not hesitate to choose an open breach of faith rather than reconciliation with Japan. A moderately prudent government could not close its eyes to the significance of that election. It is quite certain that the sentiments of this empire towards its neighbour would not be satisfied by the commonplace conditions of international amity. No bond of fellowship with China could be too close for Japan's wishes, provided it did not involve any return to the conservative route from which the former seems so firmly resolved not to wander. But unfortunately this goodwill does not appear to be reci-

procal. Whether China's mood is one of active hostility or aimless umbrage, it is a mood which Japan thinks she cannot afford to ignore, and we do not imagine that any European State similarly circumstanced would be more careless.

These things are, of course, matters of conjecture. We do not profess to interpret the exact motives which impel Japan to embark in a policy that has proved, and is proving, so ruinous to Western prosperity. But from whatever direction, other than that of China, we consider her position, no necessity for military preparation is discernible, and the plain inference is that her neighbour's disposition alone prompts her to get ready for emergencies. It has been urged that no country in the world has less reason to fear aggression than Japan; that her tranquillity is doubly assured by the goodwill she has earned, and by the consensus of Powers which have a common interest in her welfare. Considerations of this nature, unfortunately, do not receive practical recognition at the hands of any State to-day. The world has evidently made up its mind that nothing is strong but strength, and that to be prepared for war is the only way to avoid it. We cannot be surprised if Japan subscribes to this universal doctrine, however we may question her wisdom, or regret her resolve.

At present the standing army, exclusive of the Guards, consists nominally of 40,432 of all arms. The force actually with the Colours is about 2,000 short of this total. It is distributed into six divisions, which have their head-quarters at Tokiyo, Sendai, Nagoya, Osaka, Hiroshima, and Kumamoto, as shown in the following table:—

FIRST TERRITORIAL DIVISION (<i>Dai-ichi Gunkwan</i>).		
	MEN.	TOTAL STRENGTH.
Tokiyo Garrison (<i>Tokiyo Chintai</i>)	3,510	8,202
Sakura Corps (<i>Sakura Yeisho</i>)	2,346	
Takasaki Corps (<i>Takasaki Yeisho</i>)	2,346	
SECOND TERRITORIAL DIVISION (<i>Dai-ni Gunkwan</i>).		
Sendai Garrison	3,832	6,178
Awomori Corps	2,346	
THIRD TERRITORIAL DIVISION (<i>Dai-san Gunkwan</i>).		
Nagoya Garrison	2,891	5,237
Kanazawa Corps	2,346	
FOURTH TERRITORIAL DIVISION (<i>Dai-go Gunkwan</i>).		
Osaka Garrison	3,351	8,043
Otsu Corps	2,346	
Himeji	2,346	
FIFTH TERRITORIAL DIVISION (<i>Dai-shi Gunkwan</i>).		
Hiroshima Garrison	2,891	5,237
Marugame Corps	2,346	
SIXTH TERRITORIAL DIVISION (<i>Dai-roku Gunkwan</i>).		
Kumamoto Garrison	3,351	5,697
Kokura Corps	2,346	
Grand Total		38,594
DETAIL.		
Commanding Officers (<i>Fochokwan</i>)	79	
Officers (<i>Shikwan</i>)	1,366	
Non-Com. Officers (<i>Kashikwan</i>)	5,759	
Privates (<i>Hei</i>)	31,390	

On a war footing the above total would be increased to 55,742. To this must be added the Corps of Imperial Guards, whose total strength, on a peace and a war footing alike, is 3,994 of all ranks. The following table shows the composition and force of

the Standing Army according to the system inaugurated in 1875:—

ARM OF SERVICE.	NUMBER OF ORGANIZATIONS.	NUMBER OF MEN.			
		Peace Footing	War Footing	Peace Footing	War Footing
Infantry	14 Regiments or 42 Battalions	779	1,099	32,858	46,298
Cavalry	2 Regiments	159	189	318	378
Artillery	15 Brigades or 30 Companies	306	386	4,590	5,790
Engineers	14 Companies	154	189	2,156	2,646
Control	6 Companies	85	105	510	630
Corps of Imperial Guards (as detailed elsewhere)				3,994	3,994
Grand Total				44,426	59,736

It is not accurately known to what extent these numbers will be increased by the new system. Information upon this point is carefully withheld for the present. Rumour states the proposed changes as follows:—

INCREASE DURING THE YEAR				
1883.	1884.	1885.	1886.	1887.
1 Company	3 Battalions	2 Companies	3 Battalions
1 Company	3 Battalions	2 Companies	3 Battalions
2 Companies	4 Battalions	5 Battalions
2 Companies	4 Battalions	2 Companies	5 Battalions
.....	1 Company	2 Companies
.....	1 Company	2 Battalions	3 Battalions
Total increase—32 Battalions and 16 Companies, or 36 Battalions in all.				

Assuming this estimate to be correct, though, for the moment, it can only be regarded as an approximation, we may say that the effect of the new system will be to increase the Standing Army by six-sevenths of its present strength; and that, by the end of 1887, its peace and war establishments will be 82,506 and 110,938 respectively.

Before proceeding to consider the new system, it may be well to complete this part of our subject by detailing the composition of the various arms of the service:

COMPOSITION OF A BATTALION OF INFANTRY (*Dai-tai*), ON A PEACE FOOTING.

Commanding Officer	1	779 of all ranks; and 3 horses.
Officers	21	
Non-Com. Officers	115	
Privates	640	
Non-Combatant Officers	2	

COMPOSITION OF A COMPANY OF INFANTRY (*Chiu-tai*), FOUR OF WHICH GO TO A BATTALION.

Officers	5	192 of all ranks.
Non-Com. Officers	27	
Privates	160	

COMPOSITION OF A REGIMENT OF INFANTRY (*Ren-tai*), CONSISTING OF THREE BATTALIONS.

Commanding Officers	4	2,347 of all ranks; and 12 horses.
Officers	65	
Non-Com. Officers	349	
Privates	1,920	
Non-Combatant Officers	9	

On a War footing each Company is increased by eighty privates of the First Class, making the total number of privates in a Battalion 960, and in a Regiment, 2,880.

COMPOSITION OF A BATTALION OF CAVALRY ON A PEACE FOOTING.

Officers	5	159 of all ranks; and 135 horses.
Non-Com. Officers	31	
Troopers	120	
Non-Combatant Officers	3	

On a War footing the number of Troopers is increased to 150, making the strength of the Battalion 189 men, and 170 horses.

COMPOSITION OF A BRIGADE OF MOUNTAIN ARTILLERY (*Sampō-tai*), ON A PEACE FOOTING, CONSISTING OF TWO COMPANIES.

Commanding Officer	1	306 of all ranks; and 104 horses.
Officers	11	
Non-Com. Officers	51	
Gunners	240	
Non-Combatant Officers	3	

On a War footing the number of Gunners is increased to 320, making the total of all ranks 386, and 238 horses.

COMPOSITION OF A COMPANY OF ARTILLERY
(Field or Mountain) ON A PEACE FOOTING.

	Active	Reserve	TOTAL.
Officers	4	1	5
Non-Com. Officers	13	10	23
Gunners	51	69	120
	Active 68	Reserve 80	148

COMPOSITION OF A BRIGADE OF FIELD ARTILLERY (*Yahō-tai*) ON A PEACE FOOTING.

Commanding Officer	1
Officers	11
Non-Com. Officers	51
Gunners	240
Non-Combatant Officers	3
	306 of all ranks; and 180 horses.

On a War footing the number of Gunners is increased to 260, making the total of all ranks 326, and 258 horses.

COMPOSITION OF A COMPANY OF ENGINEERS ON A PEACE FOOTING.

Officers	5
Non-Com. Officers	26
Privates	120
Non-Combatant Officers	3
	154 of all ranks; and 20 horses.

On a War footing the number of the Non-Com. Officers is increased by 5, and that of the privates by 30, making 189 of all ranks and 21 horses.

COMPOSITION OF A BATTALION OF CONTROL, OR INTENDANCE (*Shichō-hei*), ON A PEACE FOOTING.

Officers	4
Non-Com. Officers	18
Privates	60
Non-Combatant Officers	3
	85 of all ranks; and 85 horses.

On a War footing the number of the Non-Com. Officers is increased by 10, and that of the privates by 20, making 105 of all ranks and 106 horses.

COMPOSITION OF THE CORPS OF IMPERIAL GUARDS (*Konoye-tai*), WHETHER ON A PEACE OR A WAR FOOTING.

	OF ALL RANKS.	TOTAL.
Infantry..... Two Regiments.....	3,262	
Cavalry..... One Battalion	189	
Artillery..... One Brigade	326	
Engineers... One Company	184	
Non-Combatants	33	3,994

The above total includes:—

Commanding Officers	9
Officers	128
Non-Com. Officers	576
Privates	3,248
Non-Combatants	33

By the new law the whole country is parcelled out, for purposes of conscription and mobilization, into seven Military Divisions. Of these the seventh is not yet completely included in the scheme, but the first six are formed into twelve Districts, and these, again, into 185 Sections. The following table gives a geographical idea of this part of the system:—

FIRST DIVISION.

1st District ...	{ 33 Sections, in the province of Musashi; and the provinces of Sagami, Kai, Idzu, and Kotsuke.
2nd District ...	{ 9 Sections, in the province of Shinano; 6 in Musashi; and the provinces of Awa, Kadzusa, Shimosa, Hitachi, and Shimotsuke.

SECOND DIVISION.

3rd District ...	{ 3 Sections, in the province of Rikuzen; the provinces of Iwaki, Iwashiro, Uzen, Yechigo, and the island of Sado.
4th District ...	{ 12 Sections, in the province of Rikuzen; and the provinces of Rikuchiu, Mutsu, and Ugo.

THIRD DIVISION.

5th District ...	{ 7 Sections, in the province of Owari; 7 in Shinano; and the provinces of Mikawa, Totomi, Suruga, Isé, and Shima.
6th District ...	{ 2 Sections, in the province of Kai; 3 in Owari; and the provinces of Mino, Kaga, Noto, Yetchiu, Hida, and Yechizen.

FOURTH DIVISION.

7th District ...	{ 6 Sections, in the province of Setsu; 9 in Kai; and the provinces of Yamashiro, Yamato, Mikawa, Idzumi, Omi, and Iga.
8th District ...	{ 11 Sections, in the province of Setsu; and the provinces of Harima, Awaji, Wakasa, Tamba, Tango, Tajima, Mimasaku, Bizen, Hoki, and Inaba.

FIFTH DIVISION.

9th District ...	{ The provinces of Aki, Bingo, Bitchiu, Idzumo, Iwami, Oki, Suwo, and Nagato.
10th District ...	{ The provinces of Awa, Sanuki, Iyo, and Toki.

SIXTH DIVISION.

11th District ...	{ The provinces of Higo, Hiuga, Osumi, Satsuma, and Okinawa.
12th District ...	{ The provinces of Buzen, Bungo, Chikuzen, Chikugo, Hizen, Iki, and Tsushima.

SEVENTH DIVISION.

Oshima, Shiribeshi, Ishikari, Teshima, Kitami, Iburi, Hidaka, Togachi, Kushiro, Nemuro, and Chishima.

NOTE.—The Seventh Division, or Hokkaido district, is placed, for the present, under the military administration of the Second Division. Conscription, however, will be carried on in Hakodate, Yesashi, and Fukushima only.

Throughout these Divisions every male, between the ages of 17 and 40, is liable to service. The military force of the Empire is divided into the Standing Army, the Reserve Army, and the Territorial Army. Youths are not enrolled for service with the Standing Army, except at their own request, before the age of twenty. Up to that age they are included in the Territorial Army. The periods of service are as follows:—

Three years with the Colours.
Four years with the Reserve of the Standing Army.
Five years with the Reserve Army.
Eleven years with the Territorial Army.

It will be seen that Japan, following France's example, and shunning the error into which England has fallen, does not commence the active training of her conscripts before they attain the age of twenty. On the other hand, she holds with Germany, and against France, that it is possible to make a soldier in three years. This we believe to be an error. The German cannot safely be taken as a type. His early inculcated habits of restraint and national spirit of obedience are exceptional elements in his favour. Judging from the evidences that have been before us since Japan's army was formed on an European model, we are inclined to regard five years as a minimum period of service with the Colours. There is much to be mended in her military practice. Her men are badly set up, and betray, to a considerable extent, that *abandon* and slovenliness which were once admired in the French army, but which are now acknowledged to be quite inconsistent with the individuality required by recent modifications in tactics. Rigid discipline and steadiness in the ranks are more than ever needed in the battles of to-day, and military critics have observed with regret an apparent lack of these qualities in the Japanese soldier. Of recent years, indeed, great improvement in these respects has been noticeable, but we doubt very much whether the peculiar habits of life of a Japanese youth permit a fair hope that he can be licked into serviceable soldier-like shape in three years.

The Reserves of the Standing Army and the Reserve Army are to be called out once a year for a period of not more than sixty days; but the Territorial Army will only be called out in time of war or other emergency. Thus the total period of liability to service may be reckoned as twelve

years, during nine of which the conscript is only required to serve two months annually.

Statistics show that the number of youths annually arriving at the age for conscription throughout the Empire is 210,000, approximately; and it is calculated that this total will be reduced by about two-thirds, owing to the working of the scheme of exemptions. There will thus come forward every year, to be passed through the ranks, seventy thousand conscripts. It is obvious that such a number could not possibly be absorbed by an army of eighty-two thousand men. Indeed this problem of keeping the Army with the Colours at its fixed maximum, and at the same time imparting military instruction to the whole body of non-exempted conscripts, is one of the most puzzling that present themselves in connection with compulsory service. Japan has met the difficulty after a novel fashion. In addition to the Standing, Reserve, and Territorial Armies, she is to have a force of Supernumeraries numbering not less than two-fifths of the Army with the Colours. Casual vacancies occurring in the ranks of the Army with the Colours are to be filled up from the Supernumeraries, and, at the end of a year, such of the latter as have not been drafted into the former, are passed into the Reserves of the Standing Army. A simple arithmetical calculation, therefore, shows that the least number of conscripts annually required will be eleven-fifteenths of eighty-two thousand (assuming the latter number as the strength of the Army with the Colours), that is to say, about sixty-one thousand. The seventy thousand conscripts yearly coming forward are thus disposed of, as the strength of the Supernumerary corps is elastic, its minimum only being fixed.

The scheme of exemptions (enumerated in the Conscription Regulations, of which a translation is appended) is very accurate and comprehensive. The hatred with which compulsory service is regarded by every people in the universe, has always been intensified in the direct proportion of the number of exemptions. In the great military nations of Europe, where exemptions reach to forty, and sometimes fifty, per cent. of the conscripts, mothers have been known to thank God for inflicting on their sons a deformity incapacitating them for military service. Japan is badly circumstanced in this respect. The comparatively small numbers of her Standing Army oblige her to extend her system of exemptions so as to embrace 66 per cent. of those liable to conscription, and we may expect that military service will be correspondingly unpopular. Of the exemptions themselves, the only one that seems open to criticism, from a general point of view, is the privilege accorded to students at public, that is to say Government, schools and colleges. The consequence of this exemption will probably be disastrous to private educational enterprise. It will be observed (*vide* Article 11) that special facilities are offered to persons who possess certificates

of graduation from public educational institutions, and who are prepared to defray the cost of their maintenance themselves. This is, doubtless, a good regulation, and the same may be said of the exemption extended to persons living abroad for purposes of scientific study. But no account appears to have been taken of men engaged in commercial pursuits in foreign countries. With the experience of France before them, the Japanese authorities ought not to have made this omission.

The method (*vide* Art. 12) of offering early retirement as a reward for educational and military proficiency, is open to objection. The effect of such a system is to deprive the army of the very men who are likely to make the best non-commissioned officers, and thus to throw these important posts open to persons of inferior attainments, not possessing the powers of command generated by habits of scholastic obedience. The value of an army depends largely on the quality of its non-commissioned officers, and this fact has long been recognized in Europe, where, as a rule, special measures are taken to attract good men to non-commissioned posts. The rates of pay—ranging from four to nine *yen* per mensem, exclusive of subsistence—of non-commissioned officers in the Japanese army do not appear sufficient to retain the better classes of soldiers with the colours.

There can be no doubt that when this new system of military organization has matured, Japan will possess a force formidable enough to defy invasion. The Japanese has all the elements of an excellent soldier,—pluck, activity, intelligence, and endurance,—and what he lacks in weight is made up by his skill as a marksman. The day seems far distant when he will be called on to measure himself by a foreign foe, but in the meanwhile it is not surprising, all things considered, that the Government of this country has partially subscribed to the doctrine preached by the *Jiyutō* and practised by the whole of Europe, that right is but an empty term where might is wanting to enforce it.

We append to this article a schedule of the pay and subsistence of the Japanese Army, as well as a translation of the recently issued Conscription Regulations:—

PAY PER ANNUM.

NOTIFICATION NO. 46 OF THE IMPERIAL GOVERNMENT.

It is hereby notified that the Conscription Regulations have been revised as follows:—

SECTION I.—GENERAL RULES.

Art. 1.—Every male inhabitant of the country will be subject to military service from seventeen to forty years of age.

Art. 2.—Military Service will be with the Standing Army (*Yōbi-hei*), the Reserve Army (*Gōbi-hei*), and the Territorial Army (*Koku-mim-pe*).

Art. 3.—Service in the Standing Army will be divided into service with the Colours (*Gen-yeki*), and service with the Reserve of the Standing Army (*Yōbi-hei*). Service with the Colours will be for a period of three years, commencing from the age of twenty. Service with the Reserve of the Standing Army will be for a period of four years, commencing from the expiration of the term of Service with the Colours.

Art. 4.—Service in the Reserve Army will be for a period of five years, commencing from the expiration of the term of Service in the Standing Army.

Art. 5.—The Territorial Army comprises all males between seventeen and forty years of age who are not serving in either the Standing Army or the Reserve Army.

Art. 6.—Even though the terms in all the services have been completed, they may be prolonged in case of war or other emergency, or for special manoeuvres, reviews, or during voyages in foreign seas, or whilst stationed in foreign lands.

Art. 7.—Those who have undergone a criminal penalty are disqualified for Service.

SECTION II.—ENLISTMENT.

Art. 8.—The ranks of the Army with the Colours will, according to the number of men yearly required, be filled by means of drafts from among the conscripts into the infantry, cavalry, artillery, engineers, transport, miscellaneous corps, and mechanics, according to their personal capacity, accomplishments, and training.

The Active Force of the Navy will, according to the number of men required yearly, be filled by means of drafts from among the people of the coasts and islands, upon whom the lot has fallen, into the ranks of the sailors, firemen, mechanics, etc., according to their training. Those, however, who serve in accordance with the Regulations for Naval Volunteers (*Shigwan-pe*), are not subject to this rule.

Art. 9.—The terms of Service in the various Armies may be shortened according to the nature of the service performed. Provided that, the whole period of Service with the Standing Army shall not be shortened.

Art. 10.—Those who, though not fully twenty years, are above seventeen years, of age, may volunteer for service with the Standing Army.

Art. 11.—Men between seventeen and twenty-seven years of age, possessing certificates of graduation from public schools or colleges (normal schools excepted) in Cities or Prefectures, and who are prepared to defray the expenses of clothing and maintenance themselves, may, on application, be admitted to serve in the ranks of the Standing Army for a period of one year at a time. Should they acquire rapid proficiency, they may be allowed to quit the ranks after a few months. Provided that, the whole period of Service with the Standing Army shall not be shortened.

Art. 12.—Those who distinguish themselves by proficiency in military exercises and by good conduct during their Service with the Standing Army, and those who obtain diplomas of proficiency in infantry exercises from public schools or colleges (normal schools excepted), may be temporarily relieved from service before the expiration of their term.

Art. 13.—In time of war, or other emergency, the Reserves of the Standing Army may be called out, and drafted into the ranks of the Standing Army, or formed into supernumerary corps. In ordinary times these Reserves will be called out once a year, for a period of not more than sixty days, for purposes of exercise and muster. The Reserve Force of the Navy will not be thus called out.

Art. 14.—In time of war, or other emergency, the Reserve Army may be called out, and drafted into the Supernumerary Corps of the Standing Army Reserves. In ordinary times the Reserve Army will be called out in the same way and for the same purposes as the Standing Army Reserves.

Art. 15.—The Territorial Army will only be called out, when in time of war or other emergency, the Reserve Army having been called out, there is still need of troops. It will then be formed into corps for service.

SECTION III.—EXEMPTIONS, PERMANENT AND TEMPORARY.

Art. 16.—Only those who are incapacitated for Military Service on account of being deformed or maimed, will be permanently exempt.

Art. 17.—The undermentioned will be temporarily exempted. They will, however, be liable to be called upon in time of war or other emergency when there is need of men:—

1.—One of two brothers who are simultaneously called on, or the brother (younger or elder) of a man already serving with the Colours.

2.—One brother (younger or elder) of a man who has died while serving with the Colours, or who has been permanently exempted on account of injuries sustained, or illness contracted, in the discharge of his duty.

3.—Heirs of heads of families aged above sixty years of age, and those next in the direct line of succession.

4.—Heirs of heads of families who cannot pursue their callings on account of being deformed or maimed, and those next in the direct line.

5.—Heads of families.

Art. 18.—Those mentioned below shall be exempt during such time as circumstances may permit:—

1.—Those who occupy the office of *Kiyosei* (priestly office).

2.—Teachers in public schools or colleges of Cities or Prefectures (normal schools excepted), who possess teachers' certificates issued by a public school or college.

3.—Students engaged in the regular course of

studies at public schools or colleges, or educational institutions of equal grade.

4.—Military and Naval Cadets and mechanics in the Navy.

5.—Those who have not yet attained the regulation height.

6.—Those who cannot serve on account of being sick or convalescent.

7.—Those who are in foreign countries for purposes of scientific study.

8.—Those who are defendants in criminal cases involving a penalty of major seclusion and upwards, and upon whom no decision has yet been pronounced.

Art. 18.—Those whose civil rights have been suspended.

Art. 19.—Students who have completed a course of one year or more in the public schools (normal school excepted) in Cities and Prefectures will be temporarily exempted for a period not exceeding six years.

Art. 20.—Those enumerated below shall not be called out whether they are in the Reserve of the standing Army or in the Reserve Army. In time of war or other emergency, however, they may be called out with the sanction of the Council of State.

1.—Officers above the *Hannin* grade and chiefs of ward offices.

2.—*Kiyodo-shoku* (priests), with the exception of Acolytes.

3.—Professors in the public schools and colleges.

4.—Members of the City and Prefectural Assemblies.

5.—Those who are practising medicine and in possession of diplomas from the public Medical Colleges in Cities and Prefectures.

Art. 21.—Those who are serving in Departments, or Bureaux, in Cities and Prefectures, in offices which cannot be performed by others, will be temporarily exempted with the sanction of the Council of State.

Art. 22.—Those enumerated below will not fall under the provisions of Article 17, as to temporary exemption:—

1.—Heads of families who are registered in other families, their heirs and the latter's heirs in the direct line.

2.—Heirs, and those next in the direct line, who are not incapacitated from pursuing their callings by illness or deformity, and who have not incurred a criminal penalty; and heirs, and their heirs in the direct line, in whose favour heirs have surrendered their right of succession.

3.—Heirs (and those next in the direct line) of heads of families who, being less than sixty years old, and not being disabled by illness or deformity from supporting their households, and not having incurred a criminal penalty, surrender their position (as heads of families); and the next of kin of heirs in whose favour heads of families of sixty years of age, and upwards, have surrendered their position.

4.—Heads of branch houses (*bunke*), and heads of houses (together with their heirs and the latter's heirs in the direct line) that have been re-established after having become extinct.*

5.—Heirs (and those next in the direct line) of heads of families, the successors of heirs (and their next of kin) who have absconded, when the act of succession has taken place within five years of the time of absconding.

6.—Heirs, as enumerated in clause 2, 3, and 4 of this Article, who, although actually occupying the position of heads of families, have obtained that position through its voluntary abdication by a person not incapacitated, by illness or deformity, from pursuing his profession, and not having incurred a criminal penalty.

7.—Heirs who, although actually occupying the position of heads of families, have obtained that position through its voluntary abdication by a person less than sixty years of age, not incapacitated, by illness or deformity, from pursuing his profession, and not having incurred a criminal penalty.

8.—Persons who, although actually occupying the position of heads of families, have obtained that position in the room of heirs (or next of kin) who not being incapacitated by illness or deformity, and not having incurred a criminal penalty, have, nevertheless, failed to take up the succession either on the death or voluntary surrender of the head of the family.

9.—Persons who, although actually occupying the position of heads of families, have succeeded to

that position within five years after it became vacant by the head of the family absconding.

Art. 23.—Persons who, failing to comply with the provisions of Article 35, do not report themselves for military service before September 16th, will not be eligible for temporary exemption during that year, even though they belong to the classes set forth in Clauses 1, 2, 3, and 4 of Article 18, and in Articles 19 and 21. Military and naval cadets, however, are excepted from this rule.

SECTION IV.—MILITARY DISTRICTS, AND DRAWING FOR CONSCRIPTS.

Art. 24.—For purposes of Conscription the Empire will be parcelled out into Military Divisions (*Gunkan*), Military Districts (*Shikan*), and Military Sections (*Ku* or *Kori*). In cases where the same urban or rural division forms part of two different Districts, a Military Section shall be formed in each. A list of the various Divisions, Districts, and Sections accompanies these Regulations.

Art. 25.—The infantry of each company (*Chintai*) will be raised in the Military District where it serves; the other arms (cavalry, artillery, &c.) may be raised anywhere in the Division to which the Corps belongs. But when the necessary number of men for the Standing Army or Supernumerary Corps cannot be thus obtained, recourse may be had to other districts for infantry Conscripts, and to other Divisions for troops of other Arms. Recruits for the Navy and Imperial Guards may be raised from any Division or District throughout the Empire.

Art. 26.—Drawings for Conscripts will take place in urban and prefectural Military Sections. The conscripts from each Section will be chosen by lot after having undergone the prescribed medical examination, and after it has been determined, according to their qualifications and acquirements, to which branch of the service they shall belong.

Art. 27.—Each Section will send not less than one and not more than three representatives, chosen by vote, to draw lots for the Section.

Art. 28.—In drawing for Conscripts, the arm of the service and a number determined in accordance with the number of men required, will be written on a ticket, and these tickets having been deposited in a box placed before the officials in charge of the drawing, the names on the list of persons eligible will be called in order, and the representatives will draw lots for them. The officers in charge of the drawing, having verified the numbers, will cause them to be proclaimed. They will then place on record the names and numbers as drawn, and will hand the tickets to the representatives.

Art. 29.—The conscription tickets will be considered as for service with the Colours until the vacancies are filled, after which the tickets will be for Supernumeraries.

SECTION V.—SUPERNUMERARIES AND STANDING ARMY RESERVES.

Art. 30.—Those who have drawn Supernumerary tickets will serve for a year in the Supernumerary ranks. During that time they will be liable to be drafted, in the order of their tickets, into the ranks serving with the Colours, should vacancies occur, or in the event of war or other contingency. The total number of Supernumeraries will not be less than two-fifths of the total number of the Army with the Colours.

Art. 31.—Supernumeraries who have not been drafted into the Army with the Colours during the fixed period (one year), and students, as described in the 3rd clause of Article 17, who have completed a course of two years service and upwards, will be assigned to the First Reserve of the Standing Army until they have attained the age of 27.

Art. 32.—Those who, as enumerated in Article 17, have not been called on to serve at the usual time, and those who, under Articles 18 and 21, are exempted from serving for seven years, and those who have completed the term of service with the First Reserve of the Standing Army, will be assigned to the Second Reserve till they attain the age of thirty-two. Those, enumerated in Article 17, who forfeit their privileges of exemption within six years after their assignment to the Second Reserve, will be enrolled in the Army with the Colours.

Art. 33.—The Reserves of the Standing Army will be called out in time of war or of any other emergency, when troops are required. The Second Reserve will not be called out unless the Reserve Army is also called out.

SECTION VI.—MISCELLANEOUS RULES.

Art. 34.—Those who arrive at the age of 17 at any time between January and December, shall report in writing their names, social position, place of registration, date of birth, and their professions (personally if they are heads of families, and if not, then through the heads of their families)

between the 1st of September and the 15th of the same month, to the chief ward officer of the place of their permanent registration.

Art. 35.—Those who arrive at the age of twenty at any time between January and December, shall report the fact in writing (directly if heads of families and if not through the heads of their families) from the 1st of September to the 15th of the same month, at the chief ward office of the district in which they are permanently registered. Should any changes occur in these details after reporting them till the 10th of April of the following year, they shall be reported in writing, within three days, to the chief ward officer of the place of the person's permanent registration. Those who are already in the service when attaining the age of twenty need not report.

Art. 36.—Should those enumerated in Article 17 forfeit their privileges, or should the conditions conferring exemption under Articles 18, 19, and 21, come to an end, or should there occur any change in the condition referred to in the last clause of Article 32, the particulars must be reported (personally, if heads of families, and if not, through the heads of their families), from the 1st of September to the 15th of the same month, to the chief ward officer of the place of their permanent registration. Those who come under this Article on and after the 16th of September up to the 10th of April, must report the fact within three days.

Art. 37.—Should those who are temporarily registered in other Cities and Prefectures desire to be enlisted elsewhere, they shall apply to the Local Authorities of the place where they desire to serve, before the month of August, with a guarantee from the head of a family living in the place where the applicant resides. The report described in Article 35 must, however, be made to the chief ward officer of the place of temporary registration.

Art. 38.—A fixed daily allowance of money, food, and clothing, will be granted to all those serving in the Army and Navy.

Art. 39.—In case of conscripts being prevented from entering the service owing to illness or criminal prosecution, they shall report the fact to the chief ward officer without loss of time. Those who are ill must send a medical certificate.

Art. 40.—In the case of those enumerated in Article 39, whose condition has not altered before the 1st of September, they shall be kept over until the next year, and shall be enrolled after due examination, the following year, before the new conscripts. In case of war or other emergency, when troops are required, they shall be enrolled without waiting for the conscription period.

Art. 41.—Those who injure themselves, feign sickness, or adopt other fraudulent means to avoid service, or who desert or conceal themselves; those who do not attend at the examination without due cause, and those who neglect to report as laid down in Articles 35 and 36, shall be liable to immediate service, without recourse to drawing, or shall be examined next year and enrolled in advance of those enumerated in Article 40, without recourse to drawing.

Art. 42.—The term of service with the Colours shall be reckoned from the 20th April of the year in which a Conscript enters the service, but those enumerated in Article 41 shall have their term counted from the day on which they enter the service. The term of the Reserves of the Standing Army and of the Reserve Army shall be reckoned from the 20th of April of the year in which a Conscript enters those services. But the number of days during which men have been sentenced to major detention, or police surveillance, or have been absent without leave, shall not be included.

Art. 43.—Those who neglect to report, as laid down in Articles 34, 35, 36, and 39, and those who do not attend, without due cause, the medical examination after having received due notice, shall be punished with a fine of not less than *yen* 3 or more than *yen* 30.

Art. 44.—Those who conceal themselves, malingering, or resort to other fraudulent devices, to escape conscription, shall be punished with major detention for not less than one month and not more than one year, with a fine of *yen* 3 to *yen* 30.

Art. 45.—The Rules required for the enforcement of this Notification shall be notified separately.

By Imperial Order,

THE NEW JAPANESE LOANS.

THE Minister of Finance has advertised in the foreign local press an issue of railway bonds to the amount of five million *yen*, being the first instalment of the capital required for constructing the Nakasendo Railway. In one respect this step may be regarded with unmixed satisfaction. Of the various industrial and commercial schemes hitherto inaugurated or assisted by the Government, the Nakasendo Railway is the first to which foreigners are admitted on equal terms with Japanese. In a majority of cases there has been valid reason for this exclusiveness, but it is none the less permissible to consider the present policy as a new departure in a wise direction. Every fresh removal of existing distinctions between aliens and natives cannot fail to hasten the advent of the time when there will be brought within reach of industry and enterprise some worthier field than the paltry commerce of circumvallation to which foreigners are now restricted.

Almost simultaneously with the appearance of this advertisement in English newspapers, the vernacular press tells us that more than four millions of the loan have been already taken up by Japanese banks. This result will probably be regarded with complaisance in certain quarters. It will be counted a proof that capital is easily available within the country, and that Japan can build her own railways without going abroad for aid. A moment's reflection will show that inferences of this nature are erroneous and misleading.

In the first place, such an application of banking capital is wholly improper. It is hardly necessary to observe that the chief function of a bank is to become a receptacle into which unemployed capital is collected for the purpose of distribution to those that want it. As Lord OVERSTONE has well said, "the whole principle of banking is to transfer capital from the inactive accumulator to the active and energetic person who needs it." There is good reason to doubt whether Japanese banks—we speak of the national banks, since, up to the present, they must be considered the representatives of banking in this country—there is good reason to doubt, we say, whether these banks have ever understood that they have any duty other than that of employing their own capital, or whether they have ever appreciated the fact that their real advantage only commences when they begin to employ the capital of others. It does not surprise us, therefore, to see them now hastening to invest in railway scrip millions which their proper function is to bring within reach of private industry and enterprise. Established on principles which, from the outset, deprived them of all inducement to act as media between lenders and borrowers, their last performance is a striking example of the persistently false

routes they have always trodden, and will always tread, until the conditions of their existence are entirely changed.

It will, perhaps, be urged that if the banks have money lying idle, there is no reason why they should not purchase railway bonds in default of more legitimate investments. This is in a measure true; but the very fact that they are so situated, constitutes one of the circumstances which, in our opinion, render an internal loan for railway purposes specially unwise at the present juncture. An invariable consequence of currency appreciation is that capital is diverted from the ordinary channels of industrial and commercial enterprise and attracted towards Government securities. This tendency has been very distinct in the Japanese money market during the past two years, and it doubtless affects the banks no less than other capitalists. If, therefore, any argument is to be founded on the fact that the banks have idle capital to invest in railway scrip, it is plainly not an argument in favour of offering them fresh facilities and inducements to fix that capital, thus rendering it unavailable to meet the demand that will certainly spring up with the revival of trade and industry.

The particular objection to such an employment of banking funds, applies generally, and with not less force, to the case of all Japanese money. "In poor countries," says JOHN STUART MILL, "the capital of the country requires the legislator's sedulous care; he is bound to be most careful of encroaching upon it, and should favour to the utmost its accumulation at home, and its introduction from abroad." Japan is essentially a poor country at present. During the past seven years she has been sending her specie abroad and replacing it by an inflated currency, which she is now again engaged in contracting. For the moment, what she feels is not the want of capital, but the difficulty of employing it profitably. So soon, however, as prices have completely adjusted themselves to the altered value of *Kinsatsu*, there will follow an industrial and commercial revival, vigorous and fruitful in proportion as the means to feed it are available. Capital is the means, and we cannot but regard with extreme anxiety the large increase of fixed capital at the expense of circulating that must take place if the Nakasendo railway is to be built with Japanese money.

Turning from the serious, we had almost said disastrous, consequences that must flow from so unwise a drain upon resources already inadequate, we may note the less important, but more evident, difference in the cost of money procured in Japan and in Europe. When this country undertakes to build railways with its own funds, it is behaving like a merchant who deliberately elects to borrow capital for his business at a rate of interest twice as high as necessary. There are

countries to which, in consequence of great annual savings and low profits, the emigration of capital becomes an object of just as great importance as its immigration or retention is to countries where capital accumulates slowly and the rates of profit and interest are high. Countries of the former class are naturally suited to be the latter's bankers. Speaking of this, MILL says:—"The railway operations of the various nations of the world may be looked upon as a sort of competition for the overflowing capital of the countries where profit is low and capital abundant." Japan's credit in Europe is so excellent that she could readily borrow money for productive enterprises at easy rates, whereas she can only procure it from her own people at very high rates, and, moreover, with the certainty of abstracting it directly from the wages fund, thus curtailing the subsistence of the people and the employment of labour, and temporarily diminishing the gross annual produce of the country. It is difficult to discover in this any evidence of practical sagacity.

There is yet another point which, though in some degree hypothetical, cannot be left unnoticed here. It is the loss which may accrue to this country by borrowing in a depreciated currency. The Finance Minister sells his railway bonds at 90, thus receiving $4\frac{1}{2}$ millions of paper, or four millions of silver, for five millions worth of stock. There can be no reasonable doubt that before the annual redemptions commence, five years hence, *Kinsatsu* will be circulating at par with silver. The loss owing to this cause will therefore amount to five hundred thousand dollars; or to four times that sum, if the whole twenty millions be similarly obtained. Not only might this be avoided by borrowing abroad, but a still further gain might be secured should silver itself appreciate, as compared with gold, during the course of the next ten or twenty years. That such a result is probable, seems to be clearly indicated by the constantly growing agitation in favour of a bimetallic standard. Let us suppose, then, this loan of twenty millions placed in England at 90, the rate of interest being six per cent.; and that in 1890, when the repayment commences, the proposed ratio between silver and gold has been established. The money in which Japan discharges her liability would, under these circumstances, cost her from five to ten per cent. less than its present value, and her gain under this heading might amount to fully two millions in the total. Thus the net result of borrowing abroad might be a saving of four millions, or twenty five per cent., in the principal, and of two per cent., at least, in the rate of interest, while the dangers of fixing a large quantity of circulating capital would be avoided. We cannot discover that the plan of borrowing at home has anything to balance these advantages, except, perhaps, some political considerations, which, though highly commendable from a sentimental point of view, will never contribute much to Japan's material prosperity.

THE CASE OF MESSRS. LUDWIG AND TRÜB.

FIFTEEN years ago, Lord OVERSTONE, when examined before a Parliamentary Committee, described a banker as a go-between, who receives deposits on the one side, and on the other applies those deposits, entrusting them in the form of capital to active energetic persons, who, he thinks, will make a good use of it. He went on to explain that, in many instances, the persons receiving these facilities have no security to give; and, "in all cases, can offer no security equal to the amount advanced to them, except that best form of security, their character, their energy, and their prudence." McCULLOCH endorses this view of bankers' functions, and says that "they are often more influenced in making loans by their knowledge of the conduct, the intelligence, and the pursuits of the parties seeking such accommodation, than by anything else."

In the practice of every day life it seldom happens that a banker is sufficiently liberal and far-seeing to apply these principles in their entirety. In almost every case he is tramelled by responsibilities, which, even if they fail to invest with a personal character the many risks of so large-minded a system, must necessarily impede a conscientious official's use of the property entrusted to his care. When, therefore, there occurs the rare and happy conjuncture of a bank manager so sensible of his highest functions, and a board of directors so unsparing of the latitude they allow their *employés*, as to permit the conduct of a bank on these highly intelligent principles, it naturally becomes at once the interest and the duty of the community to contribute, as much as possible, to the permanence and stability of such an institution. On these general grounds the sentence recently passed on Messrs. LUDWIG and TRÜB, in the Swiss Consular-General Court, seems very regrettable. It is true that, having regard to the social position these persons occupied and to the reputation they enjoyed prior to the discovery of their fraudulent dealings, the fact that they were criminally punished at all will generally seem of far greater importance than the amount of their punishment. But there is a fallacy underlying this view of the case; the fallacy of assuming that because a man's circumstances are of a nature to deter fraud, they are also to be considered as mitigating its consequences. If any inference may be drawn from a reputable merchant's descent to disreputable practices, it is the inference that he has appreciated the contingencies of his lapse, and his punishment ought to be in proportion to the knowledge with which he incurred it. As a penalty for a crime of such magnitude as that committed by Messrs. LUDWIG and TRÜB, six months' imprisonment is quite inadequate. Their counsel, addressing the

judges-assessors, said:—"You know my clients as well and better than myself, gentlemen. For a long time they have lived in the midst of you. You have always seen them laborious, orderly, modest, and enjoying universal respect." This appeal, if it was calculated to increase the embarrassment of the judges by reminding them that they were required to pronounce sentence on their some-time friends and fellow workers, ought also to have reminded them that they owed something to their own reputation, as well as to the institution whose wise liberality is so generally beneficial and had been so grossly abused. The standard of commercial probity in this settlement will not be raised, nor will the facilities offered by banking institutions be enlarged, by the finding of the Swiss Consular-General Court.

From the evidence given at the trial it appears that up to 1878, Messrs. LUDWIG and TRÜB were the servants of a firm which, though it has not escaped the general disasters of recent years, enjoys the credit of being managed with exceptional skill. They then set up on their own account, and at once obtained from the Hongkong and Shanghai Bank a credit of \$30,000 which, in the second year, was extended to \$100,000, and subsequently reached a figure considerably larger than twice the latter amount. At the time of the trial they owed the Bank \$193,438.19, and their relations with it rested entirely on a basis of confidence. They were allowed to cash cheques for the purchase of silk, and they undertook to keep these advances fully covered at all times. The Bank, on its side, relied wholly on this engagement. It never took any direct steps to ascertain whether its advances were actually covered. Such steps would have interfered with the facile conduct of its clients' business, and would have substituted for the security of honorable trust the imperfect guarantee of a difficult surveillance. Every month, however, Messrs. LUDWIG & Co. were required to furnish storage notes, giving a detailed description of the silk held to the Bank's order, and nothing but the falsification of these notes could have seriously imperilled the transaction. Such was the general situation, a situation which also represented the relations between other firms and the Bank, and which, while it did much credit to the latter's conception of its functions, had happily never been abused before. In January, however, Messrs. LUDWIG and TRÜB confessed that the documents they had furnished were incorrect; that there was little, if any, property to represent the entries in the storage accounts, and that a system of deceit had been practised towards the Bank since 1879 or 1880. Ultimately it transpired that, during the five years of its existence, the firm had lost \$118,900, and that its assets in Japan amounted to \$90,700, the greater part of which, however, was owed by Japanese, and of doubtful availability.

Brought to trial before the Swiss Consular-General Court on a charge of embezzlement and obtaining advances against fictitious certificates, Messrs. LUDWIG and TRÜB's cause was pleaded in writing by a gentleman of the very highest legal attainments. The defence set up was eloquent and elaborate. Briefly it amounted to this:—that the charge of embezzlement could not be sustained because the goods in question were not the property of the Bank, but only its security; and that the crime of obtaining advances against fictitious certificates was condoned, first by the Bank's hypothetical knowledge of the true nature of the certificates, and secondly, by the fact that the advances were obtained with the object, not of securing an unlawful advantage for Messrs. LUDWIG and TRÜB, but of recovering ability to discharge their indebtedness to the Bank. The first plea was admitted by the Court. This seems to have been unavoidable. A man cannot embezzle his own property, and though the silk was nominally held to the Bank's order, the fulfillment of this condition had never been enforced during the firm's five years' dealings with the Bank. But the second plea was plainly inadmissible. To infer that, despite Messrs. LUDWIG and TRÜB's declarations, and despite their monthly certificates, the Bank knew they were losing money simply because the silk trade was generally unprosperous, is wholly to misinterpret the terms upon which the business was conducted. Those terms rested essentially on a basis of confidence—confidence which depended, not on the nature of the times, but on the character of the men. Honesty, not fair-weather honesty, but honesty that is always honest, was the Bank's security. The last plea, that an illegal gain was not sought, is a plea which, if pushed to its logical conclusion, means simply that one wrong justifies another. To repeat a fraud with the hope of obtaining means to indemnify the defrauded, is a curious, but not a commendable, device. More valid were the pleas, urged with great eloquence and insistence, that Messrs. LUDWIG and TRÜB had never tried to abscond; that they had themselves confessed their wrong, and that they had given up the whole of their assets to the Bank. Possibly the Court took these things into consideration. If so, it would have done well to set forth the fact. What it did was to find the accused guilty of perpetrating a series of frauds extending over a series of years and amounting in the aggregate to nearly two hundred thousand dollars, and then to sentence them to the strangely inadequate penalty of six months' imprisonment. If this be a proper estimate of the punishment meet for such a transaction, it is plain that narrower limits will have to be set to the facilities which banks can extend to men having only their character and ability to offer as security.

THE IMMEDIATE CHRISTIANIZATION OF JAPAN—PROSPECTS, PLANS, RESULTS.

A Paper read at the Tokiyo Missionary Conference, Feb. 5, 1884, by C. S. Eav, and published by the request of the Conference.

I.—INTRODUCTORY.

The days in which we live are unique in the world's history. Forces which formerly were confined within narrow limits now burst every barrier, and the wide, wide world opens its gates to the energetic touch of modern enterprise. These are days which inherit all the results of a chequered past, and possess the power and the skill to assimilate the knowledge accumulated by the centuries, to transform it, and with it open up a still wider future. This is an age that will be great in history; great in invention, in the furtherance of all the arts of peace; great in the outspread of commerce, on whose ever widening streams there floats a subtle power for weal or woe for both the trader and his newer customer. Great is the age in science and research, sounding the death-knell of hoary myths and musty superstitions, but opening a way for low born, newly decked materialism. Great is the century in breaking down barriers between nations, binding by telegraph and steam the uttermost ends of the earth, and making it possible that the brotherhood of man should become, not some indefinite sentiment only partially realized, but a living universal fact. Great the work that lies at the door of the Christian Church if she will but rise to the majestic possibilities of the hour, cease trifling with her mission, and lay hold in true earnest of her great calling to disciple the world for Christ, the Prince of Peace and Truth.

This is the sublimest work of the hour, to carry forward our Saviour's plans, to advance the loving purposes of God for the human race, purposes the realization of which has been left in human hands, with the accomplished work of redemption in Christ Jesus, and with the promise of the Spirit. It is in the mission field, opening now so grandly in every quarter of the globe, that the gospel is to look for its most striking successes, efforts for which cannot but react in blessing on home lands. Success, if accomplished, will only breed an ardent desire for greater results still. And for plans for the success of mission work, no one can speak so well to the point as missionaries themselves, whose hands and hearts are in the work. Plans and commands from home churches might prove fetters rather than means of success, and our loyalty to our church may sometimes lead us to disobey the letter of her orders so as to carry out the spirit all the better. As in the case of Dr. Duff, who insisted on going out unfettered by minute orders, and went to India with only one injunction from his society. The first thing he did was to cast that injunction to the winds and do the very opposite, and would have deserved blame if he had not. Churches at home have already learned much from mission fields and have much more to learn. Men and women who are sent to mission fields ought to be persons whose sense and judgment are above suspicion, and then they should be trusted. And there is no place in the world where this is more necessary than in Japan, a land in which the light of all the centuries is being focussed, open to every influence—good or ill—of every civilized land, a land whose fundamental character has been formed on the basis of the oldest civilization now existing, with a temperament ready to accept the results of the newest and best. A land which, if really won for Christ, with all the warmth of her first love, with all her inherited advantages in her connection with China and Corea and her knowledge of the religions of the east, might and should become the key to all the lands of the Orient. I think the missionary in Japan ought to feel that he is honoured with an honour which rarely falls to the lot of the human being. We stand here inheritors of all the riches of the ages of thought, of all the benign influences of the

beloved lands in which we were born, we live in an age when the Church is feeling her way back to her original head, and beginning to put forth some little evidence of pristine power. A new day is dawning, and we stand here on the very outside edge of the Orient, where clasps the crystal cordon that now girdles the world, as representatives of this mighty awakening force. We stand amazed at the opening and progress of this land, and tremble at the possibilities of a very few years in the future of this mercurial people. Upon us depends much of the future of this land. If we are true to Christ and our calling, Japan will emerge elevated and morally great; if we fail, Japan now trembles on an abyss of anarchy and decay. There is only one other spot under heaven to be compared with our possibilities and our responsibilities in Japan, and that place is India. India won for Christ and the world might soon be won. Japan won for Christ, and the Orient will soon be won. Hence our subject to-day.

II.—COURSE OF CHRISTIANITY UNTIL TO-DAY.

It must require all the infinite patience of God to endure the stubbornness of man to accept the marvellous revelation of his love, the unfaithfulness of recusant man to be true to his high commission, to bring the boon of redemption to his fellow man. One would almost be tempted to think that the trinity of world, the flesh, and the devil, were stronger than the combined powers of the Father, Son, and Holy Ghost. But we have to bear in mind that the former powers of ill are on their native heather; the latter work through feeble man, and can never stoop to conquer by means that are foul, but work to regain a lost world while not destroying its remnant of freedom. Think of the vastness of the Divine thought as expounded by "God so loved the world, that he gave his only begotten son. God sent not his son into world to judge the world, but that the world might be saved through him." Long were the ages of preparation before that could be made plain to humanity by the actual appearing of the God-man. And see the divine vastness of the plan of Him who was called the son of the carpenter. See him in the darkest hour of anguish, an hour which to any ordinary human teacher would have been an hour of despair. He prays, "Neither for these only do I pray, but for them also that believe on me through their word, that they may all be one. Even as thou Father art in me and I in thee, that they also may be in us: that the world may believe that thou didst send me." And then afterwards when surrounded by his fishermen, publican, and kindred followers, all unlearned, unhonored, unsalaried—a mere troop of despised disciples, see the grandeur of his commission. A commission the meaning of which we have yet fully to learn; "All power is given unto me * * go ye therefore and disciple all the nations."

See that little band after that the Holy Spirit has descended upon them. How boldly they speak, what triumphs they win. What splendid success in a few years! Inside of sixty years they have produced a literature which is the soul of all that is noble in the literature of later ages, they have introduced new ideas of God and man; set sociology and politics on a new track; have churches from Palestine and Babylon to Egypt and Rome and beyond, with mighty centres of evangelism in between, with believers from the lowest up to Cæsar's household. Then they grow amid persecution-fires and rivers of martyr's blood, until proud pagan Rome dies at the foot of the cross. And wherein lay this marvellous strength of the primitive church?—and this is a matter of prime importance in our present enquiry. Certainly not in ceremonial and priesthood, for they had none at all. Nothing could be more simple than the visit of an apostolic missionary, preaching the gospel and then before passing on to another place, appointing one of the converts as an overseer to look after the rest and see that they all kept true. He would then leave them, perhaps never see them again, or at least not for a long time, and in the meantime he would comfort them with a letter. That church was the soul of simplicity, and

indeed from that day to this, the amount of priestly pretensions and the multiplication of ritual, may be taken as the measure of a church's distance from Christ and the apostolic idea. Their power lay not in refinements of modern theology, for the doctrinal teaching of Christ and his apostles was very simple. God manifest in the flesh to take away human sin; man through Christ to become an heir of heaven, a subject of the Kingdom of God on earth; some simple rules about the Kingdom, how to enter, how to act in it, how to extend it, that and little more. And as we extend our Theology into hair-splitting dogmas, into hard and fast lines not laid down in the New Testament,—so far as we make human teachings and theological forms an essential part of our faith, so far do we leave the simplicity of Christ and his apostles, so far do we dim the light, instead of spreading it, and lose hold of one of the secrets of apostolic success. They preached Christ and him crucified, and little more. Moreover, the secret of their success lay not in their ecclesiastical machinery, for they had very little of it for many a long year. But to be short, the grand underlying secret of all besides the spiritual power of their message as a divine revelation, was the fact of their unifying love, a love which linked them by a living tie to the Saviour who bled for them and for all, a love which bound brother man to brother man the world over, a love which grew boundless as God's love for humanity, and flamed into a passion to save mankind in every clime, arousing a holy ambition to conquer the world from the devil for Christ, an ambition before which the mistaken fanaticism of the Crusades pales, and beside which Napoleon's dreams or Alexander's plans are child's play. And when we rise to conquer for Christ it must be on the same line; with the same glorious gospel, hearts all aglow with unifying love, in the light of which non-essential differences die forever, and in their place an absorbing passion for the salvation of men, for the unselfish benefit of the world. But a saddening, sickening sight, a hideous half-triumph of hell divides us of these times from those old days of marvels and of power, from the trammels of which even we are not yet wholly free. "But thou shalt bruise his heel" was sadly true here; Christ conquered pagan Rome, but the spirit of pagan Rome conquered the Church of Christ. Rome's idea of empire seized the Church and her passion became, not to save, but to rule, the world. The loving Father was banished and the cross was transformed into a crucifix. "Love gave place to power. Apostolic simplicity was exchanged for the splendour of baptized heathenism. The spirit that dug up a statue of Jupiter, dubbed it St. Peter, and put it into St. Peter's Church that the pious might kiss its toe, imported a thousand other absurdities from the worship of pagan religions." The wedding of Greek philosophy with gospel truths mystified the teachings of Christ and his Apostles, and for 1,000 years the so-called Church of Christ walked in darkness, with but here and there a meteor light to relieve the gloom. But the hidden seed grew in darkness, and when men could endure it no longer, Christ spoke through Luther and his compeers. A splendid Reformation resulted and paved the way for a still better and broader one. Intellectually men were freed in a measure. The pulpit was freed but not the pew. And amid the wrangling of doctors in dogmatic strife, and the din of war in blades and blood, the spiritual power of Protestantism waned, her new energy turned to apathy when the victory was but half accomplished. And the fact remains that in Europe Protestant and Popish boundaries to-day are essentially as they were at the close of the 30 years war. But the age of the Reformation opened the way for a return to the apostolic ideal.

The Puritan movement gives us a fine example of stern and sturdy faith, when granite hearts were needed to become the foundation stones of a new nation. And well were they laid by old Plymouth rock. But these stern men had too much of the old covenant, too little of the new; too much of the old law of the Lord, too little of the gospel of Christ. But they had given birth in old England and in the New to a higher type of

freedom of conscience; individual freedom was born again, and with the more peaceful days of the last century, men awoke as never before to the needs of personal spiritual life. Wesley, Whitfield, Edwards, and others of different dogmatic creeds cried as did John the Baptist, "Repent for the Kingdom of Heaven is at hand," and as after his short ministry the Christ appeared, so in a little while after the "Holy Club" of Oxford had been termed Methodists in derision, a new and Christlike spirit came over all the churches, and such a spiritual revival took place as had not been seen since the days of Constantine. A revival proceeding not from ecclesiastical strife and political upheavings as the Reformation of Luther, not from dogmatic contentions as in Puritan days, but from the pressure of souls burdened with a sense of sin, yearning for salvation and conscious purity of heart and life. Luther said that a revival never lasted over 40 years, but that revival is going on yet in every church. It brought us back and up to Christ, and what was the result? It opened the way for a still grander reformation, a more positive realization of practical Christianity than has been seen since the days of the apostles, and on a wider scale than the world has ever seen—a movement that is only just begun, I mean the missionary revival. Bible societies date from that time and have given millions of copies of the word of God to every land. Tract societies followed, flooding every clime with tens of millions of pages of Christian literature. Missionary societies arose, and have sent agents to every quarter, and as a result Christianity has already won more in the last 80 years than in 1800 before. We boast of the conversion of island nations; of the Sandwich Islands, Fiji, Friendly Islands, and Madagascar; we count converts in some parts of India by the tens of thousands; in China and Japan by the thousand, and in looking over the record some of our good lazy churches at home, are almost inclined to think the problem solved, and like Alexander in their ignorance almost begin to think about weeping because there are no more pagan worlds to conquer!

But hold! let us look this matter in the face. If I did not look upon the work already done as preparatory and full of promise for greater things, I should scorn the church for her apathy, and despair of her accomplishing her mission. Think of it! There are more heathens in the world to-day than there were when the apostles preached! We boast of 6,000 converts in Japan, but heathenism in Japan has increased by more than 600,000 while those 6,000 were being laboriously gathered for Christ. We boast of idols overthrown and religions cast aside, but remember the church has not overcome a single great religion, since the splay-footed paganism of Rome fell (and that had already been riddled by philosophy), and the Scandinavian mythology of northern Europe vanished. We have come to savage tribes who were easily made to see that their ridiculous fetichism was no religion; or to places such as the Sandwich Islands, where they had already thrown away their idols as useless lumber, before ever the missionary came. But not a single powerful old religion has fallen or been visibly affected in these later days. Moreover Mohammedanism, which rose 600 years later than Christ, numbers more followers to-day than Christianity; Moslem propagandism is spreading more rapidly than Christianity; and the false prophet supports more missionaries to-day than all the church of Christ. The missions have wrought hard in India and not in vain, but Western infidelity has ten converts to one led to Christ, while Brahminism and Mohammedanism in India are scarcely affected; only an individual here and there. And here in Japan and China Confucianism and Buddhism are simply untouched, so far as their strength is concerned; while here the converts to Western materialism are one hundred to our one for the gospel of Christ. Of course the fact of the *quality* of Christian work and of Christian civilization is a sufficient answer for Christianity as such, but the *quantity* of the opposite shows the state of the problem before Christian men and missionaries at the present hour. The real problem

has not yet been touched, and unless the Church rise into a clearer sense of the stupendous interests at stake ages will be lost again, and the glorious light of the Gospel will go down in gloom.

III.—LARGER TACTICS NEEDED.

But thank God it need not be so. It shall not be so; the Church now partly aroused shall rise in power, and the partial return to the Apostolic spirit, the partial uplift into the Christ ideal shall be made real; this last topstone of the Reformation shall be brought on with rejoicing, and the world shall yet be won. If we compare the Church and the world of to-day with that of the Apostolic age, we find many points of similarity, but more of difference; suggesting, indeed, a difference of tactics, but a holding to the same vital principles which gave the secret of their power. They began with the passionate warmth of a new born love, we go forth with the rejuvenescence of the Church kindled anew from the perennial fountain of life. They had miraculous gifts to a certain extent to serve as an evidence of the truth of their message; we have the teeming evidence of history, of experience, and of a powerful civilization. They were mighty men of prayer and were rich in the inheritance of inspiring promises; to us the way is open to the same throne of grace, upon us falls the benediction of every promise that they could claim. Their world seems to us a very narrow one. Their Africa was but the northern shore, their Asia scarcely extended to India, their Europe reached hardly beyond Rome. Britain was barbarian. France, Germany, Russia were savage lands; China, Thibet, Korea, Siberia, Japan, America, Australia, and all the myriad islands of the oceans and four-fifths of Africa were to them as non-existent. To us who stand on higher heights, there spreads out a larger humanity; a bigger world to conquer, a vaster problem to solve. They had a solid Roman world in which one law was supreme, and one Greek culture moulded the people. Paul dealt with people whose language he knew, whose literature was his own. Dr. Crawford says he would have failed if he had come to China. But we of to-day have to go to China, and to a hundred other places, whose language, laws, customs, literature, all differ from ours. And before we can preach the Gospel to effect, these have to be mastered, to some extent at least. All these notions, which until a few years ago were sealed against Christianity, are now opened or rapidly opening. In this respect the prayer of the Christian Church has been answered; and now the question is, the world is open for you, what are you going to do about it? To the apostles were given extraordinary powers for their work; to us are given extraordinary means. As divine nature and human nature are still the same, and the underlying principle of our problem is still the same as the apostles, to make men partakers of the divine nature, to bring man to God and unite humanity in a divine brotherhood, we must conserve the same underlying principles of evangelism, by which they accomplished their marvels of success, viz., simplicity in teaching, simplicity in form, intensity of unifying love. Our great work is not with hordes of untamed savages, but with peoples whose civilization was old before ours was born, a people whose thinkings have run the whole gamut of thought and need from us but little of the human to perfect their humanity; they need only the message divine to elevate their manhood to nobler things.

But as the field of operations differs, so must our tactics differ from those of apostolic times. As the fields open before us are immeasurably greater, so much the greater is our responsibility. As our numbers, our wealth, our learning, our means are ten thousand fold greater than theirs, so must the glad outpouring of means and of men be commensurate with the larger responsibility. And as we live in a time when progress is measured, not by the leisurely tread of olden centuries, but by the rush of steam and telegraph and science and commerce and a thousand other forces which combine to make the world advance in a short decade farther than our ancestors did in a century, the triumphs of the loving Evangel must be commensurately vast and

rapid. The time has come when "a nation shall be born in a day." We must lead and mould the progress of the world or be untrue to our mission, untrue to our God who has given such power to man. The Church must change her tactics and move on broader lines.

II.—JAPAN AS A STRATEGIC POINT.

(1) But I must not dwell too long on these generalities, important as they are in throwing light on the greatness of the work at each strategic point. As I said before, I look upon India as the grandest vantage ground in the mission field to-day, calling for the greatest efforts, promising the largest results. But next to India in importance as an outpost of other nations, a vantage ground from which to sway the Orient, I place Japan. I consider the problem in Japan to be one of interest, not only to us who are here on the field, not only to the churches that have sent us here as their representatives, but to the whole Christian civilized world.

The manner in which these principles of enlarged tactics should be practically carried out, must differ of course with the country and the people for whose benefit we plan. I think a great deal of harm has been done, or at least a large amount of good has been lost, by attempting to deal with semi-civilized races, as with savage tribes. India will need one kind of tactics, China a very different sort, and Japan must be met in a way peculiarly suited to her temperament and position. To understand, then the plans necessary, we must first look at the circumstances, and find "the lay of land." And to do this we need to have such a knowledge of the language and the people, such a sympathy with their heart's feelings, as to enable us to see with their eyes as well as with our own. I may say just here that the plans I am about to propose are not the mushroom growth of an ephemeral enthusiasm, but the steady growth and outcome of seven years of careful observation and thought, quickened, it is true, by later developments; developments of the country making it more open to the gospel; developments in our churches and workers here on the field, rendering it more easy to apply apostolic plans; developments at home which lead me to think that the churches of Christendom are ripening for united and larger effort. But more of this anon. Let us now try to take in the state of affairs in Japan.

(2) A little more than three centuries ago the Jesuits brought their message to the Far East. They found in China an Empire, vast, self-contained, and philosophic. True to the instincts and ideals of their order, they took the garb of literati, became astronomers royal, taught science, and tried to found their church. As the church they founded came to public notice it was persecuted and almost obliterated, but the scientific astronomical fathers still held on, giving a wonderful example of patience and skill; and there they are to-day doing good philosophical scientific work. But what have they done for Christianity? and for Christian civilization and morality, what? About the same time they came to Japan, and they found here a place and a state of affairs, peculiarly suited to their tactics. Japan wanted trade, and the Jesuits gave them trade. Jesuits delight in moving princes and working among the brainless poor, a middle intelligent class they cannot endure. Japan was at that time a land of petty princes and low-lived masses, without a middle class, the Samurai being but appendices of their lords. Trade gave the Jesuit missionary the friendship and protection of certain daimios, gradually they won the friendship of other little lords, and had then, not only free access to their people, but the positive influence of their chiefs' example. The central government was powerless to control the movement, for they could not control their nobles, the enmity of some of the daimios was no great harm, for their enemies were sure to become the friends of those whom they hated. Thus it came to pass that in A.D. 1610, 60 years after the arrival of the first missionaries, there were said to be 2,000,000 of Christians in Japan, and 200 foreign missionaries. Charlevoix eulogizes François Civan, "King of Bungo," for having overthrown 3,000 Buddhist temples and houses. And

Father Cuello admitted that the disciples of the missionaries destroyed the temples of the false gods of the Japanese and persecuted the priests. This style of propagandism was not new to Japan, for long before this the Abbots of the *Shin* sect, driven from Kioto by the monks of *Hiyei-san*, had made forcible conquest of Kaga, where they reigned as lords for one hundred years; and Nobunaga himself for ten years waged unsuccessful war against these warrior priests in Osaka. And Nichiren, too, learned by persecution the tender mercies of Buddhism in the 13th century. But the disciples of Christ should have shown a better spirit. Protestants traders came also in those days, and disgraced the Reformation to an almost equal extent; their religious zeal found vent only in hatred of Rome and deception; their lives were a libel to their better light, and they often bartered their conscience, if they had any, for the mere sake of gain. But the orders of the Roman Church had the work of propagandism in hand, the Protestants, to the shame of the Reformation be it said, sent no missionaries. But it is, perhaps, just as well that they did not. The Jesuits and Franciscans and other orders quarrelled and betrayed each other, their powerful aristocratic friends had either died or deserted them, the central power of the Government of the Shōgun was becoming national; charges against the Roman missionaries, against the Spaniards and Portuguese were made, and, whether true or not, were believed by the Japanese Court. They had other avenues of trade now, and needed the Padres no more, and so in 1614 the decree went forth, that Japan should be freed from every stain, every trace of Christianity. Then came days of flight, days of recantation, days of blood, ceaseless, relentless, unrelieved. Shōguns swore to extirpate Christianity as a staple article in their political creed. Buddhist priests became a ubiquitous inquisition and dragged forth every suspected person; prices were paid for Christian heads, increasing in rate as the game became scarce; year after year injunctions went forth and even up to the present century one would almost suppose that the chief calling of the Government was to hunt the accursed Christian and rid the land of the gods from the pestilence of foreign devils. All books were prohibited which contained the word Christian, or the word foreign¹. Thus the work of hundreds of missionaries and the influence of 2,000,000 believers vanished as a dream, leaving scarcely a trace behind!

But Japan was saved for better things. In these days, what a transformation! If our eyes did not behold the facts we could scarcely credit the story. You all know the facts too well to need a repetition of them here. Just a word or two to bring some of the salient points in review, which will show us how completely the whole nation is changed, so as to become the most suitable ground possible for the propagation of true Christianity, which seeks not to intrigue with the ruler and make him a tool, which aims not at turning the low-lived masses from one idolatry to become the equally ignorant devotees of another, but works in broad daylight, aiming at convincing the intellect and ennobling the heart.

Scarce 25 years have passed since this land was unwillingly forced to open her ports to foreign intercourse and enter into Treaty relations with the outer world. But what do we see to-day? The Shōgunate with all its anomalies has passed away, mediæval feudalism with all its glamour and petty tyranny has gone forever, a compact of clans has given place to a consolidated empire under its rightful sovereign, who has been raised to greater power than his forefathers ever dreamed of; he rules an empire which is as truly a unit as the Kingdom of Great Britain and Ireland, or the United States of America, and its subjects are equally amenable to laws emanating from the central throne and administered by one executive. The acts of this present emperor are so finely summarized in the published dispatches sent by the U.S. Minister from Japan to the Cabinet at Washington, that I cannot do better than quote from a letter

dated July, 1880—nearly four years ago—"aided by his enlightened advisors he (the Emperor) has labored effectively for the promotion of the general welfare, and to this end has, within his short reign of 12 years abolished the feudal system, emancipated four-fifths of his subjects from feudal vassalage, and made them possessors of the soil, disarmed a feudal soldiery numbering probably 600,000 men trained to arms; recognised the order of society; established and equipped an army 40,000 strong, and also a navy equal in number and appointments to our own; assured the freedom of conscience; introduced the press, the telegraph, the railway, steam navigation, a general postage and savings system, and, above all, ordained a free system of compulsory education for the instruction of all the children of the Empire, thereby in effect declaring the equality of all before the law, and the right of each to the equal protection of the law. It may be said that seldom, if ever, in the history of civil administration, has any other ruler done so much within so brief a period for the reformation and well-being of a people numbering five and thirty millions." And this list by no means exhausts the whole story. Look at the reform of criminal and civil law, the marvellous reformation of prisons, etc., and particularly within these later years, provincial parliaments elected by the people have been inaugurated as precursors of the promised constitution and parliament which are to be given the people within the next coming five years. Moreover, the whole system of justice has been revolutionized, and instead of an Oriental jurisprudence based on suspicion and amenable to the caprice of an irresponsible bureaucracy, we have the ripened jurisprudence of civilization administered by jurists who display remarkable tact, and who need only a longer experience to give them necessary ripeness. The whole code of law, the whole mode of criminal procedure, &c., have been completely and effectively revolutionized. In fact in these externals Japan has become a Christian nation. For 20 years she has striven to become worthy of a place side by side with the civilized lands of the west, and so well has she succeeded that when she asks for recognition of that fact by the restoration into her hands of a beginning of the right to a complete control of her native soil, by the gradual removal of extraterritoriality under sufficient safeguards, one is astonished that the world does not gladly acquiesce in the response of the President of the United States, whose late message declares a readiness to accede to these proposals of Japan. But the fact is there, and the difficulty is that persons even here, who move in a narrow rut and have but little intercourse with the people beyond a degenerate few, are blind to the real progress of the land.

All this and much more the Japanese have inherited from the past ages of struggle and advance of Christian lands. But let it be understood that Japan has always had the elements of law abiding citizenship, by which all these elements could be appropriated and speedily assimilated. No more law abiding peasantry ever existed than those who toiled all through those ages in paddy fields and under burdens which only oxen should have borne, and in no veins of chivalric age or of modern patriotism ever ran truer blood than that which bound the Samurai to his lord, no philosophic or scientific students ever sought knowledge more eagerly and patiently than those same Samurai who loved letters as they loved their sword. These elements needed but the inspiration of a higher light, the moulding of a broader sympathy to make them honor the name of man and lift their nation into higher things and emulate the best. Let it be also remarked that neither Iyeyasu nor Nobunaga of those olden days, was essentially anti-foreign. They wished for foreign intercourse, and encouraged it, and it was only when they felt that their trust was betrayed and that their country was in danger, that they forbade foreign intercourse and banished Christianity. Moreover if 2,000,000 Christians, in those days when the population could not have been so great as now, had not the backbone in them to completely reform this nation and forestal persecution and not allow themselves to be rooted out,

they were a mighty poor type of Christian, and deserve but little sympathy.

But now, how about modern Christianity in Japan. I leave out of count Roman Catholic propagandism of these days; it must be very considerable, though it never courts the light; so also the Greek Church, whose agents are multiplying and whose numbers are formidable. They are doing some good work probably in breaking stones for a purer Christianity, if a purer type grows strong and fills the land before their errors are too hard baked to be removed by light brought to bear on the intelligence of the people. I deal here simply with Protestantism.

Protestant missionaries began work, or rather came to Japan in 1859; for a good while they had but little opportunity to work and a good deal of difficulty in acquiring the language. But, little by little, they won the confidence of the people, and the Government ceased to suspect them. One of the early missionaries gave us the only Japanese English Dictionary in existence, an invaluable help to all after-comers. Others, in conjunction with members of the English civil service, have from time to time produced books useful for the acquisition of the language. A piece of work untouched by the Greek and so far as I know with one small exception, untouched by the R. C. Missionaries. Another of our pioneers was for years a trusted adviser of the powers that be, an instructor of many who now rule the Empire, and yet I have never heard it whispered that the slightest effort was ever made to obtain special privileges for Protestants or to influence the ruler in any other way than by simply giving instruction and information when such was asked for. Gradually the people became inclined to hear, and the number of the missionaries increased year by year until we have now 100 (?) missionaries, representing 20 (?) societies, and the tabulated results are given in the statistics, published by the Evangelical Alliance. (The latest statistics have not been published, but the following is an approximation. Members of churches, or baptized converts 6,500. Contributions of natives for the year 16,000 yen. Bibles, testaments and portions of scripture now in circulation 200,000, tracts, books, some of them quite large, 500,000. Serials sent to 5,000 subscribers.) In order to appreciate these statistics it must be borne in mind that these members of churches, counted as converts, do not indicate the number of persons who actually believe in Christianity. Each one is supposed to have been carefully examined and found to be morally and spiritually renewed. Those who prove untrue are cut off. The effort is to count only those that are good and true. Each one of these would represent 3 or 4 persons who are as much Christian as the average non-church member of Christian lands, several theological schools are training pastors and teachers, many of whom are now doing efficient work. Seminaries are giving hundreds of boys and young men the elements of an education under Christian influences, fitting them for practical life or for higher institutions of learning. Ladies' schools are preparing hundreds of girls and young women for teaching, or who may become, as many of them have already become, wives of Christian men, Christian mothers for a better generation. Common schools gather hundreds of the poor of the children. Hospitals reach and ameliorate the bodily ills of thousands, and other modes of operation too numerous to give in detail are preparing the way for the actual and speedy evangelization of Japan on a national scale. Moreover these things are seen by men in power, and appreciated by the intelligent everywhere. They know full well the difference between the propagation of the Gospel by protestants and the Jesuit propagandism of Rome. They have learned to discriminate between Christian men, and a race of beings, outside of respectable foreigners at the outposts, who disgrace the lands from which they came, and import a new vileness to render indigenous licentiousness still more foul, blighting the moral atmosphere of their surroundings. The government has long ceased all opposition to Christianity, and indifference is actually giving place to a desire to have the land protestantized,

¹ See a fine summary of these facts in a paper by J. H. Gubbins, Esq., in Transactions of Asiatic Society of Japan, Vol. VI, pt. 1.

for it is beginning to be evident that the fruits of Christian civilization cannot become permanent and pervading without the vitality which produced them, i.e. Christianity itself. Their object in now encouraging Christian work is political, you say. Very well and what if it is? That is perfectly legitimate. If political aims and struggles for freedom and advance open the way to the free preaching of the Gospel, it is for us to thank God and take courage, and go forward expecting that the political aim shall be reached in the only legitimate way, by the elevation of the spiritual and moral life of the people. In a very short time present disabilities will be removed, in a few years, I trust the land will be thrown completely open as England or America. And shall these splendid opportunities be neglected? Shall we attempt to meet these stupendous possibilities by means which in face thereof are merest child's play, by tactics suited to ignorant savages? Nay, for this new wine fermenting, seething, we want new bottles—for these new responsibilities enlarged plans and nobler enterprise.

(3) Now in looking over the past and present with an eye to the future development of Christianity in Japan, one very serious problem arises. And that is what about these manifold and ever multiplying denominationalisms imported from the West, with shades of difference or with no difference at all, that have the slightest meaning for the people in Japan? I am not going to propose any wild utopian scheme that is at present entirely out of the question, and yet I think I see a solution of a very serious problem. A problem which many of us perhaps have not seriously contemplated. I will state my position and then try to make my meaning clear, then I will try to show the practical and only practicable way out, whereby every apparent disadvantage shall be turned to the greatest advantage, and finally I will give my plans for advance. My first position is that difference of denominationalism has been thus far a great advantage to Japan; my second position is that if we don't now cry halt, and begin to solidify our phalanxes, it will become a disadvantage, an intolerable burden for Japan, under which she will groan and pray as did a good man long ago "O Lord, save me from my friends."

I am no friend of uniformity. Men's minds are cast in various moulds, and various modes of operation must be free for individual choice. Every attempt to force on the church absolute organic unity has thus far wrought evil and only evil. Such concentration without rivalry breeds formality, carelessness, tyranny and internal discord. Look at the wrangles and endless strife within the pales of the old Roman Catholic Church, where order fought with order as no sectarians outside ever did, and to-day their internal differences are as great as in protestantism. And even to-day within the bounds of one national Church, with all its glorious goodness, we have differences as pronounced as amongst dissenters; low church and high church, broad church, or in other words, as a wag has put it, latitudinarians, platitudinarians, and attitudinarians, and so forth. Differences which I mention here not to reprehend by any means, but to show that external oneness cannot render men's minds uniform or hinder diverse developments of action. Men are born to be free and the grandest security for truth and righteousness is to be sure you are right in your own thinkings, and then agree to think and let others freely think. "In essentials unity, in non-essentials liberty, in all things charity." The freedom won for the mind of man by the Reformation could not but give rise to diversity, and mistaken were the efforts to prevent it. But you have in Germany, Lutherans, old and new and the Reformed church, besides smaller divisions. Then you have the same or similar divisions in Switzerland, Holland, Sweden, and other countries of the Continent besides Mennonites, Moravians, Swedenborgians, &c. Then in Great Britain, where since the Reformation two great religious upheavals have taken place, we have Episcopalianism, Presbyterianism Scotch, Irish, and English. In Scotland that land of Presbyterianism, we have the Auld Kirk and the Free Kirk and the United Presbyterians

and several more I believe. Then we have the Independents and the Baptists, and finally the Methodists, a prolific family—the Wesleyans, Free, Primitive, New Connexion, Bible Christian, Calvinistic Methodists, and others too numerous to mention besides the Salvation Army. Now we cross the high seas to Protestant America, peopled from almost every nation under heaven, and you have the sects of Germany, of Switzerland, of Holland, of Sweden, of Great Britain, nearly all reproduced in the United States, besides a few splits in nearly every branch and others of indigenous production, until the number baffles all enumeration. And then what do you think of Canada, the land from which I am proud to hail, which was supplied with denominations from the United States, from Britain, and from the Continent of Europe, and which has shown itself capable of producing some home-made denominations too. And now we leap across the high seas once more to Japan, and we find Europe pouring in denominations from one side and U.S. and Canada from the other, and every year they keep coming. We have now of Episcopalians, two English societies, and one American; we have Scotch and American Presbyterians, the Reformed Church of Holland as it comes through America, also the Reformed Church of Germany in United States garb, and soon we shall probably have Canadian Presbyterians, and there are Cumberland Presbyterians, and isn't there already an independent Japanese Presbyterian Church? thus giving five or six Presbyterian bodies. And then there are American and English Baptists; Methodist Episcopal, Canadian Methodists, Evangelical Association, and Protestant Methodists with more to follow. Then besides the congregational friends there are still some others. And now the question is, whereunto shall this thing grow? Several churches that have never had a foreign mission at all have pitched on Japan to begin with; as Japan becomes more widely known others will come, and the serious question arises, what is to be done about it? Are we going to plant our "isms" here or are we going to win the country for Christ? Now the obvious advantage thus far, while the native church is not yet really born, is this, that it has brought to Japan a great number and a great variety of workers, more work has been done and of a more varied kind than could otherwise have been accomplished. But surely no one is blind enough not to see that to perpetuate these different denominations, divided by home nationality or local ideas, would be a most lamentable thing for the real health of the Church of Christ in Japan. There is a possibility of having too much of a good thing, as old King Solomon found when he carried one of his theories too far. He tells us and tells us truly that he that findeth a wife findeth a good thing, and it is very true that a wife introduces a very useful and pleasant variety into a household, but when he carried the theory so far as to get a thousand wives he found that it was all "vanity and vexation of spirit." Too much of a good thing you see. But if this hand were deprived of these five different fingers or all were to be united in one, it would be of no advantage but a loss; this five-fold division giving manifoldness of use, uniting delicacy with power, producing marvellous perfectness of mechanism. But if each finger were divided and subdivided, and subdivided, the hand might eventually emulate a centipede or a paint brush, but would cease to be a hand, and so with these meaningless divisions in the hand of God in Japan. Thank God the spirit of union is abroad in our home churches, the newest countries leading the way. In Canada, Presbyterianism began by consolidating her ranks, and polyglott Methodism has at last become one in the whole Dominion. And now here in Japan we have an opportunity to teach the whole world a lesson of lofty faith working by a unifying love, that shall not only save Japan Christianity from an undeserved burden, but help to lift our home churches to a higher unitedness.

Outsiders imagine that with all this diversity there are still wars and fightings amongst us, that we spend our strength in mutual denunciation, whereas, as you are all aware, the great guns of controversy have long been silent every-

where; we have settled down to think and let think and have long ago found out that we are one in the most essential points and differ only in non-essentials. In Christian countries where the field is large, there is ample room for great diversity to live in harmony. More than anywhere else is this spirit of oneness evident in the mission field, and above every other field in the wide world, pre-eminently so in Japan. Our whole history is one of mutual sympathy and growing love, by which our efforts blend in laying the strong unseen foundation of the church of a new nation. It is wonderful how soon the atmosphere of the mission work in Japan modifies old prejudices and widens one's sympathies; in face of this stupendous national problem our little "isms" die. People who come here still capable of growth soon wonderfully change. There is for instance Bro. — who came to this country about the same time that I did, fresh from the spheres in which we moved. Whenever his keen eye and emphatic nose appeared, he always seemed to me to be a perfect incarnation of the Synod of Dort, and all my Armenian quilts stood porcupine-like on end ready for a fray. Not a word was spoken, only once we approached very near the border land, when his lips suggested knife blades. But that soon passed away, eyes and nose and lips and the whole bearing of the man spoke forth another spirit, perhaps there is some difference in the eyes with which I see, but he is a totally different man to me; I could now for years embrace him as a brother beloved; and I believe that he and I could travel through the length and breadth of this land evangelizing, as did Paul and Barnabas, and then turn round and do it again, without quarrelling over it as did those dear old saints one unfortunately cantankerous day. What we have to do for Japan is to Evangelize it, win it for Christ, and I for one care not a rush what church polity is chosen, if only the church be true to her living head, and preserve the soul of charity, the inspiration of loving faith. Ecclesiastical form, philosophical statement of doctrine, etc., differ with every race. Whatever the future church of Japan may be, its Christianity will be a Christianity in Japanese mould, and any effort of ours to put the stamp of a hundred "isms" upon it, would be childish and futile. Japan Christianity may show a different type from that of any other country, and may be none the worse for it, but only add a new richness to the trophies of Him upon whose head are many crowns. But an unselfish effort on our part to win Japan for Christ speedily on higher lines than local "isms" will do much to hasten on that day of God when we shall all see eye to eye. Our starting point must be an absorbing purpose aiming at the complete evangelization of Japan, looking at it from the standpoint of "Japan for Christ," and not for our denomination. If we work for this great aim so far as possible on the lines of our denominationalism, so far as they can serve as a means to an end, well and good, but so soon as we reverse the thing, and work for the glory of our little branch, so soon do we prove recreant to our higher commission. Let us look upon our commission from each of our boards as sub-commissions simply of that proclaimed by our common King, and join hands in winning Japan for God, and our home churches will haste to applaud while angels and men will rejoice again in "Glory to God in the highest peace on Earth, goodwill to men."

IV.—BUT HOW IS TO BE DONE?

I will simply lay down three fundamental lines of work, a trinity of first principles which each individual mission and missionary may apply to the actual circumstances of the case, and carry out as is found best and most practicable, and then will give my plans.

I.—First of all let us remember our responsibility as the apostles of this land, we are ensamples to the incipient Christianity of Japan. Our spiritual and moral life will set bounds to the endeavors of the native church. They will rise no higher than we show them how. Let us then give them the high-water mark of Christ and his first apostles. Let our teaching be as direct and as pure.

II. The second axiomatic principle I would lay down is to aim at organic consolidation within all possible bounds. Our Episcopalian friends have acted together and present themselves as one church assisted by several societies. Presbyterians are leading the way amongst the rest of churches; the American Presbyterians, the Scotch Presbyterians, and the Reformed Church of America have wrought together for sometime and now aim at a consolidation of the native church. I do not see why all churches of Presbyterian theology and of nearly the same polity should not unite in one. Why should not the Reformed Church of the United States (Ger.) also form into line? The Congregationalists are as much one I presume as elsewhere, and now we Methodists are looking forward to a closer union, which I hope will culminate in uniting all who are Arminian in doctrine and who can agree to a common polity. And my opinion is that we need not break our bones over the polity of the churches; for the future Japanese Church will by and by put that into shape to suit themselves, perhaps better than we can. And why should not the whole of the Baptists range themselves under one native organization? That would give the hand its five fingers, and would not be too many denominations in a land of 37 millions of people, and the work would be better done than by any single church organization which would consist of heterogeneous and unassimilated elements. If the future church in Japan wished to carry on the work of union further, they could easily do so when the proper time comes, but in the mean time that is as far as it would be wise for us to go. Under one of these five heads every Christian in Japan should enrol himself. Around these five points should gather the sympathies of the Christian world, and into this five fingered hand would come a power and inspiration from God. But you say the churches at home will have no sympathy with that general kind of work, they want something that they can call their own. I believe if the thing were properly represented to the churches at home, they would see the reasonableness of it, the immense saving it would make of men and means, and the immense impulse it would give to the work of God, and every large denomination at least would not only bid the movement God-speed but their sympathy and their help would be manifolded.

III.—The third fundamental principle I would lay down is to aim at making our churches speedily self-supporting, and as they become self-supporting, self-controlling, and eventually independent. Let it be distinctly understood that we look upon ourselves as necessarily a proportionately diminishing factor, while our native brethren become an increasing factor, that as they increase we decrease, until we vanish from the field altogether. And this should not be looked at as a something undesirable, to be put off as long as possible, but as an event to be devoutly desired. To this end we should put on Japanese shoulders every responsibility that they become capable of bearing. In my experience I find that as our young men are trusted they show themselves worthy of trust. The more we develop their self-respect, the more they appreciate our presence and deprecate the speedy withdrawal of our counsel and help. We should not look upon the ambition of the native church in this respect with suspicion, should rather stimulate it, but also render it safe by conditioning perfect independence on perfect self-support.

Thus far you see I have proposed no radical, no impossible change. The latter principle must take time for its culmination, the second cannot be consummated in a day, but if we aim at it honestly, its benefits will at once appear; the first is of course always open to us. None of these proposals need affect the relation of the various home churches to each other or to the work in Japan, they refer merely to the manner in which their agents carry on their work in the mission field, and yet in a short time these principles would work a revolution. And now that I come to some more definite proposals, I wish to say first of all that these will come as no disturbing element in the present mode of opera-

tions, nor necessarily entail a very heavy extra outlay on the part of home boards. I would have all schools carried on as now or more efficiently if possible, and new ones established. I would have each united denomination maintain its own divinity hall, and retain in the pastoral work as a sort of conseller and guide, a selection of our most experienced men to aid the native pastors in organizing and consolidating their several churches. In fact, the whole machinery should be kept running pretty much as now, only preparing to garner in the sheaves by the thousands, and to branch out indefinitely.

And now for my principles of advance. In the first place I would have every church set apart as many capable men as could be spared from watching by the stuff, to the work of evangelists. Let those evangelists form one body apostolic for Japan, dropping "isms" and human dogmatisms; let them take the New Testament in hand, and go through and through this land evangelizing, with nothing to do but to preach the gospel. Let the ingathering of converts be left to the churches under native pastors. The native pastors will have all they can possibly do with ingathering, and very few can be spared for this work. The evangelists for more reasons than I can now stop to enumerate must for a time be foreigners. How would it work, if three or four of us, representatives of different denominations, should start say in April and visit every church of every denomination between here and Kioto or even on to Nagasaki, leaving the churches to gather the spoils? Can you conceive of any but the most blessed results? I propose that the thing be started at once informally and tested. But to carry out the idea thoroughly we must appeal to the home churches for one hundred evangelists immediately. Young men and young ladies. It is doubtless wise in the inception of a work in a field like this to send out middle aged or elderly men whose experience would keep them from hasty mistakes. But for the army of attack and advance let it be once for all understood that only *young* men of more than ordinary ability can so learn this language as to become really efficient preachers and evangelists. And I would have these evangelists come from any and every evangelical church that could produce suitable men and would send them and keep them in the sinews of war. We want no ranting swashbucklers of boasted non-denominational freedom, a class of people who generally turn out to be the most sectarian of all sects—we want no men who would contract the whole mind of God into some pet doctrine or who consider the Kingdom of Heaven to consist in some little hobby that they ride to death. We want men loyal to their church, whom their brethren can endorse and trust, men picked from the best and most promising graduates of colleges, who are entering upon or have had a short experience in the work of the ministry. I would have them come out unmarried and on trial for say from three to five years, for not every clever man can be a successful evangelist in Japan. Those who proved unsuccessful in learning the language might find work in some other department more congenial or more suitable to their genius, or they could return home and begin life there while still young, with no opportunity lost and with the advantage of having seen the world.

And now for the trial and training of these men and women, I would have a mission institute here on the soil, a school of the prophets under the control of one or more of the oldest and wisest missionaries in the field. This institute would aim at giving the new comer thorough and systematic instruction and drill in mission tactics and above all in the Japanese language. I am sure you will all say amen, when I affirm that years and years of wasted lives have been sacrificed to the lack of system, to the unguided floundering of new comers in efforts to acquire this language, and I have no doubt that some absolute failures might have been avoided by judicious training. With the advantage of such a training school any young man of push ought to preach with ease inside of two years, and as soon as possible he should go out in connection with some older evangelist to learn further by practice,

and get into full work as soon as possible. Then take a furlough, bring back a wife and settle down for a second term of work; by the end of which time he might perhaps be no longer needed in Japan. Each evangelist would be amenable to his own denomination as to moral character; his work would be fixed by a council of the evangelistic force, assisted by representatives of the pastorate, or by some other arrangement. But where would you get your 100 evangelists? You say. Well, I reply, we could muster a good beginning of them now in Japan. We could then ask the boards to send out a few more. I expect two or more from our church before a great while and with a little arousement every society might do a little more. Then ask some wealthy men to send out one each at their own expense; arouse powerful congregations to send out one each as a separate contribution. Ask the churches of a village to unite in sending and supporting a man. Ask the students of colleges to send a picked man. And instead of a hundred we should have before long to exclaim as Macbeth to Macduff, "hold 'tis enough." With this army how long will it take to Christianize the masses? A hundred men good and true, who could pour out of their soul's fire upon the people, who feared nothing but sin, would soon move the nation.

That brings us partially out of our old groove, but wrenches no staple or bolt in the whole machinery as now existing. I now rise a step higher, where denominational lines vanish, and propose a something in which every evangelical church may have a brick and be proud of it. We want to appeal to the intellectual activity of the land. In all the world a new phase of apologetical struggle is going on, and above all is this true of such a place as Japan, where Christianity is on its trial with no prejudice in its favour, where old philosophies have moulded a ripened phase of civilization, where western materialistic infidelity has the start of western religious thought, where the university is absolutely agnostic, where the learned believe in Spencer & Co. as we believe in Christ and his apostles, where out into the tiniest hamlet has penetrated the scientific enquiries and the scientific doubts of the day. We must go through a phase of apologetics in Japan. But it is not necessary that each church should expend her energies in such a work as this. It can be done a thousand fold more effectually by concentration in an institute that could be used for other purposes as well. I propose therefore that we have one central Apologetical Institute or Lectureship of Christian Philosophy, which should be housed in an imposing building, of solid construction, containing a hall capable of seating from 1,000 to 5,000 people, and a library of choice apologetic and other literature in English, German, Chinese and Japanese. The soul of this institute should be some one man or two men upon whom could fall the mantle of the confidence of the whole church, and around whom the churches could all gather at times for a great demonstration; a course of lectures, similar to that about to be held in the Meiji Kuaido under the auspices of the Evangelical Alliance, could be an annual fact, and celebrated men of power could occasionally be invited from abroad to make a still larger impression by such efforts as have moved the west. The man in charge should be an outlook upon the intellectual ebb and flow of the land, to meet issues as they arise by a perennial use of pen and platform. In the same institution there should be a printing and publishing establishment, with a magazine of apologetical and exegetical literature, and a Christian newspaper of general news. I would not like to say a word against the useful little publications now issued by our native brethren but they are child's play in comparison with, what they ought to be, in face of this national problem. We should have about \$100,000 to do this thing properly. And where will you get the money? "Ask and it shall be given." I believe the Tract and Bible societies would gladly take over the printing and publishing part and save thousands of dollars now annually spent in giving printing houses great profits, and the rest would be a bagatelle to some of our men at home in England or America if they

only became interested in the question. Two years of work of these evangelistic forces, and of this apologetic cannonade would arouse an element that must be caught and trained and moulded so as to conserve the whole into a permanent success. And that leads me to the last but not least item in my programme.

For this purpose we must have a national Christian University, which shall not only offer better advantages than the Imperial University of Tokio, but vie with the best universities in our home lands. This university would be fed by all the Christian schools in the country, not of course to the exclusion of others, and teach the whole range of science and philosophy; sending back theological students to their own divinity halls. The instruction should be through the English language, which would become the classic tongue as Latin to the old universities of Europe. Chinese and Japanese literature should be cultivated; the former to raise up an army of attack on China, the latter of course for their own country's sake. There should be at least 12 or 15 foreign professors, not missionaries if you please, but thoroughly equipped professors, such as would grace any university in the world. Supported not on the precarious salary of a missionary, nor with the fancy prices and uncertain tenure of employees in the Government schools, but with the prospect of a life's successful career and such a salary as would enable them after an ordinary working life to settle down at a respectable distance from poverty's reach. A something that will stimulate to highest endeavour a selection of the best talent that can be obtained, consecrated and elevated by the love of Christ and the love of man. The only stipulation I would make with regard to the professors would be, besides a thorough fitness for the position and enthusiasm in teaching, a spotless moral character and a loyalty to the gospel of Christ. The object of the institution would be, not to teach Christianity but to impart a thoroughly sound education under Christian influences, and from a Christian stand-point. Thus fitting men to be teachers, professors, lawyers, doctors, statesmen, and above all Christian gentlemen. For this purpose I would ask say in round numbers \$1,000,000 to start the institution with grounds, buildings, appliances, residences, and the expenses of importation of the foreign faculties. And then another \$1,000,000 as an endowment, on the proceeds of which the strength of the institution would be kept up, and be beyond the possibility of collapse from a lack of interest in gathering annual funds or other contingencies. A million dollars in Japanese Government bonds,—as safe as any investment under the sun—would yield from \$70,000 to \$80,000 annually. That with economy would keep a good institution efficient, and then any additional endowment, for special professorial chairs would add to that efficiency.

But where's the money? you say. In the treasury of the Lord, entrusted to Christian men, I reply. I need not give reasons why the Christian world ought to give this university to Japan, sufficient surely for the Christian Church and for Christian men, that it is *needed* in Japan to carry out the Saviour's command to disciple this nation. We are debtors to Japan in the same sense that Paul was a debtor to Rome, to Greeks and barbarians. And above that we as Christians are debtors to Japan, owing to this people a something that shall counteract the bane of prolific infidelity, of rampant vice, of oppressive treaty provisions. In a word we owe it to Japan to undo all the evil that Western nations have done her, for Japan has never done us any harm. But you say the civilization imported to Japan would more than repay all the evils we have done. I am not so sure about that, and I am sure of the contrary unless the Christian Church import the counteracting moral and spiritual and intellectual correctives. Without these the present rise of Japan will be a rocket flash for a moment and then the good will go out in darkness. Tell me do we not owe it to Japan to do our work thoroughly and on a large scale?

I believe it would be easy to raise \$2,000,000

for a University in Japan if we unitedly ask for it and give our reasons. Be certain of one thing if we ask for small things, small things will be given, if we ask large things, we may expect some royal giving. "Open thy mouth wide and I will fill it" says He in whose hand lie the hearts and the gold of Christian lands. "According to your faith it shall be done unto you." Only a little while ago a Christian man gave \$1,000,000 to a missionary society. You read constantly of men giving by the hundreds of thousands to local institutions, and now let us but bring before the Christian world a plan that will commend itself to their judgment, while it arouses their heart's sympathy, and every cent that is needed will be forth-coming. And they may as well begin at once to become familiar with giving by the million, for when the time is ripe they must give by the tens of millions. Old England alone when awakened from her guilty blindness towards the iniquity of the opium traffic, must disgorge those unrighteous scores of millions gained by a national wrong, to carry a commensurate Evangel to China, or if there is a just God in heaven her national sin will be punished by a national calamity; better pay back the national debt with treasure and with love than with the other alternatives, with treasure and with blood.

But to return to Japan, an institution such as I speak of would be sure to obtain special favour from the present Government of Japan, and wealthy Japanese would soon vie with each other in enlarging its endowment, in adding buildings and professorships, and foreigners living in a free and open Japan would hail an institution where their sons could be thoroughly educated without sending them home, and would also aid in its support.

And now you have my plans. A central university as a permanent fountain of pure intellectual light, which shall be national in its scope and a credit to the Christian world. A well equipped institute of apologetics, armed with the press and the platform, to meet the immediate exigencies of the times. A force of one hundred or more evangelists who shall have nothing to do but to preach as in apostolic days, (and what are one hundred evangelists to 37,000,000 of people?) and then thoroughly organized native churches working in harmony to gather in the fruits and build for all time. And all this without a revolution, conserving every advantage thus far gained, obviating difficulties looming up in the near future, adding new elements of operations which will speedily make this conquest of love complete, and enable as to beat to arms for China and Corea, which by that time will be ripe for larger effort.

But how is it to be brought about for I am of a practical bent of mind, and I have no idea of concocting a pleasant scheme and then letting it lie to mould. Let us have action. If these plans should be modified, let us modify them. I have no hard and fast pet scheme to work out; let us unite our thoughts and experience upon it. And then let us—I mean the whole mission body in Japan or as many as can do so—present it to the Christian world, asking each board to do its best for the work now in hand, not asking them us such to pay for the larger efforts, but leave these to their own merits, to sink or swim as they recommend themselves to the judgment of individual men and churches.

Brethren, I trust you will believe me, when I assure you that what I am now about to say does not flow from an egotistic confidence in my powers of persuasion or any other personal advantage, but from my confidence in the influence of a united appeal from the Church of Christ in Japan; from my faith in these plans as being well adjusted to the time and the demand of the land and the people; from my faith in the Christianity of our home churches, and above all from my faith in our Triune God, and his royal commission. I believe, if you were to give me (or any man amongst as with enthusiasm for the work) the united indorsement of the mission body in Japan, a letter from each individual mission to its home board, and with the consent of my home society, let me loose on the Christian west, I believe I should be

back inside of two years with the whole of their part an accomplished fact, leaving it with wiser heads, to carry out the minutiae to perfectness. And then inside of ten years you could move on to China, while I would start for India,—and our Japanese friends would fall heirs to the institutions here.

"There is a tide in the affairs of men
Which, taken at the flood, leads on to fortune;
Omitted, all the voyage of their life
Is bound in shallows and in miseries.
On such a full sea are we now afloat;
And we must take the current when it serves,
Or lose our ventures."

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE KIYODO UNYU KWAISHA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am directed by the Directors of this Company to call your attention to the article in your yesterday's issue, said to be a reproduction from the *Fiyu Shimbun*, in which article it is asserted that at the General Meeting of this Company, "Mr. Komuro proposed that the balance be carried forward to next year's account, and that no dividend be declared at present, a proposal which caused a serious discussion."

This is entirely contradictory to the fact. Mr. Komuro did declare a dividend of 9 per cent. per annum, and not a single objection was raised.

Further, in looking over the *Fiyu Shimbun*, we find an article on the General Meeting in its issue of last Wednesday, stating, however, that a dividend of 9 per cent. was declared, &c., &c. But we find nothing like your alleged translation.

Please rectify, therefore, the above mentioned error and oblige.

Your obedient Servant,

T. UYENO, Foreign Secretary.

Tokyo, February 1st, 1884.

[We regret that the above error should have occurred. We can scarcely call it an error of translation, as it appears that the translator did not have the *Fiyu Shimbun* before him when he wrote. The main facts of our correspondent's letter have already been published in our Weekly issue. Elsewhere will be found a translation of what really appeared in the *Fiyu Shimbun*.—Ed. J.M.]

THE ALLEGED VENALITY OF THE PRESS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The character which English journalism is gradually receiving at the hands of its representatives in Japan must be regarded with considerable astonishment by the Japanese. Against the *Fapan Mail* charges of venal motives have been, and are still, persistently urged. The *Fapan Gazette* is now included in the same denunciation. The Minister for Foreign Affairs is said to "have it in his left hand," and the journal is described as "effusively and gushingly complimentary to its profitable patron." Men are not infallible. You and your contemporary may have fallen from the pedestal of independence, though I think you may rest assured that the public acquits you of any such descent. It would, indeed, be a sorry business that two English journals out of three should hold their pens at the bidding of a dollar. But let that pass. The point I desire to make is that even such a dual lapse might still be considered exceptional. It would not seriously affect the reputation which English journalism has deservedly acquired.

Recently, however, Japan received a visit from Mr. Henry W. Lucy, political editor of the London *Daily News*. Readers of the London Press at the time when this gentleman's novel "Gideon Fleyce," was published, will remember the remarkably high terms in which his abilities were spoken of by the leading papers. Both as an experienced journalist and as a recognised master of humour, encomiums were lavished upon him. Even men in the opposite political camp did not withhold their meed of praise. Well, Sir, this writer, leaving London during the Parliamentary recess last autumn, made his way to Japan, and, as special correspondent of the *Daily News*, called on several of the Japanese Ministers. He was, doubtless, hospitably received. Japanese hospitality is well known and would unquestionably have been extended to a gentleman of Mr. Lucy's reputation. The result of the interview with the Minister for Foreign Affairs was telegraphed to the *Daily News*. There was, indeed, nothing novel to be related. What Mr. Lucy had to tell, though not previously told by a London journal, was familiar to every one in Japan, namely, that the Japanese Government is most anxious to open the whole country to foreign intercourse. But no sooner did the telegram appear than its sender, also, was charged with venal motives by the same traducer, though in the case of the political editor of the *Daily News*, "a handsome gold-lacquered box with a few etceteras," and a little hospitality, were the limits of the consideration he was charged with having received. So far as he is concerned, he will not be a whit the worse of the accusation. But what a pretty character English writers are receiving! Are they all venal? Can nobody say a word that seems to tell directly or indirectly in Japan's favour, without being pointed at as a receiver of Japanese bounty? If Englishmen are what the *Japan Herald* represents them, and if our boasted liberty of the press has only been won that it may be carried into the market for commodities, the sooner we abandon our lofty pretensions the better.

But as there are slums in the wealthiest and most prosperous city, so, even among a respectable community like that of Yokohama, there may occasionally exist men so depraved and resourceless, that fate condemns them to live by the exercise of qualities which in sterner societies used to be punished by the whip or the stocks. If calumny and detraction flourish here, it is not because the soil is specially congenial to their growth, but because, like the slums, their very offensiveness procures for them a certain immunity.

I am, Sir,

Your obedient Servant,

Q.

Tokio, January 31, 1884.

"CONSISTENCY'S A JEWEL."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Being much interested in the prospects of this country's foreign intercourse, I am a tolerably constant reader of the various articles and notes referring to that subject published by the local foreign press.

In the columns of the *Japan Gazette* of May 13th, 1882, there appeared an article headed "Pending Questions." The writer took for his theme an article of your own under the same caption, quoting from it the following statement:—

Japan, we confidently believe, is willing and anxious to remove all restrictions upon trade, travel, and residence in the interior, provided only that we, on our side, consent to be subject to her laws while availing ourselves of the privileges thus afforded.

Referring to this your contemporary wrote thus:—

Now the *Japan Mail* is instructed to say, that if any person, whatever his position or his social status may be, in other and plainer words, any cheat or ruffian, chooses to submit to Japanese law, he may go where the educated and respectable foreigner under the control of his own law is

strictly inhibited. *Foreign governments will no doubt recognise, as all thoughtful men must recognise, the danger of the acceptance of this latest proposition; for in all probability the lawless, dishonest, and immoral conduct of the few availing themselves of the privilege of travel in the interior would be highly prejudicial, if not entirely fatal, to the extension of our mutual intercourse upon a solid foundation of confidence and experience.*

The italics here and in following quotations, are my own. Passing on now to January 19th, 1884, I find, in the same journal, an article from which I take the following:—

In well informed circles in Tokio the impression gains ground that on the arrival of Mr. Plunkett the tariff question, which was virtually decided some time ago, will be finally settled; and certain other conditions of the treaty will be modified in the manner experience shows to be desirable. Upon the conclusion of these negotiations, the government will announce that the whole of Japan is thrown open to foreign travel, residence and trade; but every person availing himself of that privilege, whatever his nationality, will be subjected to the operation of Japanese civil and criminal jurisdiction.

A proclamation to this effect would at this moment be regarded with extreme astonishment; but foreign residents may consider its publication as imminent. Japan will follow a dignified course in doing this; and there is little doubt that all the treaty powers without exception would be quite willing to join in a convention agreeing to recognise this measure, and to enforce execution of the decrees of Japanese courts against the property of foreign defendants in the settlements.

We congratulate H.E. the minister for foreign affairs upon being the author of a measure which all must wonder was not thought of some few years ago.

Once more, Sir, permit me to refer you to the columns of the *Japan Gazette* of January 26th, 1884. You will there read the following:—

If foreign governments have the real interests of Japan at heart they will persevere in the course they have heretofore pursued, and decline at present to submit their people to Japanese jurisdiction in whatever part of the empire they may be. Japan is weary of asking for the recognition of her jurisdiction; and the only dignified course left her is to open the country to all who choose to enter it and submit to native jurisdiction. Of the benefit to accrue to Japan little need be said. The people that will avail of the "privilege" we have several times endeavoured, with the best intentions, to describe faithfully and accurately; Japan will herself rue the day when she substitutes for a modified form of travel and trade under a strict passport system, the opening of the interior to all persons, conditional only upon a real or nominal submission to her laws.

I think you will agree with me, Sir, that the unfortunate journalist who penned the above has been obliged to take the "sharp curve" once too often. I could understand his changing his opinion between May, 1882, and January, 1884. A man is not disgraced by changing his opinion. Sometimes, on the contrary, he earns credit and respect by the performance. Therefore, when your contemporary declared, in the spring of 1882, that "foreign governments, as all thoughtful men, must recognize the danger of accepting the proposition" to open the country conditionally, and that such a measure "would be highly prejudicial, if not entirely fatal, to the extension of our mutual intercourse;" it was still open to him to veer round and declare, in the beginning of 1884, that doubtless "all the treaty powers without exception would be quite willing to join in a Convention agreeing to recognise this measure," and that he "congratulated the Minister for Foreign Affairs upon being the author of it." Having regard to the fact that he had himself discussed and severely condemned the same measure when suggested by you, in 1882, it was certainly a little rash to express astonishment, in 1884, that it had not been thought of some few years sooner. But that is a mere incident. Few people, especially if they are journalists, like to make a public retraction. Your contemporary's attempt to put the past out of sight altogether when taking his new departure, was a pardonable weakness. But what can have happened him between the 19th and 26th of January, that on the latter date, he should turn himself inside out once more, and declare that, "if foreign Governments have the real

interests of Japan at heart, they will decline, at present, to submit their people to Japanese jurisdiction anywhere," and that "Japan will herself rue the day" when she opens the country conditionally?

Finally, Sir, let me enquire whether "the only dignified course left for Japan," is one which she would "herself rue," and which "would be highly prejudicial, if not entirely fatal, to the extension of our mutual intercourse upon a solid foundation of confidence and experience." Her "only dignified course," observe.

Your obedient Servant,

QUERY.

Tokio, January 29th, 1884.

AN ORNITHOLOGICAL MISNOMER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your paper this morning I notice you call the *uguisu* "throstle." This is a mistake; the *uguisu* (*Cettia cantans* and/or *cantillans*, for we are not yet certain whether there are one or two species) are warblers, and allied to the nightingales, not to the thrushes.—Yours, &c.,

C.M.Z.S.

Yokohama, February 5th, 1884.

[We are much obliged to our correspondent for this information.—Ed. J.M.]

REVIEW.

Indian Idylls: from the Sanskrit of the Mahabharata. By EDWIN ARNOLD, author of *The Light of Asia*. London: Trübner & Co. 1883.

Edwin Arnold's latest production "Indian Idylls" is quite on a par with his former works. The "Light of Asia" is, according to Oriental critics, a most masterly reproduction of ancient Sanskrit though in the purest English form. Edwin Arnold has the rare gift of reproducing all the luxuriance and grace of the Indian tongue in the straightforward terseness of the English, uniting in a strange harmony the entirely different genius of two languages. "In all of his poems," says the *Statesman*, "we meet with that rich luxuriousness of imagination, which is verdant, glowing, many-coloured, and has a strong scent about it, like an Indian landscape after heavy rain—the same melody of verse, chastened by good taste, and couched in pure English." The unkindest of Mr. Arnold's critics have to acknowledge that his verse has a most pleasant ring to English ears; "Mr. Arnold's mastery of a smooth Tennysonian kind of blank verse," says one of his severest critics, "avoiding the Laureate's least commendable mannerisms, if never reaching even his average music, and only occasionally lapsing into mannerisms, is amply sufficient to supply a smooth and pleasant medium of communication." And again, "Mr. Arnold's verse is prose which borrows in a manner pleasant enough in result, and by no means unartful, the more obvious and seductive attractions of verse without forfeiting its own capacity of faithful rendering."

A full half of the "Indian Idylls" is taken up by the well-known and often translated story of the gambler Nala and his faithful wife Damayanti. Mr. Arnold could have perhaps been wiser in his choice of subject. Almost the whole of the bulky Mahabharata is virgin ground to the English reader, and it seems rather a pity that the "Indian Idylls" are so largely taken up with the one part of the Mahabharata which was already so well-known in translations. Still, Mr. Arnold's graceful manner of handling his theme goes far towards reconciling one with the old tale under a new guise.

Critics are undecided as to which of the Idylls the palm should be awarded. "The Birth of Death" is a most exquisite poem,—the legend of Mrityu, the daughter of the thought of Brahma—as was

Minerva of Jupiter—whom the god created to bring death into the world, and whose gentle nature shrank from the terrible duty imposed upon her. No other country can boast a myth in which the two ideas of death the destroyer, and death the consoler, are so skilfully and gracefully blended. The first of the Idylls is taken from the Mahabharata, line 16,616, and, with the exception of a few passages, has not been brought before English readers heretofore. "Savitri; or Love and Death," is its title; the song of that love which overreaches death itself. A Raja, long childless, receives from the gods a daughter. Savitri, "with lotus eyes, lovely of mould,"

And when swift years her blossomed youth made ripe,
Like to an image of dark gold she seemed,
Gleaming with waist so fine and breasts so deep,
And limbs so rounded.

Deep in the woods, a blind and banished King
lived a hermit's life with his only son. This Prince was

Fair of form,
(Vayati was not fairer), sweet of looks,
(The Aswari not more gracious), gallant, kind,
Reverent, self-governed.

Savitri chooses him for her husband, despite the sinister fate which overhangs him, for he is to die within one year. When the fatal day came, Savitri followed him into the forests, and when death carried off his soul she pursued the "silent presence," beseeching it to restore her loved one. Death, to appease her, promised that her husband's father should regain his sight, his throne, his children; but at last her gentle and persevering opportunity forces the black shadow itself to smile, and yield back her husband's soul. It is the Indian version of Orpheus and Eurydice.

The "Enchanted Lake" is an old friend, and revels in luxuriant description of scenery. Take, for instance, the picture of Indian jungle:—

A leafy depth, where never foot was heard
Of man, but shy deer roamed and rough bears rustled;
With tall trees crowded, in whose crown the bees
Swarmed buzzing, and strange birds builded their nests.
Through this green darkness wending, Yudhisthir
Passed to the pool, and marked its silver face
Shine in the light, rimmed round with golden cups
Of lotus blossoms.

The "Great Journey" and the "Entry into Heaven" are full of power. The "Night of Slaughter" is a weird story. Three chiefs, beaten by their enemies in open battle, flee at night into a wild forest. Desperate, bleeding from many wounds, they lie down for a space, but one of them

While he lay
Chin uppermost, arm-pillowed, with fierce eyes
Roving the wood and seeing sightlessly,
Chanced to see in a fig-tree's
Shadows a thousand crows perched;
Some nested, some on branchlets, deep asleep,
Heads under wings, all fearless
When lo! there fell out of the velvet night,
Silent and terrible, an eagle-owl,
With wide, soft, deadly, dusky wings, and eyes
Flame coloured; hooting but low
The fury smothering in its throat, then fell
With murderous beak and claws upon those crows,
Rending the wings from this, the legs from that,
From some the head The great owl
Hooted for joy of vengeance, and again
Spread the wide, dusky, deadly wings.

Springing from his couch, the silent watcher wakes his comrades, and retrieves their defeat by a night-attack upon their enemies. The "Enchanted Lake," "Great Journey," and "Entry into Heaven" are three tales which deal with the heroic constancy and justice of Yudisthir, the "Long-armed King." In the final legend, he seeks his beloved ones in the abode of the blest; but they have, it appears, committed sins which doom them to the hideous hells of Hindū mythology. He insists on seeking for his own, and is permitted to visit the lowest abysses. Their horrors for a moment shake his courageous heart, but, discovering his loved ones in torment, he turns to the attendant angel with the words—

Go to those thou servest.
Tell them I come not hither. Say I stand
Here in the throat of hell, and here will bide—
Nay, if I perish—while my well-beloved
Win ease and peace by any pains of mine.

Struck with his deathless courage and heroic love, the Hindū deities allow him to return to the upper earth with all his kindred.

TRANSLATIONS FROM NATIVE JOURNALS.

ENCOURAGEMENT OF NAVIGATION.

(Translated from the *Fiji Shimpō*.)

Learned men aim at the development and progress of social order, and to attain this great end it is above all things necessary to encourage the facilities of transport. Hence the great importance of railway and ship construction. The countries of Europe and America are covered with a perfect network of railways, and possess immense mercantile flotillas. Starting from Dover in the morning, one may reach Paris before nightfall; and one hardly lands at San Francisco before New York is in sight. These and other marvels are the direct achievements of civilization. Europeans and Americans do not, then, without good reason boast of their national progress.

But the construction of railways is not our present theme; we would rather call attention to the question of navigation. Historiographers tell us that nations without a thorough appreciation of the importance of navigation are to be regarded as uncivilized; whereas those countries who protect and encourage the rigorous development of navigation are conspicuous for national progress. This is undoubtedly correct. Rome of ancient times enjoyed remarkable prosperity, wealth, and power, solely because her people thoroughly understood the power of navigation, and carried her trade and commerce to the confines of India and Persia. Unfortunately for the greatness of Rome, Goths, and Vandals invaded and over ran the country, destroying her magnificent edifices and laid waste the land. After that time, her maritime interests fell into decay, and India was finally left to the mercy of the English. When Holland was in the zenith of her prosperity she monopolized the commerce of the high seas, established colonies in America, and carried her Eastern trade to Japan. At one time Holland was the most powerful nation on the globe; but she quarrelled with Great Britain, her war-fleets were destroyed, and her great name gradually declined. At the present moment, England is Queen of the Ocean. While Holland has been losing fame and power, England has steadily been increasing like the morning sun rising above the horizon. We may therefore justly conclude that the prosperity of a nation depends upon the development and progress of her maritime interests.

Turning our gaze upon this, our own land, we are grieved to find navigation still in its infancy. In days gone by, no communication existed between this country and foreign states; our ships sailed along the littoral only, though now and then, once or twice in many years, they found their way to China and Korea. Navigation did not command the interest of the public. Christianity was forbidden under the Toyotomi and Tokugawa régimes, and, for more than two centuries, no one attempted a voyage to foreign lands. The navigator's sole compass was the islands along the coast, nor dared he sail out of sight of land. One might as well have gone a fishing in a forest as to have hoped for the development of navigation under such circumstances. Since the great defeat of the Tokugawa armies at Fushimi and Toba, the usurper's power has passed away, and the Imperial authority has been restored. On the other hand, our foreign intercourse has gained wider and greater dimensions, as ports have been opened for the interchange of commodities. The time of dreams and sleep has vanished, and the public has awakened to the importance of its marine interests.

In the 2nd year of Meiji (1869) the Government granted the people the power of owning vessels constructed in foreign style, and six years later (1875) it extended its protection to the Mitsu Bishi Company, who established regular communication between this country and Shanghai and Hongkong. In the 13th year of Meiji (1880) the Japanese

vessels that visited foreign countries numbered 680, with an aggregate tonnage of 683,660; showing an increase of 41 vessels and 49,604 tons over the returns of the preceding year. This was welcomed as the earnest of maritime progress. Yet there was one unpleasant feature, and that was, that the greater part of our foreign commerce was in the hands of foreign ship-owners. The amount of goods conveyed by foreign vessels to and from Japan reached, in 1880, the sum of 51,776,780 yen; while Japanese ships transported goods to the amount of only 11,639,689 yen. Supposing that foreigners realised 15 per cent. in the shape of freight and insurance fees, their profits would have reached 5,170,000 yen. This was owing to the still embryonic condition of our maritime interests, and this fact cannot too forcibly impress itself on our minds.

The dangers attending navigation in early times undoubtedly obstructed its rapid development. Man desires first of all the safety of his person and property, and so it was not surprising that, while dangers still beset its path, navigation made no advancement. It was, therefore, essential to the progress of civilization that these dangers should speedily be done away with. One of the principal dangers lurked in the flimsy, unsubstantial nature of Japanese ships. Look, for instance, at the perils of going to sea in junks. On stormy days the passengers may be heard screaming with fright and invoking divine assistance by repeating again and again the mystic words *Namu Amida Butsu*. The voyage from Yokohama to Kiushiu formerly took a whole month, whereas it now takes but a week. Only a few years ago, when one started on a trip to Tokiyo, a crowd of weeping relatives paid adieu to the traveller, hardly daring to hope for his safe return. The perils of navigation were constantly before the eyes of the public. Even at present, the number of junks far exceeds the number of vessels constructed in foreign style; indeed, the latter seem to be mere auxiliaries of the former. This is an almost hopeless state of affairs. The following tables compiled from the report of the Agricultural and Commercial Department for the 13th year of Meiji, give a correct idea of the situation:—

VESSELS OF FOREIGN FORM OF CONSTRUCTION.

STEAMERS AND SAILING SHIPS ABOVE 1,000 TONS.										
1870.	1871.	1872.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.

15,087	18,584	22,692	22,673	20,684	19,919	18,756	19,135	19,285	

Despite the unsubstantial character of Japanese craft, there was an evident increase in their number during 1878-79. This was due principally to the growth of maritime industry, as well as to the fact that many navigators of the old school were incapable of passing the necessary official examinations. There are thus fragile vessels and inexperienced seamen side by side with the modern system of seamanship. Unless this obstacle be removed, the condition of our transport trade will

never make satisfactory progress. To attain the wished-for end, the construction of junks should be prohibited.

There are, however, three objections which may be raised against such a procedure: (1) the public will be seriously inconvenienced for a time; (2) the substitution of foreign built vessels for junks will entail heavy expenditures, and interfere with wholesale shipbuilding; (3) foreign-built vessels themselves are not absolutely safe. As to the first, the further benefit of the public by means of foreign-built vessels far out-balances any momentary inconvenience. Such a complaint is based on merely superficial data. Great success can only be achieved by great ventures. Whatever obstructs the path of national progress should at once be done away with. When the feudal system was abolished and prefectures established in its stead, the people were inconvenienced for a time. But just as all traces of a barbaric age must give way before the onward march of civilization, feudalism had to disappear. Since those times progress has gone on with lightning rapidity. The prohibition of the construction of junks will be more than out-weighed by the rapid development of maritime industry. With regard to the second objection, it is almost as absurd as entertaining a fear that the heavens are on the point of falling down upon us. It is undeniably true that the substitution of foreign-built vessels for native craft will entail heavy expenses, and only the rich will be able to put this plan into execution. But there need be no apprehension on this score. If we adopt the joint-stock scheme, as do, for instance, the banks and insurance companies, in which the combined capital of many individuals is invested, it will not be difficult to build as many ships as we need. And we can only repeat that our maritime industry will be increased in exact proportion to the number of our ships. As to the third objection, the statement that European vessels are unsafe and that the percentage of shipwrecks among them is larger than among native craft, betrays lamentable ignorance of the true state of the matter. In 1879, junks were wrecked to the number of 375; or 5 per cent. of the total number 19,285. In 1880, 70 ships built in foreign style were wrecked, or one out of every nine, the whole number being 619. At first sight, the calculation appear to confirm the objection raised, but a very little examination will prove the fallacy of this conclusion. In the first place, Japanese shipbuilders have little or no experience in the construction of European vessels, and are inclined to be careless; and so many of the ships built in this country are really weaker than junks, a fact largely due to a mistaken economy. In the second place, ships go on long voyages and experience all sorts of weather, whereas the junks only put to sea on calm days and sail close to the coast. Hence the difference in the percentage of wrecks. Finally, the large number of wrecks among ships is not due to the ships themselves, but to the want of skill displayed in the construction. Were these carefully built and ably officered, there would be little or no danger of shipwreck. The very fact that junks cannot put to sea in threatening weather demonstrates their uselessness. So long as our navigation is thus impeded we cannot hope for its rapid development. True civilization aims at the conversion of all things to practical use, and that with the greatest possible promptitude.

TOKIO AS THE FUTURE TRADE CENTRE.

(Translated from the *Fiji Shimpō*)

As we have already argued, when the new quays are built in Tokiyo—the means for which undertaking are to be raised by public loans—foreign and native vessels will no longer experience the serious inconvenience attendant upon the landing of cargo and the shipment of passengers, to which they are now subject in the harbours of Yokohama

and Shinagawa. The steamers of the Pacific Mail Company, running between San Francisco, Japan and Hongkong, those of the Peninsular and Oriental Steamship Co., and the Compagnie des Messageries Maritimes, plying between Europe and the Far East, as well as the vessels of the Mitsu Bishi and the Union Steam Navigation Companies, will, in future, be enabled to discharge and take cargo along the new quays in Reigan-jima, Tsukiji, and Takanawa, where there is room for any number of ships. The advantages of such an arrangement will be thoroughly appreciated by both natives and foreigners, whether they be merchants, navigators, or tourists. Under these circumstances, Tokiyo will surely become the great centre of foreign and domestic trade. By the time the quays are completed, foreign and Japanese merchants will transfer their Capital to Tokiyo; though should our foreign relations still remain in their present highly imperfect condition, European and American merchants will perforce carry on their business in Tsukiji. This, as the inevitable consequence of an untoward fate, we must greatly deplore. What we most sincerely desire, is that foreigners shall have every opportunity to start business and open stores in all of the outports of Japan, enjoying the same privileges as do the Japanese. Exterritoriality, however, may once again frustrate so satisfactory an arrangement. Should foreigners still persist in refusing to acknowledge the sufficiency of Japanese jurisdiction, we cannot, for our part, tolerate in our capital such prejudiced and selfish guests. We should dislike their presence even in Yokohama, Kobe, and the other open ports. Although we are firmly persuaded that the Japanese people are second to none in the matter of hospitality and national etiquette, yet there are limits even to these virtues, and the Japanese cannot, without impatience, see the treaty ports overrun by unfriendly aliens. While we most earnestly desire that all foreigners may enjoy the same privileges of residence and trade as do the Japanese in the Metropolis, yet we must require them to do away with the ban of extrterritoriality before availing themselves of the privileges. Internal communication is improving daily; what was proved to be inconvenient in former years has been done away with in late years, and additional advantages have been made for the convenience of the public; this year will similarly be an improvement on the last. The construction of railways is being pushed throughout the country, and the Nakasendo Railway that is to connect Tokiyo with Kiyoto has already been commenced. Public Loan Bonds have been issued to the amount of 5,000,000 yen, and these will undoubtedly be supplemented in time to come by a further issue of 15,000,000 yen. The Nakasendo Railway will shortly be *un fait accompli*, as will the line between Tokio and Aomori. Again, Kobe will be connected with Nagasaki by way of Shimonoseki, another line will run to Niigata; and so, all the treaty ports, cities and towns of any commercial importance will be linked together before many years pass by. Passengers will speedily recognize the advantages of land over marine communication, and merchandise requiring speedy conveyance will be sent by rail. No doubt need be entertained on this head. Yet foreigners stick to the treaty ports and refuse to avail themselves of the advantages of the railway outside of the treaty limits of ten *ri*. Are they, then, so well satisfied with the inconveniences of marine communication between the treaty ports? Traded operations require, first of all, promptitude and despatch; and while others enjoy these advantages, foreigners will have to forego them. Do they, then, imagine that they will be able to compete with native merchants on such unequal terms? We doubt it very much. They themselves will be the first to recognize the drawbacks of such a position. Should they attempt to travel beyond treaty limits despite the regulations of the treaties, the Government would enact stringent railway regulations, and order strict examination of all

passengers passing beyond treaty limits. We ask if any one can imagine a more absurd situation? It is an utterly impossible condition of affairs, which could not be permanent. Nor is it, on the other hand, possible for the Japanese alone to enjoy the benefit of railway communication. Apart from all other considerations, it is perfectly impossible for railways and extrterritoriality to stand side by side. And may we, in conclusion, most sincerely hope that, when Tokiyo shall have become the great centre of foreign and domestic trade, "foreign settlements" will be abolished, and foreigners themselves enjoy the same privileges of residence and trade as do the people of Japan.

SPRING MEETING OF THE UNION RACE CLUB.

The Spring Meeting of the Kiyodo Keiba Kwaisha (Union Race Club), to be held at Toyama, is fixed for Saturday, Sunday, and Monday, the 26th, 27th, and 28th April. The following is the Programme:—

FIRST DAY.—SATURDAY, 26th April.

- 1.—The CRITERION STAKES, value, Yen 500; for Subscription Griffins, 1st pony to receive Yen 400, 2nd Yen 70, 3rd Yen 30; weight as per scale; a compulsory Sweepstake of Yen 25 each. Five Furlongs.
- 2.—The YOKOHAMA STRANGERS' CUP, presented; for Japan Ponies that have never won a race; five ponies to enter or no race; weight as per scale; Subscription Ponies allowed 7lb.; Entrance, Yen 10. Five Furlongs.
- 3.—The DIPLOMATIC CUP, presented, value —; for Half-Bred Ponies that have never won a race; five ponies to enter or no race; weight as per scale; Entrance, Yen 10. Five Furlongs.
- 4.—The LOTTERY STAKES, value, Yen 200; for Subscription Ponies; weight as per scale; winners 20lb. extra; a compulsory Sweepstake of Yen 10. Once Round (6 furlongs 100 yds.).
- 5.—The PRINCES' PRIZE, presented; value, Yen 100; for Japan Ponies; weight as per scale; Subscription Ponies allowed 7lb. Entrance, Yen 5. Twice Round.
- 6.—The WAR OFFICE CUP, value —; for Half-Bred Ponies; weight as per scale; non-winners last Autumn, 20lb. allowance. Entrance, Yen 5. Twice Round.
- 7.—The FOREIGN OFFICE CUP, presented, value —; for Japan Ponies; weight as per scale; winners of 3 or more races at the last Autumn Meetings, 15lb. extra; winner of race No. 5, this day, 5lb. extra. Subscription Ponies allowed 7lb. Entrance, Yen 5. Half a Mile.

SECOND DAY.—SUNDAY, 27th April.

- 1.—The NURSERY STAKES, value Yen 300; the 1st pony to receive Yen 250, 2nd Yen 50; for Subscription Ponies; weight as per scale; winners 20lb. extra. A compulsory Sweepstake of Yen 15. Five Furlongs.
- 2.—The MAIDENS' PLATE, presented by the Merchants of Tokio; value Yen —, for Japan Ponies that have never won a race; five ponies to enter or no race; weight as per scale; Subscription Ponies allowed 7lb. Entrance, Yen 5. Five Furlongs.
- 3.—The —, presented, value Yen 100; for Half-Bred Ponies; weight as per scale; previous winners 20lb. extra, non-winners allowed 15lb. Entrance, Yen 5. Once Round.
- 4.—The LADIES' PURSE, presented by the Japanese Ladies of Tokio, value —, for Japan Ponies; weight as per scale; to be ridden by first-class members of the Union Race Club; Entrance, Yen 10. Half a Mile.
- 5.—The —, value Yen 200; for Subscription Ponies; weight as per scale; winners 20lb. extra; a compulsory Sweepstake of Yen 10. Once Round.

Six Furlongs.

The barque *Raishin Maru*, which is being built for the Union Steam Navigation Company at the Hiogo Dockyard, will be employed as a training-ship for the students of the Commercial Navigation School. She will be commanded by Messrs. Ito and Oishi, both of them being graduates from this establishment.

Acting upon a suggestion of the Union Race Club, a race course will be constructed around Shinobadzu Lake, Ueno. The costs are estimated at 40,000 yen.—*Tokyo Nichi Nichi Shimbun*.

A German band-master of the Naval Service will, it is reported, be transferred to the Imperial Household upon the expiration of his term of engagement in April next.

A general meeting of the shareholders of the Yokohama Bourse will take place on the 10th inst.

Infantry drill has been introduced into the Intermediate School (*Chingakko*) at Osaka.

There are 994 ward-offices in the Kanagawa Prefecture.

An exhibition of wrestling will be given to-day at the Yenrio-Kan, in presence of the officials of the Foreign Office and the *corps diplomatique*. A banquet will afterwards take place at the Rokumei-Kan.

With the sanction of the authorities, the *Shidzuoka Shimbun* will, in future, appear under the style of *Shidzuoka Daimu Shimbun*. The size of the paper is to be enlarged.—*Fiji Shimpō*.

General Oyama has ordered a large number of fans and tea-sets, at prices ranging from 15 yen to 25 yen, which are to be given away in the form of presents during the European tour. The articles are of excellent workmanship.

The Government is reported to have paid 300,000 yen for the dockyard owned by the late Mr. Kirby. When the *Yamato Kan* was ordered of that gentleman 160,000 yen were paid down as earnest money, so that the establishment has cost altogether nearly 500,000 yen.—*Hochi Shimbun*.

We learn that the police are strictly forbidden to draw swords within the precincts of the foreign settlements.—*Fiji Shimbun*.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, FEBRUARY 1ST, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. + Direction of Wind. † Weather.
Maximum velocity of wind 19.9 miles per hour on Tuesday at 9 a.m.

The highest reading of the barometer for the week was 30.201 inches on Sunday at 10 a.m., and the lowest was 29.669 inches on Tuesday at 6 a.m.

The highest temperature for the week was 46.2 on Sunday, and the lowest was 20.0 on Sunday. The maximum and the minimum for the corresponding week of last year were 44.0 and 24.0 respectively.

The total amount of rain and snow for the week was 1.669 inches, against 1.461 inches for the corresponding week of last year.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, February 3rd.

AFFAIRS IN EGYPT.

Baker Pasha has made a successful reconnaissance in force, in which the enemy fled. Baker's cavalry pursuing, killed several hundreds.

London, February 6th.

OPENING OF PARLIAMENT.

Parliament has been opened by Royal Commission.

THE QUEEN'S SPEECH.

The Queen's Speech, in making reference to affairs in Madagascar, said that the exchange of communications with the President of the French Republic in regard to the incidents which have occurred in that island, have confirmed the cordial understanding previously existing between France and England.

The revision of the Treaty with Japan has been nearly completed, a Treaty with Korea has been signed, and the policy of the British Government in Egypt will remain unchanged.

The Speech enumerates the principal measures for the Session, which include the enlargement of the occupation franchise, extension of local reform, and the municipal government of London.

DEFEAT OF BAKER PASHA.

Baker Pasha has been completely defeated near Tokai, with a loss of 2,000 men. He returns to Suakim.

London, Feb. 8th, 5.30 p.m.

Cotton, $\frac{1}{8}$ per lb. lower; Mid. Uplands, $5\frac{1}{2}$; Yarns, unchanged but weak; Shirtings, unchanged but dull. Silk Market quiet and little doing.

[FROM THE HONGKONG "DAILY PRESS."]

London, 25th January.

Colonel Gordon has arrived at Cairo and proceeds unescorted to Khartoum.

London, 26th January.

Colonel Gordon has been appointed Governor General of Soudan, and invested with full powers.

The Oriental Bank propose to register as a Limited Company.

London, 28th January.

Colonel Gordon has started on his Mission and taken as reporter Mr. Sterling.

TIME TABLES.

LATEST COMMERCIAL.

IMPORTS.

A moderate but very steady demand has existed, and fair sales have been made at gradually hardening prices. Deliveries of previous contracts have also been satisfactory, showing an improved state of the trade generally.

COTTON YARN.—Small daily sales have been made of both 16/24s and 28/32s again at higher prices as shown by our quotations; there have been some trifling sales of 38/42s and of 16s Bombay, but for 2-fold Yarns, there is almost no demand.

GREY GOODS.—Small sales only of best lbs. 9 Shirtings at a trifling advance have been made; also a few T. Cloths.

FANCY GOODS.—Moderate sales of Turkey Reds, Mousselines, and Victoria Lawns are reported; there is still a demand for Velvets, but hardly any in Stock, and higher prices are quoted.

EXPORTS.

RAW SILK.

Our last report was issued on the 1st instant, since which date a moderate and somewhat fitful business has been done. Reported Settlements are about 300 piculs, more than two-thirds of the same having been done in time for the American mail of the 3rd instant. Since then but little business has been transacted, and sellers do not seem inclined to force their wares upon the Market. As hinted above, an unexpected spurt in purchasing for the United States Market at higher prices, put the Market up quite \$10 for descriptions usually shipped in that direction, and holders confident in the scarcity of Good *Filatures* for the balance of the season do not feel inclined to sell freely, although the present rate of *Kinsatsu* promises them a good return. *Filatures* and *Re-reels* have again been most prominent in the daily list of purchases.

The M.M. steamer *Volga*, which left this port on the 2nd instant, carried 174 bales, all destined for Continental ports. The O. & O. steamer *Oceanic* on the 3rd instant had 439 bales for the New York Market; of these but 23 were noted as on Japanese account, and it would seem that "Direct shipments" to the United States are, for the present, somewhat restricted. These shipments bring the total Export to date up to 26,427 bales, against 20,128 bales last year, and 12,224 bales at same date in 1882.

Hanks.—But very little has been done in this class; there are buyers of good silk, but holders are strong and do not care to sell at quotations, believing in a still better time later on. Some days have passed without a single transaction, and the few purchases reported range from *Yechigen* at \$435 to Fair *Hachoji* at \$460.

Filatures.—Just before the departure of the *Oceanic*, some purchases in good *Shinshu* sorts at an advance had the effect of putting the Market up about \$10 for anything better than a No. 3. Best kinds are scarce and held for long prices, even *Koshu* district silks coming into prominence at about \$600. In fine size we note a purchase of *Yonezawa* at \$630, but the bulk has been done in kinds adapted for the United States Markets, among which we observe *Utsunomiya*, \$635; *Tokusha*, \$625; Ordinary *Shinshu*, \$600; *Yamagata*, \$590; *Hida*, \$587½; *Koshu Yajima*, \$600; *Bushu* and other sorts \$560 to \$530.

Re-reels.—The situation remains unchanged. Nothing of moment has been passing; none of the known chops have been dealt in; and the only transactions noted have been in Medium *Foshu* at \$550, with *Bushu* at \$530 down.

Kakeda.—Some business was done previous to the departure of the American mail in sorts grading 2½ to 3 at about \$540, but in other kinds nothing has been sold during the week.

Oshu.—A few piculs only have changed hands at about former quotations.

Taysam Sorts.—No sales or business of any kind to report in these descriptions.

QUOTATIONS.

	SEASON 1883-84.	1882-83.	1881-82.
	BALES.	BALES.	BALES.
France and Italy	16,080	10,425	6,320
America	7,774	6,667	3,425
England	2,573	3,036	2,479
Total	26,427	20,128	12,224

WASTE SILK.

There has been rather more doing in this Market, although transactions have been confined to one or two buyers. Settlements for the week are reported as 250 piculs; and as supplies have been retarded by snowy weather, the available Stock is somewhat reduced. The enquiry for favorite descriptions continues, but the Stock is poorly assorted, desirable kinds being scarce and comparatively dear. The French mail of last week took 117 bales for Europe, bringing total Export of Waste and *Cocoons* up to 19,132 piculs, against 17,189 piculs last year, and 14,415 piculs to same date in 1882.

Pierced Cocoons.—There are rumours of a few piculs, really good, having been settled at a rather high figure, but the Stock and business generally are quite insignificant.

Noshi-ito.—Enquiries for Good *Filature* and other kinds have resulted in some business on basis of *Shinshu* *Filature* \$135, *Koshu* *Filature* \$125, Fine *Foshu* \$100, Assorted *Foshu* \$90 to \$85, according to quality, with Common skin silk at \$55. The parcel of *Tomioka* *Filature* still remains unsold, buyers not willing to pay the price asked.

Kibiso.—There has not been very much doing in this branch. "Filature" are still in request, and

some have found buyers at from \$120 to \$113, according to quality. Some low *Shinshu* has been done at under \$45, with *Foshu* at \$32½. *Samdanshu* reported at \$60, and Fair to Medium *Shinshu Neri* at \$13. The bulk of the Stock on offer is low, undesirable Waste.

Mawata.—Nothing has changed hands during the week, although some good assortments of Best *Oshu* are on the Market at \$185 for an offer.

QUOTATIONS.

Pierced Cocoons—Medium to Fair	Nom. \$ 90 to 100

Sendai & Hamatsuki	350	Mawata	165
Taysam Kinds	150		
Total piculs	3,100	Total piculs	980

TEA.

Settlements during the interval have again resumed their old channel, namely,—only reaching about half of those during the same period of 1883. The business on the whole has been uninteresting. The purchasers for the last outgoing American mail (which sailed on the 3rd instant) seem to have been satisfied; since then only a few scattering lots amounting to about 240 piculs have been settled at irregular prices, which form no basis for quotations; those given being merely nominal, although some holders might be induced to part with their small lots more favorably (say within about half a dollar lower) than the quotations indicate. Receipts from the country up to the 7th instant do not amount to anything of importance. The steamship *Moray* is advertised to leave for New York, via the usual ports, on or about the 17th of this month, and will probably be the last Suez Canal steamer for New York for the season 1883. The rate of freight for this steamer is fixed at 60 shillings per ton of 40 cubic feet measurement. The O. & O. steamship *Oceanic*, despatched on the 3rd instant, took 4,905 lbs. for New York, 36,040 lbs. for Chicago, 3,328 lbs. for Boston, 4,940 lbs. for Portland (Oregon); 54,168 lbs. for California, and 66,375 lbs. for Canada, making in all 169,756 lbs. of Fired Tea from Yokohama.

QUOTATIONS.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S
PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis,
Opopanax, Jockey Club, Ess Bouquet, Trevol,
Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet,
and all other odours, of the finest quality only.

ATKINSON'S
GOLD MEDAL EAU DE COLOGNE

is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S
OLD BROWN WINDSOR SOAP,

celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR.

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,
and other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEBRUARY 16TH, 1884.

SUMMARY OF NEWS.

AN electric torpedo, invented by Mr. H. Tanaka, has been tried in Tokiyo and found successful. A valuable sword was presented to the inventor.

MR. STEVENS, foreign Secretary to H.I.J.M.'s Legation at Washington, has returned to Japan on official business.

A TELEGRAM published by the *New York Herald* announces that Germany has forwarded a favorable reply to Japan's proposals for treaty revision.

IT is stated that stamps will in future be substituted for the ruled paper used in draughting legal documents.

A SUBMARINE cable connecting Japan with Korea was opened for the transmission of messages on the 15th instant.

IT is announced that the Forestry Bureau will take steps to send exhibits to the International Forestry Exhibition to be held in Edinburgh.

THE Annual Report of the Ladies' Benevolent Society of Yokohama has been published. The disbursements during 1883 amounted to \$1,052.94 and there is a balance in hand of \$79.06.

THE Honorable F. Plunkett, H.B.M. Minister to Japan, is expected to arrive in Yokohama by the P. & O. mail which is due on the 16th of March. Mr. E. Satow is a passenger in the same steamer.

MR. R. T. RHODE, Captain of the Relief Fire Brigade, sailed for England on leave of absence by the P. & O. mail of the 9th instant. Mr.

Rhode was one of the most popular and energetic officers the Brigade had ever been fortunate enough to possess. He is succeeded by Mr. W. C. Bing.

THE incendiaryisms so prevalent in Tokiyo during January and the early part of February, have fortunately ceased, owing to the vigilance of the police and the gendarmerie.

THE first of a course of free lectures in the Japanese language was delivered on Monday afternoon in the Union Church, by the Rev. Geo. W. Knox. There was a good attendance.

THE fourth annual report of the Central Sanitary Bureau has been published. The period covered by the report being July 1st, 1878, to June 30th, 1879, its contents are not of much interest.

THE French Amateurs announce a second performance, for charitable purposes, which will be given at the Gaiety Theatre on Monday the 25th inst. Particulars are given in an advertisement.

A JAPANESE *employé* of the Comptoir d'Escompte committed suicide in a casino on Monday afternoon. He had forged a cheque, and deeming discovery inevitable, put an end to his life. The body of a Japanese girl, killed by a pistol shot, was found beside him.

A JAPANESE surgeon, Dr. Kogane Yoshikiyo, a graduate of the School of Medicine in the Imperial University of Tokiyo, has been nominated assistant in the Anatomical Theatre of Berlin by the German Minister of Public Worship.

THE returns of various trading associations for the second half of 1883 have been summarized by the vernacular press. The general rate of profits is considerably in excess of what might have been expected, having regard to the depressed state of commerce and industry during the past twelve months.

DURING the past fortnight *K'insatsu* have again shown a tendency to depreciate. On the 8th instant the premium on silver rose to 17½, but it has since fallen to 15. These fluctuations are doubtless attributable to local causes. The price of rice has also received an upward impulse. First class unhulled is now quoted at 5.13 *yen* per *koku*, as against 4.90 *yen* twelve days ago.

A BILL has been introduced before the United States House of Representatives providing for the establishment, in China and Japan, of Courts of Law presided over by American judges. There seems little probability that the United States will adopt this measure in Japan's case, at a moment when the President has recommended that the jurisdiction of the latter's courts shall be extended to American citizens.

THE military mission to Europe, of which General Oyama is at the head, left this port in the Messageries Maritimes steamship *Menzaleh* on Saturday morning. The party includes the following officers:—H.E. General Oyama, Minister of

War; General Miura, General Nodzu, Colonel Kawakami, Colonel Katsura, Lieutenant Nojima, Lieutenant Ijichi, Lieutenant Mataza, Lieutenant Harada, Commander Shimidzu, Commander Ozaki, Commander Murai, Commander Yabuki, Intendant Koike, and Dr. Hashimoto.

A MARINE COURT was convened on Wednesday at H.B.M.'s Consulate, to enquire into the circumstances of the loss of the British bark *Sattara*, which was stranded near Omaisaki, on January, 13th. The Court decided that sufficient use was not made of the lead and that steps ought to have been sooner taken to wear ship. The master's certificate was suspended for a period of three months from the date of the finding.

THE weather during the week has been a counterpart of that which visited us at the same season last year. On Wednesday, two or three hours after sunset, rain began to fall steadily, but changed into snow towards midnight, and in the morning the ground had a white covering from nine to ten inches deep. Then followed a few hours of drizzling rain, which, however, failed to produce much effect upon the snow. Windy days and frosty nights succeeded.

A CURIOUS example of Japanese honour is reported by the vernacular press. A family in Satsuma having been ruined, in 1876, by the contributions which the rebels levied upon it, moved to Osaka and lived there in very straightened circumstances. At the close of last year a number of the rebels, on being released from prison, voluntarily pledged themselves and their posterity to pay off the debt by monthly instalments of 30 *yen*, extending over a period of 193 years.

THE Annual General Meeting of the Yokohama United Race Club was held on Tuesday afternoon. The accounts showed a balance in hand of \$1,612. The working accounts for the year exhibited a loss of \$140 against a gain of \$500 in 1882, while the gate money and public contributions also showed a falling off of \$1,350. The President, the Honorable P. Le Poer Trench, made a strong appeal to the community to support an institution which affords them so much recreation and which helps to promote social relations between Japanese and Foreigners.

WEEKLY NOTES.

A most interesting and delicate operation took place at the Noge-yama Hospital on Friday morning (15th inst.). The patient was a Japanese, and it is decidedly to his credit that he bore the long operation without the aid of anæsthetics. The right eye had been rendered useless by adhesions on the inner surface of both eyelids, due to antecedent neglected, if not maltreated, eye-disease (conjunctivitis), the ligaments being almost as hard and tough as leather. In such cases, the object being to free the lids and restore the mobility of both lids and globe of the eye, it is not sufficient to free them merely by

dissection, as the parts concerned are peculiarly prone to form fresh adhesions, leaving matters rather worse than before. At least one of the raw surfaces must be covered by some tissue which, while capable of adhering firmly on the one side, will remain free on the other. This requirement was fulfilled, in the case in question, by the membrane dissected from the eyelid of a living rabbit (under chloroform). This membrane was applied to the raw surfaces of the patient's eye-lids, in the place of a new lining, and sewed fast in the proper position by some thirty or forty tiny stitches. Dr. Eldridge performed this interesting operation. Although this particular operation is of very infrequent occurrence, skin-grafting is now an everyday performance in European hospitals. The transplantation of portions of skin either from part to part (as in rhinoplasty), or from individual to individual, is usually attributed to Reverdin, but was in reality first performed by the famous Hamilton of New York. Success in this direction stimulated attempts at similar treatment of other tissues, as bone, muscle, and those entering the eye. In all these directions an encouraging percentage of success has been attained, especially in reference to the last. Not only have portions of tissue from the human body—for instance, from eyes totally incapable of vision—been successfully transferred to the bodies of others, but, such material being naturally scarce, the tissue of lower animals has been experimented upon, with happy results. The success of the present operation is now simply a question of time.

OFFICIAL life in China is a singular compound of corruption and espionage. A man must be doubly fortunate to grow rich. He must be successful in his extortions, and he must also be successful in conciliating the envy or satisfying the cupidity of his fellows. Failing the latter condition, he is liable to see the proceeds of long squeezings and savings swept, at a moment's notice, into the Imperial Treasury. A catastrophe of this nature has just befallen Mr. Wên Yü, President of the Board of Punishments and Assistant Grand Secretary. Among his enemies is the Censor Têng, a writer not partial to circumlocutions. Têng memorialized the Throne to the effect that Wên's "talents were of a most mediocre description, and that he was nothing more, or less than a dullard." Despite these moral drawbacks, he had succeeded in amassing so much wealth that one of his bank deposits amounted to 700,000 taels, money which, in the opinion of his accuser, had clearly been "acquired through avarice and corruption," so that Wên's "demerits did not consist merely in the possession of mediocre qualifications." In answer to this memorial, an Imperial Decree was issued ordering the Governor of Peking to investigate and report. The upshot of the matter was that Mr. Wên, of his own accord, admitted a deposit of 360,000 taels, but explained that it represented the savings he had managed to collect by the exercise of care and economy during an official career of over thirty years. The Throne gave him credit for having been frank and truthful, but ordered that he should pay into the public exchequer a sum of Tls. 100,000. To a casual observer the meaning of this decision would seem to be that though a high official may amass, by extortion and corruption, an average annual amount of Tls. 8,666, he exposes himself to punishment and confiscation if he exceeds that figure. As for the Censor Têng, he must

be an invaluable official from an Imperial point of view, and certainly if he be the upright, fearless character his memorials imply, China has reason to be proud of him. Not content with denouncing President Wên, he prefers charges of a similarly sweeping nature against the late Governor General of Kwangtung, two Literary Chancellors, two Superintendents of Customs, a Rear-Admiral, a Salt Commissioner, a Taotai, two Prefects, and three Magistrates. All these persons, he says, during their tenure of office in Kwangtung "amassed enormous fortunes, if not at the expense of the people, certainly at that of the State." If all that we have been taught to believe of Chinese official corruption be true, Censor Têng has set himself to purify an Augæan stable. One effect of his appearance on the scene will be to make men doubly solicitous of concealing the true state of their worldly affairs, and also to render banks unpopular. The security offered by a bank's strong room will lose much of its value if the bank's books are liable to be cited as evidence of ill-gotten gains. The *North China Herald* justly comments on this consequence, in the context of some remarks about a proclamation recently issued by the Kwangtung Lekin Bureau. Anxious to raise taxes for war purposes, the Bureau has farmed to a guild of merchants the privilege of managing the Lekin imposed on the banks of Canton and Fatshan. According to existing rules, the banks ought to have paid a monthly tax of two candareens on every loan of Tls. 100, and a sum of two mace on every Tls. 100 sold. They did not pay, however; or rather their yearly payments only amounted to a bagatelle of Tls. 25,000. They were consequently "advised of the importance of adding to the War Tax," a recommendation to which some simply responded by pleading inability, while others made no reply at all. The Bureau has accordingly had recourse to the device of farming the tax to a guild which undertakes to find Tls. 50,000 per annum, and to commence by handing to the Treasury a sum of Tls. 100,000, which is to be deducted, in amounts of Tls. 20,000, from the yearly payments. There is also to be imposed on the banks a third tax of 2 candareens per month on every Tls. 100 of deposits. Taken in conjunction with the inconvenient memorials of the Censor Têng, the effect of this proceeding will probably be to make capitalists prefer stockings and holes to the strong rooms of banks.

NOTES.

THAT Nihilistic agitation was about to be vigorously revived in Russia might have been inferred, some time ago, from the extraordinary accusations formulated against the Czar's Government in telegrams sent to the English and American press. Prince Krapotkin, writing from his prison stories which seriously taxed the credulity of his readers, had, nevertheless, nothing so terrible to tell as the wanton cruelties alleged to be constantly perpetrated on the route to Siberia and in the jails there. Sympathy is always illogical. When we read in an American journal that an executioner's bungling protracted the death agonies of a negro who had brained a woman and cut the throats of three children, we forget what the man did and remember only what he suffered. So, too, when we read of the pains which Nihilistic exiles have to suffer, we lose sight of the pains they inflicted, or would have inflicted, upon others. We forget, too, that

the story of their misfortunes is told by the sufferers themselves, whose natural inclination is to exaggerate; and we forget, finally, the extreme improbability that a Government required to deal with such a social plague as Nihilism would deliberately aggravate it by injudicious treatment. It is only reasonable to assume that the Russian authorities, being, as they are, civilized and sensible men, refrain from putting arms into the hands of their opponents by the exercise of needless cruelty. Nihilism, however, having paved the way to public sympathy by telegraphing to America and England terrible tales of what the pioneers of liberty have to endure in Russia, is now again resuming its ancient weapons. Colonel Sudeikin was the first victim. According to the telegrams, he was tied down, and repeatedly stabbed until he consented to disclose the whereabouts of certain documents. After enduring this torture for an hour, the Colonel gave the required information, and was then put out of pain. Of this horror an American journal, the *Alla California*, has nothing to say but that it was a counterpart of the cruelty which the Nihilists themselves suffered in times past, and that Colonel Sudeikin's executioners were less merciless than a Government which used the rack and the electric machine. Despite such utterances as these, Nihilism has long forfeited all title to sympathy, though its worst excesses cannot make wise men forget that it denotes the existence of a disease which requires judicious treatment. Colonel Sudeikin's murder was decreed by the Executive Committee, and the same body is said to have recently addressed to the Czar a proclamation demanding personal and political freedom, a full amnesty, complete liberty of the press, and representative institutions. It is impossible to conceive a greater burlesque than that an agitation professing such objects should be carried on with the dagger, the bullet, and the bomb. Torturers and assassins demand to be made legislators and teachers.

THE *North China Herald*, in an interesting article on the polytheistic worship of the Chinese, says that trees, snakes, tortoises, turtles, hedgehogs, and sundry varieties of vermin are objects of veneration in that very conservative Kingdom. Philosophers tell us that monotheism, as compared with polytheism, is an artificial product, requiring a considerable amount of intellectual culture before it can be reached. In that intellectual culture the Chinese are evidently very imperfect, else would not the Viceroy of Chili fall prostrate before a water-snake, nor the Governor of Shangtung offer Thibetan incense to a river god. The Japanese have much the advantage in this respect, though they, too, have not yet succeeded in disentangling the links in the chain of causation sufficiently to be sure that no one event can be absolutely preordained or controlled by any power save a power "holding in its hands the reins of all nature and not of some department only." Our Shanghai contemporaries mentions fox-myths as a variety of superstition common to Japan, not less than to China, but in truth the fox receives little veneration from the people of this country. As the messenger of the rice god, he has the honour of being carved in stone and placed on either side of the path to that deity's shrine, but there his elevation ends. Of his power to do mischief, however, some vaguely large notions exist or used to exist, for one never hears now-a-days of

young gallants led astray by lady foxes in human shapes, or old people pestered by the possession of imaginary brushes. We once had the pleasure of meeting a gentleman who was supposed to be possessed by a fox, but inasmuch as the only symptom of unnatural occupation his mind displayed was a very demonstrative resolution to be served with the best of whatever was going at the shortest possible notice, we concluded that foxes find their way into other folks besides Japanese.

THE London *Echo*, of 8th December last, published the following paragraph on the subject of the Ilbert Bill:—Lord Ripon informed his Council yesterday, and through it all whom it may concern, that subject to the modifications already explained by Lord Northbrook, the Ilbert Bill will be passed into law. We hope it will be passed quickly. It is much to be regretted that it was not carried through all its stages in the spring. It must be assumed that such an important measure was not brought forward until it had been carefully considered in all its bearings and the opinions of those most competent to speak upon it ascertained. Had it been passed in the spring, the perilous agitation of the last six months would have been avoided. As it stands, we do not consider the Bill to be of great value. The "modifications" consented to in the vain hope that they would conciliate opponents who are irreconcilable, have taken the backbone out of it, and made it of little worth in Native eyes. Better not have introduced it at all unless with the determination to pass it in its entirety. However, such as it is, it ought to become law before the end of the year. It has already done more mischief than (in its new form) it is ever likely to do good.

THE *République Française* remarks that in sending the son of his Sovereign from Madrid to Rome, the all-powerful arbiter of the peace of Europe has desired to make a great Conservative and Monarchical demonstration. This public manifestation of a mind which has hitherto shown such studious reserve when about to proceed to action is considered by the *République* as a remarkable departure from the habitual ways of Prince Bismarck, which calls for attention. The *République* oracularly expresses doubts whether Prince Bismarck will have reason to congratulate himself on the success of the first trial of a new method, and loftily concludes the France may safely let events take their course. The worst political coalition with which France has to deal is, it considers, that which, uniting all the *débâris* of the old Monarchic factions, assumes the mask of that religion which Republican France always has resisted and always will resist.

A SHORT time ago, we had the pleasure of being assured by the *Hongkong Daily Press* that our ignorance was something quite surprising. We had exhibited it by saying that a discretionary power to exclude the public from criminal trials is vested in every civilized administration. Now, the same critic undertakes to explain why the English law-courts prefer not to exercise that power except when circumstance make choice impossible. It seems, at first sight, a little superfluous to analyse the motives which induce a man to refrain from doing what he is not competent to do, but possibly the sequence of these ideas would be clearer to less ignorant

persons. Yet even that hypothesis will not explain all the enigmas of our contemporary's logic. "According to the *Japan Mail*," he tells us, "Japan says she is willing to adopt a code founded on those of Western nations, provided the Treaty Powers will consent to the abolition of extraterritoriality." It need scarcely be observed that the *Japan Mail* never advanced any such statement. That, however, is not the enigma. It is that Japan, having promulgated a code three years ago and practiced it since 1882, should, in 1884, offer to adopt it provided extraterritoriality be abolished. In other words, she makes the doing of what she did long ago contingent upon something still in the future. The *Hongkong Daily Press* will pardon us, if we confess that our intellectual stature does not suffice to venture into these depths of reasoning. Our contemporary's premises are entirely his own, and his right of property in his conclusions shall remain undisturbed so far as we are concerned.

A VERY interesting discovery of ancient coins was made some time since in the neighbourhood of Carystos, in the island of Eubœa. In preparing the foundations for a house there were found in an earthen vessel over seventy Athenian tetradrachmas of pre-Roman times, three Athenian drachmas, and thirty drachmas of Carystos itself. One of the tetradrachmas has in the inscription the names of the *demos*, and is believed to be a unique specimen of the kind. Between the death of Alexander and the Roman domination, the coining of money used to be entrusted at Athens to certain selected persons, who introduced their own names into the superscription; but this case would indicate that, occasionally at least, for some particular reason, the *demos* took the coining into their own hands, stamping the name on the coins. Most of the other tetradrachmas bear the names of Archons.

THE launching of H.M.S. *Impérieuse* has been successfully accomplished, at Portsmouth, electrical arrangements, under the direction of Mr. H. Lane, playing an important part in the proceedings. By pushing an electrical button, water was admitted to the dock, floating the vessel; the manipulation of a second button shattered the bottle of wine, christening the vessel; whilst on a third button being pushed the hawser holding the ship to the stage was released, and she was hauled out of the dock.

SEVERAL Russian writers have of late been drawing attention to the fact that the Japanese seas harbour various species of fish which are poisonous. Dr. Sawtscherks even suggests that ships going to these waters ought to be provided with descriptions and representations of these suspected fish, of which twelve varieties would appear to belong to *Tetrodon*, *T. inermis*, the Japanese "Kanatuka," being reported as especially venomous. According to Dr. Guldrew, one Japanese fish, known as Fuku, is so poisonous that death follows almost instantaneously after eating only a moderate-sized bit of the flesh. The Japanese are forbidden by law to eat this fish, but it is nevertheless not unfrequently the cause of death among the lower classes, who believe it to be possessed of certain marvellous properties, on account of which they risk the danger of being poisoned.—*Nature*.

THE value of newspapers in fomenting revolutionary feeling is thoroughly recognised in Russia

and Germany. Professor Alphons Thun has published in Leipsic a book the contents of which show pretty clearly that the author is fully initiated into the secret plots of Nihilism. Nothing is of greater importance to the agitators, he says, than a press to print a periodical journal. During the first stages of the Nihilistic movement in 1861, the *Old Russian* was brought out, for a time, in St. Petersburg, but the plant of the paper was soon discovered and destroyed by the police. After this many groups set up their own printing establishments, but in every case their existence was short-lived. Indeed, it is hard to see how such work as the printing of a journal could possibly be done in secret with ordinary materials and after ordinary methods. In 1875, however, Jacob Stephanowitsch invented some devices which greatly facilitated privacy, and by their aid his printing establishment escaped detection for two years. But the greatest success was achieved by a Jew, Aaron Sundelwitsch, who smuggled printing materials over the Russian frontier, and set up a press in St. Petersburg, where he worked uninterruptedly during four years. Two papers, *Land and Liberty* and the *Will of the People*, were brought out by this conspirator and his associates, though their stock of materials was of the most meagre and simple description. An accident at last betrayed them. In Germany the administration has been more successful in preventing the publication of disloyal matter, though a very extensive use of arbitrary power has been necessary for the purpose. It appears that more vigilance than ever is to be exercised henceforth. The circulation in Germany of three papers printed outside the empire is to be strictly prohibited. These journals are, the *Fremdenführer* published in London; the *Proletariat*, published in Warsaw; and the *Radical*, published in Pesth. They are all organs of extreme Socialism. We read also that, at Prince Bismarck's suggestion, a special censorship has been created to determine what papers may be published and to supervise the press generally. The effect of this measure, if it be rigorously carried out, will doubtless be to free Germany of socialistic literature.

ON the 5th ult. the *Alta* writes:—Unless the Chinese Immigration Act is amended, Congress will have to establish two or three more United States Courts in San Francisco, for those we have are quite unable to keep up with the business or hearing testimony and arguments on writs of habeas corpus taken out by the passengers on China steamers. Before the list of applicants from one steamer is disposed of another comes in and dumps its load, and the astonished Court cannot see its way out of the woods. If this thing should go on, the whole time of the District Court would come to be taken up with hearings for the benefit of Chinese immigrants, and the interests of our own citizens which need judicial attention would have to be neglected. There is just one way out of the maze, and that is for Congress to amend the law and make its enforcement possible, without consuming the whole time of the Custom House officers and the District Court.

THE *Iroha Shimbun*, which by its Uncle-Remus-like simplicity of speech sometimes lapses into unintentional sarcasm, says that clever as the Government officials must be to conduct the affairs of State with such remarkable skill, there has been drafted a project of

law which will have the effect of considerably raising the standard of their qualifications. Doubtless the allusion is to an intention, which we believe exists, of instituting a system of competitive examinations for civil officials. This would be a worthy supplement to the recently promulgated Pension Regulations.

WE have to acknowledge the receipt of the "Chronicle and Directory for China, Japan," &c., for 1884, issued from the office of the *Hongkong Daily Press*. This work has gradually assumed increasing proportions until it now contains over a thousand pages of matter of great variety and usefulness relating to all the places in the Far East between the Straits Settlements in the South and Korea and Vladivostok in the North. Glancing hastily over the Japan portion, we find, that which it is as well the publishers should know, that the names of several late residents in this country who have left, in some instances, years ago, still remain in the work. The difficulties the compilers have to contend with in far away places are great through want of agents to interest themselves sufficiently in the matter to obtain correct returns. The typography of the "Directory" is not first-class, and the printing might be a great deal better.

FROM a list of fashionable marriages published in an Indian contemporary we (*Hongkong Telegraph*) learn that a match has been arranged between Mr. Egerton Bagot B. Levett, R.N., flag-lieutenant to Admiral Willes, C.B., China Station, son of Colonel Levett, Milford House, Staffordshire, and Miss Mabel Parkes, daughter of Sir Harry S. Parkes, K.C.B., H.B.M.'s Plenipotentiary in China.

THEODORE MOMMSEN, the celebrated professor of history at the University of Berlin, and an opponent of the bimetalists, has lately published in a German journal (*Die Nation*) an essay showing how the experience of ancient Rome may be applied to the question at issue. Drawing his illustrations from an edict published in the time of the Emperor Julian fixing the pay of lawyers in measures of wheat or their equivalent, he says that this shows how, in its dotage and decline, Rome was forced to adopt the same measures of value which had been in use in those early days when coin had not become available. In the best days of Roman rule, when gold was the measure of value, the coins of Rome had conquered the ancient world quite as much as its sword. They were strictly equal in value to the amount stamped on them, and from the eastern to the western confines of the empire they were accepted as the standard measures of value. But the unfortunate policy of the empire in fixing by law the relative values of gold and silver without confining the use of silver to the payment of small sums led to a slow and gradual but certain debasement of the coinage. Julius and Augustus Cæsar had not the same difficulties to contend with as the Germans of to-day. No other state then existing could dispute the universal supremacy of Rome in commerce as in arms, and the coinage of gold had been so plentiful that for a time silver was only used in small amounts. Owing, however, to the mistaken policy referred to, silver gradually drove gold coin out of circulation, and even the silver coin was debased by alloys, and at last became little more than plated copper.

The commercial world became in consequence slaves of dishonest money-changers, and as we see from the documents which have come down to us from the times of Julian, coin finally ceased to be recognized as a measure of value and was replaced by the cumbrous wheat. Professor MommSEN argues that if this was the consequence of a policy of bimetalism under the most favorable circumstances in Rome, the same policy would lead to still more disastrous results in the complicated arrangements of modern commercial and international relations.—*Bradstreet's*.

WE observe that the next Mitsu Bishi mail steamer for Shanghai, the *Hiroshima Maru*, is advertised to leave one day earlier than usual, namely, Tuesday next instead of Wednesday.

THE *Tribune* says editorially:—It is the ambition of San Francisco to have a world's fair, and her capitalists and business men have held a meeting to arrange the preliminaries. It must be admitted that, with some drawbacks, San Francisco is, in many respects, well prepared for enterprise of this nature. The chief hindrance is the distance, but it may be said that if the California railroads and steamship companies are determined to assist the projected world's fair, they can do much toward banishing the most formidable objection to it, and we presume from the terms of the despatch, these corporations were represented at the meeting, and that they propose to interest themselves actively in the undertaking. With such aid it may be granted that the scheme is feasible, and if San Francisco is somewhat awkwardly situated with regard to Europe, it must be remembered that her location with regard to the Orient and Australia is peculiarly advantageous. But the distance over from Europe has been greatly diminished of late by the opening of the Southern Pacific. The people of San Francisco, moreover, are called upon to bestir themselves now that the completion of the Northern Pacific threatens not only their commerce with the far western terminus and States, but also with Australia, China, and Japan. There never was a period in the history of California when some energetic, popular demonstration of this sort was more needed. In fact, even as an advertisement of those splendid resources which have hitherto failed to secure for the Golden State anything like the population required for her development, and with three years of judicious and liberal drumming, aided by a free expenditure in hospitalities and organized management, there is no reason why San Francisco should not secure the "World's Fair," which will be altogether as profuse and splendid as that of any other community. It would be unique in many of its features, and of special value because of its suggestions and revelations. In short, if the Californians carry out this undertaking with their accustomed energy and dash, we can see no reason why it should not be as decided a success as its most sanguine advocates can expect or desire. On this subject the *Alta* says:—The World's Fair, which is proposed to be held in this city in September, 1887, if it attains fruition, of which there can be no doubt, will commemorate the centennial anniversary of one of the grandest events in the history of our country, for on the 17th of September, 1787, the Constitution of the United States was adopted in convention. It will be a proud and glorious commentary on the growth and pro-

sperity of our nation, that in the one hundredth year of its constitutional existence, it should be a Mecca for the pleasure-seeking people of the entire globe, and the commemoration of this historical epoch will add, in no small degree, to the *éclat* of the occasion.

THERE is a well authenticated story of the late Lord Granville's devotion to whist. Intending to set out in the course of the afternoon for Paris, he ordered his carriage and four posters to be at Graham's at 4. They were kept waiting till 10, when he sent out to say that he should not be ready for an hour or two, and that the horses had better be changed. They were changed three times in all, at intervals of six hours, before he started. When the party rose they were up to their ankles in cards, and the Ambassador, it was reported, was a loser to the tune of £8,000 or £10,000. About this time there was a set at Brooks—Lord Sefton, an excellent player, being one—who played hundred guinea points, besides bets. We still occasionally hear of £300 and £500 on the rubber, but £5 points are above the average. The spirit of play absorbs or deadens every other feeling. Horace Walpole relates that, on a man falling down in a fit before the bay window at White's, odds were instantly offered to a large amount against his recovery, and that, on its being proposed to bleed him, the operation was vehemently resisted as being unfair. When Lord Thanet was in the Tower, for the O'Connor riot, three friends—the Duke of Bedford, the Duke de Laval, and Capt. Smith—were admitted to play whist with him, and remain till the lock-up hour of 11. Early in the sitting Capt. Smith fell back in a fit of apoplexy, and one of the party rose to call for help. "Stop," cried another, "we shall be turned out if you make a noise! Let our friend alone till 11; we can play dummy, and he will be none the worse, for I can read death in his face." The clergy, especially of the West of England, were formerly devoted to whist. About the beginning of the century there was a whist club in a country town in Somersetshire, composed mostly of clergymen that met every Sunday evening in the back parlor of a barber. Four of these were acting as pall-bearers at the funeral of a revered brother, when a delay occurred from the grave not being ready, or some other cause, and the coffin was set down in the chancel. By way of whiling away the time one of them produced a pack of cards from his pocket and proposed a rubber. The rest gladly assented, and they were deep in their game, using the coffin as their table, when the sexton came to announce that the preparations were complete.—*London Society*.

AN experiment in rearing silk-worms on a small scale is reported to have been made in the Botanical Gardens at Saharunpore and Mussurie during the year ending 31st March last. The chief drawback to the development of this industry being want of fodder to the worms, it is hoped that the distribution of the mulberry plants and cuttings made during the year will tend to some extent to remove the difficulty. The result of the experiment made showed that the silk industry may possibly be carried on successfully in the sub-Himalayan Districts as well as in the Dun. The experiments in the girth measurement of Sal trees, made with a view to ascertain their rate of growth, were also continued. The net cost of the gardens to Government was Rs. 25,094.—*Indian Mirror*.

SOME time ago, writing of M. Tricou's reported endeavours to persuade Japan that her honour was concerned in espousing France's side against China, we said:—"We may be wrong, but we cannot help thinking that the mail-clad Japanese troops placed by the Chinese vernacular press in the van of the French forces at the assault of Son-tai, were creations of M. Tricou's imagination. *They are, at any rate, the outcome of the policy he pursued here.*" The *North China Herald*, omitting the portion which we have italicized in this paragraph, comments on the remainder as follows:—

A more gratuitous and indefensible assumption was never made. We are asked to believe that M. Tricou deliberately forged an absurd and libellous report, and communicated it to the Chinese newspapers, with the intention of causing trouble between two friendly Powers to the advantage of his own country. So gross a charge scarcely deserves confutation, and we should not have noticed it had not the *North China Herald* been appealed to in the matter. 'M. Tricou,' says the *Mail*, 'may congratulate himself on having obtained a certain measure of success. He has helped to sow seeds of discord between China and Japan, and we wish him joy of the achievement.' Is this true? We have heard nothing in the least bearing out any such assertion, and doubt it utterly. But the *Japan Mail* is supposed to be generally so well informed that it is possibly in possession of details that have not reached us, and these it ought now to publish. It accuses M. Tricou of furnishing false news to the Chinese papers—our own, possibly, among them—with a view to making enmity between China and Japan, and adds that he has partially succeeded. We await with interest the proof.

It is somewhat troublesome to follow the sequence of ideas in this criticism. What makes the matter more puzzling is that our Shanghai contemporary sets out by declaring that he "agrees with the *Mail* in its condemnation of M. Tricou's ill-advised and happily abortive attempts to enlist the aid of Japan in the campaign against China." We fail to see how these attempts could have been made without the "intention of causing trouble between too friendly powers to the advantage of M. Tricou's own country." But let that pass. The gravamen of the charge preferred against us appears to be that we accused the French envoy of "deliberately forging an absurd and libellous report and communicating it to the Chinese newspapers." When and where did we make any such accusation? We thought, and do still think, that in the sequel of the policy which aimed at inducing Japan to take active advantage of China's embarrassment, there was an effort to persuade China that Japan entertained such an intention. From that effort to a hint that Japanese assistance would not be wanting to the French in their Tonquinese campaign, diplomacy of a certain species might pass without much trouble. Thus much granted, how easily the mail-clad warriors appear upon the scene, and what a difficult metaphysical problem it becomes to determine whether their origin is to be referred to M. Tricou's suggestions, or to the interpretation put upon his hints by Chinese exaggeration? Disapproving, as it says it disapproves, of M. Tricou's methods, and condemning, as it says it condemns, his attempts to enlist Japan's aid against China, can the *North China Herald* persuade itself that the presence of Japanese troops in the van of the French forces would ever have been suspected had not M. Tricou's machinations prepared the way for such a fancy? We, at any rate, find it difficult to imagine that the policy of the French envoy and the romance of the Chinese vernacular press do not stand to one another in the relation of cause and effect, and that is why we spoke of the one as "the outcome" of the other. But that "M. Tricou deliberately

forged an absurd and libellous report and communicated it to the Chinese newspapers" is a very ideal rendering of our language. It is also perplexing to find that the *North China Herald* includes itself among the Chinese vernacular press; and it is, further, perplexing to learn that, having itself retailed the erroneous notions entertained by the Chinese as to the assistance given by Japan to France, our Shanghai contemporary should "have heard nothing in the least bearing out any such assertion" as that M. Tricou "has helped to sow seeds of discord between China and Japan." Are there no seeds of discord sown when the Chinese believe that the van of the French force at Son-tai consisted of Japanese troops? The *North China Herald* can scarcely suppose that a rumour of that nature, whether directly or indirectly referable to M. Tricou's policy, will help to dispel the Middle Kingdom's umbrage against its neighbour. Unqualified as our condemnation must be of the French envoy's conduct in this matter, we should be sorry to do him an injustice. But we desire to be judged by what we have written, not by an impossible interpretation of it. We are now supposed to have "accused M. Tricou of furnishing false news to the Chinese papers with a view to making enmity between China and Japan," and the *North China Herald* says that it "awaits with interest the proof" of the charge. It gives us pain to keep our contemporary waiting, but truly he can scarcely expect us to prove a proposition which we never advanced, and since he has been at the trouble to misinterpret our language, we trust that he will do us the justice of noting our correction.

A REPORT from the Riukiu Islands, states that the people are in a state of great excitement. There are two classes struggling for supremacy, the White Party, who are friendly to Japan, and the Black Party, who are adherents of China. Their dislike of each other has resulted in wordy vituperation. In October of last year one Anshi, a native noble, went to Foochow, China, accompanied by ten followers. His confederates are very numerous, and the police are doing all they can to prevent them from leaving the islands. Attempts are nevertheless frequently made to escape to China, and some forty or fifty manage to get away every year. Some attribute their secret departure to a desire to trade with China unencumbered by any restrictions; for if they are provided with passports as Japanese citizens, they cannot carry on trade in the interior; a most disadvantageous condition of affairs. The farmers live frugally and contentedly, devoting much time and attention to weaving. But the gentry (*shizoku*) are discontented, since they have been forced to forego their hereditary pensions since the abolition of feudalism. A few who have visited Tokiyo hold more enlightened views; but most of their compatriots refuse to believe in a civilization with the concomitant nuisances of telegraphs, steamers, and railways.—*Yiji Shimpō*.

AN Indian paper says:—When Theebaw is not drunk, he shows himself an able prince and a ruler of infinite resource. Just at present, his difficulties with the Shan princelets, notably Monay Isabwa, and the consequent preparations for war, keep him sober. Not long ago, the Chief Commissioner of British Burmah was obliging enough to catch twenty-two dacoits for Theebaw. They had been charged with misconducting themselves in Upper Burmah, were

arrested in British territory, and handed over to the tender mercies of the Woon. The story now goes that Theebaw, so far from punishing them, has made three of them Colonels and the remainder Lieutenants. All have been put in command of regiments of released convicts, and ordered to march against the Shans.

ON the generally good authority of the *Cologne Gazette*, it is reported that China has made a compact to cede the island of Hainan to England, if the latter nation succeeds in inducing France to consent to a partition of Tonquin, the northern portion, including the city of Bac-ninh, or Bac-ninh, to belong to China. It is an even chance, whether the story is true or false. England's general policy is one of insatiable territorial aggrandizement, but Gladstone has shown in repeated instances—in Afghanistan, South Africa, Egypt, and New Guinea—that he does not share this rage for annexation, and it is, therefore, at least doubtful that he has concluded a treaty with the Chinese on the basis stated. It is quite likely that China has made the offer to Great Britain, but if so, the probabilities are it was refused. If China could trade off the Island of Hainan for the northern half of Tonquin, it would be in every way a most advantageous stroke of policy for her. Not only is that portion of Tonquin, including the delta of the Red River, a naturally rich and fertile country, but the river possesses great strategic and commercial importance for China, being the natural outlet for the south-eastern part of the Empire. Bac-ninh, on the possession of which China places so much stress that she has threatened war if it should be taken by the French, is situated upon one of the northerly outlets of the Red River and is considered the key of the delta. If England had an ambition for territorial acquisition in that part of the world, the offer of the Island of Hainan would be a tempting bribe. The island is almost as large as Formosa—about the size of the State of Maryland; possesses a million inhabitants, and though rough and mountainous, is extremely valuable on account of its great forests of useful timber. If the late Earl of Beaconsfield, instead of Gladstone, were Premier now, it is not hard to conjecture how he would act in the contingency of being offered such a prize in return for diplomatic services that cost nothing.—*Alla*.

A SHORT time ago, the *Yiyu Shimbun* published a report that an International Dendrological Exhibition had been proposed by several influential merchants residing in Washington, D.C., and that Japan had been invited to contribute. We have not met with this statement elsewhere, but it seems that a Forestry Exhibition on a grand scale will be held in Edinburgh, during the course of this year. The classification of exhibits ranges over a wide and interesting field, so much so that *Nature* waxes quite eloquent over the Exhibition. Practical forestry will be illustrated by implements, models of huts, appliances for floating and transporting timber, and wood-working machinery of every description. The department of forest produce will include a collection of the chief uses to which the raw and manufactured material of the woods may be applied. The class of scientific forestry will deal with the botany of the forest, sylvan entomology, preservation processes applied to timber, fossil plants, parasites, and numerous other

subjects. Growing specimens of rare and ornamental trees and shrubs, rustic work in arbors, bridges, gates, and seats, and dried specimens of ornamental objects will exemplify the division of ornamental forestry. The remaining departments will include pictorial illustrations of the trees, foliage, and scenery of all countries, and the effects of blight, accident, parasitic growth and abnormal conditions; together with the literature of forestry, working plans of plantations, and examples of the economic condition of foresters and woodrangers. The entries for the exhibition will close on October 4th of this year.

No more extraordinary billiards than that shown by John Roberts and Joseph Bennett in their recent match of 4,000 points has ever been seen at the English all-round game. Although giving 400 points start, that man of iron, Roberts, beat his opponent easily. Bennett made a magnificent break of 170, and one of his last efforts was 130; but Roberts was able to put in a greater succession of large breaks. Bennett is a more nervous man than his stolid north-country opponent, whom nothing can put off his game. The play of each was frequently of the most splendid character.—*World*.

THERE was something very pathetic in the circumstances attending the departure of Baker Pasha for the Soudan. The Khedive's letter is extremely unlike those usually addressed by Princes to their military commanders. "For heaven's sake, says his Highness, be cautious. Don't do any fighting if you can possibly help it; and if you do, only engage the enemy 'under the most favourable circumstances.'" Well may the Khedive feel anxious. Two thousand of the gendarmes—the timid peasants, be it remembered—are all that Baker Pasha has to depend upon besides the black troops of Zobeir, who no doubt can fight very well if they like, though it is always open to some doubt whether they will greatly like to fight against their friends and fellow-tribesmen under the Mahdi. Considering what great difficulties Baker Pasha goes to encounter, with inadequate men, material, and money (fifteen thousand pounds was all they could raise for him in Cairo), no wonder it was with mournful forebodings that the English residents bade him farewell. Baker Pasha and his staff are officers of the Egyptian Government, and their proceedings do not concern us, we suppose; but remembering Col. Hicks and the men who fought and fell with him, it is difficult to think without apprehension of the possible fate on which another company of brave Englishmen is being hurried.—*St. James's Budget*.

THE burning of the Institute of the Immaculate Conception at Belleville, Illinois, on the 5th of January, adds another item to the list of terrible calamities that have made the world shudder during the past twelve months. Thirty women and children were burned to death or killed by leaping from the windows. The convent was a substantial brick building, five stories high, and contained, at the time the fire broke out, fifty-eight regular pupils besides the teachers. The flames started from the furnace in the basement, and the Mother Superior and Sister Superior made their way to the dormitory to arouse the sleeping children. But it was already too late to escape. The fugitives were met by the flames, and a number of their charred bodies were afterwards found grouped round the heroic women

who had sacrificed their lives in the attempt to save them. One little child died with its arms round the Sister Superior's neck. Up to the evening of the 6th of January thirteen bodies had been taken from the ruins, and at least as many more were still buried under the smoking débris.

THE telegrams show that the British Cabinet has unanimously adopted, with regard to Egypt, a policy consisting of three features. First, England is to maintain her position in Egypt; secondly, she guarantees the Khedive to resist any attempt on the part of El Mahdi to invade Lower Egypt, but does not undertake to oppose any operations of his which are not directed against Egypt proper; and thirdly, her Consul at Massowah is instructed to notify the King of Abyssinia that England will not approve of any military operations by Abyssinian troops in the Soudan. It appears, too, that certain reforms are to be immediately inaugurated in the Government of Egypt, and that Sir Evelyn Baring has been ordered to remain there and supervise the operation of the new policy. General Gordon's unescorted journey to Khartoum doubtless had for its object to superintend the withdrawal of the troops from that place to the second cataract of the Nile, that being a measure upon which the British Government insists.

AFTER letting the whole country into the secret of its method of "expanding" foreign intelligence, the Central News has failed in yet another of its numerous actions against journals which had thought fit to criticise and even condemn the process. *Judy* had gone so far as to call the expander attached to the Central News a "Chartered L——," which was interpreted at the office as signifying "chartered liar." In the spirit of the too self-conscious gentleman who, hearing a vocalist sing out at a public banquet "Now let us strike the lyre!" replied that no one should strike him with impunity, the Central News invoked punishment on the head of the journalist who had called it a "Chartered L——." But, far from avenging the wrongs of the injured telegraphic association, the court before which the case was taken declined even to hear it to the end. Such was the evidence of the prosecution, and such (as regards substance) was the speech of the prosecuting counsel, that the Recorder and the jury stopped the trial without waiting to hear the defence. The court had not been called upon to decide whether it was elegant satire to call an "expander" a "Chartered L——." The question was simply whether it could be considered legitimate to represent as having been received by telegraph from abroad what had been written in the ordinary way at home; and this admitted but of one answer. Explanations of telegrams and comments upon them are not only permissible, they are often necessary and indeed indispensable: only they should not be published as part of the message from beyond the sea. The flies and the butter should be served separately.

THE Japanese lecture delivered on Monday afternoon in the Union Church, by Rev. Geo. Wm. Knox, was a most encouraging commencement of the course to be given in Yokohama and Tokio under the auspices of the Evangelical Alliance of Japan. The day, in addition to being a most beautiful one, was the anniversary of the first Emperor of Japan's accession to the throne, and

many classes of the people had holiday. The audience, mostly of men of middle age, filled the church amounting to 250 persons, and for two full hours gave the strictest attention to a closely read lecture, without embellishment or illustration, on a subject that could hardly be expected to claim the attention of the ordinary class of native hearer—"The Basis of Morality." The speaker's argument, after an introduction showing the importance and wide scope of his subject, was mainly an effort to disprove that utility or happiness was what constituted right. After showing the doctrine of Epicurus, and the defects as well as excellencies of Spencer's and Mill's code of morality, he pointed out the true foundation of morality and whence we were to ascertain it. It was found written in Nature in Conscience, and in the character and revelation of the Lord Jesus Christ. The time, place, and subject of the next lecture would be announced through the press and might be expected the following week. The lecture of yesterday will be repeated at the Meiji Kwaido, Tokio, on Saturday, at 3 p.m. on the 16th inst.

THE trial of the newly-invented electric torpedo took place on the Sumidagawa on the 11th instant, the results being most satisfactory. Mr. Soyeshima presented the inventor, Tanaka Hisahizo, with a sword, made by the famous Munetoshi, in recognition of his inventive genius.—*Choya Shimbun*.

AN American paper says:—The cable reports that Mary Anderson—"our Mary"—is to marry the Duke of Portland. This gentleman is only 26 years of age, and at that susceptible period of life it is not improbable that he has been mashed on Mary. But that the possessor of the ancient title of Duke of Portland and the immense wealth attaching thereto will be permitted to marry an actress is not so certain. It will not come to pass without a great deal of hair-pulling in high quarters.

IT does not speak well for the business ability of the Tokiyo authorities that a sale of land should take place at the Foreign Concession, Tsukiji, without any sufficient notice being given to the public. Due intimation of the fact was doubtless sent to all the Consulates, but the United States Consul-General alone thought it worth while to advertise the sale in the newspapers. We can readily understand that a Consul might be perplexed about the proper incidence of a charge for advertising such a fact, though, truly, a sale of land in a foreign concession is not so novel an affair that the details of its management ought to present much difficulty. The Japanese, at all events, should understand how to go about it, and should know that the price obtained for the land may depend, in a great measure, on the intimation given to the public. On the other hand, from the side of the buyer there is good reason to complain. It is doubtless very imposing and correct to post up a notice on the black board at a Consulate, but what chance is there that such a notice is ever seen by any one but the Consular employés? The public does not go round to the Consulate every morning to peruse the notices, and we are disposed to think that but for Consul-General Van Buren's thoughtfulness, the sale of land at Tsukiji would have been entirely ignored. The Japanese authorities might do better if they travelled a little out of purely official grooves in these matters.

The Consuls, it is true, are the recognised vehicles for conveying intelligence to their nationals, but if they decline to employ any more efficient advertising medium than their notice-boards, it behoves the Japanese, presuming that they are desirous of selling their land, to take care that the public is not left in complete ignorance. It may not be worth the Consuls' while to convey information to their countrymen, but it certainly is worth the while of the sellers of the land to advertise the time and place of the auction.

A SPECIAL general meeting of the Relief Volunteer Steam Fire Engine Company was held on Tuesday evening at the Club Hotel for the purpose of electing a Captain in the place of Mr. R. T. Rohde, who recently left for England. After some general remarks indicative of the great loss the Company had sustained by the departure of Mr. Rohde, a ballot for the Captaincy was taken, which resulted in the unanimous election of Mr. W. C. Bing, a gentleman who, by the energy and skill displayed in connection with the working of the company during the last three or four years, has shown himself to be eminently qualified for the position. By another unanimous vote it was resolved that the Committee should address a letter to Mr. Rohde expressing the regret felt at the severance, which it is hoped may be only temporary, of his connection with the Company, and the appreciation of the efforts on his part which have been so conducive to the present efficiency of the corps.

WHILE England is very generally regarded as a great horse-breeding country, it is a fact, nevertheless, that the home supply does not adequately meet the national requirements, and that horses are largely imported. The *Manchester Guardian* has been of late giving some interesting statistics with regard to the excess of imports over exports. In the fifteen years 1868-82, the average annual import has been rather more than 14,500, while the exports have amounted to only about 4,200. In 1868 the number of horses imported was only 1,575; in 1872 it had risen to 12,618; in 1876 it was 41,146; in 1877, 30,524; in 1878, 26,521, and in 1879, 15,246. The years 1880, 1881 and 1882 show a large decrease, but the import in each case still exceeded 9,000. The exports have also fluctuated a great deal. In 1868 England exported 4,091 horses; in 1877 the number was only 2,258, but in 1882 the export stood at 6,444. The *Guardian's* statistics bring out one remarkable fact. While the average value of imported horses was £28 each, that of the animals sent from English studs to foreign buyers was £60. The larger part of the imports includes ponies, cart and cab-horses, while the bulk of the exports is made up of horses of a high class. "That we should be so largely dependent upon foreign sources for horses of any description," says the *Guardian*, "is a matter which demands attention. It is being found more and more difficult to obtain at home a sufficient supply of serviceable animals for the army."

THE British barkentine *Glenury*, Captain Thomson, which arrived here on the 13th inst. from Takao, reports having left Formosa on the 22nd ult. and during the first part of the voyage having experienced hard E.N.E. gales with high confused seas, then strong N. to N.W. winds, with unsettled

weather. During the worst of the gale a portion of the *Glenury's* bulwarks was carried away and other minor damage sustained. On the night after leaving Takao one of the crew, a Chinese, fell overboard and was drowned, all efforts to save him being fruitless.

THE false prophets of Islam have, the *St. James's Gazette* remarks, been many, not a few of them have endeavoured to follow the example of Mahomed and to found an empire by force of arms. Not one of them, however, has been permanently successful; and if the Mahdi escapes capture or assassination, he will be more fortunate than most of his forerunners have been. Moseilama, who raised the standard of religious revolt during the lifetime of Mahomed, was defeated and slain during the reign of Abu Bir by Khaled Ebnal Walid; and Al Aswad, who set up in the year of Mahomed's death, was almost immediately betrayed and decapitated. It was upon that occasion that Mahomed declared that, ere the day of judgment, Islam would be troubled by thirty other impostors. Soon afterwards Toleiha Ebn Khawailed arose, but seeing the error of his ways, recanted; and Sejjaj Bint al Moudar, an early exponent of woman's rights, led many after her. In the reign, too, of the Halif al Mohidi, Hakem Ebn Hashem, called Al Mokanna, and well known as the Veiled Prophet of Khorassan, gained some successes, and might have gained more had he not despaired and committed suicide; and in the reign of Al Motasem, the still more formidable pretender Babac was executed, but not until he had slain a quarter of a million of his enemies. Then came the Karmatians and the Ishmaelians, or Assassins, and the followers of Al Motanabbi, and of Baba the Turkoman, and of many more; so that, if Mahomed's thirty impostors have not already appeared and disappeared again, the Mahdi must surely be nearly the last of the series. If, on the other hand, all the false prophets have come and gone, who is the Mahdi? It is but too probable that Islam, or at least a great part of it, will answer the question by proclaiming that Mahomed Ahmed is the Messiah.

THE Japanese Assistant Commissioner at the Foreign Exhibition, Boston, has addressed the following letter to the *New York Herald* :—

My attention has been called to the following paragraph, which appeared in your valuable paper of the 15th inst., dated at San Francisco and headed, "Boston Taken In," which would seem to require some explanation :—

Advices from Yokohama state that the Japanese government is indignant at an imposition practised at the Boston Exhibition. The exhibits described by the Boston journals as a rare collection of ancient historical works of art are modern and were manufactured expressly for sale. The government had nothing to do with the exhibit. A valuable private collection sent by an English amateur collector failed to arrive in time.

The Japanese government has sent no direct special government contributions to the Boston Exhibition, the only exhibit of an official character being the exhibit of wall leather, and other papers sent free of expense by the Imperial Printing Bureau. This fact I have stated repeatedly to most or all of the directors of the Exhibition, to the representatives of the art museums, and to numbers of prominent people. As it might be implied, however, from your article that the government of Japan had nothing whatsoever to do with the Exhibition, either directly or indirectly, I beg to state that the government has furnished material aid and assistance to the exhibitors, and a considerable amount of money has been set apart and devoted to furthering the success of the exhibit by the government. The commission of Mr. Takahashi as chief commissioner, and myself as assistant commissioner, emanates also from the Japanese government direct.

The Japanese exhibit at the Boston Exhibition was essentially destined as an exhibit of modern Japanese art, and as such it speaks for itself. Only a very few old articles have incidentally been brought along and established, and I venture to say that in no single

instance has any of the exhibitors from Japan represented a modern article as being old or antique.

Some months ago, shortly after the opening of the Exhibition, one or two Boston papers spoke at considerable length and in detail of "antique," "historical," &c., collections exhibited at the Boston Exhibition. All the articles therein referred to are exhibited by a merchant of Boston, and the Japanese government has no more to do with them than it has with the stock in trade of any other dealer in Boston or elsewhere in the United States. These articles cannot even be called a part of the Japanese exhibit proper, which came from Japan. They are merely a private exhibit, and under the circumstances I do not feel called upon at present to give any opinion as to their merits or demerits, their historical character or otherwise. The first edition of the official catalogue of the Exhibition left it in doubt as to who was the owner and exhibitor of these goods. In the subsequent editions, in compliance with the demands of the Japanese exhibitors, this was remedied.

The Japanese exhibitors, collectively and individually, have been the recipients of a great deal of kindness and consideration from the Boston public, and would feel greatly pained at anything like a misunderstanding as to their position or the character of their exhibits. This is the principal reason why I have trespassed at such length upon the space of your paper, valuable as I know it to be, and hoping you will find it proper to insert this answer, I have the honor to remain.

Your most obedient servant,

L. WERTHEIMBER,

Imperial Japanese Government's Assistant Commissioner, Foreign Exhibition, Boston.

This communication removes all doubt as to the nature of the enterprise upon which we commented in our issue of November 10th. It will be remembered that our remarks—the substance of which was apparently telegraphed from San Francisco to New York—were based upon a lengthy notice of the Japanese Section of the Exhibition, which notice had appeared in the *Boston Herald*. It was there explained that "one of the purposes underlying the exhibition was to make some of the displays shown there as much historical in character as possible," and that "this purpose had been carried out in a remarkable degree by Commissioner Graves." The article then continued as follows :—

In the present collection shown it was attempted, for the first time, to secure, through direct appeal to the Japanese Government, such an exhibit as should be historical, and cover examples of all the various products of Japan, both ancient and modern. This has been for the first time accomplished, and in this respect, at least, the Boston Foreign Exhibition may be said to be 'unique.' To the hearty coöperation of the Japanese Government, then, is due the rare collection of historical works to be seen at the Exhibition, and without the friendly interest which prompted the same, it would have been utterly impossible to have secured such a collection. Praise is due to that Government, and it will be readily accorded when it is known that while it has refused to do the same favour for other nations holding similar exhibitions, it has, out of its especial interest in our country, which the whole Japanese people regard with the most friendly feelings, acceded to our request. The visitors, therefore, to our foreign exhibition will, for the first time in the world's history, have the pleasure of examining such a collection from this exceedingly interesting country as no one has ever enjoyed before.

Whether or no Commissioner Graves inspired this notice we cannot tell. The *Boston Herald* certainly is not primarily responsible, for it may be taken for granted that no writer employed by a journal of that stamp could have penned such a sentence as the last of those we have quoted. At all events what the public was asked to believe was,—first, that Commissioner Graves, by direct appeal to the Japanese Government, had secured its active coöperation; secondly that a rare collection of historical works had been obtained through that coöperation; and thirdly, that the Japanese Government had never before conferred the same favour upon any other foreign exhibition. Everyone of these statements was diametrically opposed to the truth. The Japanese Government had not coöperated with Commissioner Graves: the Japanese Government had not forwarded through that gentleman, or through any one else, a single exhibit, whether modern or antique, with the exception of the paper mentioned by Mr. Wertheimber; and

the Japanese Government had sent, or caused to be sent, illustrative collections to three European exhibitions in former years, when private enterprise alone could not have been trusted to represent Japanese art industries becomingly. It now appears, from Mr. Wertheimer's letter, that the articles referred to in the *Boston Herald* did not even form part of the Japanese exhibit proper, but were simply the private collection of a Boston merchant. We regret that the Assistant Commissioner refrained from mentioning the name of this exhibitor. The motives of such reticence are explicable, but not valid. As the matter stands, the *Boston Herald*, unwillingly no doubt, has been made a party to what we cannot but term a fraudulent attempt to impose upon visitors to the Boston Exhibition, and in the interests of the public we trust that that journal will take the only step consistent with the high reputation it justly enjoys. We, at this side of the water, know how persistent and subtle are the devices employed to deceive American collectors of Japanese objects of *virtu*, but it is not often that anything so flagrant as this particular performance is brought to our notice.

SOME of the advantages of Japanese *geta* are thus described by an American paper:—One of the queer sights in the streets of Japan is the rows of wooden sandals, old and new, large and small, which are seen outside of the doors of the houses, where they are left upon entering. They have a separate place for the great toe, and make a loud, clacking noise. It is surprising to see how quickly the people step in and out of them, without even stopping. Straw slippers are also worn, travellers starting on a journey take a supply of several pairs, in order to have new ones ready when the old ones give out. They cost only a cent and a half a pair. The Japanese are never troubled with corns or any disease of the feet.

A HOME paper thus describes Mr. Forster:—Mr. Forster, M.P., is a brave man. He is also a lucky man, as most people who read the evidence in the trials of the Invincibles will admit. Despite his firm, earnest nature, he is one of the most tender-hearted of men. During the unfortunate troubles in Ireland, when the work of the agitators had been done so well that sedition and outrage, assassination and murder, stalked unblushing in the light of day, it was adjudged necessary to use the troops to clear the streets. Full powers were given to them to use ball-cartridge and bayonets. Mr. Forster, seeing the misery and disaster that such a step was likely to bring about, and knowing that when a rifle bullet is once despatched amongst a crowd it must inevitably maim or kill some one, suggested that buckshot might be substituted. He argued that buckshot would not kill, though it might punish rioters sufficiently to reduce them to submission. For this thoughtful action he has since been held up by the Irish as the most infamous scoundrel who ever lived, and has been dubbed by the nickname of "Buckshot Forster." But he seemed to bear a charmed life, for though his death had been arranged for well nigh upon a score of times, he came out unscathed in the long run. He recently addressed a large and enthusiastic meeting at Bradford. A knot of noisy Irishmen in the gallery over and over again tried to prevent him gaining a hearing. He bore this with patience

for a long time, but at last he addressed the disturbers, and said in emphatic tones:—"As you did not kill me in Ireland you shall hear me now." This was followed by a grand outburst of cheering, the audience rising and waving their hats and handkerchiefs wildly above their heads. After this the disturbers judged it best to give the speaker fair play. Had they not done so, it is just possible they might have found the way downstairs much simpler and shorter than pleasant. We have nothing whatever to do with the political side of the question; we only go upon bare results. Hitherto the Irish agitation has resulted in two things. A golden plum for the agitators, and a hempen collar for the "cat's-paws" who had to do the dirty work. "Buckshot Forster" still flourishes.

THE experience's of the bark *Mohawk* on a voyage from New York to Calcutta are related in American journals of December the 27th. The *Mohawk* had a crew of thirteen sailors, among whom were several Japanese. She took the Long Island-Sound course. When the tug left her she was under light canvas and speeding before a bitter gale. Before long the cold became so intense that none of the men could remain at the helm more than ten minutes at a time. The following morning the wind hauled to the northward, and blew a "biting icy blizzard," while a dense yellow fog hid everything. This state of affairs lasted till the afternoon, by which time the ship was glazed with iced snow, and whenever a hand touched, or attempted to pull, a rope, the skin was immediately frost-bitten. By and by the wind abated, and in order to reach a harbour that day, it became necessary to set more canvas. Nine men clambered up the frosted rigging, and out on the arms of the fore-yard, where they gnawed at the gaskets with their teeth to aid their benumbed fingers in prying the knots. Gradually their efforts succeeded, with the exception of one man whose work seemed to make no progress. The officer of the watch crawled up to see what was the matter. He found that the sailor, a Japanese, called Soneyeta Okichi, was either asleep or dead. The next moment, the man fell to the deck, a distance of twenty-five feet. He died five hours later, after much suffering. A snow storm the following morning softened the air, and the skin on the men's hands and faces then rose in huge blisters. They were unable to sleep, and their agony was such that it was feared many of them would become insane. By this time the ship was anchored about 8 miles off New Haven, but a crew to man a boat could not be mustered, and the pilot was finally obliged to make his way ashore alone. Of the thirteen sailors forming the crew only three had escaped without injury. Surgical operations, of more or less gravity, had to be performed on nearly all the others. Among the sufferers were two Japanese, Thomas Jiji and John Kimbei, the former of whom lost his right thumb, and the latter had his ears frost bitten.

AN English missionary, the Rev. A. Parrott, writing to the *North China Herald* from a city called Yangchou, near Chinkiang, gives some terrible details of the suffering that has resulted from the floods in the north-eastern and mid-land districts of China. It appears that some 28,000 persons, men, women and children, have flocked down from the north of the province, and for their accommodation a species of refuge

has been formed outside the walls of Yangchou. The refuge consists of 6,000 straw huts, divided into seven compounds, each of which is surrounded by a mud wall three or four feet high, and guarded by soldiers. "Only the children," writes Mr. Parrott, "are allowed outside the enclosure, except for the purpose of gathering dead grass and weeds in the neighbourhood, for which the women have permission to leave. Very few of these wretched people have any bedding, and they are dependent upon the grass and weeds they can pick up off the graves and barren fields in the immediate district for warmth during the night. Their miserable huts are built merely of mud and straw mats, and are of such a flimsy construction that the rain beats though and necessitates not only their sleeping on the cold clay, but in many cases in soft mud. The ground in some parts is very low, and outside the compounds I noticed large pools of water and several inches of mud." For the support of these most unhappy outcasts, thus hemmed in and prevented from seeking charitable aid, there is doled out a pittance, nominally of 1½ lbs., but really of 1⅓ lbs., of rice per diem. The sufferings of the women and children are said to be very pitiful. Instead of a bed or cradle there is allowed a small mat for each newborn infant, and, as might be expected, the deaths are numerous. A similar state of things obtains at T'sing-Kiang, where the number of refugees housed in the same way is said to be 100,000. Certainly if ever there was a case calling for charitable assistance, it is this. No vivid imagination is needed to understand what the winter has in store for these poor half-starved people, without coverlets, without fire, the rain beating in on them as they lie on the ground. We venture to suggest to the Japanese that a little benevolent assistance would be most timely. Nothing is more worthy of humanity's finer instincts than those impulses of international charity which a great calamity so readily evokes in the Occident, but of which the Orient has not yet given any evidence. We should like to see Japan take the lead in this, as she has in all other points of civilization. The spirit is not wanting. Among themselves her people are seldom backward in acts of grace and kindness, and if their benevolence has never taken a national form, still less extended to sufferers in a foreign land, it is only because the means of reaching their sympathies have not existed. Now, however, there is a press to tell them of the miseries their neighbours are enduring, and we do not doubt that if some of the leading journals would take the matter up, their appeal would be widely answered. It seems almost a pity to speak of anything but charity for charity's sake in such a context, but we cannot forget that there are many reasons which impart a special value to any expression of the Japanese people's fellow-feeling for their Chinese neighbours, and which should suffice to suggest a potent initiative to men of influence.

WE (*China Mail*) hear on good authority that several changes have been made in the Portuguese Consular Service in China. Mr. Loureiro, the worthy representative of Portugal in this Colony, has been definitely transferred to Japan, with residence in Tokiyo. It is not yet known for certain who will succeed Mr. Loureiro here, but, taking into consideration the many claims of Commendador A. G. Romano to consideration at the hands of the Lisbon Government, and

his well-known abilities and long experience in the Consular Service of that nation, we think it may be taken as a foregone conclusion that that gentlemen will be ultimately raised to the honor of Consul-General, in fact, we believe, that it has already been offered to Mr. Romano. The salary of the Consul in Shanghai has been raised from \$300 to \$450 per month. It is said that Dr. Corte-Real will probably be nominated to this Consulate.

THE following definite opinion is expressed in the *Alta* of the 5th ult.:—Japan has long been striving to throw off the stigma upon her civilization caused by having thrust upon her the necessity of granting ex-territorial rights to foreigners of European and American nativity. She claims to be sufficiently civilized to have foreigners dwelling in her territories subject to her laws, instead of carrying with them the laws of their own country. There is so much justice in the complaints of Japan at the injury done her that it may be considered good news that Germany has consented to waive the right of ex-territorial jurisdiction. Our Government will follow suit, and John Bull cannot long withhold his assent.

THE *Saigonais* says:—One of our correspondents, well placed for obtaining reliable information, sends us the following news, which on account of its gravity, we give under all reserve.—A large army is now concentrated at Bac-ninh. It may, without exaggeration, be computed at 50,000 men, namely, 25,000 Chinese regulars, 15,000 bandits ranged under the banner of the chief of the Black Flags, and, lastly, 10,000 Annamite regulars commanded by disaffected mandarins who are partisans of Chinese supremacy. All these forces obey the chief of the Black Flags, who has been appointed Generalissimo of the Chinese forces in Tonquin by an Imperial decree dated from Peking. Our correspondent complains bitterly that in the attack on Son-tay the Kim-toai passage and the route to Hung-hoa were left completely free, so that the coalitionists were enabled to transport their stores and reform their forces to the south of Babac. He adds that it is necessary to strike terror into the hearts of these enemies, who are difficult to reach, and that it is greatly to be feared that if they are allowed to fly from Bac-ninh in the direction of Kwangsi the war will be protracted indefinitely. We hope that if, as we are assured, this news is true, a commencement will be made in teaching the Chinese we are no longer their dupes. A progressive bombardment of the ports of Hainan would perhaps have an excellent result.

THIBET is one of the few regions left on the earth which still afford legitimate scope for romantic conjecture. All other lands of mystery have been exploded. The Abyssinian campaign dissipated the last shreds of wonder about Prester John. Travellers have abolished the Mountains of the Moon; a Russian railway runs within sight of the Vulture's Nest, the eyrie of the Assassins and the Old Man of the Mountains; commerce has familiarized us with the Lands of the White Elephant and Golden Umbrellas; science has dispersed Atlantis, Utopia, and the other "Erewhons," of past beliefs. No Raleigh nowadays would make sail for the fabled cities of Mansa, no voyager set his helm for the Hesperides. The Ichthophagi, Tartarinis, and Malrotrans, with all the other strange races of whom Mandeville gossiped are now sobered

down into matter-of-fact tribes, and the whole world, under the ruthless scrutiny of scientific exploration, is fast becoming commonplace.—*Daily Telegraph*.

If we may judge from the accounts of the Calcutta Exhibition contained in the Indian journals, the exhibits from Japan have secured a remarkable success. That there is a Japanese Court at all in the Exhibition seems to have been entirely due to the enterprise of Mr. Kuhn, of Yokohama, who also is the proprietor of the fine collection exhibited there. We notice some curious errors in the descriptions given by the press, but there is doubtless good reason for the unanimity of praise bestowed upon the beautiful objects that adorn the Court. We congratulate Mr. Kuhn on his good fortune, and also the Japanese upon the additional market opened for their works of art by enterprise of this nature.

AMONG the pleasing little items of chit-chat which the Tokiyo society journals collect for their youthful readers there is a story of a wonderful cat, the property of a certain Mr. Takahashi, who lives at Honjo. The animal has all the accomplishments of a very clever dog, and its reputation is so wide-spread that an enterprising Japanese Barnum is said to have offered fifty yen for it. The owner would not deal, and several young ladies in the neighbourhood are reported to be engaged in an attempt to train rival pussies up to the fifty yen standard.

A WASHINGTON telegram of January 12th says:—The Senate Committee on Foreign Relations met to-day and took up the bill prepared by the Pacific Coast delegation, and introduced by Senator Miller of California, amending the Chinese Immigration Act of last Congress. The discussion was a long one, and not confined to the merits of the bill in hand, but involved the original questions, developed when the Chinese bill was under discussion. This was due to the fact that some members of the Committee had never dealt with the subject before in the Committee. The bill was referred to a sub-committee, consisting of Miller, Wilson and Morgan. The tone of the debate gave warrant that some measure, having for its purpose the correction of the defects of the present law and the prohibition of the importation of Chinese laborers will be reported by the committee.

THE *Mainichi Shimbun* has the following:—The Glass Factory at Shinagawa, an establishment of the Public Works Department, has proved very unprofitable, despite all the reforms introduced to ensure its success. It was rumored some time ago that the Factory was to be closed, but it now appears that it has been sold to a Mr. Isekatsu, a well known shoe-manufacturer in Tokiyo, for the small sum of 20,000 yen. The money is to be paid by instalments covering a term of five years.

ACCORDING to some tables recently published by the authorities, the actual cost incurred in the suppression of the Satsuma rebellion amounted to 10,878,885.87.1 yen.

THE *Yei Shimbun*, speaking of the bad times, says that one would not have expected the recent snow-fall to mend matters much, yet true to the old saying of the ill wind, the business of the

patten makers of Tokiyo has received a notable filip from the bad roads. Their ledgers show that the snow created an extra demand for more than seventy thousand pairs of *Geta*.

THE submarine telegraph cable recently laid between Japan and Korea was yesterday morning formally declared open for the transmission of telegrams. The places thus brought into communication with the outer world are the islands of Iki and Tsushima, and Fusan. The pseudonym of "Hermit Kingdom" is no longer quite applicable to Korea!

THE farmers of Sapporo are said to have captured an enormous bear weighing 725 lbs., and having a forked tail five feet long. They are taking steps to forward the monster to the Museum at Uyeno, Tokiyo.

WE learn that a collection of more than 300 Japanese pictures, intended for an exhibition of Japanese art in Paris, will be displayed on the 17th instant at the Kôyôkwan, Shiba. The collection will well repay a visit, if rumour does not greatly exaggerate its qualities.

A VERY close game of football was played on Wednesday between "Tea, Silk and Bankers" versus the "World." The former had the stronger side, and won by one goal, kicked by Mr. Durant. We are sorry to hear that Mr. Bing and Mr. Oram collided heavily, Mr. Bing having his cheek laid open and Mr. Oram his forehead.

THE following seductive advertisement appears in the *Hochi Shimbun*:—

MATRIMONIAL AGENCY.

The advertiser begs to announce that he has opened an agency for Matrimony as well as for the adoption of children of either sex. All orders attended to with promptitude and despatch. Applicants are requested to state their age, profession, social standing, and income.

We intend keeping the address a profound secret.

A MONTHLY periodical devoted to the interests and cause of Buddhism will shortly appear, under the style of *Niyo Shinshi*. It is reported that the editorial staff will be entirely made up of Buddhist priests.

THE Hongkong papers brought up by the *Harter* contain no news of fresh operations in Tonquin, and the latest with regard to the attack upon Bac-ninh is that Admiral Courbet has determined to wait until the arrival of General Millot and the reinforcements now on the way out before undertaking the assault upon that town.

An iron boat with the telescopic frame, recently invented by an officer of Japanese Engineers, is said to have been subjected to an official trial and found in every respect satisfactory. When folded, it can easily be carried by two men.

WE are informed that the Messageries Maritimes steamship *Volga*, bringing the next French mail, with dates from Marseilles to the 6th ultimo, left Hongkong for this port at three o'clock on Wednesday afternoon.

WE have to acknowledge the receipt of the Transactions of the Seismological Society of Japan, vol. vi., January to June, 1883.

JAPANESE HOUSES.

NOW that it has been finally resolved to construct the Imperial Palace of wood in Japanese style, the problem of procuring skilled carpenters is said to be giving some trouble. One imagines that a difficulty of this sort would be among the very last to present itself in Japan, where every little bit of wood-work gives evidence of admirable ability and painstaking. But the Japanese are exceedingly fastidious in these matters, and when it comes to building an Emperor's Palace, not one carpenter in a hundred is found up to the mark. It is accordingly proposed, we hear, to establish, within the grounds of the shrine of Dai-jingu, in Tokiyo, an office for examining carpenters with a view to determining their competence. This is spoken of with a sort of pride by the vernacular press, and we do not doubt that the new Palace will be a building of great beauty. But what seems really regrettable is the resolve to build it of wood. Popular opinion credits the EMPEROR himself with having decided this point, in opposition to the advice of many of his Ministers, and there need be no difficulty in accounting for HIS MAJESTY'S predilection. His life has been spent in Japanese houses constructed with such taste and symmetry that among the foreign buildings this country possesses, nothing comparable is yet to be seen. Since the Restoration, Tokiyo has been embellished—disfigured would be a more correct term—by sundry lath-and-plaster, and a few brick, edifices, popularly supposed to represent Western architecture, but in reality the veriest parodies. Of late years, indeed, matters have mended a little. The Engineering College, the Roku-mei-kwan, the Museum of Antiquities at Ueno, and one or two other buildings, have sprung up to vindicate the reputation of Occidental styles. But it would require a stretch of educated imagination to infer from any of these, suited as each of them is to its own special purpose, what an aptly designed and handsomely furnished palace might be. The Imperial Princes, for the most part, live *à la Européenne*, but it must be frankly confessed that their residences do not possess a princely air, and are not at all calculated to win the taste of a Japanese from allegiance to the light, spacious, and chaste constructions which represent the highest efforts of his country's civilization. Of the Ministers, again, some have shrunk from the heavy outlay required to build houses of stone or brick; while others, though more enterprising, have nevertheless been obliged to refrain from attempting anything of a particularly striking or attractive nature. The upshot of the matter is that, one, perhaps, of the Foreign Legations excepted, Tokiyo possesses no specimen of a foreign dwelling competent to compete with the best class of Japanese residence in the particular re-

spects which appeal most to Japanese taste. It may safely be said, therefore, that the EMPEROR has never yet seen a house likely to impress him with a worthy idea of the comfortable, healthy, and artistic features of Western architecture. His predilection for the fashions of his own country is, under these circumstances, perfectly natural.

Now from an æsthetic and a cleanly point of view, we have not a word to say against Japanese houses. They combine, in a very high degree, the qualities of symmetry, simplicity, and refinement. Intimate experience alone effaces the pleasing impression they leave upon the mind of a foreign visitor, who sees, for the first time, their spotless mats, quaint alcoves, gracefully curved roofs, and faultless decoration. But, after all, the first essential of a house is that it should be good to live in, and Japanese houses are, most emphatically, bad to live in. There exists a popular notion that they are cool in summer. Never was there a greater fallacy. Coolness is not obtained simply by opening one's room to the four winds of heaven. Of infinitely more importance is it to keep out the sun, and there a Japanese house fails completely. The midsummer suns in this country will not be denied ingress by any flimsy barrier of planking. Their rays make as little of such an impediment as though it were a paper screen, and thus it falls out that while the airs which permeate a Japanese dwelling on an August afternoon seem only to agitate, without freshening, the oven-like atmosphere, they bring to the inmate of the neighbouring brick house, with its solid walls and skilful ventilation, a sense of delightful coolness and reinvigoration. To know this, it is only necessary to have passed one or two summers in a Japanese residence. The comparison soon forces itself upon the most enthusiastic dilettante. Then, so far as the winter is concerned, we doubt whether a Japanese is ever really warm except during the half hour after his daily boiling is concluded. He comes out of his bath in a semi-scalded condition, and until this artificial caloric evaporates, he feels about as comfortable as anything human can feel. But for the rest, it is a case of shivering over a brazier, with a flushed head and icy feet; or of embracing a heated stone; or of coddling a *kotatsu*, and breathing, throughout half the night, the carbonic-acid exhalations of this deadly bedfellow. In addition to, and even more important than, this question of warmth, coolness, and comfort, there is the fact that life in a Japanese dwelling is life on all four. We had almost called it life several degrees too near the fashions of the animal world, but to avoid wounding any susceptibilities, we choose the gentler form of expression. The Japanese sits on the floor, sleeps on the floor, eats on the floor, and, in short, spends the greater part of his time indoors in a crouching, squatting, or stooping atti-

tude. It is not in his nature to be a slouch, for despite the disabling effects of the muscular contortions his household attitudes demand, his general carriage is upright enough. But he lives too near the ground for either his physical or his moral well-being. So long as his habits are not reformed in this most important particular, it is idle to look for any considerable improvement in the nation's hygiene* and physique.

We need scarcely point to the imperative necessity of saving the people, especially the citizens of Tokiyo, from those cruel catastrophes which, every winter, destroy thousands of houses. There can never be any great accumulations of wealth in a country where, year after year, conflagrations levy an enormous tax on the nation. This is so self-evident that every patriotic and prudent Japanese ought to devote his energies to popularizing building reform, since there alone is to be found a valid protection against fire.

It is very possible that Japanese gentlemen may associate Western horticulture with Western architecture, and think that in adopting the latter it would be necessary to conform to the former also. We venture to suggest that this is entirely a misconception. Though not disposed to acknowledge the inferiority of English landscape gardening to any other known system, we readily admit the exceptional charms of the Japanese style, and, above all, the great advantage it possesses in point of practicability. A Japanese gardener will produce, with an acre of land, as much effect as an English artist obtains with a park of twenty times that extent, and when one compares the methods adopted in laying out the grounds of an ordinary residence in Europe with those adopted in Japan, the superiority of the latter is at once apparent. Nothing could be less artistic, or more unnatural and unsightly, than the straight walks, mathematical flower-beds and rigid hedges of the former; nothing happier, softer, or more pleasing than the latter's infinite variety of miniature lake, cascade, hill, and forest. It were indeed a pity that Japan should abandon anything of this charming art which she has elaborated for herself through centuries of peaceful refinement. Nor is there the smallest reason for such a course. There is no fashion of house that a Japanese garden will not embellish, and nothing in foreign architecture is unsuited to Japanese surroundings.

It were idle to expect, however, that houses of brick or stone will ever find general favour with the people of this

* A minor point, but well worthy of note, is the wretched construction of the floors of a Japanese dwelling. An European, inhabiting one of its neatly matted, sunny rooms, is surprised to find that his feet are never warm. The more he heats the room, the chillier airs circulate about his extremities. He does not recognise for a long time, if at all, that no attempt has been made to join the edges of the boards underneath the mats, and that the cold atmosphere enters there freely to replace the ascending caloric. At night, when the verandahs are enclosed everywhere by wooden shutters, such a house acts like a huge cupping machine, and draws up from the soil all those dangerous gases which, according to science, are imprisoned there.

country so long as the EMPEROR leads fashion in an opposite direction. There may be some who will say that these matters do not concern foreign critics, and that an English journal would be better advised did it refrain from commenting on the MIKADO'S reported likes and dislikes. But everything Japanese concerns the friends of Japan; and, further, this country's progress has so far enlisted the interest of the world that even outsiders have acquired a certain right of comment. Were we writing of an European Sovereign, we should say that a ruler's exalted position compels him to consider every act of his life, not by the light of his individual tastes, but from the standpoint of the example he sets his subjects. In Japan, however, such a remark would be superfluous, since the principle it embodies has always been supposed to govern the relations between the MIKADO and his people. Yet, if we may judge by the statements that have appeared in the vernacular press, the model of the new Palace has not been laid on lines so entirely altruistic as would certainly have been the case had the above considerations been allowed to present themselves in their entirety to the Imperial mind.

CHRISTIANITY IN JAPAN.

THE paper read by the Rev. C. S. EBV at the Tokiyo Missionary Conference on the 5th instant, contains matter of great interest. We shall not comment here upon the earnest eloquence of the language employed, nor yet upon the view of lofty thought that runs through the whole discourse. These are qualities we might expect to find in workers of Mr. EBV'S stamp. But what seems to us specially noteworthy is the courageous candour of the position assumed by the writer in regard to questions which, as much from the apparent unwillingness of missionaries to discuss them as from anything else, are commonly considered unanswerable. The attitude of a considerable section of the lay public towards Christian propagandism is one of hostile criticism. The propagandist, sometimes by his own indiscretions, but generally because he works in a field where the strongest passions of the human heart are engaged, is frequently associated, directly or indirectly, with results which conform to no aspect of the creed he preaches. His profession, too, like all others, is not without disfiguring features. Frequently, and with much justice, it is urged against him that the outcome of his teaching can only be perplexity and doubt; that the people to whom he appeals are confused rather than enlightened by the conflicting clamour of rival sectarians, each of whom offers a different gospel, and each of whom declares that by his particular gospel only can eternal perdition be avoided. This, perhaps the

most unsightly, blemish of missionary enterprise is constantly derided by certain cavillers; while, upon the other side, little is said in its defence or extenuation. Mr. EBV, however, meets the issue fairly and unshrinkingly. He acknowledges the whole of the facts; accounts for the naturalness of their origin, and shows that, so far from being an unmixed evil, the balance of gain is on the side of sectarianism. His argument simply amounts to this—that what has been lost by diversity of doctrine has been more than gained by energy of effort. Missionary work is like every other undertaking: competition is the strongest factor in its development. It is quite certain that the enormous growth of the United States would have entirely distanced any available religious ministrations, had not the ardour of rival sects sent out teachers in all directions by the hundred. The result is that probably in no part of the world is society pervaded by a sounder or more firmly rooted religious sentiment. Whatever weight may be attached to this plea, it is evident that the evils of sectarianism, whether great or small, are coming to be recognised by the Churches themselves, and that where the advantages of competing enthusiasm cease to overbalance the dangers of its confusion, non-essential differences will be merged in essential unity. It is not our province to discuss matters of this nature in detail. But from any standpoint, the liberal philosophy advocated by Mr. EBV deserves admiration, as it will certainly command success. We think, too, that he wisely estimated the temper of the Japanese public when he elected to place before them so frank and straightforward a statement of the case. Such a method is calculated to win the confidence of all whose confidence is worth winning, while the proposed unison of action can scarcely fail to furnish an additional evidence to the Japanese Government of the moral force Christianity has actually acquired in Japan.

And here we may observe that the time cannot be far distant when the rulers of this country will have more seriously to consider their attitude towards Christianity. It is true that all grave impediments have been removed from the path of Christian propagandism, as well as all social or political disabilities from the professors of foreign faiths. But something more is wanted than negative toleration. It cannot have escaped the Japanese, keenly appreciative as they have proved themselves of the benefits of Western civilization, that Christianity is the spirit and essence of that civilization. The two cannot possibly be separated, nor can the latter be permanently assimilated without the aid of the former. Whether or no Christianity is the one and only creed suited to all classes and conditions of men, we do not pretend to say. Neither is it the function of a government to determine such a point. But the history of the world furnishes one argument which appeals

strongly to human reason. It is that material power and prosperity have never remained with non-Christian countries. The comparative conditions of the Orient and the Occident to-day are a sufficient proof of this. The characteristic of the former is decay; that of the latter, growth. It may be urged that this difference has nothing to do with religion: that the advantage in point of intelligence and energy is primarily with the people of the West. But even if this be granted, we are still confronted by the fact that the peoples possessing this intellectual and physical superiority have, without exception, chosen Christianity. If their condition be not the result of their choice, the former, at all events, gives the latter a weight not to be gainsaid. Nothing is farther from our purpose than to advocate official interference on behalf of Christianity. Its truths are quite independent of such aid. But what we desire to emphasize is that Japan cannot take the material, and leave the moral, civilization of the West. Neither, perhaps, is suited to her in its entirety, but it is impossible for her to determine how much she can assimilate of the one so long as she excludes the other, for the two are, in many respects, inseparable. This is why we say that the Government will have to reconsider its attitude. When the last vestige of the ban is removed from Christianity in Japan; when, so far as the laws are concerned, it is placed on an equal footing with Buddhism and Shintoism—then, but not till then, will the last grounds for mistrusting the stability of the country's progress be removed. Among the plans proposed by Mr. EBV, there is one for the establishment of a Christian University, competent "to vie with the best universities in our home lands." Addressing ourselves to Japanese, we need not comment on the benefits such an institution would confer on the country. But no measure of zeal and perseverance could ensure the success of an university without an officially recognised status in Japan. The very liability of the students to conscription would effectually mar its prospects. The same consideration applies, though in a lesser degree, to Christian Ministers of the Japanese Church. So long as they do not share the exemption from military service accorded to Buddhist and Shinto priests, it cannot be said that religious toleration exists fully in Japan. We do not underrate the difficulty of dealing with this matter, or the dangers of precipitancy. But knowing the spirit which animates the Japanese Government, and learning from Mr. EBV'S able essay the admirable grooves in which missionary enterprise is working, we hope before long to see Japan take the last step that is needed to convince the world of the sincerity of her progress, and to qualify her for the mission that lies before her as the civilizer of the Orient.

THE BEGINNING OF THE END.

THE *New York Herald* publishes the following telegram, dated at Berlin, January the 3rd:—

The German government has forwarded a favorable reply to the proposal of the government of Japan that the latter should establish courts of justice which will have jurisdiction over foreigners in that country as well as natives. It is understood that the United States government has given a similar reply to the Japanese proposition.

It would appear from this telegram that two of the principal Powers having relations with Japan acknowledge the justice of her proposals for treaty revision. Probably, if the truth were known, these two Powers would not be found alone in their views.

In one respect the *Herald's* message obviously conveys an exaggerated impression. It speaks of Japanese Courts of justice exercising "jurisdiction over foreigners," whereas the proposals of the Tokiyo Cabinet are known to have contemplated partial jurisdiction only. This, however, is a point of detail, about which accuracy could scarcely be expected in such a source. The broad fact, stated without any uncertainty, is that "the German Government has forwarded a favorable reply."

That this result was to be expected, nobody impartially considering the nature of the proposals could doubt. Japan is not to be for ever condemned to a state of semi-isolation. The medley of conflicting, and in many cases incompetent, jurisdictions established here by the Treaty Powers a quarter of a century ago, was never intended to be anything but a temporary makeshift. As a system it is so cumbrous and inefficient that nothing short of imperative necessity could justify its existence. Above all, it is admittedly inconsistent with any extension of foreign intercourse beyond the narrow limits fixed by the first treaties. That is the hard fact which stares us in the face from whatever aspect we consider the question. Either this country is to be permanently excluded from the privileges of free intercourse with the rest of the world, or steps must be taken to modify the existing system of extraterritoriality. There is no alternative. To argue that things should be left as they are because a change would not confer direct benefit on a section of the foreign residents, is to ignore Japan's rights altogether. This nation's title to demand an extension of its foreign intercourse is at least as valid as was ours to inaugurate that intercourse. We came here to open Japan, and when some persons now claim that she shall only be opened just so far as suits their convenience, they assume towards her precisely the same position as the Japanese anti-foreign party assumed towards them twenty years ago.

Apart from these considerations of abstract justice, men of ordinary intelligence will see at once that an extension of

foreign intercourse cannot bring to Japan any benefit which will not be equally shared by foreigners themselves. If Western capital is to assist in Japan's development, Western capitalists will have their due share of the profits. No other prospect is rational, unless we assume that so soon as Japan is allowed to associate with foreigners on equal terms, she will exhibit some subtle ability to enrich herself at their expense.

It cannot be denied, on the other hand, that deference is due to race prejudices, and that any sudden change, of such a nature as to ignore these, would be dangerous and ill-judged. It is for this reason that the Japanese, while keeping the complete abolition of extraterritoriality—in other words, the complete opening of the country—always in view as the goal of their endeavours, have proposed a transition period, during which a very limited amount of jurisdiction over foreign residents shall be vested in courts presided over by a bench of foreign and Japanese Judges. This appointment of Western jurists is not at all a confession of Japanese incompetence to administer justice. It is wholly a concession to the not unnatural reluctance entertained by Occidentals to submit to even a partial exercise of Oriental jurisdiction at once. Some such practical and reasonable intermediate step is necessary, unless the present state of things is to last for ever. There is not the slightest doubt that all the Treaty Powers will recognise this sooner or later. Some of them have already recognised it, and nothing will help more speedily to convince the rest than the interpretation which the most violent opponents of progress themselves put upon their opposition. That interpretation is, that under treaties distinctly temporary permanent interests have been created, and that until these are bought out by the Japanese Government its proposals will meet with unchanging resistance. It is not likely that any civilized Power will assist a handful of its subjects to make their own illicit gain a necessary preliminary to the fulfilment of international obligations and to the spread of international intercourse. The legitimate obstacles to any sweeping change are foreign distrust, and the consequent danger of admitting to all the rights of citizenship men predisposed to discontent and agitation. The Japanese have at least as much to apprehend as foreigners. On the one side there is the natural reluctance of Westerners to exchange familiar for unfamiliar systems; on the other, there is the equally natural diffidence of Japanese to admit into their family, outsiders who have always shown themselves masterful and haughty, and who avowedly bring with them a spirit of doubt and censure. Both that reluctance and this diffidence can only be increased by perpetuating the present state of agitation and recrimination. The Japanese Government has therefore proposed a preliminary step, and the assent its proposals have already received reduce their final success to a mere question of time.

THE HEALTH OF JAPAN.

It is a pity that the Central Sanitary Bureau cannot contrive to compile and publish its annual reports before the events they embody have passed completely into the limbo of the past. February, 1884, is some months too late for the issue of a report referring to the period July 1st, 1878, to June 30th, 1879. We could understand a delay of one year, or even two, but when it comes to three or four, the contrast of dates looks a little ludicrous. On the other hand, it has to be observed that only four such reports have as yet been published in Japan, and since the science of preparing sanitary statistics is virtually in its infancy, we have no right to expect great promptitude or precision. This is well illustrated by the tables of mortality contained in the Report just issued. The mortality during the twelve-months period 1876-77 appears to have been greater by 153,000, in round numbers, than the mortality during the preceding period; while, again, the records for 1878-79 show a further increase of 60,000 deaths. The director of the Bureau reasonably concludes that these differences are attributable, not to any actual increase of the death rate, but simply to improved methods of registration. He thinks, also, that the death rate, 1.21 per cent., indicated by the last returns, is still too low, and that some figure in the neighbourhood of 2.5 per cent. would be nearer the truth. From the tables appended to this part of the Report we learn that diseases of the digestive organs are the most powerful foes of longevity in Japan, more than twenty-five per cent. of the total mortality being ascribed to this cause. Next on the list come diseases of the nervous system, with 22 per cent. of the deaths; and then diseases of the respiratory organs, with 18 per cent. About one death in every ten is caused by fevers. After these four principal causes of mortality, a rapid descent is made to diseases of the genito-urinary organs. If these tables are to be trusted, Tokiyo and Osaka must be regarded as the most unhealthy places in Japan, their death-rates being nearly 24 per thousand inhabitants, whereas, with the exception of Yamaguchi Prefecture, which has a rate of 19.5, nothing higher than 16 is found anywhere else. We may fairly conclude, however, that differences of accuracy in registration are chiefly responsible for these discrepancies.

People whose special avocation seems to be the prediction of disasters, have recently been alarming the public with rumours that Japan is to be visited this season by a terrible epidemic of cholera. They have no better basis for their prophecy than the fact that 1883 was an "off" year, but they have certainly succeeded in causing a good deal of apprehension. The section of this Sanitary Report which refers to infectious and contagious diseases will, therefore, be read with much interest. It contains, however, little information of a novel nature. The origin of the epidemic in Nagasaki, in 1878, is referred to a case of cholera which occurred on board a British merchant vessel from Shanghai, but the compilers of the Report think that both in Kumamoto and Nagasaki the germs of the disease had lain dormant, and that favorable conditions must have caused their redevelopment. This suggests an uncomfortable inference for places which were severely visited by cholera in 1882. Nor is it much consolation to learn that the malignity of the plague

was greatest in 1877. Japan cannot be said to have been entirely free from cholera since 1877. Throughout 1878, cases were reported from various parts of the empire, though the disease reached the dimensions of an epidemic in Nagasaki and Kumamoto alone; in the summer of 1879 Kanagawa and other prefectures were visited by it; during the two following years its presence could be traced here and there at intervals; the memory of 1883 is still fresh, and up to the end of last autumn the vernacular press spoke of isolated cases which constantly suggested serious possibilities. It is to be feared that cholera must hereafter be reckoned among the contingencies of life in Japan.

An interesting point brought out by this Report is the cost of a cholera epidemic to the Central Government. During 1877, a sum of 232,273 *yen* was devoted to preventive measures, disinfection and medical relief, whereas, in 1878, the amount expended by the Sanitary Bureau was only 2,238 *yen*. It is mentioned that during the former year carbolic acid became very scarce, and the demand being great, speculative drug-dealers ran the price up to an exorbitant figure. Under these circumstances an essay to manufacture the disinfectant was made at the Tokiyo Laboratory, with such success that a carbolic acid apparatus has since then formed part of the permanent plant of the institution, and the public can now count upon always obtaining the compound at a reasonable figure.

Returns relating to small-pox have been prepared since 1878 only. The Report under review, therefore, contains the first statistics compiled in Japan with regard to the results of vaccination. We learn that of 941 cases of small-pox recorded in thirteen districts during the period covered by the Report, 458 were cases in which vaccination had been performed, and 481 were cases of unvaccinated persons. This does not say much for the preventive effects of the measure. When we come, however, to compare rates of mortality, the record assumes a different aspect, for while the deaths among vaccinated patients were only 24 per cent. of those attacked, the deaths among unvaccinated patients were 59 per cent.

It is only nine years (Feb. 1875) since a system of granting licenses to medical practitioners after proper examination was inaugurated by notification to the officials of Cities and Prefectures. At first these examinations were confined to Tokiyo and Osaka, as the progress of medical science had been more marked there than elsewhere; but applications to be included in the scheme were soon received from various places. By 1878 all the prefectures, with one exception, had made arrangements for a system of tests; and in 1879, in order to ensure uniformity of qualification as well as to raise the standard, the regulations for examinations were revised; the status of the examiners was fixed, and examination papers were issued by the Home Department to all the local authorities. The compilers of the Report do not pretend that this method is perfect, but they hope to improve it as opportunities arise. Beyond all question, very excellent results have been achieved up to the present, for the principal cities, at any rate, possess medical practitioners of considerable skill and education. We have no figures at hand to show the number of licensed physicians now practicing throughout the country, but the total in 1879 was

1,817, of whom 939 had passed the prescribed examination. Stringent regulations have also been enacted with regard to the qualifications and control of midwives, and to check abuses which were found to exist in the practice of their art. A system of examination for apothecaries, too, has been instituted. Among other interesting figures given in this section, we learn that the total number of medical students in public hospitals and medical schools, in 1879, was 4,313, while the number in the Tokiyo University was 600.

A most satisfactory feature in Japan's sanitary history is the rapid growth of hospitals. In 1879 there were 382 of these institutions in the empire, 85 of them being private. Sixty-one were Lock hospitals; a system for the prevention of venereal diseases having been adopted in all the prefectures with five exceptions. The number of inspections performed at the Lock hospitals during the period under review was 398,529.

On the measures adopted for the control of medicines, as well as on other interesting details furnished by the Report, we have no space to dwell here. It must be owned, however, that Japan's progress in sanitary matters is not the least creditable feature of her recent history.

THE GOVERNMENT PROTECTION OF INDUSTRIES.

(Translated from the *Chiugai Bukka Shimpō*.)

A glance at the tradal conditions of nations plainly shows that all countries alike are devoting their energies to the furtherance of trade and industries, while their governments are doing all they can to protect and increase the national commerce. A country that pays no attention to the development of its industries will soon find itself weakened and poor, while the bulk of its trade passes into other hands. How great are the perils that beset the path of national industries! We ourselves are surrounded with perils on every side, and so it is well to consider whether or not our industries have need of Government protection. Nothing does greater damage to our industries than the rapid fluctuations and unsettled condition of the national currency, which consequently loses its value as a trustworthy medium of exchange. Not one of our many commodities has a standard value, while many have ceased to find a market. No industry can develop favourably under such trying circumstances. Look at the state of affairs that prevailed from 1872-73 up to 1879-80. The balance of foreign trade was constantly against us, imports far exceeding exports. The drain of specie steadily continued, and an universal outcry was raised against it, but without satisfactory result. Politicians were finally forced to conclude that Japan could not be rescued from her ambiguous position. When the people develop spendthrift habits and indulge in luxurious tastes, it is only natural that imports should exceed exports, and that the drain of specie should be constant. This applies to all nations alike, and Japan is no exception to the rule. This state of affairs, however, has gradually given way to a better position since 1882. Everything has a limit; and so when the excess of imports had reached its maximum it gradually decreased, while the Government simultaneously earnestly endeavored to reduce the bulk of the currency and bring about a more satisfactory condition of affairs. The national currency has already been reduced about forty million *yen*. Small wonder then that the price of commodities should fall. Rather term it the appreciation of currency than the depreciation of commodities. But this rise in the value of currency has seriously interfered with the development of trade, and the whole nation has

had to feel its ill effects. Many remedies have been proposed, some going so far as even to propose a fresh issue of paper money. In fact, the policy of the Government has been directly attacked. But now the importance of the resumption of specie payment has been directly recognized. If the bitter experiences of the past are not misleading, we are forced to conclude that the depreciation of paper money alone has encouraged the growth of expensive habits among the people, and this in return has caused the excess of imports over exports, and resulted, finally, in the unequal balance of trade. We hope, therefore, that the Government will undeviatingly pursue the present policy.

The specie reserve in the Treasury amounts to twenty-two million *yen*. Should the Government keep to the present programme, there will be no difficulty in replacing paper money by a metallic currency. In our opinion, the Government can accumulate fifty million silver *yen* in three or four years hence, provided that there are no famines, no failure in the harvests, no war. [The specie set aside during the last two years is estimated at fifteen million *yen*]. When the Government resumes specie payment [with so large a reserve fund as this at hand, there will no longer be violent fluctuations in the price of commodities, and trade will speedily return to a healthy basis, much to the country's benefit.

The pernicious effect of the fiat currency having thus so far been counteracted, it is now necessary to raise the national industries out of the ruin into which they have fallen, thereby augmenting the wealth and power of the country. The opportunity has at last arrived. An opinion is, however, entertained, that our industries must advance hand in hand with the progress of the nation, and that those industries which remain in the van of the national advancement will surely decline, no matter how thoroughly they are protected. Yet the teachings of political economy and the experiences of the past do not at all prove that the Government protection of industries results invariably in their ruin. Its merits and usefulness depend upon the manner in which it is employed; for, if it be misapplied, great failures will arise where success was certain. It is necessary, first of all, to consider the time, place, and manner of the industry to which the Government protection is to be given. Whether this protection be given directly or indirectly—if applied in the proper manner industries are sure to be considerably benefited. This assumption has been thoroughly proved to be correct in the case of the commercial navy of Great Britain, as also with the sericulture in Italy. In a country like Japan, where all industries are still in an early stage of development, the protection of the Government is of the first importance. Mr. Kelly says:—"In recently civilized countries, protection may be given without trespassing on the field of political economy; provided that it be given for a certain number of years only, and be less stringent as the term approaches expiration. Such protection is then of very much the same force as a patent law, and must be subject to the same regulations." This is eminently true. Has the protection given by the Government to industrial enterprises since the days of the Restoration been in every way suitable? Certainly not. Our definition of protection is very different from that of the Government's. What remains now-a-days of the various industries commenced under the auspices of the Government? The Tomioka Silk Factory is often pointed out as a fair example of the success attendant upon Government interference, and it is even asserted that this interference has largely contributed to the encouragement of the industry throughout the country. We do not hold this opinion. Although most of our industrial enterprises have been at various times under direct Government supervision, yet there is none that has tended to enrich the nation. This is because the protection was given in an awkward, insufficient manner. What

industry most demands protection at present? In our opinion, nothing can be more important than the encouragement and development of land and marine transport. Should this great enterprise be ably superintended, trade will rapidly increase and products be multiplied. As the people are still unable to undertake so extensive an enterprise, it is the duty of the Government to see it properly carried out. If the means of transport remain unimproved, and the products shut up in the interior find no way to reach the ports, the country will never become wealthy or powerful; just as no man can be healthy without the proper circulation of blood. The Mitsu Bishi Company has monopolized the coast trade, but the number of its vessels is decreasing instead of increasing. Fortunately, for the welfare of the nation, the Union Steam Navigation Company is now well established; where ships were not sent last year they find their way this year, so that the outcry against the insufficiency of marine transport has considerably subsided. Still the improvement is small, and far from being all that is necessary. According to the most recent statistics, our trade requires 200,000 to 300,000 tons available for transport (foreign shipping not included), and yet the mercantile fleets of Japan do not aggregate one half of this amount. Though the prices of commodities have fallen greatly, yet freights have not been reduced; a significant indication of the condition of our maritime industry. With regard to overland transport, we find the means of communication and of the interchange of commodities much worse than that by sea. The cause of this is directly traceable to the feudal system. The railway, the principal means of conveying goods, is still in its infancy, the total length of the lines constructed not exceeding 200 miles. And even the lines now open are not linked together as they should be, nor can they be of great value till they have become so. The further construction of railroads is therefore of the utmost importance to the development of our trade interests. On this account, the Government issued the Nakasendo Railway Bonds in December last, affording great facilities for investment.

In conclusion, we can but congratulate the Government upon having these Bonds open to foreign investment. We urge the Japanese people to take them up. Finally, we request the Government to issue railway regulations, which will protect private companies who wish to connect the Nakasendo and Awomori Railroads with the numerous minor towns and districts of importance.

SERICULTURE IN CALIFORNIA.

The production of silk in California is not by any means a new idea, but it has not been systematically set about until very recently. Fifteen years ago, an attempt was made to begin the industry on a very large scale, but as it was undertaken without the necessary reference to economic conditions it is almost needless to add that the plan resulted in somewhat ignominious failure. But now, according to a correspondent of *Bradstreet's*, the idea has been resuscitated, and gives evidence of success. We are disposed to think that the San Francisco correspondent is somewhat too sanguine as to the results of the scheme, all the more so as he looks upon silk-culture more as a pleasing and lucrative pastime than a laborious and painstaking employment. He is just a thought too poetical, and indulges too much in pleasant castles-in-the-air to warrant implicit reliance in his statements. "The culture of silk," he writes, "does not hold out inducements of large incomes with small expenditure like the grape-vine colonies or orchard tracts, or the olive and walnut groves on irrigated lands, but it offers sufficient inducement to women and children to engage in it as a home work." It is essentially 'women's work.' "It is light, clean, interesting and fascinating, as it involves the care of living creatures, whose progressive stages of development

must be solicitously watched, whose food must be provided, and whose imperative natural impulse is to reward this care by spinning, of its own integument, the most perfect thread for the manufacture of fabrics to clothe and adorn those whose gentle solicitude rendered its short but useful life possible." This is very pretty, and quite rhetorical in its way, but the writer has evidently never visited the silk-producing districts of Kwangtung, or indeed of any other place. He would be speedily disillusionized as to the easy, graceful, 'fascinating' rearing of the silk-worm; and his ideas as to the ultimate end of the precious thread 'to clothe and adorn those whose gentle care' persuaded the wily worm to spin, would undergo a complete revolution. Silk was truly 'women's work' in the days of the famous Empress Si Ling-she, who kept the friendly *bombyx* within the palace-walls, and watched her maids while they wound the shining threads. But that was 4,581 years ago (2697 B.C.). Times have changed since then.

The legislature of California has created a State Board of Silk Culture, whose first annual meeting was held in the latter part of last year. This meeting was—if we are to credit all reports—a decided success, and great interest was, naturally enough, manifested in the undertaking. Prizes were distributed to adults and young people of both sexes for quantity and quality of silk. A filature has been established in San Francisco by this State Board, and—one steam reel is in operation. As yet, instruction in reeling is given by the hand-reel alone, and we hear with due delight that "there are now six young women who are nearly proficient in the art." These youthful disciples of Si Ling-she are to be in future employed as teachers in the various institutions "in which silk culture is to be introduced." It is furthermore stated that several hundred pounds of cocoons were received in 1883, and that "one person alone"—may his tribe increase—promises 1,000 pounds of cocoons this year. "It is thought," adds the San Francisco correspondent of *Bradstreet's*, "that six or eight additional steam reels must be added to the filature in 1884, owing to the increased production of silk. The superintendent of the state filature is an Italian of experience in the business."

Upon the basis of these simple data, the San Francisco correspondent indulges in a pleasant dream of silk. The United States, he argues, consumes over \$1,000,000 of raw silk every month in manufactures; so why, indeed, should not the outlook of silk culture in California be promising? The demand for silk is increasing steadily with the increase of wealth, and the country should be in a position to supply its own wants. "California alone could supply all the raw silk needed for the entire United States, but, of course, with its scant population, the production cannot be large for some time to come"—very true. Silk culture in California is, however, not to be a large public industry; careful distinction is made on this point, for it is to be "a home, or rather, family" industry. Under these circumstances, the genial writer argues, that the output of raw silk would be surprisingly large in a few years. "Five or six boys or girls in a family," says he, "with the mother's superintendence, can raise several hundred dollars' worth of cocoons." How much have we not foregone! In the palmly days of youth we not infrequently used to watch the patient struggles of the silk-worm to spin its cocoon between sundry bits of straw placed in secluded portions of our rooms, but we never knew until the present moment that there was the golden prize of "hundreds of dollars" hanging, so to speak, before our very nose.

"Under very favourable circumstances," says the bulletin of the State Board of Silk Culture, "with the help of four or five men for eight or ten days, one could earn from \$500 to \$1,000, and perhaps even more. By favorable conditions, we mean the best mulberry trees near the house, the best silkworm eggs, a suitable

cocoonery, knowledge of the work required, and careful attention by all the workers." There's the rub. These postulates are, unfortunately, not always to be had at short notice; and so we can heartily echo the San Francisco correspondent's wise decision, that the culture of silk "is not all plain sailing."

In spite of many disadvantages, and an not unnatural impecuniosity, a few determined spirits have resolved to make the enterprise a success; and numberless committees and subcommittees have met together to consider the burning question of 'ways and means.' The "Executive Committee on Mulberry Trees" held a deliberative meeting on January 4th of this year; "the committee recommended the importation of the best varieties of trees from Italy for grafting, with the proviso that the expense of the importation should not exceed \$30." Great oaks undoubtedly spring from little acorns, but if the exchequer of the mulberry committee cannot admit of a greater appropriation for the importation of the anthelmintic* shrub, it is to be feared that their hopes will prove abortive. The Chairman of the meeting reported further that a box of first-class silkworm eggs would arrive from Japan about the end of January, and that the "Health Committee was instructed to examine them before paying the charges." Another luminously sagacious proviso. "Parties wishing eggs are requested to file a written application with the Secretary before the end of the month," yet the latest advices make no mention of applicants. But the State Board has judiciously bridged this chasm by offering "500 eggs gratis" to any one who would like to have a hand in the production of silk. It also announces for sale cuttings of mulberry trees, ranging from two to three feet in height, at \$20 per 100; and smaller slips, less than three feet high, for \$15 the hundred.

All this is very laudable, and ought, doubtless, to lead to success. Yet there is a great want of funds to carry out these plans, and, more than all, "money is sadly needed to complete the work of graduating the present class of young ladies" who are still worrying along in the school of silk-reeling. "After some discussion, it was resolved to continue the school for at least two months longer in the hope of financial relief;" the Californians evidently do not intend heavy speculations in the silk market at present. A later paragraph mournfully adds that the school will remain closed until the first of next June, "owing to the lack of funds," but when it does reopen its scholastic portals there will be "greatly improved facilities in the way of new apparatus and enlarged quarters." The secret of the present financial distress is allowed to slip out in the report, despite every precaution. "The Filature Committee reported eleven scholars in attendance during December, and that something over six pounds of silk had been reeled;" da liegt der Hase im Pfeffer! Estimating these six pounds at their highest value, \$1.25 per pound, we have a grand total of seven dollars and fifty cents, with perhaps a dime or so extra for the fractional seventh pound. No silk industry based on a monthly income of \$7.50 can hope to succeed. This is our solemn conviction, nor do even the extra dimes suffice to shake it. And the pupils have evidently been flagrantly idle, for the report states elsewhere that "a good reeler will in one day's work convert a pound of cocoons into silk." Taking this statement into consideration, a simple example will suffice to convict the youthful students of an inexcusable neglect of their opportunities. Say, for argument's sake, that it takes two of these students to make one good reeler, and we have the following equations:—

11 students = 5½ good reelers;
But 1 good reeler = 1 lb. of silk daily,
Therefore 5½ good reelers = 5½ lbs. of silk daily;
Therefore in 1 month 5½ good reelers should turn out 165 lbs. of silk.
But 11 pupils turned out only 6 lbs. of silk,
Therefore there is a moral deficit of 159 lbs. of silk.

* i.e. "good for worms."

This is very shocking, and one must seriously condemn the inaction of the silk-reelers. Perhaps, however, one must view the students as the *larvæ* of perfected silk-reelers, and so it may be that the first equation is incorrect. But even if one admits that

11 students=only 1 good-reeler, there is still a deficit of 24 lbs. The journal from which we quote is evidently aware of this inconsistency, for it adds that "the facilities for instruction are somewhat meagre and admit of only eleven pupils, the youngest of whom is but thirteen years of age."

Beyond all question there is a fine field for silk industry in California, only the starters of the scheme have gone at it in the wrong fashion. It is quite true that "the fertility of the soil warrants the successful culture of mulberry trees," although it remains to be seen that "the climate is admirably adapted to the health of the silkworm." The water of California is also excellent for silk-reeling purposes, on account of its peculiar softness and its freeness from alkaline substances. The idea has been to introduce into every farm, of suitable size, a patch of mulberry trees, thus enabling persons of moderate means to augment their incomes by the breeding of silk-worms. For the present, this seems to be a mistake. If a suitable appropriation for the silk industry were made by the State Legislature a fair share of success would in all probability follow the establishment of a State silk-farm. Other smaller establishments would speedily follow suit, and the venture might easily be successful. The desultory manner in which the industry has been commenced does not at present argue any great success; it is as yet but a pretty plaything, hardly a serious undertaking. The knowledge and experience requisite for the enterprise are not easily obtained, and until several years of moderate success have crowned the efforts of the State Board of Silk Culture there is little prospect that California will become the great silk producing district of the United States.

MURDER AND SUICIDE IN TAKASHIMA-CHO, YOKOHAMA.

On Monday afternoon, the 11th inst., a Japanese interpreter, Kikuna Yoshiyuki, in the employ of the Comptoir d'Escompte de Paris, committed suicide in the house known as "Jimpuro," Takashima-cho, Yokohama. A girl, named Hamanosuke, who was with him, died at the same time from a pistol shot, but it is not known whether death was voluntary on her part or whether the man himself murdered her. It seems that the deceased Yoshiyuki had forged a cheque for \$300, and had sent a woman belonging to the "Jimpuro" to cash it on Saturday morning; she, however, signed the name of the forger on the cheque in presenting it at the exchange shop, and so disclosed the crime. After receiving the money, Yoshiyuki went to Tokiyo in company with the girl Hamanosuke, and visited various places of amusement in Asakusa, where they were seen by an acquaintance. Upon returning to Yokohama, he was informed by the woman who had cashed the forged cheque that she had signed his name on the back of it. Seeing that discovery was inevitable, he resolved to put an end to his life. Whether the girl Hamanosuke consented to die with him is not known, but at all events they were both found dead in the evening, after spending the afternoon in rioting on a grand scale. The deceased was a frequent visitor at the "Jimpuro," and was well known in that quarter. As soon as the first excitement attendant upon the discovery of the tragedy was over, an attempt to murder was made in a tea-house close to the "Jimpuro." One of the touters of the old Yoshiwara, known as Okame-no-kinta, went to the proprietor of the "Jimpuro" in order to condole with him on the unfortunate occurrence, and while there indulged in an excited altercation with one Idzukame, a touter belonging to Takashima-cho. Four of the latter's followers attacked Okame-no-kinta and dangerously wounded him. He is not expected to recover.

RATE OF PROFITS IN 1883.

The Tokiyo Domestic and Foreign Trade Journal (*Chugwai Bukka Shimpo*) publishes the following table, showing the profits realized by various guilds and associations in Japan during the second half of last year (1883):—

	PER CENT.
Nippon Railway Company	10
Kiyodo Unyu Kwaisha	9
Niigata Kingu Kwaisha	11.6
Tokiyo Marine Insurance Company	10
Meiji Life Insurance Company	20

THE LOSS OF THE BRITISH BARK "SATTARA."

MARINE COURT OF ENQUIRY.

A Marine Court Enquiry was held at H.B.M. Consulate yesterday, into the loss of the above-named vessel. The Court was composed of Russell Robertson, Esq., H.B.M. Consul, President; B. Gillett, Esq., Merchant; Captain F. Grandin, of the steamship *Harter*; and Captain Martin of the bark *Velocity*.

Captain Jenkins stated that the bark *Sattara* left Yokohama bound for Kobe on the 19th December last, and up the day of stranding they had very tempestuous weather. She stranded on the 13th of January. At daylight on the morning of the 13th, he was beating to the west of Omaisaki, standing on the port tack from 5 to 7.40 p.m., the wind being W., blowing a moderate gale. At 8 a.m. he estimated the ship to be 8 or 9 miles from Omaisaki Light. At 8 a.m. it suddenly came on to blow, and he reefed topsails, which were furled, and also top-gallant sails. The ship was standing in on the port tack, heading N. by W. by standard compass; she was under lower topsails and reefed courses. At 9 a.m. he furled the upper topsails. At 10.30 a.m. he reefed and furled the mainsail, the wind increasing. At 11 a.m. he called "all hands" to wear ship, at the same time ordering W. Burke, the man at the wheel, to put the helm up, ship heading N. by W., and she went off as far as N.E. $\frac{1}{2}$ E. He considered that the ship was about 3 miles from land when the order to wear was given. The main yards were squared, but he found the ship would not go off more than N.E. $\frac{1}{2}$ E., so he put the helm hard a starboard and made all the sails flat aback. At 11.25 a.m. while the sails were laid flat aback, he was surprised to find the ship touch the ground. He kept the yards aback and hoisted the mizen staysail, trying to back her off with stern board. Found she kept bumping and striking heavily, and canted round broadside on to the sea. Tried to clew up the sails, but they being aback and the wind being so strong, all hands we were not able to clew up the lower topsail. At noon finding the vessel was canting, her head more to the W. he let go the starboard anchor with 30 fathoms of chain. From 1 to 2.40 p.m. the sea was breaking over the vessel fore and aft. The ship was then striking so heavily that the crew were afraid to go aloft to furl the sails owing to the masts flying about so much on account of the ship bumping. At 2.30 p.m. he ordered the starboard life-boat to be lowered. Mr. Humphreys, chief officer, with five able seamen manned her and succeeded in getting a line ashore. In endeavoring to haul the life-boat back to the ship she capsized twice. He tried to get natives to launch the surf-boat, but they were afraid to come; at 5.20 they made the line fast to the surf-boat, but when she was hauled alongside she filled. He concluded to abandon the ship on Monday the 14th, regarding her as a total loss, and finally abandoned her at midnight on the 14th, leaving Mr. Carter, pilot, officers, and crew on the morning of the 15th, with instructions to salve as much as they could. He arrived in Yokohama on Thursday, 17th, and reported the wreck to the agents and the Consulate. On Sunday 20th, he returned to the wreck, and arrived on the following Tuesday (22nd). Found the ship lying as he had left her, only a little more upright. Before he had abandoned her, he, Mr. Carter, Mr. Hunt, second officer, and the carpenter had gone down into the hold, and found the ballast had shifted fore and aft and had left the sides. Several of the stanchion rivets were broken, and the ballast had sunk down 18 inches by the mainmast. The maindeck was sprung, and several seams opened. The ship was far up on the beach when he abandoned her. When he returned, he found she had sunk in the sand. The crew left the place in a schooner on Wednesday, 23rd. He, Mr. Carter, and the Chinese steward remained.

They left on the 2nd of February. He considered the ship seaworthy in every respect when he left Yokohama. There was nothing to indicate shoal water when she struck; he had no idea the water was so shallow. He had a chart of the place (produced). He did not anticipate shoal water, and therefore had not used the lead. Soundings were taken after passing the first bank. The helm put hard a starboard, so as to lay everything back; she had not struck then. He thought there might have been an undercurrent which would not let her go off more; she was then going about 3 to 3½ knots an hour. The ship struck at first about three miles from shore, and now lies about 1½ miles off.

Captain MacDonald, who appeared as surveyor for the Netherlands Sea and Fire Insurance Company, said that after the ship got ashore he was asked by Mr. Von Hemert what he (witness) knew about it, as he (Mr. Von Hemert) had taken a risk on the *Sattara*. Mr. Von Hemert said that he was told at the agents' office that she had a survey report, and he naturally concluded that it had come from him (witness). He (MacDonald) said he had refused to give her a first-class risk. Mr. Von Hemert then said he would not take it. He refused as he did not consider her bottom clean. Witness had connection with the ship through another insurance office, and in connection with that he had told the captain that if he did not satisfy him that the bottom was clean he could not give a first-class risk. If the captain had employed a diver it could soon have been determined whether she was clean or not. He ultimately got a diver (Carst) who reported that the vessel's bottom was very foul. Witness would have been satisfied of the ship had been put upon the bank. He knew after she had left that she had been put upon the bank, but as a fact she left without his making a report upon her.

The Captain put in the survey report by the diver and an account of the expenses he had incurred.

Mr. MacDonald said that if the captain had reported to him that he was going to put her on the beach he should have recommended him to have taken two or three hundred tons of ballast out of her.

Captain J. Carst confirmed his report as to the condition of the ship's bottom before she was beached. He saw her on the beach, after she had been cleaned to within seven feet from the water-line, which was as far as could be reached.

In reply to the Court, Captain MacDonald said he would not have passed her on those certificates, as he did not think that they went down far enough.

Captain Carst, in continuation, said the vessel was put on the bank at high water and was scraped down at low tide a foot under the water, in all about seven feet.

Captain MacDonald—They ought to have gone down three or four feet lower, as the bilge of the vessel is the most important part to clean.

Captain Jenkins—The keel is about nine inches deep.

Captain Carst—The ship was upright on the bank.

Captain MacDonald said no report was presented to him. If it had been impossible to do no more he might have passed her. They should have taken ballast out of the vessel, as it was the flat of the floor that ought to have been scraped. If it had been stated to his satisfaction that more scraping could not be done he might have passed her, but he believed more of her bottom could have been got at by taking ballast out.

Captain Carst said the vessel was put upon hard sand, into which she sunk about six inches.

The Chief Officer of the *Sattara*, Mr. Humphreys, was next examined. He said his watch below was from 8 a.m. till 12, and when he went below at 8 a.m. on the 13th January the vessel was on the port tack heading for the land, wind W.S.W., blowing a moderate gale. He was called about 11 o'clock, and the captain gave orders to put the helm up. The vessel was about four miles from the land, he judged. They squared the yards, but

she would not wear round. When they found she would not wear, they backed the fore and main yards, and the next thing was that she touched the ground. The anchor was let go, but the ship then got broadside on to the sea. The Captain ordered him into a boat with five men to take a line ashore, and the boat was sent back and capsized half-way between the ship and the shore. Next day the captain ordered all hands ashore. The captain told him she was a total loss. He returned to Yokohama with the crew, who were on the beach about a week salving.

In answer to the Court, witness said there was too much swell on to carry a kedge out or to take effective measures to get her off. The ship was going through the water about five knots at the time she would not wear. From the time the helm was put up to the time they found she would not wear was from 20 to 25 minutes, and all the time the vessel was going about five knots, and heading N.E., but she would not answer her helm. After they backed the yards she struck in about 10 minutes. He saw the land about five miles off when he came on deck. He did not know anything about the beach.

In reply to Captain Jenkins, witness said the main-yard was square when she touched the ground. When he came on deck with all hands he found the ship had gone off, and the main-yard was sharp up by the starboard brace. The fore-yard was square when she touched, and he thought her head was N.N.E. at that time, but did not know exactly. The fore and main-yards were braced and the mizen-staysail hauled up about ten minutes before she touched the ground.

In answer to the Court, witness said when he came on deck the yards were sharp up and the ship was on the port tack. When she struck the yards were all aback.

In reply to the Captain, witness said that from the time of leaving Yokohama to the time the vessel struck they wore ship a good many times, and she never refused to wear before under lower topsails, reefed foresail, and fore-topsail. He had found her always answer her helm, but she took a long time to get round. She answered her helm on the passage out, but was always rather slow. She was longer getting round after leaving Yokohama than on the passage out. She would go round under the same canvas in about half-an-hour. He attributed her sluggishness to the fact that she was in ballast. He had stated to the captain, when the vessel was on Kanagawa beach, that her bottom was clean.

George Hunt, the second officer, stated that he was on deck from 8 a.m. to 12 on January 13th. At 8 o'clock the wind was W., blowing a gale, and the vessel was on the port tack under shortened sail. The wind freshened at 9 o'clock, when the other top-sails were taken in. At 8 o'clock he judged the ship to be about 12 miles from land, and going about three knots. From 9 o'clock to 10 the gale continued from the W., and the vessel was on the same tack and steering N.N.W. At a quarter to 11 furled the mainsail, and at 11 o'clock handed over the ship to the captain, who ordered "all hands" on deck to wear ship, the vessel being then about four miles from land. Witness attended the braces, and the yards being squared the ship began to pay off to the N.E., but seemed to stop paying off and then appeared to be coming to. The captain ordered the helm down and the fore and main yards aback, and just after the yards were aback she struck. They loosened the main-topsail and set it, but it had no effect, and the ship came round head to wind, and seeing these operations were no good they clewed up the sails and let go the starboard anchor. The captain abandoned the ship at 12 o'clock on the night of the 14th January, and left for Yokohama. Witness remained salving for six days, and then came up to Yokohama with the crew, arriving here on the 2nd February.

Captain Jenkins had no questions to ask, and the Court adjourned until two p.m.

On resuming,

J. C. Carter stated that he was engaged to pilot the bark *Sattara* to Kobe. From midnight to 4 a.m. on the morning of the 13th January they had variable winds. Between 3 and 4 a.m. he kept her away to head outside Omaisaki Light. As she got up to the light the wind came up from the Westward and she broke off to S.S.W. There was a good current with her and she soon brought the lighthouse bearing N. About 6 o'clock, he went down and consulted with the Captain as it was blowing very hard. They agreed to reef topsails and courses, but it was blowing too hard to hoist the topsails so they left them reefed. At 7.40 a.m. they wore round, head to the land, the ship going N.N.W., wind due W. At 8 a.m. Omaisaki Light bore N.E. ¼ N. about 12 miles distant. At 9.30 a.m. he told the Captain he should lie down, as there was no necessity for him on deck. The Captain said "all right, she won't go near the shore, and I will keep a good look out for you." Between 11 and 11.30 a.m. the Captain asked him to come on deck as the ship would not go off. The Captain was wearing the ship at the time. As soon as he came on deck they agreed that the best thing was to put the helm down and put everything back. The headway was nearly stopped when she touched.

To the Court—The orders to wear the ship were given before he came on deck.

J. E. Carter continued—When she touched she was unmanageable, they clewed up the topsails and put out an anchor. She bumped till about 4 o'clock when she slipped over the bank and ran up on the beach.

To the Court—The Captain consulted him about the abandonment, and they agreed that nothing more could be done. He remained to look after the salvage and returned to Yokohama with the Captain. She struck about a mile outside of the shoalwater as marked on the chart. He often wore the ship after leaving Yokohama and found her slow. She got over the outer bank into a channel. The chart is not correct, at the place she struck there is a bay. The channel between the two shores is about a quarter of a mile wide. There was no holding ground and she dragged considerably, they had 30 fathoms of chain out, all she could take.

The man who was steering at the time the vessel struck (Burke), said he went to the wheel at 10 a.m. and remained till she stranded. When he took the wheel the vessel was heading N.N.W. About an hour afterwards, the order was given to wear ship. She was under lower topsails, reefed courses, fore topmast-staysail and mizen-staysail. When he had the order to wear, he put the helm up and the ship went off to N.E. and would go no further. The Captain asked "was she going off," and he replied "No." The Captain then ordered the helm hard a starboard, he did so, and she came up. Orders were given to back fore and main yards. The ship came up to N. about 9 minutes after, and then struck. An anchor was let go, and the topsails clewed up.

Mr. Carter, in answer to the Court, said he did not hold a Pilot's licence.

Captain Jenkins said that in his estimation the vessel was perfectly seaworthy in every respect. He held a letter from his agents saying that she had been accepted by the home offices as a good risk. He had been in her before on much longer voyages. He attributed the loss to his being misled by the chart and believed there was a current near the shore. He referred the Court to the sailing directions and the chart, which showed at the point where the vessel struck, 3½ fathoms of water and his ship only drew 12ft. 6in. The captain then expressed the thanks of himself and his officers to the Japanese for the great kindness that had been shown them.

FINDING.

The Court finds that the British barque *Sattara* of Liverpool, official No. 47,591, Thomas Jenkins master, was stranded at Shirowa-mura, near Omaisaki, on the south-east coast of Japan on the 13th January last between eleven and twelve in the forenoon, where she has since been abandoned as a total wreck.

It is contended by the master, Thomas Jenkins, that the stranding is attributable to an error in the chart which shows a depth of $3\frac{1}{2}$ fathoms at the spot where the vessel struck, also to an adverse current; he relies, too, on the "Sailing Directions," which describe the coast as being "steep to, with no known off-lying dangers."

The Court, while giving due consideration to what has been put forward by the master, is of opinion that he erred in two particulars, namely, in not using the lead which would have indicated his near approach to shoaling water, and in not wearing ship earlier having regard to the canvas the vessel was carrying at the time.

The Court orders that the certificate of Thomas Jenkins, master, certificate No. 92,216, be suspended for a period of three months from the date of this order. The certificates of Thomas Humphreys, mate, and George Percy Edward Hunt, second mate, are herewith returned to them.

CHINESE DOMESTIC LIFE.

The following interesting lecture on the above subject, by Mr. Hong Beng Kaw, M.A., appears in recent issues of the *N. C. Daily News*:-

Science, it has been said, has now made visible to everybody the great and pregnant elements of difference which lie in *race*, and in nothing is this marked difference more evident than in the social institutions and domestic life of the different races of the world. "Who will believe," says an English writer, "who will believe, when he really considers the matter, that where the feminine nature, the feminine ideal and our our relations to them, are brought into question, the delicate and apprehensive genius of the Indo-European race, which invented the Muses and Chivalry and the Madonna, is to find its last word on this question in the institutions of a people whose wisest king had seven hundred wives and three hundred concubines?" Nevertheless there is nothing which more strongly marks the essential unity of man than the points of similarity and elements of likeness, which we can trace in their early institutions, between the members of one family of people and the members of another.

Now much as the modern yellow-visaged, long-gowned Chinaman differs from the modern blue-eyed red-haired European, yet nothing is more certain than that there was a period in the early history of each of these peoples when they were naked savages, running wild upon the face of the earth without any social or moral restraint whatsoever. The Chinese writers themselves speak of a period in their early history when the people painted their skins, dwelt in caverns, and ate the flesh and drank the blood of animals raw. In an essay upon the origin of the feudal system, the writer Liu Tsung-yüan, of the T'ang dynasty, says:—"The human race, no doubt, came into existence at the same time as all the created things of the earth. Amidst the wild gloom of the virgin forests, where wild beasts of all descriptions abounded, the early man walked about, having nothing wherewith to seize upon his prey to satisfy himself.

Neither could he, having no weapons, defend himself. He was therefore obliged, as the philosopher Jün-ching says, to invent instruments. Now the invention of instruments gave rise to the possession of property, and the possession of property necessarily to disputes. The disputes were, of course, referred to him who was able to decide between the right and the wrong of the matter in question. Those, therefore, who distinguished themselves by their intelligence and prowess would have many who came to them for decisions. Finally, in order to enforce these decisions, punishment had occasionally to be inflicted. In this manner kings and rulers and a system of government came into existence."

The earliest ancestors of the Chinese people—it is now impossible to know whether they were originally immigrants or indigenes of the soil—seem to have first appeared in the modern province of Shensi. Among these people there were already leaders, who led them wandering about, living the unsettled life of a nomad people. At last there arose a great ruler, the Emperor whom the Chinese call Fu-hsi, who finally settled with his people in the western regions of China, selecting for his capital, it is said, a place which is now identified with a town in modern Honan. To this Emperor Fu-hsi, then, is ascribed the honour of having founded the social and political institutions of the Chinese people. To him succeeded Shen-nung and Huang-ti, or the Yellow Emperor, both of whom were said to have carried on the great work of civilising the people, commenced by Fu-hsi. By them the sacred rite of marriage was instituted, and with the rite of marriage we may begin our essay upon the domestic life of the Chinese.

Now, before I enter into the details of the married life of the Chinese, allow me to remark that it is one of the greatest unexploded errors among European writers, like the one I have quoted above, to suppose that the low, degraded position in which women are held, is peculiar to races other than the Aryan or Indo-European, and that the system of polygamy or concubinage is exclusively confined to the people denominated as Asiatic, among whom the Chinese are of course included. In the early history of every people there was a period when man ruled over his brother man by the mere force of his arms and the right of might. In such times, slavery, and the concomitant of slavery, polygamy or concubinage, necessarily existed. Of captives taken in warfare, the males were made slaves, and employed in menial drudgeries, while the females, unless they were old and ugly,—it is, I think, one of the great social problems of the present day in Europe as to what really is to be done with women who are old and ugly,—were made hand-maids or concubines to amuse and delight the leisure hours of powerful captors. This, I take it, is the origin of polygamy or concubinage, as it is of slavery. It was, in fact, a birth of the cruel iron law of Necessity; but gradually, as among us Asiatic people, it became an established institution sanctioned by the people from long usage. In early Greek and Roman times in Europe, the position of women was certainly not much better than it is among us Eastern people at the present age. And in the feudal times of the Middle Ages it was perhaps even worse, as may be judged from that horrible law of the *jus primæ noctuæ* of the barons. But, with the introduction of Christianity, a great spiritual influence had begun to work, an influence which idealised womanhood, invented chivalry, and finally ended by abolishing polygamy and concubinage from all European countries. Now what was this influence?

In order to explain, I must be allowed to quote the great German poet Goëthe, who, in his philosophical novel, Wilhelm Meister, has given a most just theory of the development of human religions, which is applicable not only to Europe, but, I find, even to the religions which we Chinese have had. In early times, he says, men worshipped only those

powers that were above them. In their human relations therefore they submitted only to those who were powerful enough to coerce them by mere prowess and physical force. This was the state of all early savage peoples. The second stage of their development arrived when men recognised the rights of their equals. Hence arose civil and social institutions which were only possible when mere physical force ceased to be held supreme. In the last stage of their development came that influence which made men recognise the rights of not only their superiors and equals, but also of those who were weak and miserable. Christianity, the Creed of Love, brought this last influence into Europe, and Buddhism, the Religion of Mercy, brought it into China. But Buddhism in China was never the central current of spiritual influence as Christianity certainly was at one time in Europe. The influence of Buddhistic teaching in China was, so to speak, always only a side stream crossing the vast flowing river of Confucianism. Nevertheless we shall find that, in the later Chinese literature and in the social and domestic life of the people, the influence of this Religion of Mercy has done not a little in creating the ideal of womanhood in the Chinese mind. As the Christians in Europe have their Virgin Mary or Madonna, the highest and purest conception of womanhood, so almost every boy and girl in a Chinese household is from his or her earliest years made to worship Kuan-yin, the Pure and Merciful One, who listens to the prayers of the wretched. A picture of this goddess—I am quite vexed to have no other word to use—will be found hanging in the private apartments of almost every maiden in China, in order that she may always have before her the ideal of a pure and perfect woman. The maiden is further taught in many households to repeat the ordinary Buddhistic *sutras* for the purification of the heart before this picture, every morning and evening. The good European missionaries call this an idolatry, but it is surely a beautiful kind of idolatry.

But to return to our subject. The system of polygamy* or concubinage, born, as I have said, out of the cruel law of brute physical force, became gradually, among the Chinese people, an established institution sanctioned by the people from long usage. Now in order to pronounce judgment on the characteristics of national manners and morality, it is not sufficient to say that, because they happened to be different from what we have been brought up to conceive, they are therefore to be condemned. "La morale," says Georges Sand, "c'est une affaire toute à fait géographique." It is certainly always a dangerous thing to throw stones at a nation's notions and practice of what is called morality. The pure and moral people of England, for instance, at one time certainly considered it a grave and heinous sin for a man to marry his deceased wife's sister. But within the last few years a great portion of the public opinion in England has suddenly changed, and now many good respectable English people consider it quite proper that an unmarried woman, when her sister dies, should, if it please her brother-in-law and herself, have the legal right to take care of her dead sister's children. So much for public opinion of what is called morality. I have often shocked people by expressing the opinion that public opinion in England may one day again change—having changed in one direction, why should it not change in another?—so that it may be considered quite lawful for a man to marry his wife's sister even before his wife is dead.

But the reason why some people are hasty in their judgment of the moralities of individuals as well as of nations is because they never consider that there are always two elements of the human mind which must necessarily enter into such judg-

* Note—I have here used "polygamy" and "concubinage" as synonymous terms. It is, however, perhaps not so well-known to the European reader that every Chinaman, from the Emperor downwards, can have but one *legal wife*, although he may have as many concubines or handmaidens as he pleases. But I shall have more to say on this point later on.

ment. The Chinese call these two elements *li* and *ching*, which might fairly be translated as *reason* and *sentiment*. Indeed, in European books of moral philosophy it is always a point of dispute as to whether it is our reason or our judgment, or whether it is our feeling or our sentiment, which leads us to consider this action to be right and that action to be wrong, this to be noble and that to be ignoble and base. Now without pedantically entering into abstruse questions of philosophy, it may be said in general terms that, where the relations of the sexes are brought into question, it is always our feeling or sentiment which enters for the most part into the formation of our judgment. But this feeling or sentiment always changes—is subject, as the French writer I have quoted above, says, to the different positions of geography, to the changes and necessities of the times, and perhaps even to the variations of the temperature. For it is certainly true that people of cold northern latitudes are as a rule monogamic and constant in their marriage ties, whereas people of hot southern latitudes are generally polygamic and loose in their relations of the sexes. It is true, as the poet says:

That bright and fierce and fickle is the South,
And dark and true and tender is the North.

Now, from the few glimpses we now have of Chinese married life in early times, the system of concubinage was certainly tolerated. The great wise Emperor Yao, we are told, gave his two daughters in marriage to the good ploughboy Shün. It is equally certain that the emperors and nobles of the period of the three great dynasties had, besides the one true legitimate consort, many other handmaids or concubines. But, judging from passages in the Shi-king, or the Ballads of those early times, the position of women was in no wise a low and degrading one, as might be easily supposed from the existence of concubinage. In a passage quoted by Mencius, the ancestor of the Chows is described as flying alone with his consort and coming to choose a dwelling below the Ch'i mountains. "In those days," says Mencius, "in the house the women were contented, and abroad every man had his wife and helpmeet." Many other passages might be quoted from these ballads showing the happiness and conjugal felicity of those early times. It is true that a woman was then considered good and virtuous because she was able to suffer her lord to have many handmaids or concubines. But then the moral tone of the public mind—to speak in the phraseology of the modern newspapers—was pure and healthy. There was still a certain ennobling principle or sentiment alive in the public mind, under which concubinage itself "lost half its evil, by losing all its grossness." For vice only begins when it becomes conscious of itself, becomes conscious of its own grossness. This is what an English writer meant when, comparing Charles II. and Henry VIII. of England, he said: "The Stuart had mistresses: the Tudor kept wives."

In the beginning of the great Chow dynasty, twelve centuries before the Christian era, a great Chinese Lawgiver arose, who codified and gave permanence to laws relating to the social and domestic relations of the Chinese people. This was the Duke of Chow, the brother of the first emperor of the dynasty. To this day, we Chinese speak of the marriage laws instituted by Chow Kung. Whatever might have been the state of things during the periods preceding this, the ceremony of marriage henceforth became a solemn and religious rite. It was also further enacted that a man might not marry a woman of the same surname; and this law is still binding at the present day, after the lapse of more than two thousand years.

The decay of the great Chow dynasty dates from the time when the Emperor P'ing Wang, the Peaceful, removed the capital to the East. But even before this, moral disorganisation and social disintegration had already set in, beginning, as it always does, at first in the high places. The Emperor Yen Wang, of execrated memory, with his concubine, the celebrated Pao Ssu, had set an

example of moral looseness in their domestic relations that did not take long to spread to all grades of society. In the last year but one of the reign of the Emperor P'ing Wang, we enter the troublous times known in history as the period of Spring and Autumn. From this time forth the manners of the princes and the people drifted more and more every day towards every possible kind of license and extravagance. "Alas!" exclaimed Confucius at the time, "I have not seen one who loveth virtue as he loveth pleasure." The social relations, especially the domestic relations, were being entirely disregarded and set aside. In the courts of the princes as in the halls of the nobles, all manner of excesses were the order of the day. In fact the simple ways and purer manners of those early times were no longer remembered, or, if remembered, remembered only by those who could but sigh over the degeneracy of their own times. It was the sight of this state of things, which made Confucius and his followers lay stress upon the importance of the domestic relations. Good government, it is constantly laid down in the Confucian books, rests solely upon the proper regulation of the family. To illustrate this, a beautiful passage is quoted from the Book of ancient Ballads, in which it is said that "the family well ordered, happy union with wife and children, is like the music of lutes and harps. When brethren well agree, both joy and gladness there abide. By keeping your household in order and taking pleasure with your wives and servants you make your parents happy." This, by the way, is in fact the Chinese ideal of a perfectly well ordered household. Notwithstanding, however, the influence of the Great Master's teaching, the morals and manners of the age did not improve. The system of what Mr. Faber happily calls *Frauenkultur*, the breeding and cultivation of women for the market, became a regular trade. A troop of eighty beautiful girls, with musical and other accomplishments, we are told, were sent by the Duke of Ch'i to Duke Ting of Lu to estrange him from the Master's teaching and to overturn the great reformations begun in that state. The women, accordingly, were received, and the Sage was neglected. "Alas," the Master could only exclaim with a sigh, "I have not seen one who loveth virtue as he loveth pleasure."

The Great Sage himself, however, did not seem to have been very happy in his domestic relations. In the simple ways and healthy customs of olden times, we are told in the Li Chi, a compendium, edited by one of Confucius' later followers, of the minor details of domestic "comme il faut" or etiquette,—in those early times the proper age for a man to marry was thirty and for a woman, above twenty. Confucius himself, however,—according to the traditions,—married at the early age of nineteen, and latterly, for some reason or another, he was obliged to put away or divorce his wife. Dr. Legge thinks, however, that the evidence inclines against the supposition that Confucius did put his wife away. The story therefore may be apocryphal. But we have a saying of the Sage himself recorded by his disciples, complaining of the difficulty of behaving properly to women and servants. "They are discontented," he says, "if we keep them at a distance, but if we allow them to be familiar, with us, they lose their respect for us." We have also one other single instance of the manner of the great Teacher's intercourse with his son. The disciple, who heard how the Master behaved towards his son, inferred from it that "the superior man maintains a distant reserve towards his own son." This, in fact, agrees with the words of Mencius, who says "In ancient times the father never acted as teacher to his own son." It is true to this day that the relations between a Chinese father and his son are always a little reserved. Nevertheless it must by no means be imagined that there is no room left at all in Chinese domestic relations for the play and development of natural affection. It is true that a Chinese son always speaks of his father as the "severe one"

of the family; but it would be a mistake to infer from this that the Chinese father is always an incarnation of severity, in the same manner as the French writer, Monsieur Taine, ridiculously generalises from the fact that an English boy sometimes speaks of his father as "my governor," that there is a fund of stiffness in the intercourse of relations in English households.

But one of the causes—or it may be the effects,—of the laxity of the moral relations of social and domestic life, was the literature of the time. In fact, during this period of transition, one of the great spiritual forces of humanity had set in, a force or influence, defined by an English writer as the spirit of Hellenism, which, by irresistibly forcing men to return to nature and to seeing things as they are, although it never failed to produce splendid results, had, nevertheless, always a side of moral weakness and relaxation. In an essay upon the Taoist philosopher and statesman Han Fei-tzu, the poet Su Tung-p'o of the Sung dynasty says:—"The reason why Holy men detest these strange doctrines, is not because these doctrines are capable of bringing the world into a state of anarchy, but because they are the results and products of anarchic times. Formerly during the decay of the Chou dynasty there arose the philosophers Lao-tzu, Chuang-tzu, Lieh-tzu and their followers * * *. A century and more after the death of Lao-tzu come Shang Yung and Han Fei-tzu. Scholars of after times attribute to these last two the evils which the people suffered under the Ch'in rulers; they do not know that the origin of the evil began with Lao-tzu and Chuang-tzu. Now the doctrine of humanity and righteousness arises originally from the love which husband and wife, father and son, and brothers and sisters bear in their hearts to each other. In other words, the foundations of moral and social obligations have their roots in the domestic relations, in *natural affection*. But Lao-tzu and Chuang-tzu deny this natural affection. They say that the relation between a father and his son is merely one of *accident* like the weeds on the river, which happen to get entangled with each other and thus become related." The philosopher Chuang-tzu himself, we know, took the death of his wife so lightly to heart that a friend who came to offer his condolences found him squatting on the ground, drumming upon a basin and singing. But the two great representatives of the new heresy at the time, who did most to make men do away with all social and domestic relations, were the philosophers Yang-tzu and Mê-tzu. Yang-tzu, according to Mencius, denies the moral obligations of the duties of social life, and Mê-tzu, the moral obligations of the duties of domestic life. "But," says Mencius in just indignation, "a man, who knows not the duties which he owes to his rulers and parents, is—a mere beast." Indeed we can well imagine that the great Confucian Apostle, who owed much of what he was afterwards able to do, to the early influence and teaching of his mother, the mother of Mencius,—who is become to us Chinese what the mother of the Gracchi was to the Romans,—we can well imagine, I say, that he was able rightly and fully to appreciate the importance of the domestic relations. I have already referred to his idea of the proper relation of the sexes, namely, "the women happy and contented at home, and the men, every man with his wife and helpmeet." Bachelorhood therefore found no favour in his eyes; in fact he, considered it a most heinous sin for a man not to marry. "There are three things," he says, "which I consider as sins that a man may commit against his parents: to live and die without issue is the greatest." Moreover, with his perfect knowledge of the human heart, he was not one of those strict inhuman moralists who preach down and would do away altogether with human passion, the passion of love. "In childhood," he says, "a man loves and yearns for his parents, but when he arrives at the age at which the passions are developed, he loves and his heart yearns towards

beautiful girls. Again, when he has a wife and family, his affections are set upon his wife and children." Now it has often been said that in Chinese Domestic Life there is a great deal insisted upon, of the children's duties to their parents, but nothing of the parents to their children. But Mencius lays it distinctly down that it is one of the sacred duties which the parents owe to their children to provide for them a husband for the girl and a wife for the son, as soon as they arrive at a marriageable age. In this manner one of the great social problems is solved in China even at the present day, whereas in Europe, where the mutual obligations and duties between parents and their children may be said to exist only by accident, the poet is obliged to make his hero curse the social institution of the day:—

Cursed be the social wants that sin against the strength of youth!
Cursed be the social lies that warp us from the living truth.

Now in an essay upon the domestic life of the Chinese, I have perhaps expatiated longer than is proper upon points which might be thought impertinent to the subject. But the period of which I have been speaking is a very important one in Chinese history. It was then that the Chinese institutions were fully developed, and they then acquired a degree of permanence which, with very few modifications, still obtains and holds good even to this day. The teaching of Confucius and his followers—which is the standard of Chinese manners and morals in social as well as in domestic life—has often been criticised and censured for its defect with regard to the relation of the sexes; that it permitted and gave permanence to the system of polygamy and concubinage. Now instead of actually setting up a defence for polygamy or concubinage, it is perhaps better for me to state what is the actual relation of the Confucian teaching to this so-called immoral system. In a conversation between Mencius and one of the princes of the time, the prince frankly avowed that he was incapacitated from governing his people properly by his love of women. "What is there wrong," answered Mencius, "in your Highness's love of women, if you could share them with your people?" Thus it is distinctly laid down that it is not the love of women which is immoral, but the loving of women *selfishly*, unnaturally, that is to be condemned. In the same way with polygamy and concubinage, it is not the having or keeping of many wives that makes the system degrading and vicious; the vice lies in the keeping of women selfishly, unnaturally, and immorally. Now in the actually domestic life of the Chinese of the present day, although concubinage is fully and freely permitted, yet, when cases occur,—such as an old man of sixty taking a concubine of fifteen or sixteen,—the circumstances of which are such as the feeling or sentiment in the human mind naturally revolts at, in such cases the public opinion in China never fails in unanimously condemning them. But there is another point in the Confucian teaching with regard to the relation of the sexes, upon which I wish to say a word. Somewhere in the Confucian books it is said that "the behaviour of husband and wife to each other should be like that of host and guest," *i.e.*, that they should treat each other with reverence and respect. Now where there is reverence and respect, the position of women cannot be so low and degrading as it has been supposed to be in China. Moreover, it is said that in giving and taking, men and women may not touch each other's persons.

But to return to my historical sketch of the Chinese domestic life. During the time of the Ch'in dynasty the public and domestic morals and manners of the people were perhaps no better than they were during the last years of the decaying house of Chou. The infamous mother of the First Emperor, by her profligacy and intrigues within the Palace, certainly did not set an example to improve the manners of the people. The Emperor himself was at last obliged to put to death her many paramours—one of whom is alleged to have been his own father, the celebrated Lü Po-wei. But when the House of Han finally came to the throne of China, the many years of wars and constant fighting had produced a salutary change in the manners of the age. It is true, however,

that the wars had also brought in a certain brutality of conduct in the ways of the people. But constant fighting had made the people hardy, and less inclined them to the sensual and profligate pleasures of a luxurious age. In fact this period of Chinese history corresponds very much to the period in European history at the breaking up of the Roman Empire and civilization. It was the beginning of the age of chivalry in China. It has been said: "Out of the strong came forth sweetness." This, I think, is particularly true of the manners of a people. In an age where the men are warlike and brave, the public manners are invariably pure and healthy. We find therefore that during the reigns of the early Emperors of the Han dynasty there was a certain liberty of intercourse between men and women which we do not find in any other period of Chinese history, except in the early times of the three great dynasties. As an illustration of this, I might take the romantic story of Ssü-ma Hsiang-ju, the poet who eloped with the beautiful young widow of a rich family; how the couple, when they were cast off by their family, opened a wine shop in a town in Szech'uan, where the girl served out wine to the customers while her husband washed the dishes. In late years, when the poet had become a courtier in Ch'ang-an and wanted to take a concubine, his wife wrote the beautiful song which is famous to this day. The song concludes thus:—

Weep not, weep not, ye maidens, when you take the marriage vow.
If you can find a true and faithful man, who will be true to you till your hairs are white as snow.

Another example might be taken from the literature of this period to illustrate the healthiness of the public morals as well as the brutality of the manners of the people. A memorial is still extant in which an old Minister reported to the Emperor that he had, in obedience to instructions, made a most careful and minute examination of the lady's person who was a candidate for the position of nothing less than the Empress of the Empire. The many personal and physical details which were given in the report would certainly not have been tolerated except in an age when the public manners were very healthy, free from every taint of pruriency and false delicacy.

This healthy state of the public manners, however, lasted only for a time, and, like all human things, it finally came to an end. With Emperor Han Ch'eng Ti, nearly two hundred years after the beginning of the Han dynasty, the favourite Ch'ao Fei-yen (flying swallow) and her sisters brought vice and profligacy into the palace of the Emperor, which, it may be said, did not fail to produce its results outside the palace walls. At last came Wang Mang, the Usurper, whose character is described as that of a hypocrite and charlatan in Chinese history. Under his administration, therefore, there was introduced in addition to the other immoralities and vices of the time, the great ugly vice of hypocrisy in the public manners of people. But with the restoration of the Hans under Kuang Wu Ti, there was again a change for the better. Nevertheless the free, pure and healthy manners of the early Hans were never again revived. The Eastern Han also lasted nearly two hundred years. During the last years of this House, and more so, when we enter into the period known in history as the period of the Three States, almost the same state of things existed as in the last days of the Chows. Licence, extravagance, and every possible kind of excesses were the order of the day. The same spirit of Hellenism, or it may be called, Naturalism, had again come into the mind of the people. Moral and social obligations of civil and domestic life were no more regarded. The members of the family of the Wei Emperors, were certainly not happy in their domestic relations. Ts'ao Tzu-chien, a poet prince of this house, was banished by his brother Wen Ti, the second emperor of this dynasty, for his attachment to a lady whom his brother had taken to wife. There was also a group of writers, known as the Seven Men of Genius of the Ch'ien An period, who made it their work to set at naught and pull down the social and political order then existing. This society was succeeded by another brotherhood of the Seven Worthies of the Bamboo Grove, who were still more extravagant and reckless both in their writings and conduct. Two of these worthies were uncle and nephew, and the case is often quoted by Chinese moralists as an instance of the shocking confounding of relations,—the case of the old uncle and the young nephew getting often drunk together in a bout of dissipation. Another of these worthies again appeared publicly in gay and fashionable clothing during the period of mourning for his parents, and at the same time joined in all the revelries and dissipations of his friends. These men were in fact what may be called the Free-thinkers of the time.

I must, however, hurry over the period of the Six Dynasties, which was a period of transition,

until we come to the establishment of the Great T'ang dynasty. But I am also obliged to confine my sketch of the public manners and domestic relations of the T'angs to one sentence: the Chinese have a proverb which speaks of the House of the T'angs in their domestic life as the "filthy T'angs," as they speak of the later Hans as the "unsavoury Hans."

Of the families that have sat upon the throne of China, that of the Sung is said to have been the most decorous and decent in their domestic relations. The same statement, however, cannot be applied to the Mongol dynasty, the Yüan, which succeeded the Sung. The Mings are also said to be very decent and proper in their domestic relations. We are now come to the present Ching dynasty. I shall, therefore, in the next and last portion of this paper, endeavour to give such details of the characteristics of the domestic life of the Chinese at the present day as my limited space will permit me.

I began this essay upon the domestic life of the Chinese with the sacred rite of marriage. Now marriage in China is not a matter of sentiment, of mutual love between the man and the woman. It is based solely on the idea of duty. There is therefore very little romance of the heart in Chinese marriages, at least before the wedding day. There are, of course, exceptions, but they are very rare. A Chinaman who marries generally considers that he is merely performing an act of duty towards his ancestors. A man, in China, wants a wife, and he or his family has the means. He simply gets hold of the matchmaker, or go-between, who will arrange all preliminaries for him, or, as they say, do all the courting for him. The lady intended will perhaps know nothing at all of the whole affair until within a few days of the wedding, when she is made to try on the wedding dress. Very often, however, even the bridegroom himself knows nothing. The whole affair is arranged for by the heads of their respective families. It happens sometimes that a boy of fifteen years of age is made to marry before he knows what marriage really means. I know, for instance, of a case where the grandfather was very old, and, as the Chinese say, "drawing near the wood," and the grandson, a boy ten years old, was made to go through the usual marriage ceremony with a little girl one year older than himself. Now this was done in order that the old grandpapa might have a granddaughter-in-law appear at the celebration of his eightieth birthday, or, if he should die, at his funeral obsequies. Early marriages, however, are not so general in old literary families who possess family traditions. They are much more common among what may be called the middle class. In families where the son has to finish his education, to distinguish himself at the literary examinations, his marriage is deferred until he has obtained a degree. It is always an advantage for him, if he is not already engaged, to wait, for literary honours will often procure for him a rich and influential wife. Sometimes, however, the lady's family will make it a condition that he is successful at the examinations before they will give their daughter to him. Early marriages, therefore, as I have said, are not usual in the higher classes of Chinese society. The well known poet, Yüan Tzu-ts'ai, for instance, was married at the late age of twenty-six, after he had obtained the highest literary honours in Peking. In families who have the means, however, the marriage of a son is never deferred beyond the thirtieth year.

I have said that the parents in China regard it as their duty towards their children to provide for them, a wife for the son and a husband for the daughter, as soon as they arrive at a marriageable age. But this part of their onerous duty ceases not with the marriage. In case of the son they have besides to provide for the couple ever after the marriage. Now this has a very serious disadvantage: the sons never become independent. They are in a state of dependence, both morally and for the support of their family, throughout the whole lifetime of their parents. All the members of one family almost always live under the same roof; and even after the death of the parents, the brothers, unless they choose to keep separate establishments, continue to live in the same house. When the father dies, the eldest brother takes his place, and if the mother dies the eldest brother's wife take, her place, at the head of the establishment. We often see therefore a family of six or seven—or even ten—brothers and their wives living under one roof. The poor mother, the mater-familias, has accordingly all these ten daughters-in-law to keep in order. She has often enough to do to keep these young women from tearing each other's eyes out, with the jealousies, petty spite, and tricks that women living in the same house will be sure to have. Again the unmarried sisters often come in to further complicate the difficulty. The English proverb says, blood

is thicker than water; and in Chinese households the mother is always partial to her own daughters, in preference to the daughters-in-law. Hence arise constant and interminable disputes and bickerings. The daughter-in-law, for instance, will complain that the sister has a finer pair of shoes, or such and such a head-dress that she has not; or she will complain that she has had allotted to her more than her share of the household work. An appeal is then made to the son, who will, of course, always side with his better half. In fact, a book itself might be written on the political relations of brothers, sisters and daughters-in-law in a Chinese household. An instance of this may be read in Mr. Giles's admirable translation of the "Strange Stories from a Chinese Studio." Two daughters-in-law were doing their work in the kitchen. The announcement that the eldest son had been successful at the literary examination came in just then. Instantly the mother-in-law went into the kitchen and bade the eldest daughter-in-law cease her work and go and dress herself. The other girl, of course, had nothing to do but to cry to her heart's content. Soon after, however, the other son was also announced as having been successful. The girl who had just been weeping then also threw away her work, saying, "I, too, will go and dress myself."

But this system of keeping one large establishment for all the members of one family has also many advantages. One of these is this. A girl—and girls in China, as I have said, are often very young at the time of their marriage—who marries has not to accept the serious and arduous responsibility of the proper management of a household. She is in most cases unprepared and unfit to take care of a house. But then she enters the roof of her husband's family only as an apprentice to the life of a matron. There she finds everything ordered, arranged, and prepared for her. Only one sleeping apartment and one seat more at the dinner table have to be provided for her. As yet she has all the duties of a good housewife to learn. In the mean time, all she has to do is to obey, with strict and implicit obedience; she is not yet called upon to order, to command. By and bye, however, a portion of the household duties is allotted to her. Then she can exercise a little authority, but still under the supervision and orders of the powers that be. In large and wealthy households, each of the daughters takes charge of one special department. One, for instance, will keep the accounts of the family expenses, this, by the bye, being the most eagerly contended-for position. If there is an unmarried sister in the house, the mother almost always gives it to her. But if there is no unmarried sister, each of the daughters-in-law in the house will try what she can do to get this enviable post of family bookkeeper. As a rule, the girl who finds most favour in the mother-in-law's eyes will get it. The others then will take charge, one, of the dress department, and another of the paint and powder, or cosmetic department. When the unmarried sisters are very young, the eldest of the daughters-in-law will be allotted the task of looking over them, superintending their studies, needlework, and their proper behaviour generally. It happens sometimes that one of these girls is selected to amuse the old mother-in-law—to read to her, if she can, out of some amusing book, to play chess, cards, or dominoes with her; in fact to keep her from wearying. Above all, in all well regulated families one daughter-in-law has nothing to do but to receive guests and to pay and return visits.

But we will follow these young women each into their allotted private apartments. There each is her own mistress. She is there subject only to her husband, and very often the husband himself is subject to her. She has generally a servant or slave-girl of her own, who came with her at the day of marriage from her own family. This girl she can order about just as she pleases, and if the girl displeases or provokes her, she can even chastise her, of course in her own private apartment. The girl, of course, cleans, sweeps and puts the room in order for her, wakes her up at the proper time, waits upon her with hot water, tea and all necessary things, or even assists her in her toilette. It is also through this girl that she sends her messages or buys her little things outside. The girl becomes, in fact, sometimes her confidante, or perhaps has been so even before her marriage, and therefore knows all her little secrets. I may mention, by the way, that she will sometimes persuade her husband to take the little hussy as his concubine. It sometimes happens, however, that the husband first takes liberties with the maid and then persuades the mistress to allow him to take the "good little girl" into the more intimate relationship. It is, moreover, considered that the wife is in the wrong who would not allow her husband to receive her own maid. Besides, it is perhaps better that the No. 2 should be one upon whom she has always been accustomed to exercise her petty authority,

than that it should be a strange woman from outside, who is not accustomed to her little tricks, and who perhaps does not recognise her authority. In case of her death, too, she knows that her own maid, who has been taking care of her own children, will have a love and kindness for them such as no other woman will. Cases, therefore, often occur in which the wife at her death-bed will leave word with her husband to make her maid the mother of her own children. The relation between the maid and mistress is very often a beautiful human one. Now I will only further add that this maid is merely a slave girl, bought of her poor parents in early childhood. This, then, is the form of domestic slavery against which such an outcry has been made in Hongkong and elsewhere. I do not, of course, deny that the poor slave girl is very often also badly and inhumanly treated. But even then the law in China provides that the master shall marry her at a certain age, not above thirty. Ill-treatment of slave girls, however, occurs in most cases in what are called in Europe, "shabby genteel" families; families who really cannot afford to keep a maid. The poor girls then become Cinderellas of the family; get very bad and insufficient food and clothing, and more than they are capable of doing in the way of the household drudgeries. But in rich and well-to-do families these girls are perhaps better treated than they deserve. They sometimes play tricks—convey messages, and become thereby the means of bringing ruin and dishonour upon the family who has treated them so well.

But to return to the daughter-in-law. She is supposed—according to immemorial tradition—to rise with the cock's crow, in order to commence her household duties. The first thing she has to do is to wait upon the parents of her husband as soon as they get out of bed. She is supposed to get ready their hot water for purposes of ablution, to prepare the breakfast for the old people, and then to receive their orders for the day. At the present day, however, in rich families, the actual performance of these onerous duties is generally dispensed with, except just the first few days after the marriage, when the bride has actually to make a pretence of performing these duties. As a matter of fact, it is true still in some mandarin families that the daughters-in-law have to appear before the old people every morning to pay their respects. Moreover, each of the girls takes it by turns to superintend the servants who wait upon the old folks when they get out of bed. The same rule applies to the evening. The girls are never allowed to retire to their private apartments and join their husbands before the heads of the family have retired to their rooms. I actually know of a family where a poor delicate little girl is said to have completely ruined her health by sitting late at nights waiting for the old father-in-law to retire to rest.

After the morning visit to the old people the duties of the day begin. These duties, however, in rich families, are not so very onerous. The young women as a rule wait in some one chamber, whither the female head of the family comes down to give her orders for the day. When the mother-in-law is still young and vigorous, she generally does the greater part of the management of the house herself. But if she is well on in years, or ill in health, one of the elder girls who has her confidence will do it for her. Still, in order to keep up the tradition of the family, and still more to keep these young women from fighting and brewing mischief, they have to be kept in some sort of employment, and they thus receive their orders accordingly. But as a matter of fact, they simply make a pretence of doing something. In most of the wealthy families that I know I am told that the daily occupations of the young mistresses in the house are dressing, sleeping, and card-playing. There is only one family of my acquaintance where the girls can read, and the reading too in this case I am informed is confined to the most vulgar trashy novels written in the colloquial. Other accomplishments, such as drawing and music, are still more rarely to be found. As regards music, such as is played and heard in the streets and theatres, it is considered disreputable for a girl to know these musical instruments. There is only one instrument which is above suspicion; that is, the ancient seven-stringed dulcimer. I have a friend whose lady is said to be able to perform upon this instrument, but I have never been able to persuade him to allow me to be present at a recital. In fact, I think that one of the reasons why a Chinese woman never has the health and colour of English girls, is because she has really no sane and healthy ways of passing her time. Miss Harriet Martineau suggested that skipping-ropes might, with great advantage, be introduced among the idle Turkish ladies. But then in China we have the golden lilies, which, of course, will not admit of skipping-ropes. There is then but one other amusement that I can think of at this moment; that is the swing. I have indeed read a great deal, both in prose

and verse, of ladies taking exercise on the swing, but I do not know of one family where the girls take to this amusement.

But it will be said, Why do not the women work? They do, as I have said, make a pretence of working. But then there are so many servants in a rich household. Indeed, I think the reason why most of the Chinese houses are kept in such a state of filthiness and dirt is because they have too many servants. Two good housemaids in England will, I am of opinion, keep the house more tidy than ten servant girls in a Chinese household. By the way, I may mention another reason why I think the interior of a Chinese house is kept so unrepresentable. Confucius says: "Thriftiness leads to meanness." It certainly leads to uncleanness. And thriftiness is one of the vices of Chinese women. Every boy and girl—especially every girl—is taught from his or her earliest years, not to be virtuous and good, or always to speak the truth, but ever and always to be thrifty. Although a Chinaman and to the manner born, yet I do not consider that I have the vice of thriftiness to an immoderate degree. But if ever I have children, be they boys or girls, I shall certainly whip thriftiness out of them. It is this thriftiness, in fact, which leads to so much "untruthfulness," another of the mean vices of which Confucius speaks, for which the Chinese are so much cried down by foreigners.

Now, before I speak of the relations between the husband and wife in China, let me again sum up my conclusions on the system of keeping one large establishment for all the members of one family. It destroys independence in the men; but it is perhaps a great advantage for the women. It trains them gradually to be fit to take care of a household. In fact, to keep the peace in a house with eight or ten women is in itself a discipline. Moreover, this living under the supervision, under the eye, we may say, of her mother-in-law—a woman who is always older than and more experienced than herself—is always an advantage for her both morally and, I will not say, intellectually, but certainly in a way to teach her many womanly duties, if she is only anxious to learn. She can, too, always go to someone for advice, in case of sickness, sorrow, or affliction. Again, the constant companionship with her sisters-in-law in the same house will certainly keep her away from many temptations that she would be exposed to—a raw, green, inexperienced girl as she is—if she lives alone with her husband. This part of the Chinese social institutions, therefore, cannot altogether be condemned.

Now we will bring the man and wife face to face in their private apartments. Imagine it to be the first night of their wedding. The unruly guests who came to tease the bride have all retired, and so have the servants. The red auspicious candles are still burning. The bride has doffed the most part of her unwieldy attire. There hang the many rich and gaudy scrolls inscribed with golden wishes for the happy pair. There is also the sword hanging in one part of the chamber, which in ancient times, was supposed to give the power of life and death to the husband. There the poor girl sits—the woman whom he has never seen, but who is now to be his partner for life through good and through evil report. She is perhaps frightened. He, too, is not at his ease; fidgets about, perhaps looks furtively askance at her. But night is wearing late. The watchman outside has beaten the fourth watch of the night; the candles burn low, and the room is filled with a perfume that makes faint the senses of a young man only once in a life time. The old woman who accompanies the bride will perhaps then come in to tell them that it is getting very late, and to bid them retire to rest at once, as they have to be up betimes to-morrow to perform the other part of the marriage ceremonies. The old woman will then finally retire. Now he must speak to her—to his bride. But what will he say?

Now that is one of the questions which you will never get a Chinaman or woman to answer you. I must therefore ask the reader to imagine it for himself. One thing, however, I wish here to emphasise that is not so well known among Europeans, namely, that a Chinaman almost always respects the wife of his first marriage. Time may come when his love for her may change, but he never or seldom ceases to respect her. He may take in many concubines or run after strange women. But she is always his wife. It is generally her fault if he ceases to treat her as such. She may be stupid, she may be ugly, bad-tempered; she may storm and rage, she may even beat him, over his many irregularities. But as long as she is true to him and to no other, and as long as she respects her parents, she is his wife, the mother of his children, the woman who will lie beside him when they are gathered to their fore-fathers. "By Allah!" as the Arabian prophet said, when his beautiful favourite concubine asked him whether he did not love her more than his first wife, "by Allah! no; I shall love no woman as I have loved her."

Latest advices from the Soudan state that Baker Pacha continues his advance.

A foraging expedition sent out towards Sinkat has been cut to pieces.

Obituary.—M. Rouher. Wendell Phillips.

[M. Eugène Rouher was appointed Minister of Agriculture, Commerce, and Public Works in Feb., 1885, and he was one of the plenipotentiaries who negotiated with Mr. Cobden the Treaty of Commerce between England and France signed in 1860. He belonged to the Imperial party, and at the fall of the Empire followed Napoleon III. to England.]

[The following sketch of Mr. Phillips appears in "Men of the Time":—Phillips, Wendell, born at Boston, Nov. 29th, 1811. He graduated at Harvard College in 1831, at Cambridge Law School in 1833, and was admitted to the bar in the following year. In 1837 he joined the Abolitionists, and identified himself with the Anti-Slavery, Temperance, and Woman's Rights reforms, and has ever since been one of the most popular orators in America. During the civil war he advocated a vigorous policy, especially urging the emancipation of the slaves. After the close of the war he opposed the dissolution of the American Anti-Slavery Society, and, succeeding William Lloyd Garrison, was its President, until its final disbandment in 1870.]

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 7.30, 8.45, 9.30, 10.15, and 11.30 a.m., and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 10.30 p.m.

The Trains LEAVE TOKIO (Shinbashi) at 7.30, 8.45, 10.00, 10.45, and 11.30 a.m., and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 10.30 p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, FEBRUARY 8TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 26.1 miles per hour on Monday at 2 and 4 p.m.
The highest reading of the barometer for the week was 30.317 inches on Tuesday at 10 a.m., and the lowest was 29.677 inches on Friday at 3 p.m.
The highest temperature for the week was 48.3 on Tuesday, and the lowest was 20.9 on Monday. The maximum and the minimum for the corresponding week of last year were 42.6 and 17.2 respectively.
The total amount of rain and snow for the week was 0.892 inches, against 0.00 inches for the corresponding week of last year.

On the 12th instant, the Princes of the Blood and the high military officers belonging to the mission under General Oyama were entertained in the Palace at tiffin.

The Government officials propose giving a farewell banquet to General Oyama.

An instalment of \$900 on the Korean indemnity was recently paid into the Japanese Consulate in Seoul, but the quality of the silver was so poor that the Consul requested the Korean authorities to change it. This they refused to do, on the grounds that the money was packed when handed and that it was the fault of the Japanese Consul that he had not properly examined it. The matter was finally referred to the Government.

On the 4th inst., while fishing off Ooshima, a native fisherman noticed a box floating out at sea, and heard the cries of a child. On rowing up to the box, he found a little girl, about five years old, in it, with plenty of food about her. A note was found in the box stating that she had bitten the nipple off her mother's breast, and that she had been put in the box and consigned to the waves in consequence. The fisherman concluded that the girl, if let live, would grow up to be unprincipled and unruly, and so pushed the box with its contents out to sea again. Upon returning to land, he reported the matter to the authorities.—*Fiyu Shimbun*.

The European dietary system will be introduced in the Naval Hospital.

The Spring Meeting of the Mita Race Club will take place on the 8th and 9th of next month.

Diphtheria is raging in the gaol at Ishikawa. All necessary preventive measures have been taken.—*Fiyu Shimbun*.

Mr. Tak Chang-sik, a Korean gentleman noted for his knowledge of the Japanese language, and distinguished as a promoter of his country's interests, died in the Kobe Hospital on the 11th inst. He was a man of great ability and genial disposition. Although his father was a privy councillor he refrained from entering upon an official career. All his energies were devoted to the promotion of the civilization in his own country, and his untimely decease is regretted by a large circle of friends.—*Fiji Shimpō*.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Seisho Maru*, from Kobe:—27 Japanese.

Per Japanese steamer *Ise Maru*, from Kobe:—Admiral Akamatsu in cabin; and 80 Japanese in steerage.

Per Japanese steamer *Kowyeki Maru*, from Yokkaichi:—40 Japanese.

Per Japanese steamer *Shidzuoka Maru*, from Shimidzu:—24 Japanese.

Per Japanese steamer *Kairio Maru*, from Yokkaichi:—30 Japanese.

Per Japanese steamer *Takasago Maru*, from Hakodate via Oginohama:—Sister MacAlwine, Messrs. M. Nomura, O. Fujinuma, and J. Watanabe in cabin; and 105 Japanese in steerage.

Per Japanese steamer *Gembu Maru*, from Yokkaichi:—80 Japanese.

Per Japanese steamer *Niigata Maru*, from Kobe:—Messrs. John de Ryke, Nishigawa, Hikida, Atago, and Takaishi in cabin; and 58 Japanese in steerage.

Per Japanese steamer *Saikai Maru*, from Toba:—34 Japanese.

Per Japanese steamer *Hiroshima Maru*, from Shanghai and ports:—H.I.H. Prince Yamashina-no-Miya, Mr. and Mrs. Ottoson, Messrs. R. S. Schwabe, W. S. Anderson, J. D. Macintosh, W. S. Robertson, Jas. Scott, J. Bousse, Max Norwald, Yokoyama, Kawano, Fujishima, Azegami, Shaku, Iba, and Ito in cabin; 2 Europeans and 130 Japanese in steerage.

Per Japanese steamer *Kengi Maru*, from Yokkaichi:—25 Japanese.

Per Japanese steamer *Owari Maru*, from Hakodate:—34 Japanese.

Per Japanese steamer *Shima Maru*, from Yokkaichi:—22 Japanese.

Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—48 Japanese.

The British steamer *Kashgar*, from Hongkong via Nagasaki and Kobe:—Mr. and Mrs. Blissett, Mrs. I. Ye Tong and servant, Miss Murray, Messrs. Medwin, Nanson, Hindson, Watson, Evers and Nonaka, in cabin; and 12 Japanese in steerage.

Per Japanese steamer *Yechigo Maru*, from Fushiki via Kobe:—19 Japanese.

DEPARTED.

Per American steamer *City of Rio de Janeiro*, for Hongkong:—Mr. and Mrs. E. H. R. Manley and family, Mrs. H. A. Happer, Mrs. Hunker and son, Miss Bingham, Miss M. A. Baird, Messrs.

Jas. R. Anglin, and Mr. A. Hinz in cabin; and 298 Chinese in steerage.

Per Japanese steamer *Toyoshima Maru* for Kobe:—Mr. Wm. Stoffregen in cabin; and 25 Japanese in steerage.

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—Captain and Mrs. W. Walker, family, and servant, Mr. Lye, Chinese Consul, Mrs. Hannum, Mrs. Graham and child, Madame Fujioka (3), Mrs. Yoshimura, Rev. A. R. Morris, Messrs. M. Ginsberg, V. Faga, M. M. Rewakoff, Pevier, C. Lyons, G. T. Lyons, Milits, Yasuda, Yeura, Betsuyaku, and Ikeda in cabin.

Per Japanese steamer *Seirio Maru*, for Yokkaichi:—50 Japanese in steerage.

Per Japanese steamer *Takasago Maru*, for Kobe:—Mr. Geo. Sale in cabin; and 35 Japanese in steerage.

Per Japanese steamer *Niigata Maru*, for Hakodate via Oginohama:—Messrs. J. A. Wilson, G. Mori, and Inada in cabin; and 66 Japanese in steerage.

Per French steamer *Menzaleh*, for Hongkong:—H.E. General Oyama, Minister of War, General Miura, General Nodzu, Colonel Kawakami, Colonel Katsura, Lieutenant Nojima, Lieutenant Ijichi, Lieutenant Matata, Lieutenant Harada, Commander Shimidzu, Commander Ozaki, Commander Murai, Commander Yabuki, Intendant Koike, Dr. Hashimoto, Mr. and Mrs. Bennett, Mrs. Anais, Mrs. Macarie, Mr. Hikigai Otokichi and son, Messrs. J. M. James, F. Dubois, Jenkins, W. S. Robertson, J. Bousse, Zelesny, Inouye, S. Go, Matsudaira, Hashimoto, Iwase, Amagata, Hijikata, Harada, Wada Tsunashiro, Mamba Shitoshi, S. Hikida, J. Shiba, Matsunami, N. Izawa, J. Hada, and Natsuoka in cabin.

CARGOES.

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—Treasure, \$57,000.00.

Per French steamer *Menzaleh*, for Hongkong:—Silk, for France, 269 bales; for England, 18 bales; Total, 287 bales.

Per British steamer *Kashgar*, from Hongkong via Nagasaki and Kobe:—Cattle, 20 head; Twist, 190 bales; Sugar, 4,154 bags; Sundries, 1,276 packages; Total, 5,640.

REPORTS.

The British steamer *Harter*, Captain Grandin, from Hongkong, reports having experienced strong N. to N.E. winds with high sea and unsettled weather throughout the whole passage.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard, reports leaving Kobe on the 10th February, at 10.50 p.m. with light N.W. winds and fine weather throughout the entire passage. Arrived at Yokohama on the 13th February, at 7 a.m.

The British steamer *Kashgar*, Captain W. J. Webber, reports leaving Hongkong on the 7th February, at 1 p.m. with fresh head winds and fine weather to Nagasaki, where arrived on the 12th, at 2.20 a.m.; left Nagasaki on the same day, at 3 p.m. with light adverse winds and thick rainy weather to Kobe, where arrived on the 14th, at 11.20 a.m.; left Kobe on the same day, at 8.20 p.m. with fresh N.W. winds and fine weather. Arrived at Yokohama on the 16th February, at 7 a.m.

SHIPPING IN YOKOHAMA.

STEAMERS.

Godavery, French steamer, 1,049, Du Temple, 14th October, —Hongkong 7th October, Mails and General.—Messageries Maritimes Co.

Harter, British steamer, 1,196, Grandin, 12th February, —London 23rd November and Hongkong 3rd February, Mails and General.—Smith, Baker & Co.

Hiroshima Maru, Japanese steamer, 1,862, J. Wynn, 14th February, —Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.

Ingeborg, British steamer, 436, O. M. Meldrum, 13th February, —Hongkong via Shanghai and Kobe 11th February, Ballast.—Bernard & Wood.

Kashgar, British steamer, 1,515, W. J. Webber, 16th February, —Hongkong 7th February, via Nagasaki and Kobe, General.—P. & O. S. N. Co.

Meiji Maru, Japanese steamer, 1,010, Captain Allen, 14th December, —Lighthouse Inspection, Stores.—Lighthouse Department.

MEN-OF-WAR.

Fuso Kan (12), Captain Inouye, 21st December, —Nagasaki 15th December.

LATEST COMMERCIAL.

IMPORTS.

The tone of the Market generally remains satisfactory, and though the volume of business, apart from Cotton Yarns, has not been large, prices have been well maintained and in some cases rather higher.

COTTON YARN.—Buyers have been very eager for business, and large sales have again been reported in nearly all descriptions at a further slight advance, but at the close there are symptoms of a quieter feeling.

GREY GOODS.—Shirtings have been in very limited demand, but prices are said to be very firm, for best makes of 9 lbs. and for common 8½ lbs. Fair sales of T.-Cloths 7 lbs. are reported both of English and Bombay goods.

FANCIES.—Turkey Reds have been again sold largely; Velvets still are scarce, and command full prices, and a moderate business is reported in Victoria Lawns. Mousselines de Laine, Italians, and other Woollens are rather quieter, but can scarcely be quoted lower.

COTTON YARNS.

	PER PICUL.
Nos. 16 to 24, Common to Medium	\$26.00 to 28.50

White, No. 5	4.60 to 4.75
Brown Formosa	3.90 to 4.00

EXPORTS.

RAW SILK.

Our last report was dated the 7th instant, since when a fair business for the time of year has been done. The Settlements for the week are returned as 400 piculs; and without doubt, more purchases would have been made, had not some holders raised their demands to an impracticable point, while others have withdrawn their Stocks from

the Market for the present. To show the intermittent nature of the business done, we may instance the fact that more than half the Settlements took place on one day (the 9th), while the two following days passed without a single transaction. *Hanks* have come again prominently into notice at an advance over last week's rates, and the higher grades are now held off sale at prohibitive prices. In *Filatures*, there has been less enquiry for coarse kinds, there being no steamer for San Francisco until the 1st proximo, but all grades are firmly held in spite of an easier Exchange in the native currency.

The P. & O. steamer *Khiva*, which left at daylight on the 9th instant, had on board 370 bales; of these 43 were entered as going to London, and 336 to Continental ports. This vessel's cargo brings the total Export up to 26,806 bales, against 20,186 bales last year, and 13,132 bales at same date in 1882.

Hanks.—This class has been most in demand during the week, Settlements reaching 225 piculs. Holders have checked business by opening their mouths too wide; but orders are supposed to be in town at something like last week's prices, and it remains to be seen which side will give way. Among the Settlements we notice *Shinshu*, \$520 (afterwards cancelled); *Chichibu*, \$500; *Takasaki*, \$485; *Hachoji*, \$470; *Koshu*, \$465; *Yechizen*, \$430.

Filatures.—There has not been very much doing in these, but what has transpired appears to be at full rates. In fine sizes some fairly large parcels have been taken at from \$625 to \$610, and in coarser kinds, \$620 is reported to have been freely paid, for a good lot of *Hida*. Some desirable parcels are held off the Market altogether, and for others long prices are demanded. Holders appear strongly entrenched, and buyers on their side assert that the news from home does not warrant their paying whatever price sellers choose to ask. Among the sales made, we observe *Yamagata*, \$625; *Hida*, \$620; *Mino*, \$610; *Hagiwara*, \$605; *Shinshu* and *Koshu* sorts, \$600 to \$590.

Re-reels.—These have again been almost a dead letter; there are rumours of some transactions between foreigners, but the regular business has been very small, and comprises a few bales only. *Takasaki*, \$580; *Bushu*, \$570.

Kakeda.—Transactions in this class reduced to a minimum, the sum total resolving itself into one parcel reported at \$555. Holders ask higher prices, but all quotations must be looked upon as nominal in the absence of business.

Oshu and Coarse Kinds.—Nothing done, and no movement of any kind to report in these descriptions.

QUOTATIONS.

	SEASON 1883-84.	1882-83.	1881-82.
France and Italy	16,416	10,465	6,512
America	7,774	6,667	4,032
England	2,616	3,054	2,588
Total	26,806	20,186	13,132

WASTE SILK.

Again we have to notice more doing in this Market, and as before, buying has remained in few hands. Settlements for the week have been about 350 piculs, and as arrivals for the same period were but 170 piculs, the already attenuated Stock-list shows a further diminution. Enquiry for some kinds is good, and sellers have again been able to advance rates a little. The English mail of the 9th took 119 bales, bringing total Export of Waste and *Cocoons* up to 19,492 piculs, against 17,269 piculs last year, and 14,724 piculs in 1882.

Pierced Cocoons.—The few piculs in Stock last week have been taken into foreign godowns for sorting and inspecting, thus leaving the Market

quite bare. The season for these is now closed, and should any further supplies come down, they will be dribbles only.

Noshi-ito.—Holders maintain a firm attitude supported by the paucity of the Stock. *Filatures* are wanted at higher prices, and business is reported in *Shinshu* at \$140; *Koshu*, \$130; Fine *Bushu* *Noshi*, \$120; Fine *Foshu*, \$100; Assorted *Foshu*, \$90 to \$85 (one parcel "Summer reeling" which had been held over, fetching as much as \$95); with a modicum of Common at \$55 to \$60.

Kibiso.—Some business done in this class, ranging chiefly in Medium *Foshu* at from \$35 to \$40, per picul. Some *Oshu* at \$80, with *Hachoji* at \$22½ and \$17 complete the list. *Filatures* could be readily sold at good prices, but there are none offering.

Neri.—There are rumors of a small parcel being taken at \$15, but the report lacks confirmation.

Mawata.—No transactions at present, buyers standing out in hopes of obtaining a concession in price.

QUOTATIONS.

Sendai & Hamatsuki	300	Mawata	190
Taysam Kinds	50		
Total piculs	2,800	Total piculs	790

TEA.

There has been very little animation in our Market during the past week, and but few purchases have been made. Prices are quite firm at our quotations. It would seem that the approaching close of the season, which promises to be considerably earlier than last year, and the general belief that there is but a very small quantity of leaf to come forward from the country, have stimulated a few purchasers to operate at advanced prices. Stocks here are very small, most dealers have sold their entire supply, and receipts from the country have come in very slowly. The aggregate Settlements only foot up to about 340 piculs, and consist mostly of Tea grading Medium. The P. & O. steamship *Khiva* took 80,005 lbs. Tea for New York via Hongkong.

QUOTATIONS.

Common	\$12 & under
Good Common	13 to 15
Medium	17 & up'ds
Good Medium	Nominal.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Faker that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S
PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S FLORIDA WATER,

a most fragrant Perfume distilled from the choicest Exotics

ATKINSON'S QUININE HAIR LOTION,

a very refreshing Wash which stimulates the skin to a healthy action and promotes the growth of the hair.

ATKINSON'S

ETHEREAL ESSENCE OF LAVENDER,

a powerful Perfume distilled from the finest flowers.

ATKINSON'S WHITE ROSE TOILET VINEGAR,

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,

and other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

ESTABLISHED 1799.

Dec. 29th, 1883.

KEATING'S POWDER.
KEATING'S POWDER.
KEATING'S POWDER.
KEATING'S POWDER.

KILLS BUGS,
FLEAS,
MOTHS,
BEETLES,

THIS POWDER is quite HARMLESS to ANIMAL LIFE, but is unrivalled in destroying FLEAS, BUGS, COCK-ROACHES, BEETLES, MOTHS IN FURS, and every other species of insect. Sportsmen will find this invaluable for destroying fleas in their dogs, as also ladies for their pet dogs.

THIS ARTICLE has found so GREAT a SALE that it has tempted others to vend a so-called article in imitation. The PUBLIC are CAUTIONED that the tins of the genuine powder bear the autograph of THOMAS KEATING. Sold in Tins only.

KEATING'S WORM TABLETS.
KEATING'S WORM TABLETS.
KEATING'S WORM TABLETS.
KEATING'S WORM TABLETS.
KEATING'S WORM TABLETS.

A PURELY VEGETABLE SWEET-MEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children. Sold in Bottles, by all Druggists.

Proprietor—THOMAS KEATING, London.

January 4th, 1884.

20in.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.

South African Exhibition, 1877, Gold Medal.

Paris Exhibition, 1878, Gold Medal.*

Sydney Exhibition, 1879, First-class Diploma.

Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Sole Export Agent—BROOKER, DORE & Co.,
Corbet Court, London, E.C.

May 1st, 1883.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEBRUARY 23RD, 1884.

DEATH.

At Philadelphia, U.S. of America, on January 13th, 1884, suddenly, LYDIA E., wife of Jno. C. Ballagh Esq., recently of Tokio.

SUMMARY OF NEWS.

An attempt to break Jail was made by the prisoners at Okayama on the 8th instant. The plot was discovered and frustrated.

It is stated that additional purchases of railway bonds have been effected by the National Banks, and this highly improper use of bank funds is ascribed to a circular addressed to the Banks by the merchants of Tokiyo.

THE *Hochi Shimbun* publishes a curious story to the effect that a continuous system of theft was carried on in the International Exhibition at Amsterdam by the Inspector General of Police. The goods stolen amounted in value to \$140,000.

A GENTLEMAN has written to the local press warning foreign residents in Tokiyo against fraudulent attempts on the part of Japanese coal merchants to deliver short weights.

A PROCLAMATION has been issued by the Council of State fixing the tax to be levied hereafter on the sea-weed obtained in the prefectures of Nemuro and Hakodate. In the former the tax is to be 10 per cent., in the latter 20 per cent., of the amount fished.

A REPORT is circulating that apprehensions are entertained of an unsatisfactory yield of silk in Japan this year. Similar rumours are set afloat

every spring, and the causes to which the probable deficiency is attributed in the present case are not of a nature to inspire much confidence in the truth of the rumour.

His Excellency the Minister for Foreign Affairs returned to Tokiyo on the 21st instant, accompanied by Madame Inouye and Madame Katsu Inouye. The latter lady, we are happy to state, is quite restored to health.

On the morning of the 19th instant, a godown belonging to Messrs. J. D. Carroll & Co., and containing rope, paint, oil, cotton yarn, etc., was destroyed by fire. The goods were insured for \$60,000, it is said.

SYMPTOMS of a revival of business begin to be discernible, the railway receipts, among other things, showing totals in excess of those for the corresponding periods of last year, a result which has not been witnessed for some time.

A SPECIAL meeting of the Tokiyo Traders' and Manufacturers' Association was held at the Meiji Kwaido on the 18th instant. The subjects discussed were the banking system of Japan, and a scheme submitted by the Minister of Finance for extending the use of bank bills.

It is said that the authorities contemplate the issue of return postal cards. The idea of these cards in that, when desirable, an answer may be written on the same card by the recipient and forwarded to the original sender free of expense. The vernacular press anticipates a great increase to public convenience from this facility.

THE experience of the past two years having shown that an inconvenient accumulation of cases, both civil and criminal, can scarcely be avoided with the system of law courts at present existing, reforms, intended to facilitate the transaction of judicial business, are said to be in contemplation.

THE total number of conflagrations which occurred in Tokiyo during the past week was ten, of which six were incendiary fires. In only one case did the fire attain dimensions sufficient to destroy a house. One of the incendiary fires took place within the compound of General Kuroda's residence.

AN exhibition of pictures by Japanese artists was held at the Koyokwan, Shiba, Tokiyo, on the 17th instant. About 150 artists were represented. The exhibition was under the auspices of the Riuchikwai, a society formed two years ago with the object of promoting Japanese art industries. The pictures are to be sent to Paris for exhibition in the Museum of Japanese Arts recently opened there.

REPORTS from the Riukiu Islands indicate a renewal of pro-Chinese agitation on the part of the descendants of the Fuhkien immigrants. The present inclination of these men seems to be confined to leaving the country, and, as their departure would remove the source of agitation, surprise is expressed that the Japanese authorities take measures to detain them.

THE return of His Excellency Yenomoto to Peking, at an early date, is announced. This Minister's visit to Japan was made the basis of many sensational rumours, pointing, for the most part, to complications between the Chinese and Japanese Governments. The public was also informed, now that he would replace the present Minister of Foreign Affairs, and again that he would relieve Mr. Mori, in London, the simple truth being, as we explained at the time of his arrival, that he had come home on leave of absence.

THE Annual Meeting of the Yokohama Chamber of Commerce was held on the 18th instant. The statistics of the Chamber showed that the value of the import trade was 2½ millions of dollars less, and that of the export trade about 1½ millions less, in 1883 than in 1882. A comparison of the estimated totals of the import and export trades for 1883, showed that the former exceeded the latter by nearly 9 millions of dollars. Some discussion took place with regard to Bonded Warehouses, in view of the pending changes in the tariff. Mr. A. J. Wilkin spoke at some length on the subject of treaty revision in relation to the abolition or modification of the extraterritorial clauses.

THE first lecture of the free series announced by the Evangelical Alliance was delivered by the Rev. Mr. Knox in the Meiji Kwaido on the 16th instant. About 1,200 persons, including many ladies, were present, and though occasional interruptions were caused by a few boisterous students, the proceedings were eminently successful. The next day an attempt was made by a Japanese gentleman to lecture in the same place on Buddhism, but a crowd of students took possession of the hall and effectually interrupted the affair. It is significant of the spirit of enquiry now prevailing in Japan that, in the former case, eleven or twelve hundred persons assembled and listened attentively, many of them standing all the while, to a lecture lasting more than two hours, unrelieved by any passages of anecdote or humour, and treating of a subject so severe as the "Basis of Morality."

THE Annual Meeting of the Yokohama Fire Brigade was held on the 19th instant. The accounts showed a balance of \$2,665 still due to the Hon. Treasurer, but it was explained that if there was no falling off in the receipts during the current year, this debt would be reduced by about one-third. A separate account was exhibited from which it appeared that the total losses by fire in the foreign settlement during 1883 only amounted to eighty thousand dollars. Of the origin of the seven conflagrations figuring in these statistics, the Committee of the Brigade had no satisfactory explanation to offer in any case. Some discussion took place with regard to the comparative contributions of the community and the Insurance Companies, and a proposition, made by Mr. A. J. Wilkin, to employ Mr. Hegt's corps as a flying brigade, elicited an explanation that Mr. Hegt had declined to be incorporated.

NOTES.

It is somewhat unusual just at present for the Conscription Regulations to be celebrated with any outward and visible signs of joy, but the *Fiji Shimpō* gives a striking instance of that sort. "On the 11th inst.," says this journal, "a celebration of the Conscription Regulations took place at Okayama, the promoters of the festival being Messrs. Mineya and Ishihara. A platform was erected under a canopy of national flags, and a display of fireworks took place. Mr. Mineya, in addressing his audience, pointed out the necessity of the enlargement of military organization, and warmly congratulated the authorities on the revision of the Conscription Regulations. Speeches were made by several persons, and, at the conclusion of the addresses, a straw effigy was brought forward, intended to represent those averse to military service. The effigy was considerably battered with wooden swords, and finally decapitated with due ceremony. The head of the obnoxious effigy was then hoisted on top of a bamboo pole and exposed to the derisive jeers of the populace."

Two years ago, there was organized in Tokiyo a society called the *Riuchikwai*. It consisted, in its early days, of about a hundred noblemen, gentlemen, and traders, all of whom were concerned, as a matter of profit or sentiment, in the revival of Japanese art and its popularization abroad. The society was under the presidency of H.I.H. Prince Arisugawa, patron and supporter of whatever is liberal, useful, or benevolent. In a few months its numbers were doubled, and its list of membership now comprises fully a thousand names, while it disposes annually of a fund amounting to ten thousand *yen*. The Committee of management, justly deeming that any efforts made in Japan ought to be supplemented by an appeal to the European public, have concluded arrangements to open in Paris a museum of modern Japanese art productions, and a collection of pictures destined for exhibition there was shown at the Kōyōkwan, Shiba, on the 18th instant. Japanese pictorial art undoubtedly suffered much after the Restoration, from the general disposition to discard everything of native origin. Until five or six years ago, oil paintings and water-colours *à la Européenne* were all the vogue, and the few artists who remained true to the old styles, found little employment and less patronage. But the temper of the times has changed considerably. The exhibition at the Kōyōkwan did not contain much that would satisfy the severest standards of Japanese art, but it showed a marked improvement as compared with its predecessor at Uyeno in 1882. About 150 artists were represented, and their works ranged from the most elaborate specimens of decorative painting to the severest style of Indian ink sketches. That essentially Chinese and most unnatural variety of picture known as the *Bunjin-gwa* had evidently occupied the attention of a great many artists, but we frankly confess that our education does not yet extend to an appreciation of the grotesque rocks and impossible hills which always occupy the background of these efforts. The masterpieces of the exhibition were two pictures by Kiyosai. One, in Indian ink, represented an eagle in the act of striking a young boar; the other, in colours, depicted the well known episode in Chinese mythology where the afterwards-renowned warrior Choriyo picks up the sandal of

the Genius Koseki. Nothing could exceed the boldness and vigour of these drawings. Kiyosai's works will certainly take rank hereafter among the highest achievements of his country's artists. Unfortunately like many another man of note, his respect for the conventionalities of everyday life is said to be slight, so that he fails to secure the patronage without which the execution of important pieces is difficult to a painter of slender resources in Japan. An artist, Hōgai, whose name will doubtless be better known one of these days, exhibited a remarkably composed picture of the goddess Kwannon in the act of pouring from a phial a slender stream of water, in the spray of which floated a baby drawn with great skill. Another piece from the same brush, a winter scene, attracted much attention. A very beautiful specimen of that graceful and delicate fashion of figure painting inaugurated in Japan by Matabei and copied so admirably by Okiyo, was shown by an artist called Sensai. Other pictures worthy of special note were a snow scene by Bunkiyo; a group of flowers by Kwansen; figures of fishermen by Beisen; a flock of wild geese and a hawk by Ansen, and a landscape, with a junk in the foreground, by Kason.

UNDER the heading "The French in possession of Colombo," the *Ceylon Observer* of the 23rd ult. has the following:—"So one might judge from the appearance of the harbour and streets of our city to-day. Last evening the French transport *Européen* with 600 troops on board; arrived; and this morning the *Vinhlong* with the General Commanding-in-Chief, Millot, two Brigadiers-General, Brière de l'Isle and de Négrier, with staff and about 900 troops for Tonquin. The steamer *Comorin* also came in this morning with further troops. From an exchange we quote the following details:—The reinforcements for Tonquin, numbering 6,300, were to leave France in two detachments. The first, which was to have started on the 25th Dec., consisted:—1st, of transport *Vinhlong* with Generals Millot, Brière de l'Isle, and de Négrier, 1,050 Algerian troops and three horses; 2nd, the transport *Européen*, with 602 men and two horses; 3rd, the steamer *Solong*, with 615 men and six horses; 4th, the steamer *Comorin*, with 817 men and eight horses. The *Annamite* was to start on Jan. 10th with the troops from France, consisting of infantry, artillery, engineers, and the ambulance train, numbering altogether 3,219 men, with fifty-two horses. Finally the steamer *Ville de Metz* will be dispatched at the end of the present month with 3,000 tons of provisions. It will thus be seen that there are over 2,000 French troops now in our harbour. A number of these have been wandering about our streets, wondering no doubt at the novelties of a tropical island and themselves objects of wonder to the natives. The Algerian troops are, we suppose, the first who ever landed here. An officer who died on board was buried this evening."

ON Sunday afternoon, the 17th instant, the Meiji Kwaïdo was witness of a somewhat remarkable scene. Mr. Kitabatake Dōrin, Chief Priest of the Higashi Honganji, had announced a lecture on his recent tour through India, together with observations on Indian Buddhism. As the subject was a novel one, a very large audience collected some time before the appointed hour. The hall was soon over-full, while quite a crowd forced their way through the windows,

despite every effort of the watchmen to prevent them from breaking in. As soon as the lecturer commenced speaking, cries of disapprobation and rude clamor rose from many parts of the hall, completely drowning the speaker's voice. The student element was largely represented, and was conspicuously noticeable for rowdy behaviour. The noise and disturbance finally reached such a pitch that the speaker announced that the lecture could no longer be continued, pleading sudden indisposition as the reason of his abrupt close. The excuse gave occasion for renewed hisses and derisive cries, many calling out "Priests shouldn't lie; why don't you go on with the lecture?" Unfortunately there were no police present to put an end to the riotous proceedings. The cause of the disturbance is said to be due to the fact that no admission fees were charged, access thereby being given to the mob. Several thousand persons were present.

IN days gone by, fire was known as the "flower of Yedo," because, though destructive, it was regarded as an evidence of prosperity. This sounds rather like a mysterious *non sequitur*. Since the establishment of the Imperial residence in Tokiyo, the authorities have done everything in their power to prevent the occurrence of disastrous conflagrations. Statistics show that the entire city is burnt in every seven years. From 1874 to 1883 the area covered by houses destroyed by fire amounts to 67,467 *tsubo* for each year, and, estimating the average cost of real estate at 28.91.3 *yen* per *tsubo*, this gives a total loss by fire of 1,950,715 *yen*. Dividing this sum by the total number of houses in the fifteen wards—287,930—gives an annual average of loss by fire of 6.77.4 *yen* per house.—*T. Y. Mainichi Shimbun*.

WE (*Hongkong Daily Press*) learn on reliable authority that all operations are suspended for the present throughout Tonquin, pending the arrival of General Millot with the reinforcements. As the moon will be full shortly after his arrival, the attack on Bac-ninh will be pushed forward immediately. We understand that the French authorities have taken steps by which dispatches will be sent from the field of battle direct to Hongkong, for telegraphing to France, without touching anywhere. Meanwhile correspondents are encouraged as little as ever.

THE reconnaissance made from Hanoi in the direction of Bac-ninh, on January 11th, appears to have established the fact that every preparation for a vigorous defence has been made by the Chinese. The troops engaged in the reconnaissance were four companies of Turcos, one of Annamite riflemen, and three pieces of artillery. They found that the only practicable route to the place was fortified at every point, and the same report was made as to the condition of the canal by the Staff of the Commander-in-Chief. The reconnoitring force was under Chinese fire for about three hours. It is to be feared, from all this, that the French will find the assault of Bac-ninh a task of some difficulty. As we predicted in November, they have wisely waited for reinforcements before attempting to advance, and they will thus be able to deliver the assault with a force of eight or nine thousand men. The Chinese, on the other hand, will have three times that number, at least, and if they stand to their guns with

ordinary steadiness the losses of the attacking force must necessarily be severe. As to the result, there can be little doubt, but it is not pleasant to think of the sacrifices that may have to be made. The best thing that can happen in the interests of peace is that the French should succeed easily and swiftly. They must win in the end, and every difficulty or repulse they encounter will only furnish a fresh incentive to Chinese stubbornness. Our conviction that there will not be any open war between France and the Middle Kingdom remains unchanged. Bac-ninh will fall, and France will then find that she can afford to be magnanimous, while China, on her side, is not sufficiently sensitive to be stirred to earnest action by a trouble so remote as the loss of a nominal suzerainty, or even of an outlying dependency. When France sees herself mistress of the delta of the Red River she will listen to mediation, and America will be the mediator. Any friendly offices of that nature once contemplated by England, have probably been finally abandoned in view of Egyptian complications.

A FIRE broke out on the morning of the 19th instant in a godown belonging to Messrs. J. D. Carroll & Co., next to their offices in Main-street. The fire was discovered at twenty minutes to five o'clock, and is supposed to have been caused by spontaneous combustion, the building containing rope, paint, oil, cotton yarn, waste, blankets, &c. The engines were very quickly on the spot and were soon got to work, but unfortunately the "Relief" burst a boiler tube, and had to be withdrawn. Quantities of water were poured into the burning building by the "Victoria" and manuals, but owing to the nature of the contents of the godown, the firemen were only able to confine the conflagration to the building in which it originated, which was entirely destroyed with all it contained. We understand that the property is insured in the China Fire for \$40,000, and in the Hongkong Fire for \$20,000, but whether Messrs. Carroll are covered or not has not transpired. Great credit is due to Mr. Morgan, of the Fire Brigade, for his exertions.

THE *Yomi-uri Shimbun* says that the people of Kagawa, in Sanshiu, had a surprise the other day. Some farmers were digging in the neighbourhood of a little temple when they came on a number of massive timbers buried in the ground. Pursuing their researches, they found ultimately that a hole, thirty-six yards square, was filled with similar logs. When and why these timbers were thus disposed of no one has yet been able to conjecture. Kagawa is a little village of hard-working rustics, and tradition does not tell of any time when a use could have existed there for the buried logs.

THE *North German Gazette* states that the reception of the Imperial Prince by the Pope was ceremonious yet cordial, and declares that the report published by the *Osservatore Romano* with regard to the interview was the only correct and complete one. From this it results, adds the semi-official journal, that the private conversation between the Prince and his Holiness lasted about an hour.

The *Osservatore Romano* is officially authorised to contradict, both as regards the substance and the words, the report published by some of

the Liberal newspapers of a portion of what passed in private between the Pope and the Crown Prince. That report was to the effect that at the end of the interview the Pope asked the Prince if he had no mission or anything to propose, to which the Prince replied, "My only mission is to express the lively desire of the Emperor and Prince Bismarck that peace may be re-established between Church and State in Germany compatibly with our laws and our institutions." The Pope, it was added in this report, made no answer, and was but little satisfied with what the Prince had said.

A CORRESPONDENT writes from Tokiyo:—The lecture delivered at the Meiji Kwaido on Saturday last was a thorough success, 1,150 persons were present, and at least eleven hundred of these were as quiet as could be. At first there was some slight disturbance, but after a kindly appeal of the Chairman (Rev. Mr. Eby) to the politeness of the audience, the unruly section dwindled down to half a dozen, and even these were far from being boisterous, so that the vast bulk of the listeners had the opportunity of enjoying, to its very close, a lecture which lasted over two hours. When the Chairman and the Rev. Mr. Knox ascended the platform they were received with a perfect ovation, and the applause at the points in favor of Christianity was far in excess of the few cries of disapprobation. The impressions conveyed by the paragraph in the *Japan Mail* of the 19th inst. might have been those of one who stood on the outskirts of the audience, but not of one near the front.

A RECENT issue of *Iron* has a strong argument in favour of cremation. It says:—Some people—very worthy people, no doubt—have been shocked by the recent accounts of the cremation of the body of the late Captain Hanham. For charity's sake, we will respect their feelings, but we are utterly unable to understand their arguments against such a method of disposing of our dead. From a sanitary point of view their objections are absurd, and must be relegated to an age of darkness which we have happily passed. We will do our best to direct their attention to an important extract, which bears directly upon the question, and which is taken from the reports from Her Majesty's diplomatic and consular officers abroad on subjects of general interest, presented to both Houses of Parliament this year. The report is by Mr. Corbett, of Rio de Janeiro, and embodies the investigations of Dr. Freire on the subject of yellow fever. Dr. Freire states:—"I think it a duty to divulge as soon as possible a circumstance of much importance to the public health. Having gone to visit the Turnjuba cemetery, where those dying in the maritime hospital of Santa Isabel are interred, I gathered from a foot below the surface some of the earth gathered from the grave of a person who died about a year ago of yellow fever. On examining a small quantity with the microscope, I found myriads of microbii exactly identical with those found in the excreta of persons sick with yellow fever. These observations, which were verified in all their details by my auxiliaries, show that the germs of yellow fever perpetuate themselves in the cemeteries, which are like so many nurseries for the propagation of new generations destined to devastate our city. A guinea pig, whose blood examination showed that it was in a pure state, was shut up in a confined space in which was placed the

earth taken from that grave. In five days the animal was dead, and its blood proved to be literally crammed with cryprococcus in various stages of evolution." Could science speak more plainly, and is sentiment to get the better of its teachings? We have too great a faith in healthy public opinion ever to doubt its verdict in this matter.

THE *Yomi-uri Shimbun* says that the first ice of the season came to Yokohama three days ago in the *Owari Maru*. The ship carried a cargo of 500 tons from Hakodate, and it was transferred, immediately on arrival to the ice-house of Mr. M. Asada, who expects to be as fortunate this year as he was last in the ice trade.

THE unrivalled tenor, who died at Rome on the 12th of December, though known to the world as Mario, was in reality the Marquis Giovanni di Candia. He was seventy-three years old when he died, and like many another great artist, his last days were passed in obscurity, if not in embarrassment. Among his best friends and most munificent patrons was the Queen of England. She, too, was one of the first to receive the news of the great tenor's death. A few moments before Mario expired he was waited on by Mr. Cusin, one of the Royal Chaplains, who had just arrived from London, knowing nothing of his friend's illness. Mario had scarcely strength to bid his visitor farewell, and to entrust to him respectful remembrances for Her Majesty, which were immediately telegraphed to Windsor. The Queen replied, also by telegram:—"Her Majesty has learned of M. Mario's death with sincere regret. She begs that you will represent her at his funeral, and place a chaplet of flowers, in her name, on his bier." After he retired from the stage Mario seems to have busied himself writing his memoirs, but unfortunately he left them incomplete. It is said, too, that towards the end he had become subject to curious hallucinations. Thus, on the last page of his diary, he wrote:—"At about 3 o'clock this morning, I distinctly heard three knocks at my window. Evidently this has some relation with the news which I sought of my daughters in London." Mario was originally destined for the career of arms. He was for seven years an officer in the Italian army, during five of which he served as aide-de-camp to General de Maistre. One day, however, as he himself relates, he was ordered to carry some despatches to the Viceroy of Sardinia, at Cagliari. He had special reasons for not desiring to make the journey, and as there was no way of avoiding it if he remained in the service, he determined to resign. Soon he was singing in the salons at Paris, and hearing everybody praise his beautiful tenor, with its compass from *fa* to *si*. Among his admirers was the Baroness de Montmorency, an excellent musician and pianiste, who could not conceal her astonishment at hearing him sing *basso profondo* at Nice a short time before. Mario told her gallantly that if he had formerly taken the part of *Marcel*, in "The Huguenots," he now took that of *Raoul*, because the lover's rôle always fell to the tenor. He appears to have felt many scruples about going on the stage, but the Prince of Belgiojoso finally convinced him by saying:—"If I had your voice, and your figure, I should not hesitate, prince as I am." While he was preparing for his new career he used often to go, he says, to hear Rubini sing, and that artist's beautiful voice pro-

duced such an effect on him that, on his way home, he could not help repeating what he had heard at the Salle Vendatour. The police did not appreciate this artistic enthusiasm, and more than once Mario was rebuked by them for disturbing the public tranquillity.

THE present Governor of Hongkong adopts a refined and scholarly method of letting the Colonial Office know that his ideas of the dependency he administers do not exactly correspond with those of his predecessor. Hongkong, he informs the Earl of Derby, is neither the *colonia* of the Romans, nor yet the *αποικία* of the Greeks, but is a mixture of *επιτεχισμα* and *εμποριον*, that is to say a cross between "a fort or stronghold placed so as to command an enemy's country" and a commercial mart. Lord Derby does not often enjoy an opportunity of deriving so much solid information as Sir G. F. Bowen's despatches place at his disposal, and it is to be hoped that he will have leisure to profit by the chance. Moreover, there will be much comfort for the opponents of Sir John Pope Hennesy's policy in the thought that his successor, so far from indulging in any humanitarian dreams of placing the Chinese residents on the same level as the foreign, regards Hongkong as "a fortified outpost like Gibraltar, a post of power," a place designed to "command an enemy's country." This is pretty much the conception a great many Englishmen entertain of their position, both in Japan and China, *vis-à-vis* the people of the country. Sir G. F. Bowen, having dispelled all doubts as to the proper status of the place he writes about, then proceeds to give some interesting statistics. He says that the tonnage of the shipping entered at Hongkong in 1882 was 4,976,233, a larger figure than the tonnage entered at London in the year of Her Majesty's accession: that the revenue of the colony (£220,000) is greater than was the entire public revenue of Scotland at the time of the Union; that so far from having a public debt, the place has a balance fund, invested at interest and amounting to £209,000; that its population is 160,402, of whom 7,990 are whites, 1,722 coloured, and the remainder Chinese, and that the city of Victoria extends for more than four miles along the shore and contains about 7,000 houses of stone and brick, "many of them spacious and handsome."

AN eminent financialist of social proclivities lately wrote to Mr. Mitchell to request him to inform Miss Mary Anderson that her presence would be welcome either at a dinner party, or as a guest later in the evening after it, and to request to be informed what the charge would be. Upon submitting the proposal to Miss Anderson, this young lady very rightly replied that she was not on hire for dining or evening party purposes. *Truth* remarks:—"Never was a snub more deserved. What would the financialist have thought if Miss Anderson had asked him to come to her house to be stared at in consideration of food and a cheque? This sort of purseproud, vulgar snobbishness must be put down."

THE New York correspondent of the *London and China Express* gives the following account of how a Chinaman, named Chew Fong Lee, slipped very cleverly into the country. He came over for the especial purpose of drying shrimps and crabs for food, a business which properly excludes him under the Chinese Anti-Immigra-

tion Act. He had the forethought, when challenged, to engage a lawyer, who overwhelmed the judge before whom the case was tried with a burst of scientific jargon. "He is, your honour," said the lawyer, "about to conduct a series of experiments and investigations in the arts of dessicating and freeing from moisture the long-tailed decaped crustaceans, which inhabit the waters of our beautiful bay; also in pulverising the *palcemon vulgaris* and utilising the carapax of macoural and the cephalo thorax of the *alamoura* species as an article of food." "That sounds very good," said his Honour; "I wish Chinamen were all seized with the desire to benefit science." Chew Fong Lee is now drying shrimps and small crabs.

ONE of the Tokiyo society journals enters into some pleasing details about an unfortunate youth whose body is said to be the home of innumerable caterpillar-like animals. He is at present an inmate of a private hospital, and various microscopists are endeavouring to place the animalculæ in their proper classification. This is nothing to the case of Edward Longmore, a man of Sedalia, whose stomach has just ceased to be the home of a lizard which had lived there for more than two years and made the miserable citizen very uneasy by promenading in his intestines.

A CORRESPONDENT of the *Pottery Gazette*, under the heading of "Bosh Tea Shops," calls attention to the fact that the "tea and glass combination" is taking a new departure in Birmingham. Enterprising tea-shops have extended their "gifts" giving a *towel* with every half-pound of tea. This is suggestive to the happy purchaser. A dustpan, a coal-shovel, a tin basin, a brush, indeed nearly every trifle used in a house is "given away" now-a-days with each pound or half pound of tea. The writer concludes that this new move is a direct attack at the drapers' trade, "but," he adds, "the draper can defend himself, and with great pertinacity, as we all know." We do not wish to appear too active in our own behalf, but—really could not some of our local tea-dealers do the same? Towels are very handy articles.

THE *Morning Advertiser* of December 26th thus delivers itself on the situation in Egypt:—Even "the uncrowned king," as Gordon came to be called, had to complain continually of the untrustworthiness in action of his best trained troops. But Valentine Baker has no trained troops at all. They are policemen at the best, and not good policemen. And if, as we insisted should be done at first, Indian troops are not to be used even for the protection of Egypt—and a diversion by Suakim is clearly the quickest way of securing such a protection—then there is nothing for it but to stand on the defensive where defence is possible, and to recruit men from the Levant, who, especially Turks from Smyrna and Constantinople, would be only too glad to volunteer under English officers. But the first thing, it appears to most people who have studied the subject, is that there shall be an end of divided counsels at Cairo. Mr. Hake shows how these hampered Gordon, even when the situation was much simpler than it is, and when there was a strong ruler in the Palace of Abdeen. The next step is some relaxation of the rule respecting the application of the revenue. It is absurd, when Egypt has hardly begun to recover from the

effects of Arabi's rebellion, and when the Treasury is empty, and when these troubles have come upon the Government, to insist on the strict letter of financial arrangements which were well enough when Mr. Goschen devised them, but were never meant to cover such contingencies as are now to be met. Sir Evelyn Baring has had a soldier's training, and we can hardly believe that he will refuse his sanction to an arrangement by which the surplus tribute—the prospective sinking fund—should be advanced to the Khedive for actual purposes of defence. The continuance of the present state of affairs must deprive the Government of Cairo of far more revenue than would be spent in a few resolute movements which would have the effect of restoring public confidence and reopening the now paralysed markets at Khartoum, Berber, and Dongola. No doubt we should in no way assist the Khedive in reconquering the Eastern Soudan. But there is no question of that now. And if we refuse to help him out of his hobble we shall have a much vaster responsibility cast upon us very soon. We are virtually his protectors; Sir Evelyn Baring is virtually a Resident and dictator of policy. It will be strange if our direction of policy leads to military paralysis, and if our protection means tying our puppet by hands and feet. Yet that is remarkably like what the immediate outcome is.

THE course of events in Europe seldom elicits any expression of journalistic opinion with regard to Consular jurisdiction. It happens, however, that the Continental newspapers comment very plainly on this subject, in connection with the Capitulations of Tunis, which, as our readers are doubtless aware, recently gave rise to long negotiations between France and Italy, with the result that the jurisdiction of the former has been finally accepted. The whole question to be discussed was one of jurisdiction. Neither the commercial nor the financial phases were taken into consideration. The Capitulations referring to jurisdiction had their origin in the existence of barbarian governments, more especially the Mussulman Government, which, having no law but the Koran, was obviously incompetent to administer justice to Christians. It had been necessary to establish Consular tribunals, and of these a leading Italian journal says that "they have always been considered very defective," and that "wherever regular tribunals exist, the interest of all is to suppress special and exceptional jurisdictions, which, by their very nature, are vicious." The same journal then continues thus:—"From a civil point of view, diverse tribunals, the competence of which depends on whether a man is defendant or plaintiff, are good only for persons of bad faith, who seek, in chicanery, the means to evade their engagements. With justice of this species, credit is impossible, and consequently respectable merchants of every nationality desired to put an end to a regimen injurious to all legitimate interests. There remained then, the question of criminal justice, which interests, it is true, in general, very uninteresting persons, respectable folks seldom having anything to do with criminal tribunals: yet as there might be exceptions to this rule, guarantees were necessary. The difficulty has been solved by giving to Italians, when accused, the guarantee of a number of Italian jurors sufficient to remove any suspicion of partiality. It is evident that

the new jurisdiction will be preferable to that of Consuls, which, we repeat, is most defective." One cannot but wonder how this journal, and others that write in the same strain, would express themselves about Japan, where not two, but seventeen, different jurisdictions exist, and where respectable foreign merchants, so far from thinking that these multitudinous administrations "are good only for persons of bad faith who seek to evade their engagements," regard them as a valuable privilege not to be given up until Japan can offer some material *quid pro quo* for their surrender.

For some time past a party of speculative auctioneers have been plying an interesting and exciting trade in the neighbourhood of Nihon-bashi. Their organization combines the elements of buying and selling, and appears to resemble the device said to be so successfully practiced in New York for disposing of cigars to unwary visitors. The American plan is to put up a number of boxes of cigars apparently in one lot, and to sell them to a bystander for some ridiculously small sum. Tempted by such easy terms, another bystander bids for the next lot, and finds that his bid is accepted, not as covering the whole parcel, but as referring only to one box. The result is that in a majority of cases he compromises by paying a fine and getting rid of his bargain. In Japan the plan is simpler. The party watch for the advent of a countrified looking person, and when his attention is attracted to the auction, the auctioneer sells a number of valuable articles for a mere song to confederates who drop in by accident. The happy purchasers betray so much satisfaction that the countryman is at last tempted, and the value he gets for his money can be easily surmised. The other day, however, the auctioneers were unfortunate enough to mistake a detective for a bumpkin. The next morning they were all deprived of their licenses.

At the closing of the Fisheries Exhibition in London, announcement was made that its immediate successor would be devoted to the subject of health. A Health Exhibition will be a very novel affair: the more so that its scope appears, at first sight, vague and almost limitless. If the only restriction placed upon exhibits were that they should bear some relation to health, it is plain that almost every useful object might find a place in the show. To obviate this uncertainty care has been taken to define the nature of the exhibits with tolerable accuracy. Those in the first main division are to be divided into five groups—Food, Dress, the Dwelling, the School, and the Workshop: the second main division is to be devoted to Education. Even this classification leaves an inconvenient degree of latitude, and it may be presumed that further steps will be taken to circumscribe the vagaries of exhibitors. But the programme, however it may be narrowed down hereafter, shows that the exhibition will be the most instructive, and not the least interesting, of those hitherto held. *The Times* thinks that Japanese and Chinese Courts may be looked for, and we trust that if Japan elects to send anything, she will take care to be better represented, than she was at the Fisheries Exhibition. Models of houses, gardens; specimens of clothing and foot-gear; food of all sorts; including some of her wonderful *daikon* and *kabu*; examples of cookery—from such a list as this a court might

be furnished so as to create quite a sensation among Western sight-seers. The whole process of cooking eels *à la Japonnaise* would delight a London audience, and there is a fortune to be made by anyone who is sufficiently enterprising to exhibit a tea house, built after the most approved fashion of the *Cha no Yu* æsthetics, where visitors would have a chance of tasting the best *kwaiseki riyori*, served by Japanese waitresses and washed down by mulled *saké*.

Le Saigonnais publishes a startling piece of news, to this effect:—The Viceroy of Yunnan, who considered Son-tay an impregnable fortress, learning that the French were marching upon it, went himself to the town in order to enjoy the sight of their defeat. Of the day of the assault, accompanied by the first lieutenant of Liu Vinh-phuoc, he passed along the Chinese ranks, exhorting them to resist to the utmost. While thus engaged he saw the French Admiral at a distance of not more than 150 mètres. Turning to the second chief of the Black Flags, he thus addressed him:—"Terrible soldier, you see before you the chief of these barbarians who have sworn our death; you are accounted our best shot, let us see you justify your reputation." The lieutenant raised his rifle to his shoulder, but before he had time to press the trigger, both he and the Viceroy fell, shot dead. The news of their death spread along the ramparts like a powder train. An hour afterwards the French entered the town victorious, the Chinese having retired into the citadel. The French were at a loss to account for the sudden cessation of the opposition, and this is put forth by our Saigon contemporary as the explanation.

According to the *Saigonnais* of the 7th inst., the French transport *Vinhlong*, whose machinery broke down off Colombo, had arrived at Singapore four or five days before the date of the paper. The troops and *matériel* for Tonquin were immediately transferred to the *Mytho*, but as this operation would occupy three or four days it will be towards the end of this week before the *Mytho* can arrive at Tonquin. Owing to the breakdown of the machinery of the French transport *Vinhlong*, near Colombo, Generals Millot, Briere, de l'Isle, and de Negrier, who were passengers on board, disembarked at Colombo and proceeded to Saigon by the French mail steamer *Anadyr* arriving there on Tuesday, the 5th instant, and they left for Haiphong the following day by the *Saigon*. They were preceded by the cruiser *Hamelin* carrying urgent despatches from General Millot to Admiral Courbet.

A SPORTING correspondent of the *Exeter Gazette* states that a series of inquiries have been addressed by a northern doctor to eighty headmasters on the subject of football casualties, and that answers have been received from forty gentlemen who have had in their charge upwards of 3,500 pupils. They report forty-six fractures, chiefly of the collar-bone, ninety-three dislocations and sprains, and twenty-three other injuries. One master sarcastically suggests that the risks of football be lessened by wrapping the players in cotton-wool and letting them play in goloshes and umbrellas.

It is a common saying among Japanese vegetable growers that one radish (*daikon*) grown at Miyashige (Owari), takes two men to carry it, and that two Satsuma turnips make a load for one pony. This sounds somewhat "tall," but so far

as the Satsuma turnip is concerned, the statement is little, if at all, exaggerated. One of these monster vegetables was presented to the Emperor the other day by the Shimadzu family. It measured over six feet in girth. The curious thing about these enormous turnips is that they are generally sound to the core, and that, when skilfully boiled, or steamed, they are an exceedingly delicate and palatable aliment.

THE Newcastle Chronicle says:—"Should the full strength at the disposal of France be pitted against the Celestials, we have never had two opinions about the upshot. China has made vast progress in her military organisation, but she cannot yet cope successfully with the skill, energy, and enlightenment of a great European Power. A more important question is—Can the Republic of France afford to imperil its existence by undertaking a great war on the far side of Asia, and leading the nation, in the teeth of its political prejudices, into a distant adventure more hazardous and inexcusable than that of Mexico, which was the first nail in the coffin of the Empire?"

THE example of lucrative law-breaking carried on with impunity is apt to have a demoralizing effect. The gambling establishment recently opened at the old Auction Mart in Nagasaki has proved so successful that a similar concern has been set a-going at a place known as the old Fulton Market in the same Settlement. These enterprises are forcible illustrations of what might happen on a very much larger scale if people were so minded. By an unwarrantable and illogical rendering of the treaties, the Japanese have been deprived of all municipal authority in the foreign settlements, while, on the other hand, it is not even pretended that foreigners themselves have any right to exercise that authority. The consequence is that the maintenance of peace and order depend entirely on the disposition of the residents. Should there happen to be discerned some prospect of gain or convenience by infringing the municipal regulations to which the Japanese are subject, then the only safe-guard left for the regulations is the virtuous instinct of publicans and adventurers. This state of affairs does credit to the patriotism and sagacity of diplomatists who concluded that no law at all was better than a law not of their own making. That the paralysis of government produced by an arbitrary and absurd interpretation of the treaties has not led to worse things than the occasional establishment of a gambling saloon or an exchange shop in open defiance of the laws of the land, is quite a creditable feature of foreign intercourse with this country.

JUSTIN MCCARTHY, speaking of the Czar Nicholas and the proposals he made in his celebrated conversations with Sir G. Hamilton Seymour, says that the Western idea of honour had not quite got possession of the Russian potentate's mind, and compares him to a savage who is ambitious of learning the ways of civilization, and who may be counted on to do whatever he knows to be in accordance with these ways, but who is constantly liable to make a mistake simply from not knowing how to apply them in each new emergency. A writer of contemporaneous history is at one serious disadvantage. He runs the risk of seeing his theories hopelessly upset by the sequel of the events on which they are based. There can be no doubt that Justin

McCarthy's language expresses, justly enough, the ideas entertained by the majority of Englishmen at the time when he wrote. But judged by what has since happened, the semi-civilized potentate's notions assume a new character. He thought that Servia and Bulgaria might become independent states, and that Turkey was too sick to be left any larger to her own devices; and he said that if England would let him alone to deal with the patient, she might take possession of Egypt and Candia, should the reorganization of South-Eastern Europe seem to render such a step advisable. England, of course, thought it would be highly improper to enter into any such compact without the knowledge of the other European Powers, and thenceforth, ceasing to regard Nicholas as a sincere friend, counted him an unprincipled plotter and plunderer, not to be made an associate in any engagement. The result of this little bit of sentiment, so far as Great Britain is concerned, is that, after two wars, involving the expenditure of tens of thousands of lives and seventy or eighty millions of treasure, she is drifting, point by point, into the very position which Nicholas would have had her assume without loss or bloodshed in 1853. Preferring Cyprus to Candia, she took possession of the former without consulting any of the Great Powers, and she is now occupying Egypt under circumstances that do not present the least prospect of her being able to withdraw. Ill-natured critics might be disposed to say that while she declined to let Nicholas have his share of the proposed compact, she has not failed to take her own. But the truth is that events have been too strong for her. There are phases of international policy which refuse to shape themselves by the principles of high morality. The Czar's method of dealing with European complications thirty years ago savoured slightly of scheming and spoliation, but if his ideas of international honour seemed a little behind the period, his political sagacity was a quarter of a century before it. From a material point of view the gain would have been immense had his programme been carried out, and though England might have forfeited a little of her self-respect, she would have been saved the injustice of imputing dishonest motives to an honest friend.

MR. LOWELL, having made himself very popular in England, is fast becoming an object of execration among the lower social strata of his own countrymen. In the eyes of Irish-Americans the greatest sin that can be laid to the charge of an United States' official is to be the friend of Englishmen. The London *World*, in a moment of giddy effusiveness, mentions, among Minister Lowell's titles to be liked, that "the arms of the United States are nowhere conspicuously emblazoned" about the Legation, that "you cannot detect in the tones of his voice the slightest Americanism." These are grave offences. An American journal makes them the text of a vigorous pasquinade against a diplomatist who is "more English than the English themselves." The talented writer and refined scholar is called "dishonorable" because he "declines to conspicuously emblazon the arms of his country," and speaks without a nasal twang. He is said to represent "that foreign-worshipping element of our Eastern cities who look upon their nationality as a misfortune and a disgrace, and would gladly welcome the restoration of British institutions over the ashes of our Republic." Another

writer thinks that "there is only one thing conspicuously absent from Mr. Lowell's career to make his identification with the worst conceivable toadyism to loyalty complete, and that is his singular failure to have written an elegy on John Brown." This patriotic journalist declares that an American Representative abroad should be a man "who would connect with the idea of the United States the fact that it is a nation which has attained its maturity through a defiance, and not an imitation, of foreign institutions: a man who would remember that 'a quarter of a century has not elapsed since Great Britain sent from her ports ships gunned with British guns and manned with British seamen to destroy the Government of the United States, and that she would do the same thing to-morrow were circumstances as favorable as when she launched her Confederate cruisers.'" It is not likely that this vulgar bluster will seriously impair Englishmen's friendship for a nation so closely related to them as the American. The principal feeling excited by the perusal of such wild writing is one of astonishment at the depth and permanence of Federal anger. Even granting that England were guilty of all the sins laid to her charge in connection with her so called "Confederate cruisers," still the worst that she did was to help one party of Americans against another. This, to our thinking, is a sin very much more venial than that of taking part with a foreign power against the United States. But among a certain class of Americans the distinction does not appear to be recognized. To have sympathized with the Confederates is an unpardonable crime. Whether the enduring umbrage its memory causes is to be attributed to the intensity of the North's wrath against the South, or to independent jealousy of England and Englishmen, it is pleasant to think that sensible men on both sides have learned to laugh at these acrimonious displays, and to regard their violence only as a proof of their growing insignificance.

THE Rev. W. C. Davisson, of the American Methodist Episcopal Church Missions, who, in addition to the arduous task involved by his own duties, undertook the Pastorate of the Union Church over twelve months ago, will preach his farewell sermon to-morrow (Sunday) morning, prior to his departure for America by the Pacific Mail steamship *City of Rio de Janeiro*. During Mr. Davisson's connection with the Union Church, the congregation has nearly doubled in numbers, the hymn-book formerly in use has been changed for a more suitable one, the singing at the services has undergone a marked improvement, and the finances of the Church are in a far healthier condition than they have ever been previously, the balance at present in the Treasurer's hands reflecting great credit both upon Mr. Davisson and the officers of the Church who have assisted him in the conduct of affairs. Mr. Davisson will probably not return to Japan, and a large circle of friends beside his congregation wish him a pleasant voyage and a safe return to his native country.

It has long been understood that trees of the same kind do not generally flourish on opposite sides of the same continent. As a rule, the conifers of the Pacific Coast languish when planted on the Atlantic seaboard, and our oaks and hickories die in California and Oregon. The case is different with the corresponding shores of two continents. The ocean currents

and other causes make the climatic conditions of Eastern Asia more like our own, while the moist airs of Western Europe resemble those of our Pacific Coast. For this reason, California trees flourish in England, while, by natural selection, the forests of China and Japan are more nearly akin to our own. Indeed, a large percentage of the decorative plants on our lawns have come from Eastern Asia. Among the well-known deciduous trees are the ailanthus, sophora, kalreneria, paulownia, Japanese maples and Chinese magnolias, with such conifers as the retimosporas, ginko, Japan larch, umbrella pine, and Chinese cypress; beside shrubs, vines and herbaceous plants without number. It is not surprising, then, that the trees of Western Europe take kindly to our California climate, and these introductions may prove of great value to a region which is so rich in evergreen forests, but poverty stricken as regards hard wood. For some years past the English oak (*quercus robur*, var. *pedunculata*) has been tested on the grounds of the University of California alongside of our own oaks and other foreign ones. During the first two seasons the growth of the English oak exceeded from two or three times that made by any other, besides throwing out many more branches. The tree is a most valuable one, and serves in Europe most of the services for which we use white oak, ash, and hickory; that is all purposes where strength, elasticity, and toughness are required. A considerable supply of fresh acorns has been lately imported and planted with a view to the distribution of the seedlings when a year old. Besides this, Professor Hilgard invites application for acorns by those who wish to test the tree for forest planting in the different climatic regions of the State.—*Philadelphia Weekly Press*.

REUTER's enigmatical telegram, dated February 16th, stating that General Gordon had "recognized" the Mahdi, has been variously and amusingly translated by the vernacular press. The *Choya Shimbun* has, like many others, construed "recognized" by "acknowledged the supremacy." It states that the "gallant English General has made the False Prophet ruler of the Soudan," and gives vent to the opinion that as "the rebel chieftain has now accomplished his desire there will be no further disturbance in Egypt!"

A RECENT issue of an Indian contemporary has the following:—Professor Arminius Vambery has been giving his opinion on the Soudan disaster. He was interviewed by a reporter in Vienna, and his reply is well worth quoting in full. The veteran Orientalist is reported to have spoken to the following effect:—There is no reason for fearing disastrous consequences from Hicks Pasha's defeat. The Mahdi, as is well known to the lower classes, does not descend from the Khoreish family. None of the signs which are promised simultaneously with his appearance have appeared. The sun does not rise in the west. The stars do not fall. Antichrist has not appeared. Mecca and Medina are not destroyed. Without these signs, people will not believe in him. The Mahdi is much the same as many prophets who come forward in the East, and are bastinadoed or imprisoned for their pains. He may perhaps, invade Khartoum, but he cannot endanger England's position in Egypt, if it adopts the motto—"Fy suis et jy reste." The whole affair is doubtless a continuation of

Arabi's work, and if the cowardice of the Egyptians and all Africans is considered, we may rely upon it that a couple of English regiments will suffice to destroy the Mahdi's army, notwithstanding its fanaticism. It was most unlucky that the climate combined with Hicks Pasha's enemies, but it was reckless of the English to trust Mahomedans, who will never scruple to betray Europeans, since the Koran says that unbelievers have no claim to their fidelity. There can be no doubt that the Mahomedans exaggerate the importance of the Mahdi's victory.

AN article on the subject of the comparative bravery of the French troops under the Empire and under the present Government appears in the *République Française*. It says:—"Upwards of 300 men were killed and wounded in the five days' march and fighting which resulted in the capture of Song Tay. That is about ten per cent. of the combatants engaged. It is not surprising that it was a warm affair, since the enemy was under cover of his entrenchments. But our soldiers were well handled, and had confidence in their officers, and, when that is the case, success is not doubtful. What becomes of the argument put forward by detractors both in the tribune and in the press, that the Republic disorganises the army? Could the army have done better than it has done? More than 30,000 officers and soldiers have volunteered for Tonquin. In 1859, under the Empire, the Government offered an increase of one-third in the pay of the officers, and the pay of the troops was also augmented. No promise of this kind has been made by the present Government. The military spirit prevailing in our army is, therefore, as great as, if not greater than, at another epoch of our national history."

HIS EXCELLENCY INOUE, Minister for Foreign Affairs, was a passenger from Kobe in the Mitsui Bishi mail steamer *Tokio Maru* which arrived here on Thursday morning. His Excellency was accompanied by his wife and daughter, and the party on landing proceeded at once to Tokio. Mr. Yoshikawa, the Governor of Tokio, was also a passenger by the *Tokio Maru*.

It is stated that in future a battalion of infantry will be detailed for fire duty in Tokiyo and the other garrison cities of Japan. Attached to the battalion will be a company with pumps. It has always been a matter of surprise to foreigners that no use is made of the troops during conflagrations in the capital, but we confess that our confidence in the discipline of the soldiers is not such as to warrant us in congratulating the citizens on the measure now in contemplation.

AN American journal says:—"Ancient ruins, which a contemporary says surpass anything of the kind yet discovered on the American continent, have been found in Sonora, about four leagues south-east of Magdalena, Mexico. There is one pyramid which has a base of 4,350 feet, and rises to a height of 750 feet. It has a winding roadway from the bottom leading by an easy grade to the top, wide enough for carriages to pass over, which is many miles in length. The outer walls of the roadway are laid in solid masonry from huge blocks of granite in rubble, and the circles are as uniform and the grade as regular as could be made at this date by the best engineers. To the east of the pyramid, a short distance off, is a small mountain about the same height. On the sides of this mountain a

people of an unknown age have cut hundreds upon hundreds of rooms, from 5 feet by 10 feet to 16 feet or 18 feet square. These rooms are cut out of solid stone, and so even and true are the walls, floor, and ceiling, so plumb and level, as to defy variation. There are no windows to the rooms, and but one entrance, which is always from the top. The rooms are 8 feet high from floor to ceiling. On the walls are numerous hieroglyphics and representations of human forms, with feet and hands of human beings cut in the stone in different places. Stone implements of every description are to be found in great numbers in and about the rooms. It is, of course, a matter of much speculation as to who the inhabitants were and in what age they lived. Some say they were the ancestors of the Mayos, a race of Indians who still inhabit Sonora, who have blue eyes, fair skin, and light hair, and are said to be a moral, industrious, and frugal race of people, who have a written language and know something of mathematics."

REFERRING to the frequent removal of old landmarks in London, the *Whitehall Review* says:—"Portsmouth Street, Lincoln's Inn, which is receiving so many visitors by reason of the approaching demolition of that venerable imposture the so-called original "Old Curiosity Shop," contained in the memories of many of us a far greater, and certainly genuine, attraction in the shape of the old Black Jack public-house, celebrated as the favourite resort of that Joe Miller with whose time-honoured jokes such unwarrantable liberties have been, and we fear always will be, taken. From an upper window of the Black Jack, long known as the "Jump," Jack Sheppard made one of his memorable escapes to avoid the too close attentions of Jonathan Wild and Blueskin. The window has been pointed out to countless visitors, and has duly figured in the pages of Harrison Ainsworth and chroniclers of the adventures of Jack Sheppard, and other heroes of the Newgate Calendar. Has not also the pencil of George Cruickshank duly limned the Black Jack and its window?—which, if we mistake not, figures in that drama of Buckstone's which owed its main success to the "Jack" of Mrs. Keeley, and which brought such grist to the mill of the old Adelphi Theatre. We wonder how the tumble-down tenement in the aforesaid Portsmouth Street has come to be associated with that "Old Curiosity Shop" from which Little Nell and her grandfather went forth hand in hand? There is nothing to bear out the assertion that it was the original of the old bric-a-brac shop—nothing in the pages of Dickens to connect it with Nell's home. And why is the Black Jack supposed to be identical with the Magpie and Stump which figures in the immortal pages of Pickwick? Those who search for the genuine Magpie will have as hopeless a task as that of finding the George and Vulture, in George Yard, Lombard Street, with the veritable Sam Weller in attendance on Mr. Pickwick. The aforesaid Magpie and Stump was situated, we are told, in the vicinity of Clare Market, and closely approximating to the back of New Inn. Hence the association of the Black Jack with the hostelry sacred to the evening orgies of Mr. Lowton and his companions, and where Mr. Pickwick listened to the old man's tale about a queer client."

A FULL-PAGE photograph of "two famous Japanese wrestlers" appears in one of the

American "Society" papers. It may interest the public to know that these are the two athletes engaged by Barnum's wily agent in this country last year. Their "fame," however, is confined to the other side of the water, as they were considered but very third-rate artists here. Still, our friends across the Pacific have given them a very hearty welcome, and have gone into raptures over the "graceful poses" of the two wrestlers.

TELEGRAPHIC news announces that an attempt, fortunately unsuccessful, has been made upon the life of His Majesty the King of Italy. The only particulars to hand are that His Majesty was attacked in the train while on his way home from a hunting party.

THE Japanese journals in the capital announce that certain well-known physicians are taking steps towards establishing a "health-recruiting" club (*Yosei-kan*) at the Atami Hot Springs. A fund of 30,000 *yen* is to be raised in 300 shares at 100 *yen*, to be paid in five instalments. The rules of the club will be sent to any applicant on receipt of a two *sen* stamp.

THE next lecture of the course being delivered at the Meiji Kwaido, Tokiyo, gave on Friday afternoon, commencing at three o'clock. Dr. Verbeck is the lecturer, and the subject will be—"Points of Similarity and Dissimilarity in Science and Religion."

WE have received the prospectus of a new work now in the press and to be published in March, "Practical and Inductive Book-keeping," by Professor J. L. Hart-Milner, of the Commercial School, Macao. The contents indicate that the work will be a thoroughly exhaustive one, and this, taken with the author's name, should ensure it a large circulation.

THE Mume Yashiki or Plum Garden at Kamada, near Kawasaki, is already driving a thriving trade in refreshments to would-be admirers of the blossoms. But, as a matter of fact, not a single petal is yet out, nor will the place be worth visiting for another ten days or a fortnight.

A GREAT many complaints with regard to this year's oyster crop have been made of late. This mollusc is not always digestible, and, just at present, is rather less so than at other times. It was to this fact that the Roman poet evidently referred in the words *Sic itur ad astra*—i.e. sick eater 'ad oysters.

WE learn with pleasure that the submarine telegraph cable between Saigon and Tongking, which the Eastern Telegraph Company contracted to lay for the Government of France, has been successfully completed. The cable connects Saigon with Thuan (Annam) and Haiphong (Tongking).

A LONDON paper, writing shortly after the New Year on the infliction of the "waits," says:—"It is a mercy that the dismal serenaders have left off for another year. What induces people to perpetuate this nuisance by paying for it we cannot imagine. We heard of an unhappy man who last week had three bands about his house at the same hour in the middle of the night. Of course they each played different tunes—the one that stayed longest giving at last Keble's Evening Hymn, and then, by way of benediction, "Coming through the Rye."

COMMERCIAL DEPRESSION AND CURRENCY APPRECIATION.

JAPAN has had to pay a heavy tax for the success of the revolution that abolished feudalism and inaugurated an era of progress and enlightenment. Inconvertible paper money, or revolutionary currency, as it has been well called, is an indirect tax, somewhat unequally and irregularly imposed, and yet as nearly equitable as any public measure born amid the exigencies and confusion of a great social change can possibly be. When it is considered that the Government of the Restoration came into power with an empty treasury; that it was obliged to assume a heavy burden of debt; that it found the finances of the empire completely disorganized; that several varieties of depreciated fiat notes were already in circulation; that it had to create a central administration, as well as to construct an army, a navy, postal, telegraphic, police, and educational, systems, and at the same time to encourage or take the initiative in many species of commercial and industrial enterprise,—when all these things are considered, there seems more to applaud than to censure in the recent financial history of this country. Indeed, it is doubtful whether the issue of *Kinsatsu*, and the conversion of the military pensions into public bonds, must not be regarded as measures of much political sagacity. Economists hint that without its enormous national debt the Government of Great Britain could scarcely have resisted the political convulsions of 1848; and certainly it could not otherwise have counted on the hearty support it received from every stock-holder and shop-keeper in London. So, in Japan's case, there can be little question that the pecuniary obligations which the Government assumed towards the people, gave the latter a material interest in guaranteeing its stability. On the other hand, it is very certain that the prolonged use of fiat paper, and the fluctuations in its value caused by inflation, do at least as much harm to the morals of a country as to its commerce, its reputation and its financial well being. Japan's gradual return to specie payments is, therefore, a result which those interested in her prosperity observe with much satisfaction.

We say "gradual return," because in a process of this nature, nothing is more to be deprecated than precipitancy. Reversion to a hard-money circulation must, under any circumstances, carry a country back, by a revulsion cruel in the direct ratio of its rapidity, to such a state of collapse as sometimes follows the excitement and delirium of a fever. Industry is depressed, prices fall, trade stagnates, and bankruptcies become numerous. The harm and wrong fall on the debtor classes, who are the most numerous and least able to bear losses. It has to be remembered, too, that the depreciation of paper money is

really a tax, inasmuch as the paper is issued originally to avoid the necessity of a direct tax, and each person through whose hands it passes, parts with it again at a loss proportionate to the quantity he holds and the time he holds it. The total loss is thus divided among those using the paper in just proportion to their ability and liability to pay a tax. The payment of the whole value borne on the face of a fiat note to the last holder, who has received it at a large discount, would only be to impose a second tax on the same persons who have already been fairly and heavily taxed by the depreciation of the note. These principal reasons make it imperative that financiers should prepare the way for a resumption of specie payments with the utmost deliberation and care. Heroic measures, such as those which used to be so vigorously advocated by the foreign local press of Yokohama some years ago, could not have been applied without disastrous consequences.

Without attempting to controvert the self-evident proposition that the degree of public confidence in fiat paper must, to some extent, influence its value, we may say, generally, that the value of such money is primarily controlled by its quantity. Inconvertible notes will not sensibly depreciate, other things being equal, until issued in excess of the minimum of the money which the people would use if it was metallic. It follows, therefore, that since any considerable depreciation may be regarded as a sign of excessive issues, the first step towards restoring equilibrium between paper and specie is to contract the volume of the former. This is what the Government has been doing for the past four years. In 1875-76, the quantity of *Kinsatsu* in circulation was 98½ millions, approximately, and silver was at a premium of 5 per cent. In 1878-79, the quantity of *Kinsatsu* was increased to 177 millions, and the premium on silver soon rose to 60 or 70 per cent. To understand these great and rapid changes, it is necessary to recall three facts. First, the rebellion in the South, and other exceptional events, obliged the Central Government to add 22½ millions to its note issues, thus raising their nominal total from 98½, to 121, millions. Secondly, the special reserve also went into circulation. The *raison d'être* of the special reserve is to defray the current expenses of the State at times when incomings are temporarily insufficient to cover outgoings. In 1878-79, it amounted to 22 millions, the whole of which was added to the volume of the currency. Thirdly, the National Banks, established in 1876 under conditions which rendered their rapid growth a certainty, issued paper of their own to the extent of 34 millions. Thus, in sum, the years 1878 and 1879 witnessed an inflation of about 78 millions of *yen*. Under these circumstances, it is not wonderful that rapid depreciation ensued, until, in the fall of 1880,

a paper *yen* was only worth 56 *sen* in silver.

The first step taken in the direction of contraction seems to have been the recall of the 22 millions which had constituted the special reserve. This was effected without much difficulty. The Finance Minister then proceeded to deal with the 121 millions which represented the nominal amount of the Treasury's issues. These he has succeeded in reducing by 29 millions¹, so that the total of the Government's paper now in circulation is only 91,580,000. It is not in our power to detail the exact processes by which this result has been achieved. Foremost among them, doubtless, is the sale of bonds. A considerable quantity of these securities had been accumulated by the late Minister of Finance, in lieu of the specie and other reserves which he found in the Treasury; and the Government has probably been able to dispose of them on advantageous terms. Finally, in accordance with the scheme published last May, the note-issuing power of the National Banks has been taken away, and measures are in progress to withdraw the whole of their paper by 1898. Thus the volume of the currency has been diminished by fully 50 millions since 1879, and the result is that a paper *yen* is now worth 90 *sen* in silver.

Contemporaneously with this contraction of its note issues, the Government has applied itself to accumulate a specie reserve for their ultimate redemption. Twenty-two millions are said to be now at the Treasury's command in silver and gold, and it is hoped that during the course of the next three years the total will be raised to thirty millions. Of the principal devices adopted in connection with this part of the scheme, we have already spoken in previous issues.

That the economies and accumulations of the Minister of Finance should have amounted to upwards of seventy million *yen* in less than five years, is somewhat difficult to realize. Yet it is scarcely credible that transactions of less magnitude could have produced the very remarkable appreciation of the past eighteen months. There may be differences of opinion as to the wisdom of such rapid manipulation, but there can be no question that it displays a degree of financial energy which places the future of Japan's fiduciary currency beyond the range of doubt.

Meanwhile, however, industry and trade have suffered severely. The same evils that overtook Great Britain and the United States at the period of their return to specie payments were experienced here in 1883, and are still experienced. This part of the subject is full of interest, since it involves the vital question—has the depression reached its maximum, or must we expect to see it still further intensified? In order to appreciate what has really happened, it will be necessary to examine a few figures, and we cannot do better than

¹ We take this figure from the *Nichi Nichi Shimbun*.

commence with agricultural returns, since in Japan the condition of the farmers is a true measure of the country's prosperity. With this object we have prepared four tables, showing the returns of agricultural industry in as many different districts for each year since 1879. These tables are as follows:—

KADSUSA DISTRICT.					
	1879.	1880.	1881.	1882.	1883.
Landlord's share of produce per <i>chō</i> (3,000 <i>tsubo</i> —about 2½ acres).	KOKU.	KOKU.	KOKU.	KOKU.	KOKU.
	18	18	18	18	18
YEN.	YEN.	YEN.	YEN.	YEN.	YEN.
Total value of above	138.46	200.00	171.41.8	152.00	100.00
Value per <i>koku</i>	7.69	11.11.1	9.52.3	8.44.4	5.55.5
Land Tax (<i>Chiao</i>)	18.11.8	18.11.8	18.11.8	18.11.8	18.11.8
Local Tax (<i>Chihō-zai</i>) and expenses of irrigation (<i>Yō-sui-hi</i>)	7.42.5	7.21.1	8.33.1	8.09.7	7.80.5
Net value of produce	112.91.9	174.68.2	144.96.9	125.78.2	74.70.7
Value of land as assessed for purposes of taxation (<i>Chikendaka</i>)	724.53.2	724.53.2	724.53.2	724.53.2	724.53.2
Market value of land (<i>Bai-bai Soba</i>)	1,800	2,250	2,000	1,636	1,333
PER CENT.	PER CENT.	PER CENT.	PER CENT.	PER CENT.	PER CENT.
Net interest on Assessed value	15.5	24.1	20	17.3	10
Net interest on market value	6.3	7.8	7.2	7.6	5.5

KUMAGAYE DISTRICT.					
	1879.	1880.	1881.	1882.	1883.
Landlord's share of produce per <i>chō</i> (3,000 <i>tsubo</i> —about 2½ acres).	KOKU.	KOKU.	KOKU.	KOKU.	KOKU.
	13.5	13.5	13.5	13.5	13.5
YEN.	YEN.	YEN.	YEN.	YEN.	YEN.
Total value of above	115.29	145.39.5	153.27.9	125.46.9	96.39
Value per <i>koku</i>	8.52.4	10.77	11.33.5	9.29.4	7.14
Land Tax (<i>Chiao</i>)	20	20	20	20	20
Local Tax (<i>Chihō-zai</i>) and expenses of irrigation (<i>Yō-sui-hi</i>)	6.50	7.66.6	9.23	7.36	8.36
Net value of produce	88.79	117.72.9	124.04.9	98.10.9	68.03
Value of land as assessed for purposes of taxation (<i>Chikendaka</i>)	800	800	800	800	800
Market value of land (<i>Bai-bai Soba</i>)	1,250	1,400	1,500	1,250	1,000
PER CENT.	PER CENT.	PER CENT.	PER CENT.	PER CENT.	PER CENT.
Net interest on Assessed value	11.1	14.8	15.5	12.2	8.5
Net interest on market value	7.1	8.4	8.2	7.8	6.8

URAWA DISTRICT.					
	1879.	1880.	1881.	1882.	1883.
Landlord's share of produce per <i>chō</i> (3,000 <i>tsubo</i> —about 2½ acres).	KOKU.	KOKU.	KOKU.	KOKU.	KOKU.
	12	12	12	12	12
YEN.	YEN.	YEN.	YEN.	YEN.	YEN.
Total value of above	107.30.4	135.58.8	140.48	119.49.6	87.30
Value per <i>koku</i>	8.94.2	11.29.9	11.70.7	9.95.8	7.27.5
Land Tax (<i>Chiao</i>)	17.12.5	17.12.5	17.12.5	17.12.5	17.12.5
Local Tax (<i>Chihō-zai</i>) and expenses of irrigation (<i>Yō-sui-hi</i>)	5.13.75	6.85	6.16.5	7.60	7.53.5
Net value of produce	85.15.4	111.72.55	117.30.65	94.88	62.75.2
Value of land as assessed for purposes of taxation (<i>Chikendaka</i>)	685	685	685	685	685
Market value of land (<i>Bai-bai Soba</i>)	800	800	1,200	1,200	900
PER CENT.	PER CENT.	PER CENT.	PER CENT.	PER CENT.	PER CENT.
Net interest on Assessed value	12.4	16.3	17.1	13.8	9.1
Net interest on market value	10.6	13.9	9.7	7.9	6.9

KAMADA DISTRICT.					
	1879.	1880.	1881.	1882.	1883.
Landlord's share of produce per <i>chō</i> (3,000 <i>tsubo</i> —about 2½ acres).	KOKU.	KOKU.	KOKU.	KOKU.	KOKU.
	10	10	10	10	10
YEN.	YEN.	YEN.	YEN.	YEN.	YEN.
Total value of above	84.74	108.94	122.49	97.98	60.88
Value per <i>koku</i>	8.47.4	10.89.4	12.24.9	9.79.8	6.08.8
Land Tax (<i>Chiao</i>)	18.75	18.75	18.75	18.75	18.75
Local Tax (<i>Chihō-zai</i>) and expenses of irrigation (<i>Yō-sui-hi</i>)	5.55	5.55	11.25	12	11.25
Net value of produce	60.44	84.64	92.71.5	66.34.8	30.88
Value of land as assessed for purposes of taxation (<i>Chikendaka</i>)	750	750	750	750	750
Market value of land (<i>Bai-bai Soba</i>)	850	900	1,000	900	800
PER CENT.	PER CENT.	PER CENT.	PER CENT.	PER CENT.	PER CENT.
Net interest on Assessed value	8.0	11.3	12.36	8.84	4.1
Net interest on market value	7.1	9.4	9.27	7.3	3.8

In order to form a clear conception of the statistical import of the above figures, it becomes necessary to re-group them in comparative tables as follows:—

TABLE I.
Comparative market values of rice-land from 1879 to 1883, taking the value in the former year as the unit (100).

YEAR.	VALUE.
1879	100
1880	113.83
1881	121.28
1882	106.08
1883	85.80

* N.B.—This figure shows a variation from the general rate of change, owing, apparently, to an exceptional attraction of capital towards land investments.

TABLE II.
Comparative returns on capital invested in land from 1879 to 1883, taking the return in the former year as the unit (100).

YEAR.	RETURN.
1879	100
1880	127
1881	110.5
1882	98.5
1883	73.95

TABLE III.
Comparative incomes actually derived from land (without reference to capital invested) from 1879 to 1883, taking the income in the former year as the unit (100).

YEAR.	INCOME.
1879	100
1880	140.73
1881	137.93
1882	110.88
1883	68.06

These figures, especially those in the last table, are striking. They show that the income of the Japanese agriculturist in 1883 was less than half of his income in 1880 or 1881, and nearly forty per cent. less than his income in 1882. It will be seen, too, from the tables of details, that the average price of rice in 1883 is taken as 6.71 *yen* per *koku*, whereas the price at present ruling in Tokiyo is only 5.10 *yen*. Should the latter rate hold, the agriculturist's income in the current year will be represented in Table III. by a figure less than 50.

The significance of these facts is not to be mistaken. When we remember that the land-tax constitutes nearly sixty-five per cent. of the State's revenue in Japan, it becomes plain that the condition of the whole people is intimately associated with that of the agricultural classes, and that some improvement in the latter must precede any real revival of industry and commerce. There can be no active market for foreign goods so long as the practice of a rigid economy is an imperative necessity for the bulk of the nation.

How much of the above results are attributable to currency contraction, there is no possibility of determining with accuracy. It is a well known fact in political economy that prices always fall and rise somewhat beyond the permanent effect of the causes which influence them, and that in either case there is a reaction to the extent of the excess. During the past five years we have seen a paper *yen* sell for only 56 cents in silver, and then appreciate steadily until it now sells for 90 silver cents. Rice, during the same interval, rose in value to 12 *yen* per *koku*, and fell again to 4.90 *yen*, thus fluctuating within much wider limits than *Kinsatsu*. Something of this is doubtless due to the plentiful harvests which succeeded one another from 1879 to 1883. The production of rice exceeded the wants of the people, and so long as currency inflation continued the price of the staple was sustained at a high point by exceptional causes. When the general depression resulting from currency contraction set in,

stores of rice, accumulated in prosperous times, were thrown upon the market, thus helping to accentuate the mischief. While, therefore, the first symptoms of reaction will probably be discernible in the quotations of the rice market, we shall arrive at a more accurate estimate of the effects of currency contraction by excluding that staple from our calculations.

It is only by the price of commodities that the value of money can be ascertained and compared. In England, during the suspension of specie payments, from 1797 to 1821, prices gradually rose from 100, in 1795, to 157, in 1809. After the pacification of 1815, and the resumption of specie payments throughout Europe, prices again fell, until, in 1849, they reached 64. Similar causes have been everywhere followed by similar effects, and the following schedule will show that Japan has not been exceptional. For purposes of comparison we take, in each case, the price ruling in 1879 as the unit, and call it 100:—

Comparative Table of prices of the principal staples and necessities from 1879 to 1883, the prices ruling in the former year being taken as the unit in each case.

N.B.—Rice, *Saké*, and Tobacco are omitted from the body of this table; the first for the reason mentioned above, and the two last because exceptional taxation has prevented their prices from fluctuating like other commodities.

ARTICLE.	1879.	1880.	1881.	1882.	1883.
Cotton cloth (<i>Mo-men</i>)	100	123	155	145	106

Average price of silver	100	111.5	127	116	96
Average price of rice	100	134	152	110	83

The influence of currency inflation upon values is plainly shown by this table. It appears, too, that, on the whole, prices have fallen below the level at which they stood before the effects of inflation began to be seriously felt, a fact which inspires a hope that some reaction may soon be expected. Japan has to go through the same experiences as other countries under similar circumstances. She may congratulate herself that her sufferings have not been more severe.

THE YOKOHAMA CHAMBER OF COMMERCE AND TREATY REVISION.

AT the Annual Meeting of the Yokohama Chamber of Commerce, Mr. A. J. WILKIN spoke at some length on the subject of treaty revision, more especially with reference to a proposed modification of the existing system of extritorial jurisdiction. Whether his remarks were intended as an outline of the Chamber's opinion, or whether they embodied his own ideas only, there is a difficulty in determining. He opened his speech by saying that some expression from the Chamber on the extritorial question seemed advisable, but we are nevertheless disposed to think that he spoke merely as an individual, first because his observations were not made the subject of any resolution, and secondly because their nature was in some respects incompatible with the hypothesis that they had received the previous scrutiny and endorsement of a body of thoughtful men.

We may say at once, that while we dissent in the main from Mr. WILKIN'S views as formulated at this meeting, we hail their public expression with much satisfaction. The conservative section of the foreign community has been too long represented by men who, whatever their loyalty to the cause they champion, are so manifestly swayed by bitter aversion of everything Japanese, that their utterances assume the appearance of unreasoning hostility, and impart to the people of this country a wholly false idea of foreign sentiment. From this fault, at any rate, Mr. WILKIN'S statements are free. It would be difficult to find any one in Yokohama whose character is a better guarantee for the sincerity and kindliness of his opinions.

He sets out by deprecating any tendency to obscure the question by "selfish or sentimental considerations," and then goes on to say that while Japan ought, by all means, to have her sovereign rights, the fact that others have rights also must not be overlooked. What the latter rights are, he does not exactly explain, but we gather, from the general tenor of his speech, that he alludes to the extritorial privileges conferred by the present treaties. Now nothing is more necessary than to remark, at the outset, that there never has been any expressed desire on Japan's part to suddenly disturb those privileges. Her proposals, as Mr. WILKIN doubtless knows, contemplate nothing more, in the immediate future, than the exercise of a very partial jurisdiction, guaranteed against abuse by various liberal provisions, and to be regarded as a probationary step to more radical changes. It will readily be admitted that the treaties signed in 1856 were never intended to be permanent. A date for their revision was distinctly fixed. It will also be admitted that the term "revision" was never intended to apply to tariff only. Such a supposition would be absurd. If

then, eleven years after the date of revision as fixed by the treaties themselves, Japan asks for a modification—not the abolition, but a modification—of their extritorial clauses, it can scarcely be contended that she seeks to recover her own sovereign rights in defiance of the rights of foreigners.

Mr. WILKIN, however, is of opinion that Japan's concern about this matter is much less than the public has been led to suppose. He thinks that her advisers and advocates misrepresent her. Into the latter surmise we cannot follow him; but with regard to the former, we differ from him altogether. Nor need we go beyond his own statement for a justification of our view. "I cannot understand," he says, "how this country can aspire to be considered enlightened and civilized, while it closes the land in this fashion—a relic of darker ages." Now that is exactly what the Japanese themselves feel. They cannot aspire to be called a civilized nation until foreign intercourse has been emancipated from all restrictions, and strangers are as free to travel, trade, and live in Japan, as Japanese are free to live, trade, and travel in Europe or America. That is their feeling, a feeling which may or may not have been fomented by their foreign advisers and advocates, but which, at any rate, sways the educated classes so powerfully that it finds expression, publicly and privately, in all their writings and speeches. The Government, then, sharing this sentiment and recognising its strength as well as the danger of ignoring it, seeks to accomplish what it regards as an absolutely essential preliminary to the opening of the country,—namely, a modification of existing extritorial arrangements.

Here, however, Mr. WILKIN joins issue with the Government. "The plea that the opening of the country might lead to trouble without full jurisdiction, breaks down," he tells us, "under the result of actual experience." This is a very interesting statement. It is interesting because the great majority of foreign writers have hitherto agreed that the Japanese would not be justified in opening their country unless some provision were made for the government of foreigners in the interior. The reason is simple. To extend the privileges of trade and residence throughout Japan to persons who are only amenable to the jurisdiction of Courts sitting at one or two remote villages on the sea-coast, would be a virtual denial of justice to native suitors. The imperfections and inconveniences of sixteen conflicting jurisdictions, even when the area of their authority is confined to the open ports, have been sufficiently demonstrated to deprive the Japanese of all choice in this matter. How, then, does Mr. WILKIN obtain a different deduction from "actual experience"? By reference to the results of the passport system. "During the few years in which the passport system—an enlightened step in advance—has been

working," he says, "by the British Legation alone several thousand, say 7,000, passports have been obtained, and in no single instance is there a record of any serious trouble with any of the holders." We confess that a feeling of hopeless bewilderment creeps over us when we contemplate this argument. During the past fourteen or fifteen years passports have been issued to foreigners on the distinctly stipulated condition that their holders should not engage in any species of trade outside the treaty limits. The privilege, thus safeguarded, has not led to any complications, and Mr. WILKIN now bids us accept this as a proof that no complications would have ensued even though the safeguard had not existed. Such, at least, is the only construction we can put upon his language. The whole question hinges upon the right of trade. Travel merely for purposes of science, sanitation, or recreation admits only a class of persons for whom legal restraint is seldom, if ever, necessary. So soon, however, as trading passports are issued, everybody will find his way into the interior. The exercise of any efficient discretionary power by the Consuls would be quite impossible. As to what may happen under such circumstances, no inference whatever can be drawn from what has happened under existing circumstances. Mr. WILKIN'S argument is singularly inconsequential. He says that Japan cannot aspire to be considered enlightened or civilized until she opens the country, and he contends that the existence of extritoriality is not an obstacle to the opening, yet the only proof he advances is that no complications have hitherto attended the exercise of a privilege expressly circumscribed so as to consist with extritoriality. We cannot consent to regard this as the deliberate opinion of the Yokohama Chamber of Commerce.

Turning now to Mr. WILKIN'S analysis of the conditions that exist, and that formerly existed, in Japan, we are confronted by a list of singular inaccuracies. First among the reasons put forward as justifying extritoriality is "the want of any written law." This want, however, is of the past. "Within the last year or two, or two or three years, a written code has been formed," says Mr. WILKIN, "and it is understood that it is to some extent working." It would be difficult to construct a statement better calculated to convey a false impression. Japan has had a written code for centuries. Mr. WILKIN is evidently not a reader of the Proceedings of the Asiatic Society or he would have remembered an analysis of that code made years ago by an English jurisconsult. He is evidently not a reader of the local press, or he would have remembered a lengthened reference to that code recently translated into the columns of this journal from a German pamphlet. He is evidently not a reader of the calendars issued by the principal educational establishments in

Tokiyo, or he would know that that code forms a part of the course of law at the University of Japan. But his neglect of these sources of information is as nothing compared with his ignorance of the fact that a new code of criminal law was compiled and promulgated shortly after the Restoration; that it was translated by a member of the British Legation staff and published in English, and that its provisions were commented on over and over again by European experts as well as by foreign writers on and in Japan. Of the Old Code, of the New Code, and of the Revised Code, all antecedent to the present Code, he is apparently wholly oblivious. As for the codes now in force, after many years of preparation, they were finally promulgated in the summer of 1881, and came into force, not "to some extent," as Mr. WILKIN says, but altogether, and everywhere throughout Japan, on January the 1st, 1882. Mr. WILKIN thinks "it would be only decent to see a little how the Codes work before he is entrusted to their care." If the examination is to be conducted at the rate indicated by his present knowledge, not one generation, but half a dozen will pass away before the process is completed.

We do not wish to be misunderstood in this matter. The objection that Japan is unfamiliar with, and therefore not yet competent to administer, her present codes, is natural and to some extent valid. But there is neither justice nor accuracy in the assertion that "for generations all her habits of thought and idea have been in different grooves." Neither Mr. WILKIN, nor any other foreigner, is in a position to define the grooves in which her "habits of thought and idea" formerly moved. These are matters which history has still to elucidate. What we do certainly know is that ever since the Restoration her criminal procedure has been gradually purged of all its cruel elements, and that, although for more than two years she has been governed by laws admittedly abreast of the most advanced systems of the West, her judicial machinery has worked smoothly and her statistics show no increase of crime. In view of these facts, one of two conclusions is inevitable: either that her codes are administered with singular ability, or that the morality of the nation is in consonance with their provisions.

But Mr. WILKIN'S surprising carelessness of expression on these points pales before his assertion that torture prevailed in Japan three years ago. This is a cruel libel. Torture was partially abolished by a proclamation issued on the 25th of August, 1874, and wholly interdicted by a proclamation dated June 18th, 1876. The records of the Department of Justice show that since the latter date there has not been one application of torture in the courts of Japan. Again we say that, if Mr. WILKIN'S notions are to be taken as an index of his countrymen's knowledge of Japan, there is little hope that

the truth will be recognized during the lifetime of the present generation.

It is weary work discussing such errors, the more so when we remember the source from which they emanate. A few words more will, however, suffice to dissect the last of Mr. WILKIN'S delusions. He complains that there is no *habeas corpus* in Japan. There is a story told of an Irishman who, being accustomed to live in a house with broken windows, came to regard paper patches as an ornamental species of glazing. Mr. WILKIN'S case is similar. The *habeas corpus* is a device to correct the abuses of imperfect laws. England and the United States have a monopoly of it. It does not exist in France, Germany, Italy, or any other country where the laws are good enough to dispense with it. If Mr. WILKIN thinks it an essential adjunct of Japanese civilization, he must begin by mutilating the laws which in their present complete state render it quite superfluous.

"Is it not still the case," he then proceeds to ask, "that a man can be thrown into prison on a mere suspicion, and kept there for weeks without a trial?" So far as keeping a man in prison on suspicion is concerned, we have known it done, not for weeks, but for months in England. But Mr. WILKIN evidently means that in Japan a man is liable to be treated thus without undergoing any judicial examination. Here again he is wholly mistaken. If he will take the trouble to peruse the Third Book of the Code of Criminal Procedure, he will see that due provision is made for the immediate examination of every prisoner by a police magistrate, who deals with the case or remands it according to its nature. There is, or ought to be, no more delay in Japan than in England.

Mr. WILKIN'S next two queries severely tax our gravity. "Shall I be liable to be brow-beaten," he enquires, "if I walk on the bund without a lantern, even under the gas lamps? and is a foreigner to have the privilege of being able to tell his wife she may go—he does not want her any more?" We incline to the belief that Mr. WILKIN has been walking a long time without light of any sort if he thinks that pedestrians in Japan are still obliged to carry lanterns; and as for his conjugal crux—well, if an Englishman can persuade an Englishwoman to marry him *à la Japonnaise*, we presume he will have the privilege of treating her accordingly. These are frivolous issues and unworthy of serious discussion. They furnish an unfortunate preface to the complaint that the state religion of Japan is a paganism. Mr. WILKIN is doubtless actuated by the best motives when he classes this among Japan's disabilities, but it is not the business of any nation, or combination of nations, to dictate a religious faith to Japan, or to make the acknowledgment of her just rights contingent upon her acceptance of a particular creed.

More regrettable, however, than any series of misstatements and misapprehen-

sions is the spirit displayed in Mr. WILKIN'S closing remarks, where he deprecates the idea that the opening of the country would be really "a *quid pro quo* for the surrender of alien privileges." He does not deny that foreigners would benefit by the step, but he dismisses the whole prospect with the assurance that Japan's benefit would be much greater. And what if it would? Is Japan under any necessity to purchase from foreigners the rights which belong to every independent State? Must she be condemned to a condition of semi-seclusion, to the status of an unenlightened and uncivilized country, until she can make it worth our while to remove her present disabilities? Mr. WILKIN would be the last person to wittingly advance such a proposition. Yet he fails, apparently, to see that Japan is not more disgraced by her isolation, than are foreigners by their determination to keep her isolated until their own prejudices and misconceptions are removed by some miraculous revelation, and until they can be sure that their material gain by a just act will be at least equivalent to the selfish privileges they surrender in performing it. We have never believed that a logical defence of the conservative cause is possible, but the full extent of its sophistry and weakness had not dawned upon us before reading this speech of Mr. A. J. WILKIN.

MUNICIPAL MATTERS.

WHEN a Pacific Mail steamer arrives at San Francisco with a contingent of Chinese among the passengers, the Custom House officials proceed to institute a search for concealed opium. The operation partakes, somewhat, of a sporting character, especially in the fact that the whereabouts of the secreted poison appears to be best ascertained by the sense of smell. The searchers become so expert that in the end they trust to the guidance of their noses, and thus dig out deposits of drug much as a terrier ferrets out truffles. We are reminded of this by some remarks contained in a Shanghai contemporary to the effect that the weak points in the drainage system of a house can only be detected by the nasal ability of a professional, and that the Municipal Council ought to insist upon periodically investigating people's back premises and drains by means of a properly qualified inspector. It appears that even in self-governed Shanghai, Englishmen's castellated notions about the inviolability of their homes have hitherto interfered with sanitary inspection, and our contemporary, while acknowledging the sanctity of this creed, sensibly says that "there is a point beyond which individual liberty becomes a nuisance and a danger," and that there "judicious tyranny should step in to prevent the mischief which may accrue to the whole Settlement from the

neglect of one man." How long it will be before this principle is practically admitted in Yokohama, we are afraid to speculate. In the proposals drafted by a committee of land-renters more than two years ago there was one providing for the appointment of a Sanitary Committee with power to pay periodical visits to the premises and compounds of all the foreign residents. Obviously essential as such a measure is, any attempt to carry it out by the Japanese local authorities would probably be scouted by more than half of the community. This is perplexing, but what is worse is that the character and morality of the Settlement depend, at present, chiefly upon the good will of the grog shop keepers. The members of that fraternity are under no sort of control. If they were clever enough, they might take charge of Yokohama and defy the community. It is a strange state of affairs. Probably there never yet was offered to public gaze a more wonderful spectacle than that of a number of sensible men wasting months and years in formulating written complaints against the inefficiency of a Government which is confessed to be without the power of governing. The foreign residents complain, with justice, that they know nothing of the municipal laws which the Japanese Authorities profess to enforce. But it does not seem to have occurred to the complainants to ask themselves how a knowledge of those laws could be obtained. It has always been maintained by the Foreign Representatives, with some happy exceptions, that no Japanese laws, as such, are binding upon foreigners. The municipal regulations of the local government cannot, therefore, be authoritatively communicated to the community except through the Foreign Representatives, of whom only two, or three at most, are competent to meddle with such a matter. Thus, even supposing the Japanese agreed to admit that extraterritoriality applies to local as well as to imperial laws—an admission involving all sorts of irrational complications—and supposing they were consequently willing that their municipal regulations should be promulgated through the Foreign Ministers, there would still remain the trouble, that while the regulations could thus be made binding on two or three of the nationalities represented here, they would be a dead letter so far as the remaining thirteen or fourteen are concerned. There is not the smallest probability that the Japanese will take a step involving the abandonment of an important principle, and powerless to produce any good result. So long as our Ministers maintain that no municipal regulations are binding without their sanction, and at the same time admit that the great majority of them are not competent to give that sanction, just so long will the muddle remain hopeless. Writing memorials that ignore the true cause of the complication is mere waste of time. It is hard that busy men should be commissioned to per-

form such a hopeless duty. It is even harder that a respectable community should be indirectly charged with defying laws of which it knows nothing. But these things will never be mended until there is laid the foundation of all Government, the recognition of a governing authority.

MARRIAGE IN THE UNITED STATES.

The ritual employed at the marriage ceremony in England and elsewhere having no pretensions to supernatural inspiration, its alpha and omega are not protected by anathemas. Consequently its language is sometimes altered; sometimes dispensed with altogether. The latter is the case in the State of New York. There the intervention of a clergyman or magistrate is not needed to make a marriage contract valid. Neither is it essential that some formula should be uttered to express the mutual consent of the parties to the contract. Neither must that consent be attended by any ceremony, or manifested by any particular act or sign. The whole thing is purely a matter of dual volition. "Concurrence in matrimonial intent is all that is required of a man and woman in order to enter into the relation of husband and wife." These are the words of Justice FURGUESON, uttered in the Court-house of New Utrecht a few weeks ago. The occasion which elicited his verdict was a suit brought by Miss ANNIE EVADNE BEGBIE against Mr. JEROME WALTER VAUGHAN. These young people, each aged seventeen, had been married to one another under somewhat novel circumstances.

They met, not for the first time, last July at a "sociable." The entertainment, which was of a mixed nature, began at 9 o'clock in the forenoon. First there was a literary and musical performance; then followed refreshments, and then the party adjourned to the lawn where they tried to play croquet. This amusement does not appear to have suited their mood, for they quickly abandoned it, and received with acclaim a proposal that they should play at getting married. The sport began at once. Among its early incidents was a squabble between Miss ANNIE BEGBIE and another lady for the privilege of being united to Master VAUGHAN. This ended in an amicable compromise by which they were both married to the object of their choice. The ceremony was performed by a youth of twenty, who also married the same young ladies to another gentleman, and was himself united to a third spinster. How many others entered into the matrimonial state the evidence given at the trial did not clearly show, but the only practical consequence of the affair on that occasion was that the newly made husbands jumped over a fence and escaped from their wives. Subsequently Master VAUGHAN paid frequent visits to the house of Miss BEGBIE'S brother-in-law where he generally met his bride. On these occasions he never failed to "hug and kiss her." A hammock appears to have been a favorite place for exchanging endearments of this nature, and a not unfrequent witness of them was another young lady of seventeen who watched the proceedings from the vantage ground of another hammock which she shared with another young gentleman. On the whole the trial showed that neither the belles nor the beaux of New Utrecht are of a

prudish nature. Six gentlemen were examined. One was a man of forty whose kissing habits were, therefore, circumscribed, but the other five, judging from their recorded experiences, seemed to think that fondling ladies in hammocks and out of hammocks was a duty not to be neglected in polite society. There was naturally some difficulty in determining how far these attentions were responded to. One witness couldn't tell whether he was kissed back; another thought such affairs were "sort of simultaneous;" and a third was puzzled about the impression left on his mind. The testimony was most concurrent with regard to the relations between the witnesses and the plaintiff. Apart from her supposed husband, four of them confessed that they were on kissing terms with her. And so they remained until, three months after the ceremony at the sociable, the plaintiff's mother invited Master VAUGHAN to pay her a visit. The young gentleman doubtless had some intimation of what was coming, for he took care to be accompanied by three friends. He was told that the affair was more serious than he supposed; that the marriage was legal and binding, and that the only way to set the young lady right was to get separation papers drawn. This simple expedient, a small return, one would imagine, for the many kindnesses he had received at the plaintiff's hands, was not adopted, probably because Mr. VAUGHAN *père* felt so confident that, as he explained himself, "if a copper cent would have settled the affair at the start, he would not have paid it." The case, therefore, came into Court, and gave Justice FURGUESON an opportunity of explaining the marriage laws of the State of New York, as well as of deciding that the dual intention which alone could tie a genuine matrimonial knot was wanting in the instance under examination. The Judge added that "if parents would not neglect the discharge of their parental functions, mock marriages and indiscriminate kissing would not be so frequent." Some persons will be disposed to doubt whether the parents or the laws are more to blame.

THE CHINESE EVASIONISTS IN SAN FRANCISCO.

From a statement recently submitted to the Secretary of the United States Treasury it appears that attempts to defraud the Customs by means of undervalued invoices are made by about twenty-five per cent. of the merchants engaged in the importation of goods from Europe. If this is the result of a protective tariff in the case of Americans themselves, no surprise ought to be felt at a display of similar dishonesty on the part of Chinese who endeavour to evade the provisions of the anti-immigration law.

The devices resorted to by the would-be immigrants are sometimes ingenious and often ludicrous. One plan is based upon the difficulty a white man finds in distinguishing this Chinese from that. An immigrant is provided with a Canton certificate to which his photograph is affixed. Arrived at San Francisco and being admitted to bail pending a final decision as to his right to remain, he seeks out a fellow countryman who wants to revisit the Celestial Empire. Then the one who desires to leave, substitutes his own photograph for that of the one who desires to stay, and when the case comes up for hearing, the former appears in court

instead of the latter, prefers an insufficient plea for rights of residence, and is shipped back to China at the expense of the United States. By this double-barrelled dodge the outgoing AH HOW gets a free passage home, and the incoming AH WHY settles down unmolested. Others depend upon the straightforward plan of swearing the thing that is not. Such was the method adopted by Mr. LING YEN TICK, a gentleman described as "a rough looking, horny handed, coolie, whose clothes did not indicate anything better than a wharf rat or a vegetable digger," but who, nevertheless kept a Federal Judge, a District Attorney and certain other Court officials, engaged during the best part of a day investigating his private history. Mr. TICK averred that he owned a \$500 interest in a store in San Francisco, and that he had journeyed to America to become an active partner. In support of the allegation he called several witnesses, who declared that the interest originally belonged to TICK Senior, and that it had been transferred to TICK Junior on the former's decease. The Judge asked for documentary evidence, and after an adjournment for dinner the TICK faction produced an account-book, on the fly leaf of which was an entry saying that TICK Junior had an interest in the firm. This seems to have been an oversight on the part of the Chinese, for the account-book was six years old, and TICK Senior's decease only dated back a few months. The faction rose stoutly to the occasion, however. They swore blandly that TICK Senior's interest had never been recorded, but that TICK Junior's had. The Court then, having the account books at hand, proceeded to examine them, and found that during the first year of business the receipts from all sources were about \$300 per month, whereas, before dinner, the head partner had sworn that they were \$20,000 per annum. Confronted by this discrepancy, the faction said, with unruffled composure, that all things must have a beginning. The baffled Court now went on another tack. Entries of profits remitted to the TICK partner in China were asked for. Again the Chinese were equal to the occasion. There never had been any profits, they said. To their great regret the expenses had swallowed up everything. Questioned still further, they averred that their outgoings had always been the same—\$20,000 per annum—and that when they commenced business they had a capital of only \$3,500. Thus in the first year they appeared to have spent all their capital and made a deficit of \$13,900. The Judge exulted. He thought the faction must weaken under such a hard piece of logic as that. But the hope was deceptive. The head partner politely explained that he had made up the deficit out of commissions on the sale of garden truck coming from a manure-heap in which he had an interest. Manifestly the Court could not go into the manure-heap, so it fell back on TICK Junior. That worthy, being shown the account-book with the names of the partners, said that he recognized three of them as his relations. Once more the Court exulted, for TICK, when questioned by the Custom-house officers on board ship, had been unable to name any of the partners. But when everybody looked to see TICK confounded, he explained complacently that he had been sea-sick and unable to use his memory. And this though the ship had been three days in the dock before TICK was confronted by the Custom-house folks. Finally, the case was re-

manded, and other "evasionists" came on. One of them, inspired, perhaps, by TICK's example, professed himself a trader, but said that he, too, had been too sea-sick to remember the fact when first questioned. Another averred that, out of a possible total of \$156, he had saved \$250, and with it bought a seventh-share in a drug store in which a capital of \$4,800 was invested. He also could not recall the names of any of the partners in the store where his six years' savings were placed, and he also, under the influence of sea-sickness, had said he was to be, not a partner, but a book-keeper. These discrepancies between statements made on board ship and those sworn to in Court may perhaps be referred to the promptings of a Chinese circular said to have been published for the benefit of new comers. It is translated as follows:—

On her last trip the *Oceanic* brought over a number of passengers, a majority of whom are ashore, out on bail. It will not be a great many days before their cases will be regularly called for trial. There is a law prohibiting the coming of Chinese laborers. It is not only the Chinese who are not thoroughly acquainted with the above, but even the lawyers do not seem to comprehend it. The following hints are for the information of those whom those cases concern, particularly those who are passengers. They ought to understand the above so that there may be no disappointment:

First—If a laborer, "he must have returned to China after November 17, 1880 (Kwong Su, tenth month, fifteen day), and before May 6, 1882 (Kwong Su, eighth year, third month, twentieth day)." Then he can return to this country.

Second—If a young, intelligent person, coming to this country to go to school, he can land without any difficulty, but then he must never mention a word of learning how to work, etc.

Third—In the case of merchants, whether new-comers or old residents, they can also be landed without any difficulty, but then they must have some evidence prepared in the form of a paper, showing interest in some store, account-book, or money brought over. These facts must be all clearly stated and then all will be right. Those passengers who have been examined already by the Custom House, whose testimonies do not correspond with the above, who have signed their names to the paper (meaning the Custom House records), will say they had heard a great deal of what the interpreter said was not understood by the Chinese, and that a great deal of the numerous dialects was not understood by the interpreter. When these Chinese come into Court and their testimony does not agree with that given to the Custom House officials, the fault then must lie with the interpreter, in that he did not understand clearly what he heard. When they come to Court they need not be afraid to relate, clearly and straight to the Judge's face, that they do not understand the Canton dialect, and this will prevent disappointments.

We incline to the opinion that this circular rather injures the anti-Chinese case. That it should have been issued at all is unlikely enough, but that it should have been translated and given to the newspapers is almost incredible. Taken in conjunction with the evidence elicited in Court, it has inspired some tolerably strong journalistic utterances. The Chinese are declared to be "just as inveterate liars to-day as they were in the age of Confucius." What evidence there is to prove their disregard for veracity in the times of that sage, we are not told. It is enough that, according to a San Francisco journal, "they lie for friendship, for gain, and for pure love of lying." Possibly they might seem less mendacious in the eyes of men who did not think it a duty "to preserve America for its people and their posterity, and to protect the American laborer from a competition degrading in character and ruinous to his hopes of material and social advancement." However this may be, the tailed immigrant is in exceedingly bad odour just now beyond the Pacific. Great ingenuity is exercised to show that even his occa-

sional virtues are an evil trait. "The very frequency and persistency of the vice of lying," we are told, "force on a few men who are in business the necessity of keeping their word good, for otherwise they would be unable to make contracts. Where ninety-nine out of a hundred are liars, the business value of a reputation for truthfulness is higher than among a people who are habitually truthful. This is the whole explanation of the exceptional truthfulness of occasional Chinese." As a way of reconciling a perplexing inconsistency, this is quite the most convincing thing we have seen for a long time. The Chinaman, in short, is so bad that the necessity of being good under certain circumstances is borne in upon him with exceptional force; and when he is good he appreciates the value of the thing so much that he is uncommonly good. Further, truth is such a rare thing among people of his race, that it is far more esteemed than in countries where lying is less common. This method of reasoning in parts a new aspect to the character of nations which have the credit of setting a higher price than their neighbours upon virtue and probity. The inference is that vice and dishonesty are proportionately prevalent among them.

But what a pitiable business the whole thing seems. What a parody on Western civilization are these Courts of Judges and Attorneys busied, day after day, with investigations into the biographies and private affairs of Chinese hucksters, petty traders, and travellers, who may not live an hour in, "the land of freedom" without having previously undergone a rigorous official catechism, and proved that their industry and frugality are not to enter into competition with the insolent slothfulness of uneducated truculent boors from Ireland and elsewhere. And what a contrast does the orderly, hard working life of the much-abused Chinaman present to the noisy indolent ways of the Fenian agitator, honored citizen of the Great Republic, who openly plots assassinations and revels in riot and treason. At some not very distant day Americans will want to tear this page out of their national history.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

A FRIEND IN NEED.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The latest performances of a certain Yokohama journalist in the ill-fitting rôle of "guide, philosopher, and friend" to the Japanese Government, recall the days when his earlier efforts in that disguise used to excite alternately the amazement, the consternation, the bewilderment, and the horror of English-speaking officials in Tokio. That was a period when obnoxious intruders were to some extent held at bay by the difficulty of communication between the Capital and this Settlement, but it was never found that the obstacles which deterred the majority had the slightest restraining effect upon the editorial pest of whom I speak. Steamboats might blow up, stage coaches might break down, but such risks were always willingly encountered by this individual, who came gradually to be likened to Mrs. Micawber, in her determination not to desert the object of her fond devotion. I well remember the eagerness with which the attachés of a Department then situated near Tsukiji flew to inspect the list of killed by the explosion of the little boat commanded by poor Crowninshield;

and their expression of fatalistic resignation when it was ascertained that nothing resembling the *kata-kana* equivalent of the too familiar name could be found therein. I speak particularly of the list of "killed," because, even at that epoch, a gloomy conviction pervaded the department officials that nothing short of sudden death could free them from their incubus. A theory, weakly held by a few over sanguine optimists, to the effect that hopes might be cherished from the tendency of violent casualties to result in lock-jaw, was promptly suppressed by the larger number, who knew that their tormentor's resources were by no means limited to his lingual capabilities. I remember, furthermore, how each recurring overflow of the Rokugo River, at Kawasaki,—then a frequent event, though now almost unknown—was hailed with a satisfaction not usually evoked by a public mishap, solely because the chances of the unwelcome visitation were to that extent diminished. When the railway was first contemplated, it became a question of some gravity, in the precincts of *Kasumi-ga-seki* at least, whether the advantages of that enterprise would really compensate for the dire opportunities it would offer to the one dreaded foreigner. Then it was, or shortly after, that the reports of illness among the members of the Guwai Mu Sho staff began to be observed in such alarming repetition. During a number of months, it was noticed that, after each editorial pilgrimage to Tokio, a paragraph would appear announcing the serious indisposition, and consequent strict seclusion, of almost every officer or attaché who understood English. A little later, the hitherto unexplained fancy of prominent public servants to possess two or more private residences, in widely different parts of the city, commenced to manifest itself. The plea of sickness and confinement to their homes had not proved as efficacious as was anticipated, and it became convenient, in the event of objectionable calls, to be able to say that the *danna-san* was just now occupying some one of his other houses—perhaps at Asabu, possibly at Shinagawa, or it might be in Honjio. The apprehensions as to the railway were not, indeed, justified; its baleful facilities being counteracted by the admonitory properties of the telegraph. Whenever it was known that the object of official, terror was among the passengers from Yokohama, an excited and feverish tapping, like that of Poe's raven, would set in at most of the Departments, and especially at the one occupying the Kuroda estate, the consequences of which would generally be, first, a "hurrying to and fro" not unworthy of comparison with that of the ante-Waterloo revellers in Belgium's capital, and next, a half holiday all round. Many of the personal changes in the Guwai Mu Sho, ten years ago, were undoubtedly attributable to causes of which the community had no accurate conception. The memorable retirement of an eminent statesman was probably not due, as suspected at the time, to a dispute with his colleagues, but to the wear and tear of a nervous organization, subjected to incessant trituration by a bore from whom no means of escape could be devised. The transfer of several rising diplomatists, in rapid succession, from congenial posts in their chosen Office to the Finance, Law, or other Departments, was a source of wonder to those who were unacquainted with the dreadful penalty under which the original positions were held. *Daijos* begged on their knees to be sent upon missions to Europe and America. The organization of an intricate branch of the national service was understood to be undergoing gradual derangement from the inroads of a visitant more dreaded than the cholera or small-pox. But the invader, like Shakespeare's hero, was not to be awed from the career of his humour. Imitating the perseverance of a namesake famous in song, he simply stated—

"Men may come and men may go,
But I go on forever."

Finally, it is said, the expedient was adopted of summoning home from abroad the most dexterous and ingenious of Japan's younger diplomatists, to

cope with the evil. It was thought necessary that a decisive step be taken. A panic was feared. Ghastly forebodings that the suffering Department would become paralysed, or atrophied, were floating in the air. It was time to test the skill of the nimblest-witted and most imaginative of its agents. Arriving here, he was presently installed in a station of flattering prominence, and instructed as to the task before him. His conduct at that trying moment won him the undivided respect of his associates and the gratitude of his superiors. Confronted with a duty inexpressibly distasteful, he assented with the promptness of a soldier detailed for a forlorn hope. In the secret bosom of his family he was sometimes seen to wince. In the broad body of society his heroic calm never deserted him. History contains no nobler example of self-sacrifice at the command of patriotic abnegation.

And did he succeed? So I am given to understand, although I cannot vouch for the unimpeachable accuracy of such records as have been revealed to me. At any rate, the burden was thereafter borne by him alone. It is even alleged that he made light of it, and assumed an air of surprise that the proper treatment had not before been discovered. But this is not an uncommon device, to heighten the effect of brilliant achievement. He was often heard to say that beyond auricular blight and impotence he had little to fear. To listen—or affect to listen,—that was the only cruel hardship of his lot. Discussion, argument, persuasion,—these he contrived to set aside from the beginning. For this keen-sighted attaché at once detected that his visitor's purpose was not so much to discover and set forth the actual needs of Japan, as to find out the inclinations, the prejudices, the passing fancies of the individuals in power, and to formulate them in such ponderous English as should, in the writer's estimation, impose a dead weight of conviction upon every hearer or reader. To get at what the Government wanted, and then to convince the Government that the only sure way to attain their end was to enlist his coöperation as adviser, promulgator, editorial champion, or whatever—that (if I may use a vulgar expression for so exalted a project)—that was the little game in hand. From the moment of this disclosure, our young diplomatist's labours are believed to have been easy—excepting, always, the discomfort of having to sit like a bucket, day after day, and be pumped into. The fundamental principles of the editorial guardian-angel turned out akin to those of the Hibernian candidate who, having expounded his platform, proceeded to remark,—“These, fellow-citizens, are my fixed convictions, but if they do not suit you, they can be altered.” And so it came to pass that one of the most diverting series of dissolving views ever set in operation was exhibited in the columns of a Yokohama journal. Of course I do not speak from my own knowledge, and am open to correction in case of need; but the *ben trovato* tale runs that the able editor was induced from day to day to modify and reconstruct the doctrines previously asserted, until, at the end of a month or six weeks, his paper was proclaiming the exact opposite of what it had undertaken to demonstrate at the beginning. Nothing is more delightful than to listen to the lively descriptions of occurrences at that period, from the lips of those who were empowered by proximity and the thinness of *Shoji* to hear what passed between the native official and Japan's only true foreign friend. The course of the genial colloquy would thus run smooth:—

“Excellent, admirable! Nothing more true. Now I wonder how any person can see so exactly what our country needs, and can put it so perfectly into just the necessary language; so compact, so eloquent! It is a wonder!”

“Oh, no; not at all, not at all. You see,—well, practice, perhaps, and—ah,—habits of investigation; yes, experience goes a great way. Now, if you cared to hear, I could tell you,”—and so forth,

and so forth, mumble, mumble, for something like half an hour.

“Yes, very wonderful! I don't see how any body could present it in so grand a form. It is perfect. Perfect is the only word. I only wish—I only wish—

“Well, what?”

“I only wish that *all* the members of our Government would look at these matters in the same way. But sometimes, you know —,”

“Yes, oh yes, naturally. Let me tell you. When I was Minister of —, in —,”

“What? I beg your pardon. Were you ever Minister of — in —?” [He has heard the same thing a dozen times, but finds he can always make a point by expressing admiring surprise.]

“Oh, certainly; it's a well known fact. I held that responsible office for nearly a week. The parties, you know —”

“But, excuse me, this is *very* interesting. I must make a note. So, you were Minister of — in —. What was the date? My Government will be greatly concerned to know this. Pardon me for interrupting you. Then it is true that other Governments besides the Japanese do not always agree on delicate points.

“Why, bless you, of course not.” [Here a thumb is poised, as if meditating interjection between two Japanese ribs; from which familiarity the Oriental anatomy recoils in ill-concealed loathing.] “To be sure. I once made a speech nine hours long, and had to change my whole political position five times in the course of it, because I could see my colleagues didn't altogether agree, don't you see?”

“Ah! Very few could do that so discreetly, I dare say.”

“Oh, I don't say that; not quite that; but—well—I confess that my particular training may have given me a faculty of shifting—that is—ah—of gliding,—let us say *gliding*, you know”—[Again a slumberous monologue of fifteen minutes.]

“Then, perhaps, with your peculiar tact, you would not mind altering one slight point,—just ‘gliding,’ I think you said.”

“Yes, ‘gliding’ would be the parliamentary way of putting it.”

“Would you kindly ‘glide,’ then”—etc., etc.

The result, I am informed, always was that a certain deviation, as of a point in the compass, was effected with each interview; with the ultimate consequence that the wind which blew due North at the beginning of a month had “glided” so as to blow due South at the close. This feat accomplished, a climax of exquisite humour would be brought about. The first and the last article of the series would be solemnly presented to the writer, with an assurance that nothing was now required but to compose a national constitution for Japan, in which the the admirable ideas of the two effusions should be carefully wrought together. That done, the empire would be safe. But as that could not be done, by any process of “gliding” known to literature; and as the devoted friend of Japan was constrained to admit that the effort was too much even for an ex-Minister of —, in —, the equable young diplomatist invariably cut the knot of difficulty by saying, with imperturbable good humour,—“Very well; let us begin again.” And so the entire operation would be repeated, without awakening a touch of suspicion on the part of the deluded dupe. But of course this could not last forever. No amount of vanity and conceit, however cunningly tickled, could perpetually blind their possessor to the fact that he had been trifled with and rendered utterly ridiculous, not only in the sight of the Japanese, but in his own as well. How the catastrophe came about, I may at some future time relate. It is too good a story to be impaired by hasty narration. It is sufficient to say that the officers of the Government, high and low, were relieved, for years if not forever, from the offensive personal intrusions of this disinterested applicant for the post of Mentor. From that date, friendly advice and fraternal

counsel were at an end. Sweeping denunciation and blind hatred became the order of each day. I am given to believe that for several successive years, the pages of the Yokohama newspaper concerned in the proceedings were rarely free from abuse and defamation of everything Japanese. The annihilation of Japan's independence was advocated, and the theory that the country would be benefited by being placed under British rule was openly advanced. Whether this candid attitude of hostility was more, or less, satisfactory to its objects than the previous pretence of big-hearted amity, we need not inquire; but it was considered a settled fact that no renewal of the exploded "confidence game" need be feared. Time, however, works strange changes; and we are now diverted once more by the spectacle of the unreformed hypocrite coming forward in his stale character and proffering patent panaceas of his invention, for all the serious evils and embarrassments under which this country continues to labour. The reasons of his return to a field of endeavour in which he signally failed before, and the methods which he now employs, are not unworthy of a brief examination; and if I may, at another time, be granted the requisite space, I will attempt to bestow upon them a little of the attention which they merit.

I am, Sir, yours, &c.,

GOOD MEMORY.

Yokohama, 19th February, 1884.

SHORT WEIGHT COALS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I wish to call the attention of foreign residents in Tokiyo to the fact that, to my knowledge two established native dealers in coal not only deceive their customers with short weight, but make matters worse by bringing with them, when delivering coal, false weighing machines—one of them a Japanese machine marking *kuwamme*, the other a foreign machine marking pounds avoirdupois. A number of piculs brought to me showed great uniformity in weighing 133 lbs. on the dealer's weighing machine, a short weight of 3 lbs., and not, therefore, very important. I then had them weighed on a stamped *hakari*, and found each to mark 11.3 *kuwamme* instead of 16.0 *kuwamme*, that is 92 lbs. instead of 133 lbs. The dealer admitted his defaulting, and altered his delivery note to the correct weight, and received money in accordance with it. I have not kept particulars of the false *hakari* brought by the other dealer.

The use of false weights and measures is punishable in Japanese law, but probably very few persons would undertake the task of reporting the culprit to the authorities.

It is desirable, however, not only for their pocket's sake, but for the cause of commercial honesty among Japanese that coal consumers should take steps as I have done to defeat gross attempts at cheating.

I am, Sir, yours, &c.,

N.

Tokiyo, February 18th, 1884.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I should like to add a few words to the letter in your issue of to-day headed "Short Weight Coals." A statement of the two methods of fraud which I have detected may help to put other purchasers on their guard. In one case, when a foreign platform machine was used, I noticed that the man who weighed the coals always stood very close to the machine, and at last I found out that he put his foot under the platform each time and pressed the works underneath. In the other case when an ordinary Japanese *hakari* was brought, on my producing a small *hakari* of my own for comparison, the seller thought it well to take his away and bring another—a correct one I presume—and the coal which he had brought as a ton was found, when weighed with this, to be just three-

quarters of a ton, and he received in consequence some two *yen* less than he had expected. I did report this case to the police, but do not know whether they took any action in the matter. In the case of a Japanese *hakari*, the beam and the weight should be carefully examined to see whether the letters or marks on each correspond; otherwise you cannot tell that the coals are not being weighed with a weight belonging to a lighter *hakari*. We have, in fact, in this place to take these precautions:—1. See that the coals correspond to sample, so that you do not get *Chikugo* when you have ordered *Karatsu*. 2. Test the scales: this can be done even with a few pounds weighed on small house scales. 3. Watch the manner of weighing.

It would pay a community like the one in Tsukiji to have a weighing machine of their own for common use.

Yours, &c.,

M.

Tsukiji, February 21st, 1884.

ANNUAL MEETING OF THE YOKOHAMA CHAMBER OF COMMERCE.

The annual meeting of the Yokohama General Chamber of Commerce was held at their rooms yesterday afternoon, when the following members were present viz:—J. A. Fraser (Chairman) J. Dodds, I. Lindsley, E. Flint Kilby, A. J. Wilkin, A. O. Gay, W. B. Walter, A. Wolff, Tom Thomas, J. T. Griffin, A. C. Read, J. Bissett, H. Gribble, C. H. Dallas, F. Grosser, Aug. Evers, J. M. des Pallières, and others.

The CHAIRMAN said that, this being the annual meeting of the Chamber, the first formal business was to read the notice convening the meeting (read); the next business was to pass the minutes of the last annual meeting and of the special meetings of the 17th April and 18th December. He hoped some member would propose that they be passed.

Mr. WILKIN made the proposition, which was carried.

Mr. LINDSLEY then proposed that the accounts and report of the Committee as printed be taken as read.

Mr. W. B. WALTER seconded the proposition, which was carried.

The CHAIRMAN said that they now passed to a consideration of the various headings of the report of the Committee, the first of which was Treaty and Tariff Revision. They were unable to give any more information than appeared in the report as they had not received any communications on the subject. The views of the Chamber had been fully set forth in various communications with the Foreign Ministers in Tokiyo, and it was most probable that there remained very little more to say on the subject. It was also probable that a settlement would be arrived at before long, perhaps during the present year, and it was to be hoped that it would be one that would be honourable on all sides and at the same time carry no injustice to the interests of foreign merchants in Japan.

Mr. A. J. WILKIN then rose and said—I think that this subject should scarcely pass without some expression from the Chamber on that point, upon which a good deal is now being said, viz., the abolition or partial abolition of extraterritoriality jurisdiction. We are all, I trust, desirous that no injustice should be done to Japan, nor do we wish that any selfish or sentimental consideration should influence our judgment in respect to this question. By all means, let Japan have her sovereign rights, at the same time let it not be overlooked that others have rights as well as Japan. If I mistake not, there is a good deal of misrepresentation or at least a keeping back of the truth on the subject. Parties who have little practical knowledge of it, or who are interested,

picture a state of things which carries the idea of oppression on the part of the stronger nations. Now I hazard the assertion that practically there is very little of serious fiction in the present machinery of the relations with foreign powers. There may be a certain amount of feeling of injured pride, but I verily believe, speaking with all diffidence, that this owes its origin to a great extent to some of Japan's foreign advocates or advisers. No doubt, more especially in later years, Japan has many among these both able and worthy, but it is not so in all cases, and there are some on whose assistance she is not to be congratulated. But I presume the boldest of them would not venture to say that twenty years ago it was possible that any jurisdiction over aliens could have been conceded to this country; or say even 10 years ago, or even 5,—or let us come down even to three. The want of any written law; the utter dissimilarity of thought and feeling; the despotic method of treatment by one class of another; the prevalence of torture; a code of morality of a unique pattern; all these combined to set at nought any notion of the kind. But within the last year or two, or two or three years, a written code has been formed, and it is understood that it is to some extent working. But surely it will be only decent that at least we should see a little how it works before we are intrusted to its care. It is no great matter to write out a code, but a very different thing to administer it, and especially when for generations all habits of thought and idea have been in different grooves. Let us just illustrate by some examples the position of a Japanese towards the law and the position a foreigner would find himself in under that law. Is there any *habeas corpus*? Is it not still the case that a man can be thrown into prison on a mere suspicion, and kept there for weeks without trial? I know for a fact that comparatively recently this has been done. Shall I be liable to be brow-beaten by a policeman if I walk on the bund without a lantern, even under the gas lamps; a small matter, but the representative of a good deal. Or take a more serious question; the marriage law, or rather marriage customs of the country, for I suppose there are no marriage laws. Is a foreigner to have the power, or the privilege of being able to tell his wife she may go—he does not want her any more? These are aspects in which the subject should be considered, and there is another point, a delicate matter which I wish to allude to only in a proper spirit; the state religion of Japan is a paganism of a very primitive type, containing, as far as I know, no code of morality worthy of the name. People at home should know precisely how and where their people stand in relation to extra-territoriality jurisdiction, and it must take a generation at any rate before a state of thought and feeling can be developed here, which shall place this country in consonance with the platform of the West. Then, as to opening the country, which we hear of as something as a *quid pro quo* for the surrender of alien privileges; let there be no mistake on this point. I do not believe that it will have any material effect in increasing the opportunities of foreigners to do business. Indirectly and gradually it will foster business, and it will at once obviate a good many annoyances, but the benefit will assuredly be more for Japan than for the foreigner. While on the other hand, I cannot understand how this country can aspire to be considered enlightened and civilized, while it closes the land in this fashion—a relic of the darker ages. There is no country in the world besides which adopts this course. The plea that it might lead to trouble without full jurisdiction breaks down under the result of actual experience. I believe I am right in saying that during the few years in which the passport system—an enlightened step in advance—has been working, that by the British Legation alone several thousand, say 7,000, passports have been obtained, and in no single instance is there the record of any serious trouble with any of the holders. I am

very anxious that these remarks should not be misunderstood. I do not wish to make them in any carping spirit, but, on the other hand, it seems time to make some counter-statements to those which are circulated freely at the present time.

The CHAIRMAN after thanking Mr. Wilkin for his remarks said the next item was the Korean treaty. When this had last been brought to the notice of the Chamber they had commented in very unfavourable terms on the treaty made by Admiral Willes. He believed that it was through the representations made by the Chambers of Commerce in Shanghai, Hongkong, and here, that it had not been ratified, and was glad to say that the treaty as concluded by Sir H. Parkes was much more satisfactory. Speaking of the Kerosene Regulations, he said that he congratulated the members on the fact that they had been rescinded, and the promise of the Government that if new ones were enacted due notice would be given before they came into operation. Referring to the Postal Contract, they had appealed to the Home Government to continue the subsidy to the line between here and Hongkong, which appeal had been refused. It cost the Government £12,000 per annum, and they did not think it a necessary expense. He was glad to say that the delivery as conducted now by outside boats was as regular as by the French Mail.

Mr. WILKIN said there was some acknowledgment due to Mr. Rickett for signaling the mails, although they came by outside steamers. It was a great convenience, and he would suggest that the Committee ask Mr. Center, the Agent of the P.M. and O. & O. Companies to fire a gun when their steamers arrived.

The CHAIRMAN said he would note the suggestion and leave it to be dealt with by the new Committee. The Chairman, resuming, said the next question was Drawbacks and Bonded Warehouses. The views of the Chamber were forwarded to the Foreign Representatives in Tokiyo through the Doyen of that body in March last, in which they particularly pressed the matter of drawbacks. If it came to a question of only receiving one concession, he was not sure but that the Bonded Warehouse scheme would not be the more advantageous.

Mr. W. B. WALTER thought that the tariff question would come up for consideration during the current year, at least, and then they would have an opportunity of discussing the whole question.

Mr. WILKIN remarked that the proposed increase in duties was a very serious matter. A proposition had been made some time ago about Bonded Warehouses in the Settlement which was well worthy of being kept in view.

The CHAIRMAN then passed on to the scale of charges, which he said had been drawn up and adopted by a special committee in April last. Referring to Hatoba accommodation, principally for metals, he was given to understand that the Superintendent of Customs had not put aside a portion of the sheds and had them floored, as promised; but perhaps we expected these things to be done too quickly.

Mr. KILBY said that the Hatoba was in no better state than before. During the last fall of snow a steamer landed its cargo and no men were employed to clear away the snow; the sheds were leaky, and merchants suffered heavy losses from the damage occasioned.

Mr. WALTER remarked that the Hatoba accommodation was insufficient for the trade of the port. It was the same now as 10 years ago when the trade was smaller. He thought the Chamber should address the Superintendent of Customs on the subject, and, failing that, apply to the Ministers.

The CHAIRMAN said he had had two interviews with the Superintendent of Customs on the subject and had received plenty of promises. He would suggest that a special committee be appointed to push the matter.

Mr. LINDSLEY suggested that cargo might be landed here as at Shanghai, that is at other places

than the Hatoba, under special permits. It had been done here, but the fees were too heavy, viz., \$6.00 per diem. He would propose that the incoming committee be asked to look into the matter and see if some arrangement could not be made.

The CHAIRMAN, resuming, said there was nothing special to say about the Tea Telegram. The first was sent on the 22nd December, and there was a proposal to get an outward telegram from New York. The Finances had been fully considered in November and December last, and therefore there was very little to be said on the subject now. He would take this opportunity of mentioning that the Secretary's salary had been reduced to \$150.00. This was done after drawing up the report, and therefore did not appear in it. Mr. Dinsdale had kindly waived his right to two months' notice of the reduction. This would make the question of finances easier for the new committee.

Mr. WILKIN remarked that the increase in the price of the Circular, instead of increasing the receipts from this source had caused them to fall off 14 per cent. He moved that the incoming committee consider at the first opportunity the advisability of reducing the price of the Circular.

Mr. THOMAS seconded the motion.

The CHAIRMAN remarked that if the few firms who now held aloof from the Chamber, and there were only a few, would join, it might be said to be a thoroughly representative body. There was nothing to say about the State of Trade as it referred to a time that was past, but since the report was drawn up things had assumed a brighter aspect. As to Railways, it was to be desired that they should be built as economically as was consistent with good work. They would confer great benefits on the people of the country and this would naturally stimulate foreign trade. He would ask for a motion that the statement of accounts and report be adopted, printed, and circulated as usual.

This was proposed by Mr. DODDS, seconded by Mr. READ, and carried unanimously.

REPORT OF THE YOKOHAMA GENERAL CHAMBER OF COMMERCE FOR THE YEAR 1883.

In framing a report of the proceedings of this Chamber for the past year, it is not necessary to assign to the question of Treaty Revision the prominent position which it has occupied in the Reports of the two preceding years.

Not that the question has lost any of its importance or interest, but, because, so far as this Chamber is concerned, the year 1883 has passed away without the necessity of any further action on its part.

REVISED TARIFF.

As regards the Revised Tariff on which it is supposed an understanding had been arrived at, last year, between the Japanese Government and the Foreign Representatives, and which had thereafter been remitted to the various Home Governments for their approval and confirmation, it might have been expected, remembering the eagerness displayed at one time by the Government of this country on the question, that ere now a date would have been fixed, or at least indicated, for the coming into operation of the new scale of duties, devised with the intent of providing this country with an increased revenue, but apparently fresh and unforeseen obstacles have interposed to hinder this result.

What the precise nature of these points of difference is, Your Committee is unable to state, but it is supposed that they have reference to the question of the duration of the Revised Tariff, and to the manner of its determination on the expiry of whatever period may be agreed on during which it shall be in force.

Apart then from the broader question of Treaty Revision, about which so much continues to be written in the native and foreign press, and so many conflicting opinions are constantly being expressed, Your Committee is not in possession of any information of a more definite character on the subject of the Revised Tariff.

COREAN TREATY.

Passing from the question of Treaty Revision in Japan, Your Committee arrives at a reference to the treaties with Corea concluded by the Representatives of Great Britain and Germany on the 26th November last, the former intended to replace the convention negotiated by Vice-Admiral Willes in 1882, and referred to in the Chamber's Report for that year. Through the courtesy of H.B.M.'s Representative at the Court of Peking, this Chamber was afforded an opportunity of expressing an opinion on the merits of the new Treaty, and Your Committee, in a despatch to Earl Granville, dated 8th instant, took occasion to commend the provisions of the new Convention, and to express the hope that its ratification might shortly be accomplished. (Appendix A.)

KEROSENE REGULATIONS.

In the month of February last, a new set of Regulations was promulgated by the Government, to come into force on the 1st of July, 1883. As the effect of these Regulations would have been seriously detrimental to the interests of all concerned in this important trade, a communication was addressed by Your Committee, on the 23rd February, to the Doyen of the Foreign Representatives in Tokio, pointing out the injustice of altering the Standard of Kerosene to be

imported into this country, without giving ample and sufficient notice of such proposed change.

The effect of the Chamber's directing attention to this matter, was to procure a rescinding of the New Regulations, and further to obtain from the Japanese Minister for Foreign Affairs, an assurance that no alteration of the Standard of Kerosene would be decreed, without ample notice being given to foreign merchants engaged in the trade. (Appendix B.)

POSTAL CONTRACT.

In furtherance of the resolution carried at the last Annual General Meeting, a communication was addressed in March last to H.E. Sir Harry Parkes, requesting his co-operation in a fresh effort to induce the Home Government to consent to a renewal of the Branch Service by British Packets between Hongkong and this port.

In the month of August, H.E. informed the Chamber that he had received a reply from the Earl Granville, stating, that H.M.'s Postmaster-General, to whom the matter had been referred, saw no reason to recommend a reversal of the adverse decision previously taken by the Lords of the Treasury in this matter. (Appendix C.)

DRAWBACKS AND BONDED WAREHOUSES.

The resolutions on these subjects, passed at last Annual General Meeting, were duly communicated to the Foreign Representatives in Tokio, in a communication dated 28th March, and addressed to the Doyen of that body. (Appendix D.)

SCALE OF COMMISSIONS AND CHARGES.

A Special Committee, consisting of Messrs. W. B. Walter, Gay, Wolff, Evers, and Thomas, was duly elected, in terms of the resolution carried at last Annual General Meeting, and a revised scale was drawn up by these gentlemen. At a Special General Meeting of the Chamber, called in April last to consider the proposed scale, its adoption was agreed to, with some slight alteration in the Fire Insurance scale. Members were supplied at the time with copies of the new scale as adopted, but it will also appear in the annual pamphlet. (Appendix E.)

HATOPA ACCOMMODATION FOR METALS.

In May last the Chamber addressed a letter to the Superintendent of Customs, at the request of the Foreign Merchants and others interested in the trade, complaining of the insufficient accommodation for metals at the Hatoba, whereby serious damage was often caused, to iron more especially, in the process of landing and sorting cargo. After some delay, a reply was received from the Superintendent, promising to pave and set apart a portion of the existing sheds for metals only. (Appendix F.)

FINANCES.

The financial position of the Chamber has been the cause of some anxiety to Your Committee during the past year, it was found necessary to hold two Special Meetings, to consider the all-important subject of ways and means. The proceedings at these meetings were duly printed, and circulated for the information of members, and Your Committee hope that the measures adopted may result in placing the Chamber's finances on a sound footing. (Appendix G.)

ACCOUNTS.

A statement of accounts for the past year, duly audited, is appended, and shows a credit balance of \$439.33, against \$713.98 at the close of 1882.

MEMBERS.

It is satisfactory to be able to state that the Chamber's list of Members for the current year amounts to 58, as against 59 for 1883.

DANGERS IN THE SUNDA STRAITS.

A circular was received in October last from the Secretary of the Batavia Exchange, having reference to dangers to navigation in the Straits of Sunda, arising from the recent volcanic disturbances, and offering to take charge of letters and telegrams for vessels expected at Anjer.

Your Committee, considering the matter one of general public interest, forwarded the Circular to the local press for publication.

TEA TELEGRAM.

A request having been made by the recently established "Importers' and Grocers' Exchange of New York" that this Chamber would undertake the construction and despatch, after the departure of each American mail, of a Telegram about Japan Tea, averaged from information to be furnished by various firms engaged in the trade, your Committee decided to sanction the Chamber's undertaking the work on certain conditions, which have been duly communicated to the Committee of the Exchange.

As a commencement, a telegram was despatched on the 22nd instant, after the departure of the *Arabic*. All expenses in connection with the message are to be defrayed by the New York Exchange.

STATE OF TRADE.

Under this heading it is difficult for Your Committee to make reference to the past year in more cheering terms than those applied to its immediate predecessors. The Import Trade, as a reference to the Chamber's Statistics will prove, shows an estimated falling off in value of nearly 2½ millions of dollars, compared with 1882, and running the eye down the list of Imports, it is noticeable that this falling off has not alone affected the principal articles of staple use, but that, with few exceptions, all imported goods give evidence of a diminished sale, and of a lower average value.

Turning to Exports, it is apparent that the quantity of Tea shipped in 1883 differs but slightly from total of 1882, but the average cost has been somewhat less. Notwithstanding this advantage to buyers, it is to be feared that to most, if not to all engaged in the trade, the past season has been one of disappointment, for against the more moderate cost on this side has to be placed the decline in American markets, culminating in a low range of prices. Happily, indications are no longer wanting that a reaction has set in, and that a considerable improvement has taken place in New York, since the beginning of the current year.

As regards Silk, the figures of export for 1883 are the largest on record, and a lower average cost than in 1882 has to be noted, but here, too, it is open to question whether the result of operations in the article has so far proved profitable to shippers. These remarks would be incomplete without a reference to the large increase (due possibly to somewhat exceptional causes,) in direct shipments on native account, and also to the reappearance, in quantity, of what may be termed "Taysam" sorts, their presence on this market affording proof of the asserted depression and inactivity of the native manufacturing industry.

A further reference to the Chamber's figures shows a difference in the total value of exports, (in favor of 1882 as compared with 1883) of about 1½ millions of dollars, notwithstanding the remarkable increase in last year's Silk shipments; but comparing the estimated totals of the Import and Export trade for 1883, we find that the latter exceeded the former by the large sum of close on 9 millions of dollars.

RAILWAYS.

This report may fittingly be closed with a brief reference to the work of Railway construction, which the past year has witnessed in this country, as well as to the schemes for a further extension of the system, which are in contemplation.

Public Works of this nature, if carefully and judiciously carried out, cannot fail to be of great benefit to Japan, in opening up and developing the country, and it would seem not unreasonable to hope that their ultimate effect, in conjunction with the increased facilities for coast transport afforded by the numerous additions to Japan's Mercantile Marine, may be to give an impetus to the trade and commerce of the country, which shall be of benefit to native and foreign merchants alike.

J. A. FRASER, Chairman.

January, 1884.

YOKOHAMA GENERAL CHAMBER OF COMMERCE.

STATEMENT OF RECEIPTS AND EXPENDITURE FOR THE YEAR 1883.

RECEIPTS.	
To Balance from 1882	\$ 713.98
Members' Annual Subscriptions 50 @ \$25	1,475.00
Additional payments by Members 56 @ \$10	560.00
	2,350.00
Circulars sold:—To members 11,798 @ 10 cts.	1,179.80
Circulars sold:—To members 3,692 @ 12½ cts.	461.50

Circulars supplied to non-members	236.16
Half yearly Statistics sold: { To members 683 @ 10 cts. 68.30	
{ To non-members 60 @ 20 cts. 12.00	
	80.30

Reports, &c., &c., sold to members	10.30
Sample Japanese Bank note, returned by H.E. Sir H. S. Parkes	10.00
Interest allowed by H. & S. Bank on current account	18.51

\$4,745.55

EXPENDITURE.	
Rent	\$ 480.00
Secretary's Salary	2,100.00
Wages for Chinese assistant and office boys	475.00
Printing Circulars and half-yearly Statistics	647.76
General printing, advertising, and subscriptions to local newspapers	240.00
Returns of imports and exports, deliveries, and sales	147.83
Furniture and stationery	83.52
Books of reference	43.88
Petty disbursements, postages and sundries	68.33
Fire insurance, \$1,000	20.00

Balance, carried to new account	\$4,306.32
	439.33

Balance. Cash in hand	\$439.33
E. & O. E.	G. K. DINSDALE, Secretary.

Yokohama, 1st January, 1884.

Examined and found correct, 4th February, 1884.

J. RICKETT,
L. C. MAFSEN, } Auditors.

The ballot was then taken for the Chairman for the ensuing year, Mr. FRASER stating that he did not wish to serve again. This resulted in the election of Mr. W. B. Walter.

On the ballot for Vice-Chairman, Mr. Gay was reelected.

The following gentlemen were elected as Committee:—Messrs. Wilkin, Evers, Thomas, Lindsley, Wolff, Dodds, and Fraser.

The CHAIRMAN proposed, and Mr. DODDS seconded, a vote of thanks to the Auditors for their trouble, which was carried.

Mr. LINDSLEY proposed a vote of thanks to the Chairman for the able manner in which he had conducted the business during the last year.

Mr. WILKIN seconded this proposition, which was carried unanimously.

The CHAIRMAN thanked them for their kind expressions, and said there had been no very important work to take hold of during the year. He was glad, nevertheless, to see that the Chamber held its own in point of numbers, and he thanked Mr. Walter for accepting the chairmanship.

ANNUAL MEETING OF THE YOKOHAMA FIRE BRIGADE.

The annual meeting of the Brigade was held yesterday afternoon (by kind permission) in the Chamber of Commerce Rooms. The following gentlemen were present:—Messrs. J. Dodds (in the chair), Jas. Walter (Hon. Sec. and Treasurer), E. Flint Kilby, W. C. Bing, E. Whittall, T. Brewer, A. Milne, W. B. Walter, and A. J. Wilkin.

The CHAIRMAN, in opening the proceedings, said he was sorry to have to remark on the very sparse attendance. The institution was one of very grave importance to Yokohama. He wished that the

people who were so ready to ventilate their ideas in the newspapers would make some suggestions as to the best means of protecting the Settlement from fires. The first business was to read the minutes of the last meeting.

These were read and confirmed.

Mr. KILBY proposed, and Mr. W. B. WALTER seconded, that the report and accounts, as laid on the table, be taken as read.

Carried.

The CHAIRMAN wished to know whether any one had any remarks to offer about the accounts. The expenditure during the last year had no doubt been very heavy, but the Committee hoped that the results would fully justify it. The Brigade was now put on a thoroughly efficient footing and ready for every emergency. It was true, unfortunately, that at the fire at No. 51 both engines had broken down, the "Relief" bursting some boiler tubes and the valve in the pump of the "Victoria" giving way. The valve, however, was promptly replaced and the engine got to work. The repairs to the "Relief" would take some days, and in the meantime they hoped to make an arrangement whereby the new Japanese Police steam engine would be placed in the Fire Brigade compound. Both the engines had been recently tested by the engineer to a very high pressure, and they were found in good order although rather old. The expenditure had chiefly been on capital account, and such items were not likely to come in again for some years. During the next year there would be nothing to meet but the working expenses, unless something extraordinary happened which would entail extra expense, so that they hoped in time to be able to pay off the debit balance. The subscribers would see from the statement of accounts that there was a new item, namely, for police patrol, which had cost for working expenses \$749.54. This patrol was of great service, not only by giving the alarm as quickly as possible but also, as some of the newspapers had pointed out, by preventing thieves from carrying on their depredations. He thought that some of the members of the community who would not subscribe to the Brigade might be induced to subscribe to this branch of the service. The estimated expenses for the current year were as follows:—

Police Patrol	\$ 800.00
Sundries	160.00
Pumping Water	150.00
Manual Engines	1,100.00
Steam Engines	1,262.00
Total	3,472.00

and if the subscriptions amounted to the same figure as last year, namely, \$4,432.00, there would be a balance of \$967.00 to go towards reducing the debt due to the Hon. Treasurer. He hoped that the sale of water to tea firing godowns etc., would be increased. The outlay for pipes, pumps, tanks, etc., had been \$483.19, and the cost of pumping, etc., \$248.68, making a total of \$731.78, and they had received for water \$454.80, leaving a debit balance of \$276.98. The estimated working expenses for the present year are \$144.00, and if the receipts keep the same as last year, namely, \$454.80, in the two years the total cost of the plant will have been paid off and a balance left to the good of \$33.82.

Mr. W. B. WALTER remarked that the item of \$2,410.00 as subscriptions for 1883 was virtually from English Insurance offices and one or two others. The two local insurance offices expended in the support of their engine about \$1,800.00, which of course did not come into the accounts. At one time the English offices did not seem to think it their business to look after the prevention of fire, but they had seen the folly of their ways and now were doing more in London than they had ever done before. He would urge upon the Agents here to write home and point out the urgent necessity of making the Brigade thoroughly efficient. The residents not only gave money but their time and trouble, and he thought the amount subscribed by the Insurance offices was not nearly sufficient.

The CHAIRMAN thanked Mr. Walter for his remarks. Some of the offices said it was not their business, but always held out the hope of reduced

premiums if matters were better conducted and the buildings more substantially constructed. The community said they paid such high premiums that it was not their business, and so between the two the Brigade was not supported as it ought to be.

Mr. WILKIN thought the Home offices were of the opinion that it was as much the business of the community as theirs. There was a great deal of property not insured, and the offices were prepared to reduce premiums if they saw their way to it. The offices were likewise prepared to do their share if the community would come forward and do theirs, but they would not bear the whole burden. He was glad to find that the Honmura sluice had been repaired, as it ran through an important part of the Settlement, but he had heard there was still some difficulty in using it.

Mr. JAS. WALTER said that he had examined the sluice with an engineer, and it appeared that it had been built as a drain and not to hold water. If the gate of the sluice was closed it carried away the creek wall, and therefore they were obliged to keep it open. The sluice would never be of much use unless it were rebuilt.

Mr. W. B. WALTER suggested that the tubs on the Bluff were too far apart, and that when the Brigade was in funds it should have them mounted on wheels, so that a number of them could be run down right on the spot.

The CHAIRMAN said the tubs were a present to the Brigade, and were placed there as being better than nothing. In the last report it was stated that the generality of the wells on the Bluff were too deep, and it was proposed to construct reservoirs, but the expenses to which the Brigade had been put had rendered such an outlay impossible: of course tubs were only of use at the very commencement of a fire.

Mr. JAS. WALTER remarked that it would cost 6 yen each to mount the tubs on wheels. The proper thing would be to have tank engines, but as each engine cost from \$150 to \$175 and the tank \$40, it was hopeless to think about it. A tank engine would carry sufficient water to work for 25 minutes.

After some further conversation the subject dropped.

The CHAIRMAN pointed out that, in accordance with a suggestion of Mr. Macpherson's at the last meeting, the Secretary had placed in the report a valuation of the property destroyed at each fire, and it would be seen that the total amount for the 7 fires which occurred during the year was only \$80,000.

Mr. WILKIN wished to know whether it was not possible to come to some arrangement with Mr. Hegt, who took a great interest in fire prevention and was a thoroughly practical man. He thought Mr. Hegt's brigade might be subsidized in some way and made useful as a flying brigade, working independently. Of course the subsidy would depend upon their attending all fires.

Mr. JAS. WALTER said that both he and Mr. Rohde had spoken to Mr. Hegt of incorporating his service with the Brigade, but Mr. Hegt had refused to do so.

The CHAIRMAN believed Mr. Hegt was supposed to have a system, but what it was they had never been able to make out, and Mr. Hegt had never explained it. He had always shirked a fair trial.

Mr. WILKIN had great pleasure in moving the adoption of the report and passing the accounts. He was gratified to see the bold manner in which things had been taken in hand. He was sorry that the balance due to the Hon. Treasurer was so heavy, but expressed a hope that during the present year a great portion of it would be paid off.

Mr. E. WHITTALL seconded the motion, which was carried.

REPORT.

REMARKS ON ACCOUNTS.

RECEIPTS.

The subscriptions for 1883 show an increase of \$1,015 over those of 1882, Insurance Companies having contributed, \$160 and private firms \$455 more than last year, in addition to which the Chinese community have contributed \$400, on condition that an engine be kept in the China Town. This entails a rental for premises of \$120 per annum. The committee have to thank Mr. Chan Wong Chee, Chinese Consul, for the interest he has taken in the Brigade, and for inducing the Chinese community to become subscribers again. The sum of \$10 has been subscribed for the protection of the Bluff. A further sum of \$454.80 has been received for water supplied from the Brigade wells to tea firing compounds, for drinking purposes, which has been rather more than swallowed up for this year by the outlay of \$483.19 for iron pipes and pumping gear, and \$248.68 for labor. This, however, should be fully repaid in the course of next year.

DISBURSEMENTS.

These amount to \$7,259.12, which sum includes \$3,761.10 on Capital account, \$3,445.75 on Working account, and \$52.24 interest on overdraft, leaving a balance of \$2,665.07 due by the Brigade to the Hon. Treasurer. In the Capital Expenditure the principal items are for necessary Buildings, as detailed in the accompanying accounts, and in the Working Expenditure, which shows an increase of \$1,163.75 over last year, \$749.54 has been absorbed by the new item

of Police Patrol. This and the great rise in *kinsatsu*, fully account for the difference.

Commodious quarters are now provided for 150 scavenger coolies, in lieu of payment for working at fires, and the Coolie Superintendent has made arrangements by which 60 men shall always be on the spot in case their services are required.

WATER SUPPLY.

Repairs have been made by the Kencho authorities to the gates of the Honmura sluice, but this source of supply cannot be relied on at fires.

A new fire well has been made at the cost of the Brigade on the Bund opposite No. 2, iron pipes being extended into the sea to enable the Engines to work at low tide.

This well, after nearly a year's trial, has proved to be a thoroughly reliable source of water supply and, as funds permit, the Committee recommend that the number of these wells be increased.

The recommendation of the Committee in their last Report having been sanctioned at the subsequent meeting, the arrangements for a force of picked policemen were completed, and control clocks were fixed at (Nos. 198, 205, 241, 221, 224, 274,) (21, 47, 72, 54, 78, 59) (10, 20, 36, 86, 88, 62) (149, 154, 168, 134, 113, 161) in the Settlement, in order to ensure a vigilant and effective patrol. The Settlement is divided into 4 districts which are thoroughly patrolled throughout the night, the men being relieved every three hours. The early alarm now given of an outbreak of fire, has proved of great service to the Brigade, and your Committee in bearing witness to the greatly improved efficiency of the Japanese Police Force generally of this Settlement, are also of opinion that the comparative immunity from theft noticeable during the past year, is in no small measure attributable to the watchfulness of the night Patrol.

It would be most regrettable if, through insufficient support from the Community your Committee be compelled to discontinue this force, now so well organized.

The resignation of Police in February included Mr. Takahayachi (Keibu) who had done much to assist the Fire Brigade, but the harmonious working of the force with the police has continued under the management of the latter and Mr. T. Nozoe, who has done everything in his power to assist us.

FIRE.

In the Settlement and China Town there have been 7 fires, and 4 in the Japanese Town.

In two cases only the fires spread to adjoining buildings. The Committee have no satisfactory explanation of the cause of any of the fires in the foreign Settlement.

BLUFF.

The funds at the disposal of the Committee have not permitted any further outlay than was necessary for the placing of 24 water casks in convenient positions on the Bluff.

It is hoped that subscriptions will be sent in from private persons and firms somewhat more liberally for the ensuing year, to enable the Committee to increase the efficiency of the Brigade, as it will be seen from the subjoined statement that the private subscriptions only amounted to \$1,175 during the past year.

The Committee take this opportunity of thanking the Chief Superintendent, the Captains, officers and men of the various Steam Fire Brigades, the Japanese Municipal Fire Brigades, likewise Mr. Hegt, for the assistance rendered during the past year. The Committee have also to thank Mr. James Favre Brandt for the present of 3 Extincteurs.

Mr. R. Rohde, Captain of the Brigade, having returned to Europe on leave, the Committee take this opportunity to thank that gentleman for the very great services he has rendered to the Brigade for several years past. The Committee would be glad to see more of the young men of the Settlement offering to fill the vacancies in the several Steam Fire Engine Companies, which have not quite their full complement of men at present.

FIRE—SETTLEMENT.

1883.	
Mar. 8, 4.15 a.m., Lot 130, dwelling house owned by executors of Mrs. Hutton	\$ 3,000 destroyed.
Mar. 14, 2.13 a.m., Lot 52, dwelling house and store, E. Jacot	\$24,000 destroyed.
Mar. 15, 2.30 a.m., Lot 147, 150, China Town.	\$ 2,000 destroyed.
Mar. 16, 3.45 a.m., Lot 255, Godowns, P. Bolim	\$26,500 destroyed.
Sept. 15, 3.45 a.m., Lot 31, Dwelling, Madame Maigre	\$ 1,500 destroyed.
Nov. 30, 3.15 a.m., Lot 70, Provision store, Mr. Hoffmann	\$ 8,700 destroyed.
Dec. 25, 8.30 p.m., Lot 16, Water Street and Bund	\$12,000 destroyed.

BLUFF NONE.

June 12, 0.20 a.m., Kita Nakadori, Tea house, 15 houses.	
June 13, 4.30 p.m., Uchida-cho, Fireworks Manufacturer.	
Sept. 8, 8.00 p.m., Omari Yato, 36 houses.	
Nov. 9, 2.30 a.m., Honmura Zotoku-in, 600 houses.	

THE YOKOHAMA FIRE BRIGADE IN ACCOUNT WITH THE HON. SECRETARY AND TREASURER.

JAMES WALTER, Hon. Sec. and Treasurer.

Yokohama, 31st December, 1883.

I have examined the above statement with the vouchers and books, and find the same to be correct.

H. ABEGG.

Mr. KILBY proposed, and Mr. WHITTALL seconded, a proposition that the present committee be re-elected.

Carried.

The committee consists of Messrs. J. Dodds, T. Brewer, Jas. Walter, G. W. Playfair, E. Flint Kilby, and W. C. Bing.

The CHAIRMAN said a most cordial vote of thanks was due to Mr. Jas. Walter, the Superintendent of the Brigade, and the executive officers, more especially Mr. Walter, for his zeal and ability and also for his time and trouble.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Asiatic Society of Japan was held at the Theological Hall, 17, Tsukiji, on Wednesday, February 13th, the Vice-President for Tokiyo in the chair.

The Minutes of the last Tokiyo Meeting, having been published in both the daily and weekly editions of the *Japan Mail*, were taken as read.
